THE

THIRD AND LAST VOLUME OF THE VOY-

AGES, NAVIGATIONS, TRAF-
fiques, and Discoueries of the *English Nation*, and in
some few places, where they haue not been, of strangers, per-
formed within and before the time of these hundred yeeres, to all
parts of the *Newfound world* of *America*, or the *West Indies*, from 73.
degrees of Northerly to 57. of Southerly latitude:

As namely to *Engronland*, *Meta Incognita*, *Eslotiland*,
Tierra de Labrador, *Newfoundland*, vp *The grand bay*, the gulfe of *S. Lau-*
rence, and the Riuer of *Canada* to *Hochelaga* and *Saguenay*, along the coast of *Aram-*
bec, to the shores and maines of *Virginia* and *Florida*, and on the West or backside of them
both, to the rich and pleasant countries of *Nueva Biscaya*, *Cibola*, *Tignex*, *Cicnic*,
Quinira, to the 15. prouinces of the kingdome of *New Mexico*, to the
bottome of the gulfe of *California*, and vp the
Riuer of *Buena Guia*:

And likewise to all the yles both small and great lying before the
cape of *Florida*, *The bay of Mexico*, and *Tierra firma*, to the coasts and Inlands
of *Newe Spaine*, *Tierra firma*, and *Guiana*, vp the mighty Riuer of *Orenoque*,
Desschebe, and *Maramon*, to euery part of the coast of *Brasil*, to the Riuer of *Plate*,
through the Streights of *Magellan* forward and backward, and to the
South of the said Streights as farre as 57. degrees:

And from thence on the backside of *America*, along the coastes, harbours,
and capes of *Chili*, *Pern*, *Nicaragua*, *Nueva Espanna*, *Nueva Galicia*, *Culiacan*,
California, *Nova Albion*, and more Northerly as farre as 43. degrees:

Together with the two renowned, and prosperous voyages of *Sir Francis Drake*
and *M. Thomas Candish* round about the circumference of the whole earth, and
diuers other voyages intended and set forth for that course.

Collected by *RICHARD HAKLVYT* Preacher, and sometimes
Student of Christ-Church in Oxford.

Imprinted at London by *George Bishop*, *Ralfe*
Newberie, and *ROBERT BARKER*.

ANNO DOM. 1600.

Anno Domini 1600.

THE THIRD AND LAST

Volume of the principall Nauigations, Voyages,

Traffiques and Discoveries of the English Nation

made to the Northwest, West, and Southwest

parts of the World, with the Letters, Privileges,

Discourses, Obseruations, and other

necessary things concern-

ing the same.

The most ancient Discouery of the *West Indies* by *Madoc* the

sonne of *Owen Guyneth* Prince of *North-wales*, in the yeere 1170: taken
out of the history of *Wales*, lately published by *M. David Powel* Doctor of Diuinity.

After the death of *Owen Guyneth*, his sonnes fell at debate
who should inherit after him: for the eldest sonne bozne in ma-
trimony, *Edward* or *Iorwerth Drwydion*, was counted vn-
meet to gouerne, because of the maine vpon his face: and
Howell that tooke vpon him all the rule was a base sonne, be-
gotten vpon an Irish woman. Therefore *David* gathered all
the power he could, and came against *Howell*, and fighting with
him, slew him; and afterwards iuioued quietly the whole land
of *North-wales*, until his brother *Iorwerth*'s sonne came to age.

Madoc another of *Owen Guyneth* his sonnes left the land in
contention betwixt his brethren, & prepared certaine ships,
with men and munition, and sought aduentures by Seas,
sailing West, and leauing the coast of *Ireland* so farre North,

Madoc the son
of *Owen Guy-
neth*.

that he came vnto a land vnknownen, where he saw many strange things.

This land must needs be some part of that Countrey of which the *Spaniards* affirme them-
selues to be the first finders since *Hannos* time. Whereupon it is manifest that that countrey
was by *Britaines* discovered, long before *Columbus* led any *Spaniards* thither.

Humf. Lloyd.

Of the voyage and returne of this *Madoc* there be many fables sained, as the common people
doe vse in distance of place and length of time rather to augment then to diminish: but sure it is
there he was. And after he had returned home, and declared the pleasant and fruitfull countreys
that he had seene without inhabitants, and vpon the contrary part, for what barren & wild ground
his brethren and nephewes did murder one another, he prepared a number of ships, and got with
him such men and women as were desirous to liue in quietnesse: and taking leaue of his friends,
tooke his journey thitherward againe. Therefore it is to be supposed that he and his people in-
habited part of those countreys: for it appeareth by *Francis Lopez de Gomara*, that in *Acuza-
mil* and other places the people honored the crosse. Whereby it may be gathered that *Christians*
had bene there before the comming of the *Spaniards*. But because this people were not many,
they followed the maners of the land which they came vnto, & vsed the language they found there.

The second
voyage of *Ma-
doc* the sonne
of *Owen Guy-
neth*.
Gomara, lib. 2.
cap. 16.

This *Madoc* arriuing in that *Westerne* country, vnto the which he came in the yere 1170, left
most of his people there, and returning backe for more of his owne nation, acquaintance & friends
to inhabit that faire & large countrey, went thither againe with ten sailles, as I find noted by *Guy-
tyn Owen*. I am of opinion that the land whereunto he came was some part of the *West Indies*.

M. Powel's ad-
dition.

Gutyn Owen.

Carmina Meredith filij Rhef mentionem facientia de *Madoco* filio *Oweni Guynedd*, & de sua
nauigatione in terras incognitas. *Vixit hic Meredith circiter annum Domini 1477.*

Madoc wyf, mwyedic wedd,
Iawn genau, *Owyn Guynedd*.
Ni synnum dir, fy enaid oedd
Nada mawr, ond y moroedd.

The same in
English.

Madoc I am the sonne of *Owen Gwynedd*
With stature large, and comely grace adorne:
No lands at home nor store of wealth me please,
By minde was whole to search the Ocean seas.

These verses
I receiued of
my learned
friend *M. Wil-
liam Camden*.

The

2 The English Voyages, Nauigations, Colum. offer accepted.

The offer of the discouery of the West Indies by Christopher Columbus to king Henry the seventh in the yeere 1488 the 13 of February: with the kings acceptation of the offer, & the cause whereupon hee was deprived of the same: recorded in the thirteenth chapter of the history of Don Fernand Columbus of the life and deeds of his father Christopher Columbus.

Christophoro Colon temendo, se parimente i Re di Castiglia non assentissero alla sua impresa, non gli bisognasse proporla di nouo à qualche altro principe, & così in ciò passasse lungo tempo; mandò in Inghilterra un suo fratello, che haueua appresso di se, chiamato Bartholomeo Colon: il qual, quantunque non hauesse lettere Latine, era però huomo pratico, & giudicioso nelle cose del mare, & sapea molto bene far carte da nauigare, & sphere, & altri instrumenti di quella professione, come dal suo fratello era instrutto. Partito adunque Bartholomeo Colon per Inghilterra, volle la sua sorte, che desse in man di corsali, i quali lo spogliarono insieme con gli altri della sua naue. Per la qual cosa, & per la sua povertà & infirmità, che in così diuersi terre lo assalirono crudelmente, prolungo per gran tempo la sua ambasciata, fin che, acquistata un poco di facultà con le carte, ch'ei fabricaua, cominciò a far pratiche co' il Re Enrico settimo, padre de Enrico ottauo, che al presente regna: a cui appresentò un mappamondo, nel quale erano scritti questi versi, che fra le sue scritture lo troua, & dame saranno qui posti piu tosto per l' antichità, che per la loro eleganza.

*Terrarum quicumque cupis feliciter oras
Noscere, cuncta decens doctæ pictura docebit,
Quam Strabo affirmat, Ptolomæus, Plinius, atque
Isidorus: non vna tamen sententia cuique.
Pingitur hic etiam nuper sulcata carinis
Hispanis Zona illa, prius incognita genti
Torrida, quæ tandem nunc est notissima multis.*

Et piu di sotto diceua.

Pro Authore sue Pictore.

*Ianua cui patriæ est nomen, cui Bartholomæus
Columbus de Terra Rubra, opus edidit istud,
Londonijs anno Domini 1480 atque insuper anno
Octauo, decimæque die cùm tertia mensis
Februarij. Laudes Christo cantentur abundè.*

Et, perciocche auuertirà alcuno, che dice Columbus de Terra Rubra, dico, che medesimamente io viddi alcune sottoscrizioni dell' Ammiraglio, primo che acquistasse lo stato, on' egli si sottoscriveua, Columbus de Terra Rubra. Ma, tornando al Re d' Inghilterra, dico, che, da lui il mappamondo veduto, & ciò che l' Ammiraglio gli offeriua, con allegro volto accettò la sua offerta, & mandolo a chiamare. Ma, perciocche Dio l' haueua per Castiglia serbata, già l' Ammiraglio in quel tempo era andato, & tornato con la vittoria della sua impresa, secondo che per ordine si racconterà. Lasciarò hora di raccontar ciò, che Bartolomeo Colon haueua negoziato in Inghilterra, & tornaro all' Ammiraglio, &c.

The same in English.

Christopher Columbus fearing least if the king of Castile in like maner (as the king of Portugal had done) should not condescend vnto his enterprize, he should be inforced to offer the same againe to some other prince, & so much time should be spent therein, sent into England a certaine brother of his which he had with him, whose name was Bartholomew Columbus, who, albeit he had not the Latine tongue, yet neuertheless was a man of experience and skillfull in Sea causes, and could very wel make sea cards & globes, and other instruments belonging to that profession, as he was instructed by his brother. Wherefore after that Bartholomew Columbus was departed for England, his lucke was to fall into the hands of pirats, which spoiled him with the rest of them which were in the ship which he went in. Upon which occasion, and by reason of his poverty

pouerty and sicknesse which cruelly assaulted him in a countrey so farre distant from his friends, he deferred his ambassage for a long while, vntill such time as he had gotten somewhat handsome about him with making of Sea cards. At length he began to deale with king Henry the seventh the father of Henry the eight, which reigneth at this present: vnto whom he presented a mappe of the world, wherein these verses were written, which I found among his papers: and I will here set them downe, rather for their antiquity then for their goodnesse.

The occasion why the West Indies were not discovered for England.

Thou which desirest easily the coasts of lands to know,
This comely mappe right learnedly the same to thee will shew:
Which Strabo, Plinie, Ptolomew and Isodore maintaine:
Yet for all that they do not all in one accord remaine.
Were also is set downe the late discovered burning Zone
By Bozringals, vnto the world which whilom was vnknown,
Whereof the knowledge now at length thorow all the world is blown.

And a little vnder he added:

For the Authour or the Drawer.

He, whose deare native soile hight stately Genua,
Euen he whose name is Bartholomew Colon de Terra Rubra,
The yeere of Grace a thousand and foure hundred and fourescore
And eight, and on the thirteenth day of February more,
In London published this worke. To Christ all laud therefore.

And because some peraduenture may obserue that he calleth himselfe Columbus de Terra Rubra, I say, that in like maner I haue seene some subscriptions of my father Christopher Columbus, before he had the degree of Admirall, wherein he signed his name thus, Columbus de Terra Rubra. But to returne to the king of England, I say, that after he had seene the map, and that which my father Christopher Columbus offered vnto him, he accepted the offer with ioyfull countenance, and sent to call him into England. But because God had reserued the sayd offer for Castile, Columbus was gone in the meane space, and also returned with the performance of his enterprise, as here after in order shall be rehearsed. Now will I leaue off from making any farther mention of that which Bartholomew Colon had negotiated in England, and I will returne vnto the Admirall, &c.

King Henry the seventh his acceptance of Columbus offer.

Another testimony taken out of the 60 chapter of the foresayd history of Ferdinando Columbus, concerning the offer that Bartholomew Columbus made to king Henry the seventh on the behalfe of his brother Christopher.

Ornato adunque l' Ammiraglio dallo scoprimento di Cuba & di Giamaica, irò nella Spagnuola Bartolomeo Colon suo fratello, quello, che era già andato a trattare accordo col Re d' Inghilterra sopra lo scoprimento delle Indie, come di sopra habiam detto. Questo poi, ritornandosene verso Castiglia con capitoli conceduti, haueua inteso a Parigi dal re Carlo di Francia, l' Ammiraglio suo fratello haueua già scoperta l' Indie: per che gli souenne per poter far il Viaggio di cento scudi. Et, Auenga che per cotal noua egli si fosse molto affrettato, per arrinar l' Ammiraglio in Spagna, quando non dimeno giunse a Siniglia, egli era già tornato alle Indie cò 17 nauigli. Perche, per esser quanto ei gli hauea lasciato, di subito al principio dell' anno del 1494 sen' andò ai Re Catholici, menando seco Don Diego Colon, mio fratello, & me ancora, accioche seruissimo di paggi al serenissimo principe Don Gionanni, il qual vna in gloria, si come hauea commandato la Catholica Regina donna Isabella, che allhora era in Vagliadolid. Tosto adunque che noi giungemmo, i Re chiamarono Don Bartolomeo, & mandaronlo alla Spagnuola con tre navi, &c.

The same in English.

Christopher Columbus the Admirall being returned from the discovery of Cuba and Iamayca, found in Hispaniola his brother Bartholomew Columbus, who before had beene sent to treat of an agreement with the king of England for the discovery of the Indies, as we haue

have sayd before. This Bartholomew therefore returning vnto Castile, with the capitulations granted by the king of England to his brother, vnderstood at Paris by Charles the king of France, that the Admirall his brother had already performed that discovery: whereupon the French king gaue vnto the sayd Bartholomew an hundred French crownes to beare his charges into Spaine. And albeit he made great haste vpon this good newes to meet with the Admirall in Spaine, yet at his comming to Siuil his brother was already returned to the Indies with seuentene saile of shippes. Wherefore to fulfill that which he had left him in charge in the beginning of the yeere 1494 he repaired to the Catholike princes, taking with him Diego Colon my brother and me also, which were to be preferred as Pages to the most excellent Prince Don Iohn, who now is with God, according to the commandement of the Catholike Queene Lady Isabell, which was then in Validolid. Assoone therefore as we came to the Court, the princes called for Don Bartholomew, and sent him to Hispaniola with three shippes, &c.

THE ENGLISH VOYAGES, NAVIGATIONS,
and Discoveries (intended for the finding of a Northwest pas-
sage) to the North parts of *America*, to *Meta incognita*, and the backe-
side of *Gronland*, as farre as 72 degrees and 12 minuts: performed first by
Sebastian Cabota, and since by Sir *Martin Frobisher*, and M.
John Davis, with the Patents, Discourses, and
Aduertisements thereto belonging.

The Letters patents of King *Henry* the seuenth granted vnto *Iohn*
Cabot and his three sonnes, *Lewis*, *Sebastian*, and *Sancius* for the discoverie of
new and vnknown lands.

Enricus Dei gratia rex Angliæ, & Franciæ, & Dominus Hiberniæ, omnibus, ad quos præsentēs literæ nostræ peruenerint, salutem.

Notum sit & manifestum, quod dedimus & concessimus, ac per præsentēs damus & concedimus pro nobis & hæredibus nostris, dilectis nobis Ioanni Caboto ciui Veneriarum, Lodouico, Sebastiano, & Sancio, filijs dicti Ioannis, & eorum ac cuiuslibet eorum hæredibus & deputatis, plenam ac liberam auctoritatem, facultatem & potestatem nauigandi ad omnes partes, regiones, & sinus maris orientalis, occidentalis, & septentrionalis, sub banneris, vexillis, & insignijs nostris, cum quinque nauibus siue nauigijs, cuiuscunque portituræ & qualitatis existant, & cum tot & tantis nautis & hominibus, quot & quantos in dictis nauibus secum ducere voluerint, suis & eorum proprijs sumptibus & expensis, ad inueniendum, discooperiendum, & inuestigandum quascunque insulas, patrias, regiones siue prouincias gentilium & infidelium quorumcunque, in quacunque parte mundi positas, quæ Christianis omnibus ante hæc tempora fuerint incognitæ. Concessimus etiam eisdem & eorum cuiuslibet, eorumque & cuiuslibet eorum hæredibus & deputatis, ac licentiam dedimus ad affigendum prædictas banneras nostras & insignia in quacunque villa, oppido, castro, insula seu terra firma à se nouiter inuentis. Et quod prænominatus Ioannes, & filij eiusdem, seu hæredes & eorum deputati, quascunque huiusmodi villas, castra, oppida, & insulas à se inuentas, quæ subiugari, occupari, possideri possint, subiugare, occupare, possidere valeant tanquam vasalli nostri, & gubernatores, locatenentes, & deputati eorundem, dominium, titulum & iurisdictionem earundem villarum, castrorum, oppidorum, insularum, ac terræ firmæ sic inuentorum nobis acquirendo. Ita tamen, vt ex omnibus fructibus, proficijs, emolumentis, commodis, lucris, & obuentionibus ex huiusmodi nauigatione prouenientibus, præfatus Iohannes, & filij ac hæredes, & eorum deputati, teneantur & sint obligati nobis pro omni viagio suo, toties quoties ad portum nostrum Bristollia applicuerint (ad quem omnino applicare teneantur & sint stricti) deductis omnibus sumptibus & impensis necessarijs per eosdem factis, quintam partem capitalis lucris facti, siue in mercibus, siue in pecunijs persolvere: Dantes nos & concedentes eisdem suisque hæredibus & deputatis, vt ab omni solutione custumarum omnium & singulorum honorum & mercium, quas secum reportarint ab illis locis sic nouiter inuentis, liberi sint & immunes. Et insuper dedimus & concessimus eisdem ac suis hæredibus & deputatis, quod terræ omnes firmæ, insulæ, villæ, oppida, castra, & loca quæcunque à se inuenta, quorquot

quotquot ab eis inueniri contigerit, non possint ab alijs quibuscumque nostris subditis frequentari seu visitari, absque licentia prædictorum Ioannis & eius filiorum, suorumque deputatorum, sub pœna amissionis tam nauium quàm bonorum omnium quorumcunque ad ea loca sic inuenta nauigare præsumendum. Volentes & strictissimè mandantes omnibus & singulis nostris subditis, tam in terra quàm in mari constitutis, vt præfato Ioanni, & eius filijs ac deputatis, bonam assistentiam faciant, & tam in armandis nauibus seu nauigijs, quàm in prouisione com-
meatus & victualium pro sua pecunia emendorum, atque aliarum omnium rerum sibi prouidendarum pro dicta nauigatione sumenda suos omnes fauores & auxilia impertiant. In cuius rei testimonium has literas nostras fieri fecimus patentes. Teste meipso apud Westmonasterium quinto die Martij anno regni nostri vndecimo.

Ann. Dom.
1495.

The same in English.

Henry by the grace of God, king of England and France, and lord of Ireland, to all to whom these presents shall come, Greeting.

Be it knownen that we haue giuen and granted, and by these presents do giue and grant for vs and our heires, to our welbeloued John Cabot citizen of Venice, to Lewis, Sebastian, and Sanctius, sonnes of the sayd John, and to the heires of them, and euery of them, and their deputies, full and free authorizty, leaue, and power to saile to all parts, countreys, and seas of the East, of the West, and of the North, vnder our banners and ensignes, with five ships of what burthen or quantity soeuer they be, and as many mariners or men as they will haue with them in the sayd ships, vpon their owne proper costs and charges, to seeke out, discouer, and finde whatsoeuer isles, countreys, regions or prouinces of the heathen and infidels whatsoeuer they be, and in what part of the world soeuer they be, which before this time haue bene vnknownen to all Christians: we haue granted to them, and also to euery of them, the heires of them, and euery of them, and their deputies, and haue giuen them licence to set vp our banners and ensignes in euery village, towne, castle, isle, or maine land of them newly found. And that the aforesayd John and his sonnes, or their heires and assignes may subdue, occupy and possesse all such townes, cities, castles and isles of them found, which they can subdue, occupy and possesse, as our vassals, and lieutenants, getting vnto vs the rule, title, and iurisdiction of the same villages, townes, castles, & firme land so found. Yet so that the aforesayd John, and his sonnes and heires, and their deputies, be holden and bounden of all the fruits, profits, gaines, and commodities growing of such nauigation, for euery their voyage, as often as they shall arriue at our port of Bristol (at the which port they shall be bound and holden onely to arriue) all maner of necessary costs and charges by them made, being deducted, to pay vnto vs in wares or money the fift part of the capitall gaine so gotten. We giuing and granting vnto them and to their heires and deputies, that they shall be free from all paying of customes of all and singular such merchandize as they shall bring with them from those places so newly found. And moreouer, we haue giuen and granted to them, their heires and deputies, that all the firme lands, isles, villages, townes, castles and places whatsoeuer they be that they shall chance to finde, may not of any other of our subiects be frequented or visited without the licence of the foresayd John and his sonnes, and their deputies, vnder paine of forfeiture aswell of their shippes as of all and singular goods of all them that shall presume to saile to those places so found. Willing, and most straightly commanding all and singular our subiects aswell on land as on sea, to giue good assistance to the aforesayd John and his sonnes and deputies, and that as well in arming and furnishing their ships or vessels, as in prouision of food, and in buying of victuals for their money, and all other things by them to be prouided necessary for the sayd nauigation, they do giue them all their helpe and fauour. In witness whereof we haue caused to be made these our Letters patents. Witnesse our selfe at Westminster the fift day of March, in the eleuenth yeere of our reigne.

Bristol thought
to meetest port
for Westerne
discoueries.
Freedom frō
custome.

Billa signata anno 13 Henrici septimi.

Ex tertio die Februarij, anno 13, licentiam dedit Ioanni Caboto, quod ipse capere possit sex naues Anglicanas, in aliquo portu, siue portibus regni Angliæ, ita quod sint de portagio 200. doliorum, vel subtrus, cum apparatu requisito, & quod recipere possit in dictas naues omnes tales magistros, marinarios, & subditos regis, qui cum eo exire voluerint, &c.

A record of the
rolls touching
the voyage of
John Cabot and
Sebastian his
sonne.

The

The same in English.

The king vpon the third day of February, in the 13 yeere of his reigne, gaue licence to John Cabot to take five English ships in any haven or hauens of the realme of England, being of the burden of 200 tunnes, or vnder, with all necessary furniture, and to take also into the said ships all such masters, mariners, and subiects of the king as willingly will go with him, &c.

An extract taken out of the map of *Sebastian Cabot*, cut by *Clement Adams*, concerning his discouery of the *West Indies*, which is to be seene in her Maiesties priue gallerie at *Westminster*, and in many other ancient merchants houses.

Nno Domini 1497 Ioannes Cabotus Venetus, & Sebastianus illius filius eam terram fecerunt peruiam, quam nullus prius adire ausus fuit, die 24 Iunij, circiter horam quintam bene manè. Hanc autem appellauit Terram primum visam, credo quod ex mari in eam partem primum oculos iniecerat. Nam quæ ex aduerso sita est insula, eam appellauit insulam Diui Ioannis, hac opinor ratione, quod aperta fuit eo die qui est sacer Diuo Ioanni Baptista: Huius incolæ pelles animalium, exuiasque ferarum pro indumentis habent, easque tanti faciunt, quanti nos vestes preciosissimas. Cum bellum gerunt, vtuntur arcu, sagittis, hastis, spiculis, clauis ligneis & fundis. Tellus sterilis est, neque vllos fructus affert, ex quo fit, vt visis albo colore, & ceruis inusitata apud nos magnitudinis referta sit: piscibus abundat, iisque sane magnis, quales sunt lupi marini, & quos salmones vulgus appellat; soleæ autem reperiuntur tam longæ, vt vine mensuram excedant. Imprimis autem magna est copia eorum piscium, quos vulgari sermone vocant Bacallaos. Gignuntur in ea insula accipitres ita nigri, vt coruorum similitudinem mirum in modum expriment, perdicæ autem & aquilæ sunt nigri coloris.

The same in English.

In the yere of our Lord 1497 John Cabot a Venetian, and his sonne Sebastian (with an English fleet set out from Bristol) discovered that land which no man before that time had attempted, on the 24 of June, about five of the clocke early in the morning. This land he called Prima vista, that is to say, First seene, because as I suppose it was that part whereof they had the first sight from sea. That Island which lieth out before the land, he called the Island of S. John vpon this occasion, as I thinke, because it was discovered vpon the day of John the Baptist. The inhabitants of this Island vse to weare beasts skinner, and haue them in as great estimation as we haue our finest garments. In their warres they vse bowes, arrowes, pikes, darts, wooden clubs, and slings. The soile is barren in some places, & yeeldeth litle fruit, but it is full of white beares, and staggess farre greater then ours. It yeeldeth plenty of fish, and those very great, as seales, and those which commonly we call salmons: there are soles also aboute a yard in length: but especially there is great abundance of that kinde of fish which the Sauages call baccalaos. In the same Island also there breed hauks, but they are so blacke that they are very like to rauen, as also their partridges, and egles, which are in like sort blacke.

A discourse of *Sebastian Cabot* touching his discouery of part of the *West India* out of England in the time of king *Henry the seuenth*, vsed to *Galeacius Butrigarius* the Popes Legate in *Spaine*, and reported by the sayd Legate in this sort.

This discourse is taken out of the second volume of the voyages of Baptista Ramusius.

Sebastian Cabots Pilot map of Spaine.

De you not vnderstand sayd he (speaking to certaine Gentlemen of Venice) how to passe to India toward the North-west, as did of late a citizen of Venice, so valiant a man, and so well practised in all things pertaining to navigations, and the science of Cosmographie, that at this present he hath not his like in Spaine, inso much that for his vertues he is preferred aboue all other pilots that saile to the West Indies, who may not passe thither without his licence, and is therefore called Piloto mayor, that is, the grand Pilot. And when we sayd that we knew him not, he proceeded, saying, that being certaine peres in the city of Siuil, and desirous to haue some knowledge of the navigations of the Spaniards, it was tolde him that there was in the city a valiant

baliant man, a Venetian bozne named Sebastian Cabot, who had the charge of those things, being an expert man in that science, and one that coulde make Cardes for the Sea with his owne hand, and that by this report, seeking his acquaintance, hee found him a very gentle person, who entertained him friendly, and shewed him many things, and among other a large Mappe of the world, with certaine particuler Navigations, as well of the Portugals, as of the Spaniards, and that he spake further vnto him to this effect.

When my father departed from Venice many yeeres since to dwell in England, to follow the trade of marchandises, hee tooke mee with him to the citie of London, while I was very yong, yet hauing neuerthelesse some knowledge of letters of humanitie, and of the Sphere. And when my father died in that time when newes were brought that Don Christopher Colonius Genuese had discovered the coasts of India, whereof was great talke in all the Court of King Henry the 7. who then raigned, insomuch that all men with great admiration affirmed it to be a thing moze diuine then humane, to saile by the West into the East where spices growe, by a way that was neuer knowne before, by this fame and report there increased in my heart a great flame of desire to attempt some notable thing. And vnderstanding by reason of the Sphere, that if I should saile by way of the North-west, I should by a shorter tract come into India, I thereupon caused the King to be aduertised of my deuise, who immediatly commanded two Caruels to bee furnished with all things appertayning to the voyage, which was as farre as I remember in the yeere 1496. in the beginning of Sommer. I began therefore to saile toward the North-west, not thinking to finde any other land then that of Cathay, & from thence to turne toward India, but after certaine dayes I found that the land raine towards the North, which was to mee a great displeasure. Neuerthelesse, sayling along by the coast to see if I could finde any gulfes that turned, I found the lande still continient to the 56. degree vnder our Pole. And seeing that there the coast turned toward the East, despairing to finde the passage, I turned backe againe, and sailed downe by the coast of that land toward the Equinoctiall (euer with intent to finde the saide passage to India) and came to that part of this firme lande which is now called Florida, where my victuals failing, I departed from thence and returned into England, where I found great tumults among the people, and preparation for warres in Scotland: by reason whereof there was no moze consideration had to this voyage.

Whereupon I went into Spaine to the Catholique king, and Queene Elizabeth, which being aduertised what I had done, entertained me, and at their charges furnished certaine ships, where- with they caused me to saile to discover the coastes of Brasile, where I found an exceeding great and large riuer named at this present Rio de la plata, that is, the riuer of silver, into the which I sailed and followed it into the firme land, moze then fife scoze leagues, finding it euery where very faire, and inhabited with infinite people, which with admiration came running dayly to our ships. Into this Riuer runne so many other riuers, that it is in maner incredible.

The second voyage of Cabot to the land of Brasil, and Rio de plata.

After this I made many other voyages, which I nowe pretermitt, and waring olde, I giue my selfe to rest from such trauels, because there are nowe many yong and lustie Pilots and Hariners of good experience, by whose forwardnesse I doe reioyce in the fruit of my labours, and rest with the charge of this office, as you see.

The office of Pilote maior.

The foresaide Baptista Ramusius in his preface to the thirde volume of the Navigations, writeth thus of Sebastian Cabot.

In the latter part of this volume are put certaine relations of Iohn de Varazana, Florentine, and of a great captaine a Frenchman, and the two voyages of Iaques Cartier a Briton, who sailed vnto the land situate in 50. degrees of Latitude to the North, which is called New France, which landes hitherto are not thoroughly knowne, whether they doe ioyne with the firme land of Florida and Noua Hispania, or whether they bee separated and deuided all by the Sea as Islands: and whether that by that way one may goe by Sea vnto the countrey of Cathaia. As many yeeres past it was writen vnto mee by Sebastian Cabota our Countrey man a Venetian, a man of great experience, and very rare in the art of Navigation, and the knowledge of Cosmographie, who sailed along and beyond this lande of New France, at the charges of King Henry the seventh king of England: and he aduertised mee, that hauing sailed a long time West and by North, beyond those Islands vnto the Latitude of 67. degrees and an halfe, vnder the North pole, and at the 11. day of Iune finding still the open Sea without any manner of impediment, he thought verily by that way to haue passed on still the way to Cathaia, which is in the East, and would haue done it, if the mu-

The great probability of this North-west passage.

time

time of the shipmaster and Partners had not hindered him and made him to returne homewards from that place. But it seemeth that God doeth yet still reserve this great enterprize for some great prince to discover this voyage of Cathaia by this way, which for the bringing of the Spices from India into Europe, were the most easie and shortest of all other wayes hither to found out. And surely this enterprize would be the most glorious, and of most importance of all other that can be imagined to make his name great, and fame immortall, to all ages to come, farre more then can be done by any of all these great troubles and warres which daily are vled in Europe among the miserable Chyistian people.

Another testimonie of the voyage of *Sebastian Cabot* to the West and Northwest, taken out of the sixt Chapter of the third Decade of *Peter Martyr of Angleria.*

Scrutatus est oras glaciales Sebastianus quidam Cabotus genere Venetus, sed à parentibus in Britanniam insulam tendentibus (vix moris est Venetorum, qui commercij causa terrarum omnium sunt hospites) transportatus penè infans. Duo is sibi nauigia, propria pecunia in Britannia ipsa instruxit, & primò tendens cum hominibus tercentum ad Septentrionem donec etiam Iulio mense vastas repperit glaciales moles pelago natantes, & lucem ferè perpetuam, tellurè tamen libera, gelu liquefacto: quare coactus fuit, vti ait, vela vertere & occidentem sequi: tetenditque tantum ad meridiem littore sese incuruante, vt Herculei freti latitudinis fere gradus equarit: ad occidentemque profectus tantum est vt Cubam Insulam à læua, longitudine graduum penè parem, habuerit. Is ea littora percurrent, quæ Baccalaos appellauit, eosdem se repperisse aquarum, sed lenes delapsus ad Occidentem ait, quos Castellani, meridionales suas regiones adnauigantes, inueniunt. Ergò non modò verisimilius, sed necessario concludendum est, vastos inter vtràmque ignotam hæcenus tellurem iacere hiatus, qui viam præbeant aquis ab oriente cadentibus in Occidentem. Quas arbitror impulsu cælorum circulariter agi in gyrum circa terræ globum, non autem Demogorgone anhelante vomì, absorberique vt nonnulli senserunt, quod influxu, & refluxu forsan assentire daretur. Baccalaos, Cabotus ipse terras illas appellauit, eò quod in earum pelago tantam repperit magnorum quorundam piscium, tynnos æmulantium, sic vocatorum ab indigenis, multitudinem, vt etiam illi interdum nauigia detardarent. Earum Regionum homines pellibus tantum coopertos reperiēbat, rationis haudquaquam expertes. Vrsorum inesse regionibus copiam ingentem refert, qui & ipsi piscibus vescantur. Inter densa namque piscium illorum agmina sese immergunt vrsi, & singulos singuli complexos, vnguibusque inter squammas immisis in terram raptant, & comedunt. Propterea minimè noxios hominibus visos esse ait. Orichalcum in plerisque locis se vidisse apud incolas prædicat. Familiarem habeo domi Cabotum ipsum, & contubernalem interdum. Vocatus namque ex Britannia à Rege nostro Catholico, post Henrici Maioris Britanniae Regis mortem, concurialis noster est, expectatque indies, vt nauigia sibi parentur, quibus arcanum hoc naturæ latens iam tandem detegatur.

The same in English.

These North Seas haue bene searched by one Sebastian Cabot, a Venetian borne, whom being yet but in maner an infant, his parents caried with them into England, hauing occasion to resort thither for trade of marchandise, as is the maner of the Venetians to leaue no part of the world vnsearched to obtaine riches. Hee therefore furnished two ships in England at his owne charges, and first with 300 men directed his course so farre towards the North pole, that euen in the moneth of Iuly he found monstrous heapes of ice swimming on the sea, and in maner continually day light, yet saw he the land in that tract free from ice, which had bene molten by the heat of the Sunne. Thus seeing such heapes of yce before him, hee was enforced to turne his sailes and follow the West, so coasting still by the shore, that he was thereby brought so farre into the South, by reason of the land bending so much Southwards, that it was there almost equall in latitude, with the sea Fretum Herculeum, hauing the Northpole eleuate in maner in the same degree. He sailed likewise in this tract so farre towards the West, that hee had the Island of Cuba on his left hand, in maner in the same degree of longitude. As hee traueiled by the coastes of this great land, (which he named Baccalaos) he saith that hee found the like course of the waters toward the West, but the same to runne more softly and gently then the swift waters which the Spaniards found in their Nauigations Southward. Wherefore it is not onely more like to be true, but oughe also

A current toward the West.

also of necessitie to be concluded that betweene both the lands hitherto unknowne, there should be certaine great open places whereby the waters should thus continually passe from the East vnto the West: which waters I suppose to be driuen about the globe of the earth by the vncessant moving and impulsion of the heauens, and not to bee swallowed vp and cast vp againe by the breathing of Demogorgon, as some haue imagined, because they see the seas by increase and decrease to ebbe and flowe. Sebastian Cabot himselfe named those lands Baccalaos, because that in the Seas thereabout hee found so great multitudes of certaine bigge fishes much like vnto Tunies, (which the inhabitants call Baccalaos) that they sometime stayed his shippes. He found also the people of those regions couered with beastes skimes, yet not without the vse of reason. He also saith there is great plentie of Beares in those regions which vse to eate fish: for plunging themselves into y^e water, where they perceiue a multitude of these fishes to lie, they fasten their clawes in their scales, and so draw them to land and eate them, so (as he saith) the Beares being thus satisfied with fish, are not noisome to men. Hee declareth further, that in many places of these Regions he saw great plentie of Copper among the inhabitants. Cabot is my very friend, whom I vse familiarly, and delight to haue him sometimes keepe mee company in mine owne house. For being called out of England by the commandement of the Catholique King of Castile, after the death of King Henry the seuenth of that name King of England, he was made one of our counsell and Assistants, as touching the affaires of the new Indies, looking for ships dayly to be furnished for him to discover this hid secret of Nature.

The people of Island say the Sea and yce fetterh also West. Ionas Arngimus.

Copper found in many places by Cabote.

The testimonie of *Francis Lopez de Gomara a Spaniard*, in the fourth Chapter of the second Booke of his generall history of the West Indies concerning the first discouerie of a great part of the West Indies, to wit, from 58. to 38. degrees of latitude, by *Sebastian Cabota* out of England.

In which brought most certaine newes of the countrey & people of Baccalaos, saith Gomara, was Sebastian Cabot a Venetian, which rigged vp two ships at the cost of K. Henry the 7. of England, hauing great desire to traffique for the spices as the Portingals did. He caried with him 300. men, and tooke the way towards Island from beyond the Cape of Labrador, vntill he found himselfe in 58. degrees and better. He made relation that in the moneth of July it was so cold, and the ice so great, that hee durst not passe any further: that the dayes were very long, in a maner without any night, and for that short night that they had, it was very cleare. Cabot feeling the cold, turned towards the West, refreshing himselfe at Baccalaos: and afterwards he sailed along the coast vnto 38. degrees, and from thence he shaped his course to returne into England.

A note of *Sebastian Cabots* first discouerie of part of the *Indies* taken out of the latter part of *Robert Fabians* Chronicle not hitherto printed, which is in the custodie of *M. Iohn Stow* a diligent preseruer of Antiquities.

In the 13. yeere of K. Henry the 7. (by meanes of one Iohn Cabot a Venetian which made himselfe very expert and cunning in knowledge of the circuit of the world and Islands of the same, as by a Sea card and other demonstrations reasonable he shewed) the king caused to man and victuall a ship at Bristow, to search for an Island, which he said hee knew well was rich, and replenished with great commodities: Which shippe thus manned and victualled at the kings cost, diuers Marchants of London ventured in her small stocks, being in her as chiefe patron the said Venetian. And in the company of the said ship, sailed also out of Bristow three or foure small ships fraught with sleight and grosse marchandizes, as course cloth, caps, laces, points & other trifles. And so departed from Bristow in the beginning of May, of whom in this Maiors time returned no tidings.

Cabots boiage from Bristol wherein he discovered Newfound land, & the northerne parts of that land, and from thence as farre almost as Florida.

Of three Sauages which *Cabot* brought home and presented vnto the King in the foureteenth yere of his raigne, mentioned by the foresaid *Robert Fabian*.

In this yeere also were brought vnto the king three men taken in the Newfound Island that before I spake of, in William Purchastime being Maior: These were clothed in beastes skins, & did eate raw flesh, and spake such speech that no man could vnderstand them,

10 The English Voyages, Navigations, Seb. Cab. pension.

them, and in their demeanour like to brute beastes, whom the King kept a time after. Of the which vpon two yeeres after, I saw two apparelled after the maner of Englishmen in Westminster pallace, which that time I could not discern from Englishmen, til I was learned what they were, but as for speech, I heard none of them utter one word.

A brieft extract concerning the discoverie of Newfound-land, taken out of the booke of *M. Robert Thorne*, to doctor *Leigh*, &c.

I Reason, that as some sicknesses are hereditarie, so this inclination or desire of this discovery I inherited from my father, which with another marchant of Bristol named *Hugh Eliot*, were the discoverers of the Newfound-lands; of the which there is no doubt (as now plainly appeareth) if the Mariners would then haue bene ruled, and followed their Pilots minde, but the lands of the West Indies, from whence all the golde cometh, had bene ours; for all is one coast as by the Card appeareth, and is aforesaid.

The large pension granted by K. Edward the 6. to *Sebastian Cabota*, constituting him *grand Pilot of England*.

Edwardus sextus Dei gratia Angliæ, Franciæ, & Hiberniæ rex, omnibus Christi fidelibus, ad quos præsentis hæc literæ nostræ peruenerint, salutem. Sciatis quod nos in consideratione boni & acceptabilis seruitij, nobis per dilectum seruientem nostrum Sebastianum Cabotam impensis atque impendendi, de gratia nostra speciali, ac ex certa scientia, & mero motu nostro, nec non de adujsamento, & consensu præclarissimi auunculi nostri Edwardi Ducis Somerseti personæ nostræ Gubernatoris, ac Regnorum, dominiorum, subditorumque nostrorum protectoris, & cæterorum consiliariorū nostrorum, dedimus & concessimus, ac per præsentis damus, & concedimus eidem Sebastiano Cabotæ, quandam annuitatem siue annualem redditum, centum sexaginta & sex librarum, tresdecim solidorum, & quatuor denariorum sterlingorum, habendam, gaudendam, & annuatim percipiendam prædictam annuitatem, siue annalem redditum eidem Sebastiano Cabotæ, durante vita sua naturali, de thesauro nostro ad receptum scacarij nostri Westmonasterij per manus thesaurariorum, & Camerariorum nostrorum, ibidem pro tempore existentium, ad festa annuntiationis beate Mariæ Virginis, natiuitatis sancti Ioannis Baptistæ, Sancti Michaelis Archangeli, & Natalis Domini per æquales portiones soluendam. Et vterius de vberiori gratia nostra, ac de adujsamento, & consensu prædictis damus, & per præsentis concedimus præfato Sebastiano Cabotæ, tot & tantas Denariorum summas, ad quot & quantas dicta annuitas siue annalis redditus centum sexaginta sex librarū, tresdecim solidorum, & quatuor denariorū, a festo sancti Michaelis Archangeli vltimò præterito huc vsq; se extendit, & attingit, habendas & recipiendas præfato Sebastiano Cabotæ & assignatis suis de thesauro nostro prædicto per manus prædictorum Thesaurariorum, & Camerariorum nostrorum de dono nostro absque computo, seu aliquo alio nobis, hæredibus, vel successoribus nostris proinde reddendo, soluendo, vel faciendo: eo quod expressa mentio, &c. In cuius rei testimonium, &c. Teste Rege, apud Westmonasterium 6. die Ianuarij, Anno 2. Regis Edwardi sexti.

Anno D.
1549.

The same in English.

Edward the sixt by the grace of God, King of England, France and Ireland, Defender of the faith, to all Christian people to whom these presents shall come, sendeth greeting. Know ye that we, in consideration of the good and acceptable service done, and to be done, vnto vs by our beloued seruant Sebastian Cabota, of our speciall grace, certaine knowledge, meere motion, and by the aduise and counsel of our most honourable vncle Edward duke of Somerset gouernour of our person, and Protector of our kingdomes, dominions, and subiects, and of the rest of our Counsaile, haue giuen & granted, and by these presents do giue and graunt to the said Sebastian Cabota, a certaine annuities, or yerely reuennue of one hundredeth, threescore & sixe pounds, thirtene shillings foure pence sterling, to haue, enioy, and yerely receiue the foresaid annuities, or yerely reuennue, to the foresaid Sebastian Cabota during his natural life, out of our Treasurie at the receit of our Exchequer at Westminster, at the hands of our Treasurers & paymasters, there remayning for the time being, at the feast of the Annuntiation of the blessed Virgin Mary, the Natiuitie of S. John Baptist, S. Michael & Archangel, & the Natiuitie of our Lord, to be paid by equal portions,

And

And further, of our more speciall grace, and by the aduise and consent aforesaide wee doe giue, and by these presents doe graunt vnto the aforesaide Sebastian Cabora, so many, and so great summes of money as the saide annuities or yeerely reuenue of an hundred, threescore and five pounds, thirteene shillings 4. pence, doeth amount and rise vnto from the feast of S. Michael the Archangel last past vnto this present time, to be had and receiued by the aforesaid Sebastian Cabora, and his assignes out of our aforesaid Treasurie, at the handes of our aforesaid Treasurers, and officers of our Exchequer of our free gift without accompt, or any thing else therfore to be peeld, payed, or made, to vs, our heires or successours, forasmuch as herein expresse mention is made to the contrary.

In witness whereof we haue caused these our Letters to be made patents: Witness the King at Westminster the sixt day of Januarie, in the second yeere of his raigne. The yeere of our Lord 1548.

A discourse written by Sir Humfrey Gilbert Knight, to proue a passage by the Northwest to Cathaia, and the East Indies.

¶ The Table of the matters in euery Chapter of this discourse.

Capitulo 1.

TO proue by authoritie a passage to be on the North side of America, to goe to Cathaia, China, and to the East India.

Capitulo 2.

TO proue by reason a passage to be on the North side of America, to goe to Cathaia, Molucca, &c.

Capitulo 3.

TO proue by experience of sundry mens traualles the opening of this Northwest passage, whereby good hope remaineth of the rest.

Capitulo 4.

TO proue by circumstance, that the Northwest passage hath bene sailed throughout.

Capitulo 5.

TO proue that such Indians as haue bene driuen vpon the coastes of Germania came not thither by the Southeast, and Southwest, nor from any part of Afrike or America.

Capitulo 6.

TO proue that the Indians aforesaid came not by the Northeast, and that there is no thorough passage nauigable that way.

Capitulo 7.

TO proue that these Indians came by the Northwest, which induceth a certaintie of this passage by experience.

Capitulo 8.

What seuerall reasons were alleaged before the Queenes Maiestie, and certaine Lords of her Highnesse priuie Council, by M. Anthonie Jenkinson a Gentleman of great traualle and experience, to proue this passage by the Northeast, with my seuerall answers then alleaged to the same.

Capitulo 9.

How that this passage by the Northwest is more commodious for our traffike, then the other by the Northeast, if there were any such.

Capitulo 10.

What commodities would ensue, this passage being once discovered.

TO proue by authoritie a passage to be on the Northside of America, to goe to Cathaia, and the East India.

Chapter 1.

When I gaue my selfe to the studie of Geographie, after I had perused and diligently scanned the descriptions of Europe, Asia & Afrike, and conferred them with the Happs and Globes both Antique and Moderne: I came in fine to the fourth part of the world, commonly called America, which by all descriptions I found to bee an Island enuironed round about with Sea, hauing on the Southside of it the frete or straight of Magellan, on the West side Mar del Sur, which Sea runneth towards the North, separating it from the East parts of Asia, where the Dominions of the Cathaians are: On the East part our West Ocean, and on the North

North side the sea that seuereth it from Groneland, thozow which Northzen Seas the Passage lyeth, which I take now in hand to discover.

Plato in Timæo, and in the Dialogue called Critias, discourseth of an incomparable great Island then called Atlantis, being greater then all Affrike and Asia, which lay Westward from the Straights of Gibraltar, nauigable round about: affirming also that the Princes of Atlantis did as well enjoy the gouernance of all Affrike, and the most part of Europe, as of Atlantis it selfe.

Also to proue Platos opinion of this Island, and the inhabiting of it in ancient time by them of Europe, to be of the more credite; Marinus Siculus in his Chronicle of Spaine, reporteth that there haue bene found by the Spaniards in the gold Mines of America, certaine pierces of Honey ingraued with the Image of Augustus Caesar: which pierces were sent to the Pope for a testimonie of the matter, by Iohn Rufus Archbishop of Conſentinum.

Proclus pag. 24.

Iustine Lib. 4.

Plinie.

Moreouer, this was not only thought of Plato, but by Marsilius Ficinus, an excellent Florentine Philosopher, Crantor the Græcian, and Proclus, and Philo the famous Iew (as appeareth in his booke De Mundo, and in the Commentaries vpon Plato) to be ouerflown and swallowed vp with water, by reason of a mightie earthquake, and streaming downe of the heauenly Fludgates. The like whereof happened vnto some part of Italy, when by the forciblenes of the Sea, called Superum, it cut off Sicilia from the Continent of Calabria, as appeareth in Iustine, in the beginning of his fourth booke. Also there chanced the like in Zeland a part of Flanders.

And also the Cities of Pyrrha and Antissa, about Meotis palus: and also the Citie Burs, in the Corynethian bolome, commonly called Sinus Corinthiacus, haue bene swallowed vp with the Sea, and are not at this day to be discerned: By which accident America grew to be unknown of long time, vnto vs of the later ages, and was lately discovered againe, by Americus Vespucius, in the yeere of our Lord 1497. which some say to haue bene first discovered by Christophorus Columbus a Genuois, Anno 1492.

The same calamitie happened vnto this Ile of Atlantis 600. and odde yeeres before Plato his time, which some of the people of the Southeast parts of the world accompted as 9000. yeeres: for the maner then was to reckon the Moone her Period of the Zodiak for a yeere, which is our vsuall moneth, depending à Luminari minori.

So that in these our dayes there can no other wayne or Islande be found or iudged to bee parcel of this Atlantis, then those Westerne Islands, which beare now the name of America: counteruailing thereby the name of Atlantis, in the knowledge of our age.

A minore ad maius.

Then, if when no part of the sayd Atlantis was oppressed by water, and earthquake, the coasts round about the same were nauigable: a farre greater hope now remaineth of the same by the Northwest, seeing the most part of it was (since that time) swallowed vp with water, which could not betterly take away the olde deeps and chanelis, but rather, be an occasion of the enlarging of the olde, and also an inforcing of a great many new: why then should we now doubt of our Northwest passage and nauigation from England to India? &c. seeing that Atlantis now called America, was euer known to be an Island, and in those dayes nauigable round about, which by access of more water could not be diminished.

Also Aristotle in his booke De mundo, and the learned Germaine Simon Gryneus in his annotations vpon the same, saith that the whole earth (meaning thereby, as manifestly doth appeare, Asia, Africk, and Europe, being all the countreys then known) is but one Island, compassed about with the reach of the sea Atlantine: which likewise proueth America to be an Island, and in no part adioyning to Asia, or the rest.

Strabo lib. 15.

Also many ancient writers, as Strabo and others, called both the Ocean sea (which lieth East of India) Atlanticum pelagus, and that sea also on the West coasts of Spaine and Africk, Mare Atlanticum: the distance betweene the two coasts is almost halfe the compasse of the earth.

Valerius Anselmus in Catalogo annorum & principum, fol. 6. Gen. 9. 10.

So that it is incredible, as by Plato appeareth manifestly, that the East Indian Sea had the name Atlanticum pelagus of the mountaine Atlas in Africk, or yet the sea adioyning to Africk, had the name Oceanus Atlanticus of the same mountaine: but that those seas and the mountaine Atlas were so called of this great Island Atlantis, and that the one and the other had their names for a memorial of the mighty prince Atlas, sometime king thereof, who was Iaphet yongest sonne to Noah, in whose time the whole earth was diuided betweene the three brethren, Sem, Cam, and Iaphet.

Wherefore I am of opinion that America by the Northwest will be found fauourable to this our enterprize, and am the rather imboldened to beleue the same, for that I finde it not onely confirmed by Plato, Aristotle, and other ancient Philosophers: but also by all the best moderne Geographers,

Geographers, as Gemma Frisius, Munsterus, Appianus, Hunterus, Gastaldus, Guyccardinus, Michael Tramafinus, Franciscus Demongenitus, Bernardus Puteanus, Andreas Vauasor, Tramontanus, Petrus Martyr, and also Ortelius, who doth coast out in his generall Mappe set out Anno 1569, all the countreys and Capes, on the Northwest side of America, from Hochelaga to Cape de Paramantia: describing likewise the sea coastes of Cataia and Gronland, towards any part of America, making both Gronland and America, Islands disioyned by a great sea, from any part of Asia.

All which learned men and painefull traouellers haue affirmed with one consent and voice, that America was an Island: and that there lyeth a great Sea betweene it, Cataia, and Gronland, by the which any man of our countrey, that will giue the attempt, may with small danger passe to Cataia, the Moluccæ, India, and all other places in the East, in much shorter time, then either the Spaniard, or Portugall doeth, or may doe, from the neereſt parte of any of their countreys within Europe.

What moued these learned men to affirme thus much, I know not, or to what ende so many and sundry traouellers of both ages haue allowed the same: But I coniecture that they would neuer haue so constantly affirmed, or notified their opinions therein to the world, if they had not had great good cause, and many probable reasons, to haue lead them thereunto.

Now least you should make small accompt of ancient wryters or of their experiences which trauelled long before our times, reckoning their authoritie amongst fables of no importance: I haue for the better assurance of those proofes, set downe some part of a discourse, wrytten in the Saxon tongue, and translated into English by M. Nowel seruant to Sir William Cecil, lord Burleigh, and lord high treasurer of England. wherein there is described a Nauigation, which one Ochther made, in the time of king Alfred, King of Westſaxe Anno 871. the words of which discourse were these: Hee sailed right North, hauing alwaies the desert land on the Starborde, and on the Larbord the maine sea, continuing his course, vntill hee perceiued that the coast bowed directly towards the East, or else the Sea opened into the land he could not tell how farre, where he was compelled to stay vntill he had a westerne winde, or somewhat vpon the North, and sayled thence directly East alongſt the coast, so farre as hee was able in foure dayes, where he was againe inforced to tary vntill hee had a North winde, because the coast there bowed directly towards the South, or at least opened he knew not howe farre into the land, so that he sayled thence along the coast continually full South, so farre as he could trauell in the space of fve dayes, where hee discovered a mighty riuer, which opened farre into the land, and in the entrie of this riuer he turned backe againe.

Whereby it appeareth that he went the very same way, that we now doe perely trade by S. Nicholas into Moscouia, which way no man in our age knew for certaintie to be by sea, vntill it was since discovered by our English men, in the time of King Edward the first: but thought before that time that Groneland had ioyned to Normoria, Byarmia, &c. and therefore was accompted a new discovery, being nothing so indeede, as by this discourse of Ochther it appeareth.

Neuerthelesse if any man should haue taken this voyage in hand by the encouragement of this onely authoz, he should haue bene thought but simple: considering that this Nauigation was wrytten so many yeres past, in so barbarous a tongue by one onely obscure authoz, and yet we in these our dayes finde by our owne experiences his former reports to be true.

How much more then ought we to beleue this passage to Cataia to bee, being verified by the opinions of all the best, both Antique, and Moderne Geographers, and plainly set out in the best and most allowed Mappes, Charts, Globes, Cosmographical tables & discourses of this our age, and by the rest not denied, but left as a matter doubtfull.

To prooue by reason, a passage to be on the Northside of America, to goe to Cataia, &c.

Chap. 3.

First, all seas are maintained by the abundance of water, so that the neerer the end any Riuer, Bay or Hauen is, the shallower it wareth, (although by some accidentall barre, it is sometime found otherwise) But the farther you sayle West from Island towards the place, where this fret is thought to be, the more deepe are the seas: which giueth vs good hope of continuance of the same Sea with Mar del Sur, by some fret that lyeth betweene America, Gronland and Cataia.

Also if that America were not an Island, but a part of y^e continent adioyning to Asia, either

113

We ought by reasons right to haue a reuerent opinion of worthy men.

A Nauigation of one Ochther made in king Alfreds time.

A perfect description of our Moscouia voyage.

23p Sir Hugh Willoughbie knight, Chanceller and Secretary.

Experimented by our English sithers.

the people which inhabite Mangia, Anian, & Quinzay, &c. being borderers vpon it, would befoze this time haue made some road into it, hoping to haue found some like comodities to their owne.

Frede makes
the old wile
to trotte.

3 Or els the Scythians and Tartarians (which often times heretofore haue sought farre and neere for new seats, driuen thereunto through the necessitie of their cold and miserable countreys) would in all this time haue found the way to America, and entred the same, had the passages bene neuer so straitte or difficult; the countrey being so temperate, pleasant and fruitfull, in comparison of their owne. But there was neuer any such people found there by any of the Spaniards, Portugals, or Frenchmen, who first discovered the Inland of that countrey: which Spaniards, or Frenchmen must then of necessitie haue seene some one ciuill man in America, considering how full of ciuill people Asia is: But they neuer saw so much as one token or signe, that euer any man of the known part of the world had bene there.

4 Furthermoze it is to be thought, that if by reason of mountaines, or other craggy places, the people neither of Cataia or Tartarie could enter the countrey of America, or they of America haue entred Asia if it were so ioyned: yet some one sauage or wandring beast would in so many yerres haue passed into it: but there hath not any time bene found any of the beasts proper to Cataia, or Tartarie &c. in America: nor of those proper to America, in Tartarie, Cataia, &c. or any part of Asia. Which thing proueth America, not onely to be one Island, and in no part adioyning to Asia: But also that the people of those Countreys, haue not had any traffique with each other.

5 Whereouer at the least some one of those painefull travellers, which of purpose haue passed the confines of both countreys, with intent only to discover, would as it is most likely haue gone from the one to the other: if there had bene any piece of land, or Isthmos, to haue ioyned them together, or els haue declared some cause to the contrary.

6 But neither Paulus Venerus, who liued and dwelt a long time in Cataia, euer came into America, and yet was at the sea coastes of Mangia, ouer against it where he was embarked, and perfourmed a great Nauigation along those seas: Neither yet Verarzanus, or Franciscus Vascques de Coronado, who trauelled the North part of America by land, euer found entry from thence by land to Cataia, or any part of Asia.

The Sea hath
three motions.
1 Motum ab ori-
ente in occiden-
tem.
2 Motum fluxus
& refluxus.
3 Motum circu-
larem.
Ad cœli motum
elementa omnia
(excepta terra)
mouentur.

7 Also it appeareth to be an Island, insomuch as the Sea runneth by nature circularly from the East to the West, following the diurnal motion of Primum Mobile, which carrieth with it all inferiour bodie mouable, as wel celestia as elemental: which motion of the waters is most euidently scene in the Sea, which lieth on the Southside of Africke, where the current that runneth from the East to the West is so strong (by reason of such motiō) that the Portugals in their voyages Eastward to Calicut, in passing by Cap. de buona Sperança are enforced to make diuers courses, the current there being so swift as it striketh from thence all along Westward vpon the fret of Magellan, being distant from thence, neere the fourth part of the longitude of the earth: and not hauing free passage and entrance thow the fret towards the West, by reason of the narrowness of the sayd Straite of Magellan, it runneth to salue this wrong (Nature not yeelding to accidentall restraints) all along the Easterne coastes of America, Northwards so far as Cape Fredo, being the farthest knowne place of the same continent towards the North: which is about 4800 leagues, reckoning therewithal the trending of the land.

8 So that this current being continually maintained with such force, as Iaques Cartier affirmeth it to be, who met with the same being at Baccalaos, as he sayles along the coastes of America, then either it must of necessitie haue way to passe from Cape Fredo, thow this fret, Westward towards Cataia, being knowen to come so farre, onely to salue his former wrongs, by the authority befoze named: or els it must needes strike ouer, vpon the coast of Island, Norway, Finmarke, and Lappia, (which are East from the sayd place about 360 leagues) with greater force then it did from Cape de buona Sperança, vpon the fret of Magellan, or from the fret of Magellan to Cape Fredo, vpon which coastes Iaques Cartier met with the same, considering the thownesse of the Tut from the sayd Cape Fredo, to Island, Lappia, &c. And so the cause Efficient remaining, it would haue continually followed along our coasts, through the narrow seas, which it doth not, but is disgessed about the North of Labrador, by some through passage there thow this fret.

Posita causa, po-
nitur effectus.

Conterenus.

The like course of the water in some respect happeneth in the Mediterrane sea (as affirmeth Conterenus) whereas the current which commeth from Tanais, & Pontus Euxinus, running along all the coastes of Greece, Italy, France, and Spaine, and not finding sufficient way out through Gibraltar, by meanes of the straitnesse of the fret it runneth backe againe along the coastes of Barbary, by Alexandria, Natolia, &c.

It may (peradventure) bee thought that this course of the sea doth sometime surcease, and thereby

thereby impugne this principle, because it is not discerned all along the coast of America, in such sort as Iaques Cartier found it: Whereunto I answered this: that albeit, in every part of the Coast of America, or elsewhere this current is not sensibly perceived, yet it hath evermore such like motion, either in the uppermost or nethermost part of the sea: as it may be proved true, if ye sink a sayle by a couple of ropes, neere the ground, fastening to the nethermost corners two gunne chambers or other weights: by the driving whereof you shall plainly perceive, the course of the water, and current, running with such course in the bottome.

By the like experiment, you may finde the ordinary motion of the sea, in the Ocean: howe farre soeuer you be off the land.

9 Also there commeth another current from out the Northeast from the Scythian Sea (as M. Ienkinson a man of rare vertue, great trauaile and experience, told me) which runneth Westward towards Labrador, as the other did, which commeth from the South: so that both these currents, must haue way thorow this our fret, or else encounter together and runne contrarie courses, in one line, but no such conflicts of streames, or contrary courses are found about any part of Labrodor, or Terra noua, as witnesse our peery fishers, and other saylers that way, but is there digested, as aforesayd, and found by experience of Barnard de la Torre, to fall into Mar del Sur.

10 Furthermore, the current in the great Ocean, could not haue bene maintained to runne continually one way, from the beginning of the world vnto this day, had there not bene some thorow passage by the fret aforesayd, and so by circular motion bee brought againe to maintaine it selfe: For the Tides and courses of the sea are maintayned by their interchangeable motions: as fresh riuers are by springs, by ebbing and flowing, by rarefaction and condensation.

So that it resteth not possible (so farre as my simple reason can comprehend) that this perpetuall current can by any meanes be maintained, but onely by continuall reaccess of the same water, which passeth thorow the fret, and is brought about thither againe, by such circular motion as aforesayd. And the certaine falling thereof by this fret into Mar del Sur is prooued by the testimonie and experience, of Bernard de la Torre, who was sent from P. de la Nariuidad to the Moluccæ, Anno domini 1542. by commandement of Anthony Mendoza, then Viceroy of Noua Hispania, which Bernard sayled 750. Leagues, on the Northside of the Aequator, and there met with a current, which came from the Northeast the which brought him backe againe to Tidore.

Wherefore, this current being prooued to come from C. de buona Sperança to the fret of Magellan, and wanting sufficient entrance there, by narrownes of the straire, is by the necessity of natures force, brought to Terra de Labrador, where Iaques Cartier met the same, and thence certainly knowen, not to strike ouer vpon Island, Lappia, &c. and found by Bernard de la Torre in Mar del Sur, on the backside of America: therefore this current (hauing none other passage) must of necessity, fall out thorow this our fret into Mar del Sur, and so trending by the Moluccæ, China, and C. de buona Sperança, maintaineth it selfe by circular motion, which is all one in nature, with Motus ab Oriente in Occidentem.

So that it seemeth, we haue now more occasion to doubt of our returne, then whether there be a passage that way, yea or no: which doubt, hereafter shall be sufficiently remooued. Wherefore, in mine opinion, reason it self, grounded vpon experience, assureth vs of this passage, if there were nothing els to put vs in hope thereof. But least these might not suffice, I haue added in this chapter following, some further prooue hereof, by the experience of such as haue passed some part of this discouerie: and in the next adioining to that the authority of those, which haue sailed wholly, thorow euery part thereof.

To proue by experience of sundry mens trauels, the opening of some part of this Northwest passage: whereby good hope remaineth of the rest.

Chap. 3.

Paulus Venetus, who dwelt many yeres in Caraija, affirmed that hee sayled 1500 miles vpon the coastes of Mangia, and Anian, towards the Northeast: alwayes finding the Seas open before him, not onely as farre as he went, but also as farre as he could discerne.

2 Also Franciscus Vasques de Coronado passing from Mexico by Ceuola, through the countrey of Quinira, to Siera Neuada, found there a great sea, where were certaine ships laden

An objection answered. The sea both euermore perceiue this circular motion, either in Suprema, or Concaua superficie aquæ.

The pee set westward enen as peere from Island. Auth. Iona Aingrimo.

The flowing is occasioned by reason that the heate of the moone boyleth, and maketh the water thinn by way of rarefaction. An experience to proue the falling of this current into Mar del Sur.

Alcatrazzi be
Pellicanes.

Baroslib's. Of
his first De-
cas cap. 1.

with Merchandise, carrying on their prowes the pictures of certaine birds called Alcatrazzi, part whereof were made of golde, and part of siluer, who signified by signes, that they were thirty dayes comming thither: which likewise proueth America by experience to be disioyned from Cataia, on that part by a great Sea, because they could not come from any part of America, as Natiues thereof: for that, so farre as is discovered, there hath not bene found there any one Shippe of that countrey.

3 In like maner, Iohn Baros testifieth that the Cosmographers of China (where he himselfe had bene) affirme that the Sea coast trendeth from thence Northeast, to 50 degrees of Septentrional latitude, being the furthest part that way which the Portugals had then knowledge of: And that the said Cosmographers knew no cause to the contrary, but that it might continue further.

By whose experiences America is proued to be separate from those parts of Asia, directly against the same. And not contented with the iudgements of these learned men only, I haue searched what might be further sayd for the confirmation hereof.

4 And I found that Franciscus Lopez de Gomara affirmeth America to be an Island, and likewise Gronland: and that Gronland is distant from Lappia 40 leagues, and from Terra de Labrador, 50.

5 Moreover, Aluarus Nunnius a Spaniard, and learned Cosmographer, and Iacobus Cartier, who made two voyages into those parts, and sayled 900 miles vpon the Northeast coastes of America doe in part confirme the same.

6 Likewise Hieronymus Fracastorius, a learned Italian, and trauailer in the North parts of the same land.

7 Also Iaques Cartier hauing done the like, heard say at Hochelaga in Noua Francia, how that there was a great Sea at Saguinay, whereof the end was not knowen: which they presupposed to be the passage to Cataia.

Written in the
discourses of
Nauigation.

Furthermore, Sebastian Cabota by his personal experience and trauel hath set forth, and described this passage in his Charts, which are yet to be seene in the Queens Maiesties priuie Gallerie at Whitehall, who was sent to make this discovery by king Henrie the seventh, and entered the same fret: affirming that he sayled very farre Westward, with a quarter of the North, on the Northside of Terra de Labrador the eleuenth of Iune, untill he came to the Septentrional latitude of 67 degrees and a halfe, and finding the Seas still open, sayd, that he might, & would haue gone to Cataia, if the mutinie of the Master and Mariners had not bene.

Now as these mens experience hath proued some part of this passage: so the chapter following shal put you in full assurance of the rest, by their experiences which haue passed through euery part thereof.

To prooue by circumstance that the Northwest passage hath bene sayled throughout.

Chap. 4.

Quinque sensus.

1. Visus.
2. Auditus.
3. Olfactus.
4. Gustus.
5. Tactus.

Singularia sensu
vniuersalia vero
mente percipiuntur.

The diuersitie betweene brute beastes and men, or betweene the wise and the simple is, that the one iudgeth by sense onely, and gathereth no surety of any thing that he hath not seene, felt, heard, tasted, or smelled: And the other not so onely, but also findeth the certaintie of things by reason, before they happen to be tryed. Wherefore I haue added proofes of both sorts, that the one and the other might thereby be satisfied.

1 First, as Gemma Frisius reciterh, there went from Europe three brethren through this passage: whereof it tooke the name of Frerum trium fratrum.

2 Also Plinie affirmeth out of Cornelius Nepos, (who wrote 57 yeeres before Christ) that there were certaine Indians driuen by tempest, vpon the coast of Germanie which were presented by the king of Sueuia, vnto Quintus Metellus Celer, the Proconsull of France.

3 And Plinie vpon the same sayth, that it is no maruell though there be Sea by the North, where there is such abundance of moisture: which argueth that hee doubted not of a nauigable passage that way, through which those Indians came.

4 And for the better prooue that the same authoritie of Cornelius Nepos is not by me wrested, to proue my opinion of the Northwest passage: you shall finde the same affirmed more plainly in that behalfe, by the excellent Geographer Dominicus Marius Niger, who sheweth how many wayes the Indian sea stretcheth it selfe, making in that place recital of certaine Indians, that were likewise driuen through the North Seas from India, vpon the coastes of Germany, by great

Lib. 2. cap. 66.

Page 590.

great tempest, as they were sayling in trade of marchandize.

5 Also while Frederic Barbarossa reigned Emperour, Anno Do. 1160, there came certaine other Indians vpon the coast of Germanie.

6 Likewise Orhon in the storie of the Gothes affirmeth, that in the time of the Germane Emperours, there were also certaine Indians cast by force of weather, vpon the coast of the sayd countrey, which foresaid Indians could not possibly haue come by the Southeast, Southwest, nor from any part of Afrike or America, nor yet by the Northeast: therefore they came of necessitie by this our Northwest passage.

Quouched by
Franciscus Lopes
de Gomara in
his historie of
India, lib. 1.
cap. 10.

To prooue that these Indians asorenamed came not by the Southeast, Southwest, nor from any other part of Afrike, or America.

Cap. 5.

First, they could not come from the Southeast by the Cape de bona Speranga, because the roughnes of the Seas there is such (occasioned by the currents and great winds in that part) that the greatest Armadas the king of Portugal hath, cannot without great difficulty passe that way, much lesse then a Canoa of India could liue in those outrageous seas without shipwacke (being a vessell of very small burden) and haue conducted themselues to the place aforesayd, being men vnerpert in the Arte of nauigation.

2 Also, it appeareth plainly that they were not able to come from alongst the coast of Afrike aforesayd, to those parts of Europe, because the winds doe (for the most part) blow there Easterly off from the shore, and the current running that way in like sort, should haue driuen them Westward vpon some part of America: for such winds and tides could neuer haue led them from thence to the said place where they were found, nor yet could they haue come from any of the countries aforesayd, keeping the seas allwayes, without skilful mariners to haue conducted them such like courses as were necessary to perforce such a voyage.

3 Presupposing also, if they had bene driuen to the West (as they must haue bene, comming that way) then they should haue perished, wanting supplie of victuals, not hauing any place (once leauing the coast of Afrike) untill they came to America, nor from America untill they arrived vpon some part of Europe, or the Islands adioynning to it, to haue refreshed themselves.

4 Also, if (notwithstanding such impossibilities) they might haue recovered Germanie by comming from India by the Southeast, yet must they without all doubt haue striken vpon some other part of Europe before their arriual there, as the Isles of the Acores, Portugal, Spaine, France, England, Ireland, &c. which if they had done, it is not credible that they should or would haue departed vndiscovered of the inhabitants: but there was neuer found in those dayes any such ship or men but only vpon the coasts of Germanie, where they haue bene sundry times and in sundry ages cast aland: neither is it like that they would haue committed themselves againe to sea, if they had so arriued, not knowing where they were, nor whither to haue gone.

5 And by the Southwest it is vnpossible, because the current aforesayd which cometh from the East, striketh with such force vpon the fret of Magellan, and falleth with such swiftnesse and furie into Mar del Zur, that hardly any ship (but not possibly a Canoa, with such unskillfull mariners) can come into our Western Ocean through that fret, from the West seas of America, as Magellans experience hath partly taught vs.

This streame
son by later ex-
perience is pro-
ued utterly un-
true.

6 And further, to prooue that these people so arriuing vpon the coast of Germany, were Indians, & not inhabitants of any part either of Africa or America, it is manifest, because the natives both of Africa and America neither had, or haue at this day (as is reported) other kind of boates then such as do beare neither mastes nor sailes, (except onely vpon the coasts of Barbarie and the Turkes ships) but do carie themselves from place to place neere the shore by the oze onely.

That the In-
dians could
not be natives
either of Africa,
or of America.

To prooue that those Indians came not by the Northeast, and that there is no thorow nauigable passage that way.

Cap. 6.

It is likely that there should be no thorow passage by the Northeast, whereby to goe round about the world, because all Seas (as aforesayd) are maintained by the abundance of water, waring more shallow and shellie towards the ende, as we find it doeth by experience in Mare Glaciali, towards the East, which breedeth small hope of any great continuance of that sea, to be nauigable towards the East, sufficient to saile thereby round about the world.

rali loco priua-
tur, quam citissi-
me corrumpitur.

Qualis causa ta-
lis effectus.

Similium similis
est ratio.

Quicquid cor-
rumpitur à con-
trario corrumpi-
tur.

Omne simile
gignit sui simile.

2 Also, it standeth scarcely with reason, that the Indians dwelling vnder Torrida Zona, could endure the iniurie of the cold ayre, about the Septentrional latitude of 80. degrees, vnder which eleuation the passage by the Northeast cannot bee (as the often experience had of all the South parts of it sheweth) seeing that some of the inhabitants of this cold climate (whose Summer is to them an extreme Winter) haue bene stroken to death with the cold dampes of the aire about 72 degrees, by an accidental mishap, and yet the aire in such like Eleuation is alwaies cold, and too cold for such as the Indians are.

3 Furthermore, the piercing cold of the grosse thicke aire so neere the Pole wil so stiffen and furre the sailes and ship tackling, that no mariner can either hoist or strike them (as our experience farre neerer the South, then this passage is presupposed to be, hath taught vs) without the vse whereof no voyage can be performed.

4 Also, the aire is so darkened with continuall mists and fogs so neere the Pole, that no man can well see, either to guide his ship, or direct his course.

5 Also the compasse at such eleuation doth very suddenly vary, which things must of force haue bene their destructions, although they had bene men of much more skill then the Indians are.

6 Moreover, all baires, gulfes, and riuers doe receiue their increase vpon the flood, sensibly to be discerned on the one side of the shore or the other, as many waies as they be open to any maine sea, as Mare Mediterraneum, Mare Rubrum, Sinus Persicus, Sinus Bodicus, Thamesis, and all other known hauens or riuers in any part of the world, and each of them opening but on one part to the maine sea, doe likewise receiue their increase vpon the flood the same way, and none other, which Mare Glaciale doeth, onely by the West; as M. Ienkinson affirmed vnto me: and therefore it followeth that this Northeast sea, receiuing increase but onely from the West, cannot possibly open to the maine Ocean by the East.

7 Moreover, the farther you passe into any sea towards the end of it, on that part which is shut by from the maine sea (as in all those aboue mentioned) the lesse and lesse the tides rise and fall. The like whereof also happeneth in Mare Glaciale, which prometh but small continuance of that Sea toward the East.

8 Also, the further yee goe toward the East in Mare Glaciale, the lesse salt the water is: which could not happen, if it were open to the salt Sea towards the East, as it is to the West onely, seeing Every thing naturally ingendreth his like: and then must it be like salt throughout, as all the seas are, in such like climate and eleuation.

And therefore it seemeth that this Northeast sea is maintained by the riuers Ob, and such like freshets, as Mare Goticum, and Mare Mediterraneum, in the vppermost parts thereof by the riuers Nilus, Danubius Neper, Tanais, &c.

9 Furthermore, if there were any such sea at that eleuation, of like it should be alwaies frozen throughout (there being no tides to hinder it) because the extreme colones of the aire being in the vppermost part, and the extreme colonesse of the earth in the bottome, the seathere being but of small depth, where by the one accidentall colonesse doth meet with the other, and the Sunne not hauing his reflection so neere the Pole, but at very blunt angles, it can neuer be dissolued after it is frozen, notwithstanding the great length of their day: for that the sunne hath no heate at all in his light or beames, but proceeding onely by an accidentall reflection, which there wanteth in effect.

10 And yet if the Sunne were of sufficient force in that eleuation, to preuaile against this ice, yet must it be broken before it can be dissolued, which cannot be but through the long continuance of the sunne aboue their Horizon, and by that time the Sommer would be so farre spent, and so great darkenes and cold ensue, that no man could be able to endure so cold, darke, and discomfortable a navigation, if it were possible for him then, and there to liue.

11 Further, the ice being once broken, it must of force so dyne with the windes and tides, that no ship can saile in those seas, seeing our Fishers of Island, and the New found land, are subiect to danger through the great Illands of Ice which fleete in the Seas (to the sailers great danger) farre to the South of that presupposed passage.

12 And it cannot be that this Northeast passage should be any neerer the South, then before recited, for then it should cut off Ciremissi, & Turbi Tartari, with Vzesucani, Chisani, and others from the Continent of Asia, which are known to be adioyning to Scythia, Tartaria, &c. with the other part of the same Continent.

And if there were any thorowe passage by the Northeast, yet were it to small ende and purpose for our traffique, because no shippe of great burden can navigate in so shallow a Sea:

and

and ships of small burden are very vnfit & vnproffitabie, especially towards the blustering North, to perforce such a voyage.

To proue that the Indians aforementioned, came only by the Northwest, which induceth a certaintie of our passage by experience.

Cap. 7.

It is as likely that they came by the Northwest, as it is unlikely that they should come either by the Southeast, Southwest, Northeast, or from any other part of Africa or America, and therefore this Northwest passage hauing bene already so many wayes proued, by disproouing of the others, &c. I shall the lesse neede in this place, to vse many wordes otherwise then to conclude in this sort, That they came onely by the Northwest from England, hauing these many reasons to leade me thereunto.

1 First, the one halfe of the windes of the compasse might bring them by the Northwest, bearing alwayes betweene two sheats, with which kind of sayling the Indians are onely acquainted, not hauing any vse of a bow line, or quarter winde, without the which no ship can possibly come either by the Southeast, Southwest or Northeast, hauing so many sundry Capes to double, whereunto are required such change and shift of windes.

2 And it seemeth likely that they should come by the Northwest, because the coast whereon they were driuen, lay East from this our passage, And all windes doe naturally driue a ship to an opposite point from whence it bloweth, not being otherwise guided by Arte, which the Indians do utterly want, & therefore it seemeth that they came directly through this our fret, which they might doe with one wind.

True, both in ventis oblique flantibus, as also in ventis ex diametro spirantibus.

3 For if they had come by the Cape de buona Sperança, then must they (as aforesaid) haue fallen vpon the South parts of America.

4 And if by the fret of Magellan, then vpon the coasts of Afrike, Spaine, Portugall, France, Ireland or England.

5 And if by the Northeast, then vpon the coasts of Ceremissi, Tartarij, Lappia, Island, Terra de Labrador, &c. and vpon these coasts (as aforesaid) they haue neuer bene found.

So that by all likelihood they could neuer haue come without shipwracke vpon the coastes of Germanie, if they had first striken vpon the coastes of so many countries, wanting both Arte and shipping to make orderly discouery, and altogether ignorant both in the Arte of Nauigation, and also of the Rockes, f lats, Sands or Hauens of those parts of the world, which in most of these places are plentifull.

6 And further it seemeth very likely, that the inhabitants of the most part of those countries, by which they must haue come any other way besides by the Northwest, being for the most part Anthropophagi, or men eaters, would haue deuoured them, slaine them, or (at the least wise) kept them as wonders for the gaze.

So that it plainly appeareth that those Indians (which as you haue heard in sundry ages were driuen by tempest vpon the shore of Germanie) came onely through our Northwest passage.

7 Moreouer, the passage is certainly proued by a Nauigation that a Portugall made, who passed through this fret, giuing name to a Promontorie farre within the same, calling it after his owne name, Promontorium Corterialis, neere adioynning vnto Polisacus fluius.

8 Also one Scolmus a Dane entred and passed a great part thereof.

9 Also there was one Saluaterra, a Gentleman of Victoria in Spaine, that came by chance out of the West Indias into Ireland, Anno 1568. who affirmed the Northwest passage from vs to Cataia, constantly to be beleued in America nauigable. And further said in the presence of Sir Henry Sidney (then lord Deputie of Ireland) in my hearing, that a Frier of Mexico, called Andrew Vrdaneta, more then eight yeeres before his then comming into Ireland, told him there, that he came from Mar del Sur into Germany through this Northwest passage, & shewed Saluaterra (at that time being then with him in Mexico) a Sea Card made by his owne experience and trauell in that voyage, wherein was plainly set downe and described this Northwest passage, agreeing in all points with Ortelius mappe.

And further, this Frier tolde the king of Portugall (as he returned by that countrey homeward) that there was (of certaintie) such a passage Northwest from England, and that he meant to publish the same: which done, the king most earnestly desired him not in any wise to disclose or make the passage knowne to any nation: For that (said the king) if England had knowledge and

a Frier, touch-
ing the concea-
ling of this
Northwest
passage from
England to Ca-
taia.
An objection.

Aristotle lib. de
mundo, cap. 2.
Berofus lib. 5.

and experience thereof, it would greatly hinder both the king of Spaine and me. This Frier (as Saluaterre reported) was the greatest Discoverer by sea, that hath bene in our age. Also Saluaterre being perswaded of this passage by the frier Vrdaneta, and by the common opinion of the Spaniards inhabiting America, offered most willingly to accompanie me in this Discovery, which of like he would not haue done if he had stood in doubt thereof.

And now as these moderne experiences cannot be impugned, so, least it might be objected that these things (gathered out of ancient writers, which wrote so many yeeres past) might serue little to prooue this passage by the North of America, because both America and India were to them then utterly unknown: to remooue this doubt, let this suffice: That Aristotle (who was 300. yeeres before Christ) named Mare Indicum. Also Berofus (who liued 330 yeeres before Christ) hath these words, Ganges in India. Also in the first chapter of Hester be these words, In the dayes of Assuerus which ruled from India to Aethiopia, which Assuerus liued 580 yeeres before Christ. Also Quintus Curtius (where he speaketh of the conquests of Alexander) mentioneth India. Also, Arianus, Philostratus, and Sidrach in his discourses of the warres of the king of Bactria, and of Garaab, who had the most part of India vnder his gouernment. All which assureth vs, that both India and Indians were known in those dayes.

These things considered, we may (in my opinion) not only assure our selues of this passage by the Northwest, but also that it is nauigable both to come and go, as hath bene prooued in part and in all, by the experience of diuers, as Sebastian Cabora, Corterialis, the three brethren aboue named, the Indians, and Vrdaneta the Frier of Mexico, &c.

And yet notwithstanding all this, there be some that haue a better hope of this passage to Cataia by the Northeast then by the West, whose reasons with my seuerall answers ensue in the chapter following.

Certaine reasons alleaged for the proouing of a passage by the Northeast, before the Queenes Maiestie, and certaine Lords of the Counsell, by Master *Anthony Jenkinson*, with my seuerall answers then vsed to the same.

Cap. 8.

BEcause you may vnderstand as well those things alleaged against me, as what doth serue for my purpose, I haue here added the reasons of Master Anthony Jenkinson a worthy gentleman, and a great traoueller, who conceived a better hope of the passage to Cataia from vs, to be by the Northeast, then by the Northwest.

He first said that he thought not to the contrary, but that there was a passage by the Northwest, according to mine opinion: but assured he was, that there might be found a nauigable passage by the Northeast from England, to goe to all the East parts of the world, which he endeououred to prooue three wayes.

The first was that he heard a Fisherman of Tartaria say in hunting the Morce, that he sayled very farre to wards the Southeast, finding no end of the Sea: whereby he hoped a thorow passage to be that way.

Whereunto I answered, that the Tartarians were a barbarous people, and utterly ignorant in the Arte of Nauigation, not knowing the vse of the Sea Card, Compasse or Starre, which he confessed to be true: and therefore they could not (said I) certainly know the Southeast from the Northeast, in a wide sea, and a place vnknown from the sight of the land.

Or if he sailed any thing neere the Shore, yet he (being ignorant) might be deceiued by the doubling of many points and Capes, and by the trending of the land, albeit he kept continually alongst the shore.

And further, it might be that the poore Fisherman through simplicitie thought that there was nothing that way but sea, because he saw no land: which prooue (vnder correction) giueth small assurance of a nauigable sea by the Northeast, to goe round about the world, For that he iudged by the eye onely, seeing we in this our cleare aire doe account twentie miles a ken at Sea.

His second reason is, that there was an Unicorne's horne found vpon the coast of Tartaria, which could not come (said he) thither by any other meanes then with the tides, through some fret in the Northeast of Mare Glaciale, there being no Unicorne in any part of Asia, sauing in India and Cataia: which reason (in my simple iudgement) forceth as little.

First, it is doubtfull whether those barbarous Tartarians do know an Unicorne's horne, yea, or no: and if it were one, yet it is not credible that the Sea could haue driuen it so farre, being of such nature that it will not swimme.

gation.

The answer of
resolution.

Also the tides running too and fro, would haue driuen it as farre backe with the ebbe, as it brought it forward with the flood.

There is also a beast called *Afinus Indicus* (whose horne most like it was) which hath but one horne like an *Unicozne* in his forehead, whereof there is great plenty in all the North parts thereof vnto adioynning, as in Lappia, Noruegia, Finmarke, &c. as *Iacobus Zieglerus* writeth in his historie of *Scondia*.

And as *Albertus* saith, there is a fish which hath but one horne in his forehead like to an *Unicozne*, and therefore it seemeth very doubtfull both from whence it came, and whether it were an *Unicoznes* horne, yea, or no.

His third and last reason was, that there came a continuall streame or current through *Mare Glaciale*, of such swiftnesse (as a *Colmax* told him) that if you cast any thing therein, it would presently be carried out of sight towards the West. The third and last reason of assertion.

Whereunto I answered, that there doth the like from *Mæotis Palus*, by *Pontus Euxinus*, *Sinus Bosphorus*, and along the coast of *Græcia*, &c. As it is affirmed by *Contarenius*, and diuers others that haue had experience of the same: and yet that Sea lieth not open to any maine Sea that way, but is maintained by freshets as by *Tanais*, *Danubius*, &c. The answer of resolution.

In like manner is this current in *Mare Glaciale* increased and maintained by the *Dwina*, the riuer *Ob*, &c.

Now as I haue here briefly recited the reasons alleaged, to prooue a passage to *Caraia* by the Northeast, with my seuerall answers thereunto: so will I leaue it to your iudgement, to hope or despair of either at your pleasure.

How that the passage by the Northwest is more commodious for our traffique, then the other by the East, if there were any such.

Cap. 9.

First, by the Northeast (if your windes doe not giue you a maruelous speedie & luckie passage) you are in danger (being so neere the Pole) to be benighted almost the one halfe of the yeere, and what danger that were, to liue so long comfortlesse, void of light, (if the cold killed you not) each man of reason or vnderstanding may iudge.

2 Also *Mangia*, *Quinzai*, and the *Moluccæ* are neerer vnto vs by the Northwest, then by the Northeast, more then two fūe parts, which is almost by the halfe. Some doubt of this.

3 Also we may haue by the West a yerely returne, it being at all times nauigable, whereas you haue but 4. moneths in the whole yeere to goe by the Northeast: the passage being at such eleuation as it is formerly exprested, for it cannot be any neerer the South.

4 Furthermore, it cannot be finished without diuers winterings by the way, hauing no hauens in any temperate climate to harbour in there: for it is as much as we can well saile from hence to *S. Nicholas*, in the trade of *Moscovia*, and returne in the nauigable season of the yeere, & from *S. Nicholas* to *Cerimissi Tartari*, which stande at 80 degrees of the Septentrionall latitude, it is at the least 400 leagues, which amounteth scarce to the third part of the way, to the end of your voyage by the Northeast.

5 And yet after you haue doubled this Cape, if then there might be found a nauigable Sea to carie you Southeast according to your desire, yet can you not winter conveniently, vntil you come to 60 degrees, and to take vp one degree running Southeast, you must saile 24 leagues and three foure parts, which amounteth to 495 leagues.

6 Furthermore, you may by the Northwest saile thither with all Easterly windes, and returne with any Westerly windes, whereas you must haue by the Northeast sundry windes, and those proper, according to the lying of the coast and Capes, you shalbe enforced to double, which windes are not alwaies to be had, when they are looked for: wherby your iourney should be greatly prolonged, and hardly endured so neere the Pole. As we are taught by *Sir Hugh Willoughbie*, who was frozen to death farre neerer the South.

7 Moreover, it is very doubtfull, whether we should long inioy that trade by the Northeast, if there were any such passage that way, the commodities thereof once knowne to the *Dolcouire*, what priuilege soeuer hee hath granted, seeing pollicy with the masse of excessiue gaine, to the enriching (so greatly) of himselfe and all his dominions would perswade him to presume the same, hauing so great opportunitie to better the commodities of those countries by the Narue.

But by the Northwest, we may safely trade without danger or annoyance of any prince liuing, Christian or Heathen, it being out of all their trades.

8 Also the Queenes Maiesties dominions are neerer the Northwest passage then any other great princes that might passe that way, and both in their going and returne, they must of necessity succour themselves and their ships vpon some part of the same, if any tempestuous weather should happen.

Further, no princes naue of the world is able to encounter the Queenes Maiesties naue, as it is at this present: and yet it should be greatly increased by the traffike insuing vpon this discouerie, for it is the long voyages that increase and maintaine great shipping.

Now it seemeth necessarie to declare what commodities would growe thereby, if all these things were, as we haue heretofore presupposed, and thought them to be: which next adioynning are briefly declared.

What commodities would ensue, this passage once discovered.

Cap. 10.

First, it were the onely way for our princes, to possesse the wealth of all the East parts (as they terme them) of the world, which is infinite: as appeareth by the experience of Alexander the great, in the time of his conquest of India, and other the East parts of the world, alleaged by Quintus Curtius, which would be a great aduancement to our countrey, a wonderfull enriching to our prince, and an unspeakable commoditie to all the inhabitants of Europe.

2 For through the shortnesse of the voyage, we should be able to sell all maner of merchandize, brought from thence, farre better cheape then either the Portugall or Spaniard doth or may do. And further, we should share with the Portugall in the East, & the Spaniard in the West, by trading to any part of America, chozow Mar del Sur, where they can no maner of way offend vs.

3 Also we might sayle to diuers very rich countreys, both ciuill and others, out of both their iurisdictions, trades and traffikes, where there is to be found great abundance of golde, silver, precious stones, cloth of gold, silkes, all maner of spices, grocery wares, and other kinds of merchandize of an inestimable price, which both the Spaniard and Portugall, through the length of their iournies, cannot well attaine vnto.

4 Also we might inhabite some part of those countreys, and settle there such needy people of our countrey, which now trouble the common wealth, and through want here at home are enforced to commit outrageous offences, whereby they are dayly consumed with the gallowses.

5 Moreover, we might from all the aforesaid places haue a yeerely returne, inhabiting for our staple some conuenient place of America, about Sierra Neuada, or some other part, wheras it shal seeme best for the shortning of the voyage.

6 Beside uttering of our countrey commodities, which the Indians, &c. much esteeme: as appeareth in Hester, where the pompe is expressed of the great king of India, Assuerus, who matched the coloured clothes, wherewith his houses and tents were apparelled, with gold and silver, as part of his greatest treasure: not mentioning either beluets, silkes, cloth of gold, cloth of silver, or such like, being in those countreys most plentiful: whereby it plainly appeareth in what great estimation they would haue the clothes of this our countrey, so that there would be found a farre better vent for them by this meanes, then yet this realme euer had: and that without depending either vpon France, Spaine, Flanders, Portugall, Hamborow, Emden, or any other part of Europe.

7 Also, here we shall increase both our ships and mariners, without burthening of the state.

8 And also haue occasion to set poore mens children to learne handie craftes, and thereby to make trifles and such like, which the Indians and those people do much esteeme: by reason whereof, there should be none occasion to haue our countrey cumbered with loiterers, vagabonds, and such like idle persons.

All these commodities would grow by following this our discouery, without iniury done to any Christian prince, by crossing them in any of their vsed trades, whereby they might take any iust occasion of offence.

Thus haue I briefly shewed you some part of the grounds of mine opinion, trusting that you will no longer iudge me fantastike in this matter: seeing I haue conceiued no vaine hope of this voyage, but am perswaded thereunto by the best Cosmographers of our age, the same being confirmed both by reason and certaine experiences.

Also this discouery hath bene diuers times heretofore by others both offered, attempted, and performed.

It hath bene offered by Stephan Gomes vnto Carolus the first Emperour, in the yeere of our Lord

Lord God 1527, as Alphonso Villua testifieth in the story of Carolus life: who would haue set him forth in it (as the story mentioneth) if the great want of money, by reason of his long warres had not caused him to surcease the same.

And the king of Portugall fearing least the Emperour would haue perseuered in this his enterprise, gaue him to leaue the matter vnattempted, the summe of 350000 crownes: and it is to be thought that the king of Portugall would not haue giuen to the Emperour such summes of money for egges in mooneshine.

This discouery offered.

It hath bene attempted by Sebastian Cabora in the time of king Henry the seventh, by Cornelius the Portugall, and Scolmus the Dane.

This discouery attempted.

And it hath bene performed by three brethren, the Indians aforesaid, and by Vrdaneta the Frier of Mexico.

This discouery performed.

Also diuers haue offered the like vnto the French king, who hath sent two or three times to haue discovered the same: The discoverers spending and consuming their victuals in searching the gulfs and bayes betweene Florida and Terra de Labrador, where by the yce is broken to the after commers.

So that the right way may now easily be found out in short time: and that with little ieperdie and lesse expences.

For America is discovered so farre towarde the North as Cape Frio, which is at 62 degrees, and that part of Grondland next adioynning is known to stand but at 72 degrees. So that wee haue but 10 degrees to saile North & South, to put the world out of doubt hereof: and it is likely that the king of Spaine, and the king of Portugall would not haue sit out all this while, but that they are sure to possesse to themselves all that trade they now vse, and feare to deale in this discovery, least the Queenes Maiestie hauing so good opportunitie, and finding the commoditie which thereby might ensue to the common wealch, would cut them off, and enioy the whole traffique to her selfe, and thereby the Spaniards and Portugals, with their great charges, should beate the bush, and other men catch the birds: which thing they foreseeing, haue commanded that no pilot of theirs vpon paine of death, should seeke to discover to the Northwest, or plat out in any Sea card any thozow passage that way by the Northwest.

The labour of this discouery shortned by other mens trauell.

Why the kings of Spaine and Portugal would not perseuer in this discouery.

Now, and if you will indifferently compare the hope that remaineth, to animate me to this enterprise, with those likelihoods which Columbus alleaged befoze Ferdinando the king of Castilia, to proue that there were such Islands in the West Ocean, as were after by him and others discovered to the great commodity of Spaine and all the world: you will thinke then this Northwest passage to be most worthy trauell therein.

For Columbus had none of the West Islands set forth vnto him, either in globe or card, neither yet once mentioned of any writer (Plato excepted, and the commentaries vpon the same) from 942 yeeres befoze Christ, vntill that day.

Moreouer, Columbus himselfe had neither seene America nor any other of the Islands about it, neither vnderstood he of them by the report of any other that had seene them, but only comforted himselfe with this hope, that the land had a beginning where the Sea had an ending: for as touching that which the Spaniards doe write of a Biscaine, which should haue taught him the way thither, it is thought to be imagined of them, to depprue Columbus of his honour, being none of their countrey man, but a stranger boyne.

And if it were true of the Biscaine, yet did he but roue at the matter, or (at the least) gathered the knowledge of it, by coniectures onely.

And albeit my selfe haue not seene this passage or any part thereof, but am ignorant of it as touching experience (as Columbus was befoze his attempt made) yet haue I both the report, relation, and authoritie of diuers most credible men, which haue both seene and passed through some and euery part of this discovery, besides sundry reasons for my assurance thereof: all which Columbus wanted.

These things considered, & indifferently weighed together, with the wonderfull commodities which this discovery may bring, especially to this realme of England: I must needs conclude with learned Baptista Ramusius, and diuers other learned men, who said, that this discovery hath bene referred for some noble prince or woorthie man, thereby to make himselfe rich, and the world happier: desiring you to accept in good part this brieft and simple discourse, written in haste, which if I may perceiue that it shall not sufficiently satisfie you in this behalfe, I will then impart vnto you a large discourse, which I haue written onely of this discovery.

And further, because it sufficeth not only to know that such a thing there is, without abilitie to performe the same, I wil at leasure make you partaker of another simple discourse of navigation, wherein

wherein I haue not a litle trauelled, to make my selfe as sufficient to bying these things to effect, as I haue bene readie to offer my selfe therein.

And therein I haue deuised to amend the erroz of vsuall sea cards, whose common fault is, to make the degrees of longitude in euery latitude of one like bignesse.

And haue also deuised therein a Spherical instrument, with a compasse of variation for the perfect knowing of the longitude.

And a precise order to picke the sea card, together with certaine infallible rules for the shortning of any discovery, to know at the first entring of any fret, whether it lie open to the Ocean more wayes then one, how farre soeuer the sea stretcheth it selfe into the land.

Desiring you hereafter neuer to mislike with me, for the taking in hande of any laudable and honest enterpryse: for if through pleasure or idlenesse we purchase shame, the pleasure vanissheth, but the shame remaineth for euer.

Pereas qui vmbra
bras times.

And therefore to giue me leaue without offence, alwayes to liue and die in this mind, That he is not worthy to liue at all, that for feare, or danger of death, shunneth his countreys seruice, and his owne honour: seeing death is ineuitable, and the fame of vertue immortall. Wherefore in this behalfe, *Mutare vel timere sperno.*

Certaine other reasons, or arguments to prooue a passage by the Northwest, learnedly written by M. Richard Willes Gentleman.

Foure famous wayes there be spoken of to those fruitfull and wealthie Islands, which wee doe vsuallly call Moluccaes, continually haunted for gaine, and dayly trauelled for riches therein growing. These Islands, although they stand East from the Meridian, distant almost halfe the length of the worlde, in extreame heate, vnder the Equinoctiall line, possessed of Infidels and Barbarians: yet by our neighbours great abundance of wealth there is painefully sought in respect of the voyage deerebought, and from thence dangerously brought home vnto vs. Our neighbours I call the Portugals in comparison of the Moluccians for neerenesse vnto vs, for like situation Westward as we haue, for their vsuall trade with vs, for that the farre Southeasterlings doe knowe this part of Europe by no other name then Portugall, not greatly acquainted as yet with the other Nations thereof. Their voyage is very well understood of all men, and the Southeasterne way round about Afrike by the Cape of Good hope more spoken of, better knowne and trauelled, then that it may seeme needfull to discourse thereof any further.

1 By the
Southeast.

2 By the
Southwest.

This is an
error.

3 By the
Northeast.

Ortel. tab.
Asia, 3.

4 By the
Northeast.

Ob. 1.

The second way lyeth Southwest, betweene the West India or South America, and the South continent, through that narrow straight where Magellan first of all men that euer we doe read of, passed these latter peeres, leauing thereunto therefore his name. This way no doubt the Spaniards would commodiously take, for that it lyeth neere vnto their dominions there, could the Easterne currente and lettant windes as easily suffer them to returne, as speedily therewith they may be carried thither: for the which difficultie, or rather impossibility of striuing against the force both of winde and streame, this passage is litle or nothing vled, although it be very well knowne.

The third way by the Northeast, beyond all Europe and Asia, that worthy and renowned knight sir Hugh Willoughbie sought to his perill, enforced there to ende his life for colde, congealed and frozen to death. And truly this way consisteth rather in the imagination of Geographers, then allowable either in reason, or approued by experience, as well it may appeare by the dangerous trending of the Scythish Cape set by Ortelius vnder the 80 degree North, by the unlikely sailing in that Northerne sea alwayes clad with yce and snow, or at the least continually pestered therewith, if happily it be at any time dissolved: besides bayes and shelves, the water waring more shallow toward the East, that we say nothing of the foule mists and darke fogs in the cold climate, of the litle power of the Sunne to cleare the aire, of the uncomfortable nights, so neere the Pole, five moneths long.

A fourth way to go vnto these aforesaid happy Islands Moluccae sir Humfrey Gilbert a learned and valiant knight discourseth of at large in his new passage to Cathayo. The enterpryse of it selfe being vertuous, the fact must doubtlesse deserue high praise, and whensoever it shall be finished, the fruits thereof cannot be smal: where vertue is guide, there is fame a follower, & fortune a companion. But the way is dangerous, the passage doubtfull, the voyage not thoroughly knowne, and therefore gaine said by many, after this manner.

First, who can assure vs of any passage rather by the Northwest then by the Northeast: doe not

not both wayes lye in equall distance from the North Pole: Stand not the North Capes of eyther continent vnder like eleuation: Is not the Ocean sea beyond America farther distant from our Peridian by 30, or 40, degrees West, then the extreme popntes of Cathayo Eastward, if Orrelius generall Carde of the world be true: In the North-east that noble Knight Syr Hugh Willoughbie perished for colde: and can you then promise a passenger any better happye by the North-west: Who hath gone for triall sake at anytime this way out of Europe to Cathayo?

If you seeke the aduise herein of such as make profession in Cosinographie, Ptolome the father of Geographie, and his eldest childe, will answere by their mappes with a negative, concluding most of the Sea within the land, and making an ende of the world Northward, neere the 63, degree. The same opinion, when learning chiefly flourishd, was receined in the Romanes time, as by their Poets writings it may appeare: tibi seruiat vltima Thyle, said Virgil, being of opinion, that Island was the extreme part of the world habitable to ward the North. Ioseph Moletius an Italian, and Mercator a Germane, for knowledge men able to be compared with the best Geographers of our time, the one in his halfe Spheres of the whole world, the other in some of his great globes, haue continued the West Indies land, euen to the North Pole, and consequently, cut off all passage by sea that way.

The same doctozs, Mercator in other of his globes and mappes, Moletius in his sea Carde, neuertheless doubting of so great continuance of the former continent, haue opened a gulf betweene the West Indies and the extreme Northerne land: but such a one, that either is not to be traueled for the causes in the first objection alledged, or cleane shutt by from vs in Europe by Groenland: the South ende whereof Moletius maketh firme land with America, the North part continent with Lappeland and Norway.

Thirdly, the greatest fauourers of this voyage can not denie, but that if any such passage be, it lieth subiect vnto yce and snow for the most part of the yee, whereas it standeth in the edge of the frostie zone. Before the Sunne hath warmed the ayre, and dissolued the yce, eche one well knoweth that there can be no sailing: the yce once broken through the continuall abode the sunne maketh a certaine season in those parts, how shall it be possible for so weake a vessel as a shippe is, to holde out amid whole Islands, as it were of yce continually beating on eche side, and at the mouth of that gulf, issuing downe furiously from the north, and safely to passe, when whole mountaines of yce and snow shall be tumbled downe vpon her?

Well, graunt the West Indies not to continue continent vnto the Pole, grant there be a passage betweene these two lands, let the gulf lie neerer vs then commonly in cardes we finde it set, namely, betweene the 61. and 64. degrees north, as Gemma Frisius in his mappes and globes imagineth it, and so left by our countryman Sebastian Cabot in his table which the Earle of Bedford hath at Cheinies: Let the way be voyde of all difficulties, yet doeth it not follow that wee haue free passage to Cathayo. For examples sake: You may trend all Norway, Finmarke, and Lappeland, and then bowe Southward to Saint Nicholas in Moscouia: you may likewise in the Mediterranean Sea fetch Constantinople, and the mouth of Tanais: yet is there no passage by Sea through Moscouia into Pont Euxine, now called Mare Maggiore. Again, in the aforesaid Mediterranean sea, we saile to Alexandria in Egypt, the Barbarians bring their pearle and spices from the Moluccas by the Red Sea or Arabian gulph to Sues, scarcely thre dayes iourney from the aforesaid haven: yet haue wee no way by sea from Alexandria to the Moluccas, for that Istmos or litle straight of land betweene the two seas. In like maner although the Northerne passage be free at 61 degrees of latitude, and the West Ocean beyond America, usually called Mar del Zur, knowen to be open at 40. degrees eleuation from the Island Iapan, yea thre hundred leagues Northwardly about Iapan: yet may there be land to hinder the thorow passage that way by Sea, as in the examples aforesaid it falleth out, Asia and America there being ioyned together in one continent. Ne can this opinion seeme altogether friuolous vnto any one that diligently peruseth our Cosinographers doings. Iosephus Moletius is of that minde, not onely in his plaine Hemispheres of the world, but also in his Sea card. The French Geographers in like maner be of the same opinion, as by their Mappe cut out in forme of a Hart you may perceiue: as though the West Indies were part of Asia. Which sentence well agreeth with that old conclusion in the Schooles: Quicquid præter Africam & Europam est, Asia est. What soeuer land doeth neither apperteyne vnto Africke nor to Europe, is part of Asia.

Furthermore it were to small purpose to make so long, so painefull, so doubtfull a voyage by such a new found way, if in Cathayo you should neither bee suffered to land for silkes and siluer, nor able to fetch the Molucca spices and pearle for piracie in those Seas. Of a law denying all Aliens to enter into China, and forbidding all the inhabitants vnder a great penaltie to let in any

stranger into those countreyes, shall you reade in the report of Galeotto Pereira there imprisoned with other Portugals: as also in the Japonish letters, how for that cause the worthy traveller Xauierus bargained with a Barbarian Merchant for a great summe of pepper to be brought into Canton, a port in China. The great and dangerous piracie vsed in those Seas no man can be ignorant of, that lieth to reade the Japonish and East Indian historie.

Ab. 6.

If finally, all this great labour would be lost, all these charges spent in vaine, if in the ende our travellers might not be able to returne againe, and bring safely home into their owne native countrey that wealth & riches, which they in forreign regions with aduventure of goods, & danger of their liues haue sought for. By the Northeast there is no way, the Southeast passage the Portugals doe hold as the Lords of those Seas. At South west Magellans experience hath partly taught vs, and partly we are perswaded by reason, how the Easterne current striketh so furiously on that straight, and falleth with such force into that narrow gulph, that hardly any ship can returne that way into our West Ocean out of Mar del Zur. The which if it be true, as truly it is, then wee may say that the aforesayd Easterne current or leuant course of waters continually following after the heauenly motions, loseth not altogether his force; but is doubled rather by an other current from out the Northeast, in the passage betwene America and the North land, whither it is of necessity caried: hauing none other way to maintaine it selfe in circular motion, & consequently the force and fury thereof to be no lesse in the straight of Anian, where it striketh South into Mar del Zur, beyond America (if any such straight of Sea there be) then in Magellans fret, both straights being of like breadth: as in Belogrine Zalerius table of new France, and in Don Diego Hermano de Toledo his Card for nauigation in that region we doe finde precisely set downe.

Neuerthelesse to approue that there lyeth a way to Cathayo at the Northwest front out of Europe, we haue experience, namely of thre brethren that went that iourney, as Gemma Frisius receiveth, and left a name vnto that straight, whereby now it is called Fretum trium fratrum. We doe reade againe of a Portugall that passed this straight, of whom Master Frobisher speaketh, that was imprisoned therefore many yeeres in Lisbon, to verifie the olde Spanish pouerbe, A suffer for doing well. Likewise Andrew Vrdaneta a Fryer of Mexico came out of Mar del Zur this way into Germanie: his Card (for he was a great Discoverer) made by his owne experience and trauell in that voyage, hath bene seene by Gentlemen of good credite.

Cic. 1. de orat.
Arist. pri.
Metaph.

Now if the obseruation and remembrance of things breedeth experience, and of experience proceedeth arte, and the certaine knowledge we haue in all faculties, as the best Philosophers that euer were doe affirme: truly the voyage of these aforesayd travellers that haue gone out of Europe into Mar del Zur, and returned thence at the Northwest, do most evidently conclude that way to be nauigable, and that passage free. So much the more we are so to thinke, for that the first principle and chiefe ground in all Geographie, as Ptolome saith, is the history of trauell, that is, reports made by travellers skilful in Geometrie and Astronomie, of all such things in their iourney as to Geographie doe belong. It onely then remaineth, that we now answer to those arguments that seemed to make against this former conclusion.

Lib. 1. Geog.
Cap. 2.

Sol. 1.

The first objection is of no force, that generall table of the world set forth by Ortelius or Mercator, for it greatly skilleth not, being unskilfully drawn for that point: as manifestly it may appeare vnto any one that conferreth the same with Gemma Frisius his vniuersall Mappe, with his round quartered carde, with his globe, with Sebastian Cabora his table, and Ortelius his generall mappe alone, worthily preferred in this case before all Mercator & Ortelius other doings: for that Cabora was not onely a skilful Sea man, but a long traveller, and such a one as entered personally that straight, sent by king Henry the seventh to make this aforesayd Discoverie, as in his owne discourse of nauigation you may reade in his carde drawn with his owne hand, that the mouth of the Northwesterne straight lyeth neere the 318. Meridian, betwene 61. and 64. degrees in the eleuation, continuing the same breadth about 10. degrees West, where it openeth Southerly more and more, vntill it come vnder the tropicke of Cancer, and so runneth into Mar del Zur, at the least 18. degrees more in breadth there, then it was where it first began: otherwise I could as well imagine this passage to be more unlikely then the voyage to Moscouia, and more impossible then it for the same situation and continuance thereof in the frostie clime: as now I can affirme it to be very possible and most likely in comparison thereof, for that it neither coasteth so farre North as the Moscouian passage doeth, neither is this straight so long as that, before it bow downe Southerly towardes the Sunne againe.

Sol. 2.

The second argument concludeth nothing. Ptolome knew not what was about sixteene degrees South beyond the Equinoctiall line, he was ignorant of all passages Northward from the eleuation of 63. degrees: he knewe no Ocean sea beyond Asia, yet haue the Portugals crended the

the cape of Good hope at the South point of Afrike, and travelled to Iapan an Island in the East Ocean, betweene Asia & America: our merchants in the time of king Edward the first discouered the Moscouian passage farther North then Thyle, & shewed Groenland not to be continent with Lappeland & Norway: the like our Northwesterne traueellers haue done, declaring by their navigation that way, the ignorance of all Cosmographers that either doe ioyne Groenland with America, or continue the West Indies with that frosty region vnder the north pole. As for Virgil he sang according to the knowledge of men in his time, as an other Poet did of the hot Zone.

Quam quæ media est, non est habitabilis æstu. Imagining, as most men then did, Zonam torridam, the hot Zone to be altogether dishabited for heat, though presently wee know many famous and woorthy kingdomes and cities in that part of the earth, and the Island of S. Thomas neere Æthiopia, & the wealthy Islands for the which chiefly all these voyages are taken in hand, to be inhabited euen vnder the equinoctiall line.

To answer the third obiection, besides Cabota and all other traueellers navigations, the onely credit of M. Frobisher may suffice, who lately through all these Islands of ice, and mountaines of snow, passed that way, euen beyond the gulfes that tumbleth downe from the North, and in some places though he vze one inch thicke ice, as he returning in August did, yet came he home safely againe.

The fourth argument is altogether friuolous & vaine, for neither is there any isthmus or strait of land betweene America and Asia, ne can these two landes ioyntly be one continent. The first part of my answer is manifestly allowed of by Homer, whom that excellent Geographer Strabo followeth, yeelding him in this facultie the price. The authour of that booke likewise Alerander, attributed vnto Aristotle, is of the same opinion that Homer and Strabo be of, in two or three places. Dionysius in hath this verse So doth the Ocean Sea runne round about the worlde: speaking onely of Europe, Afrike and Asia, as then Asia was travelled and known. With these Doctours may you ioyne Pomponius Mela, cap. 2. lib. 1. Plinius lib. 2. cap. 67. and Pius 2. cap. 2. in his description of Asia. All the which wryters doe no lesse confirme the whole Easterne side of Asia to be compassed about with the sea, then Plato doeth affirme in Timæo, vnder the name Atlantis, the West Indies to be an Island, as in a special discourse thereof R. Eden writeth, agreeable vnto the sentence of Proclus, Marfilius Ficinus, and others. Out of Plato it is gathered that America is an Island. Homer, Strabo, Aristotle, Dionysius, Mela, Plinie, Pius 2. affirme the continent of Asia, Afrike, & Europe, to be enuironed with the Ocean. I may therfore boldly say (though later intelligences therof had we none at all) that Asia & the West Indies be not tied together by any Isthmos or straight of land, contrary to the opinion of some new Cosmographers, by whom doubtfully this matter hath bin brought in controuersie. And thus much for the first part of my answer vnto the fourth obiection.

The second part, namely that America and Asia cannot be one continent, may thus be proued, where the earth is most hollow and deepe, writeth Aristotle: and the Sea (sayth he in the same place) as it goeth further, so is it found deeper. Into what gulfes doe the Moscouian riuers Onega, Duina, Ob, powze out their streames Northward out of Moscouia into the sea: Which way doeth that sea strike? The South is maine land, the Easterne coast wareth more and more shallow: from the North, either naturally, because that part of the earth is higher Aristotle, 2. Met. cap. 1. or of necessity, for that the forcible influence of some Northerne starres causeth the earth there to shake off the Sea, as some Philosophers doe thinke: or finally for the great store of waters engendred in that frostie and colde climate, that the bankes are not able to holde them. Alber. in 2. Meteor. cap. 6. From the North, I say, continually falleth downe great abundance of water. So that this Northeasterne currant must at the length abruptly bow toward vs South on the West side of Finmarke and Norway: or else strike downe Southwest about Groneland, or betwixt Groneland and Island, into the Northwest straight we speake of, as of congruence it doeth, if you marke the situation of that Region, and by the report of M. Frobisher experience teacheth vs. And M. Frobisher the further he traualled in the former passage, as he tolde me, the deeper alwayes he found the Sea. Lay you now the summe hereof together. The riuers runne where the channels are most hollow, the sea in taking his course wareth deeper, the Sea waters fall continually from the North Southward, the Northeasterne current striketh downe into the straight we speake of, and is there augmented with whole mountaines of yce and snowe falling downe furiously out from the land vnder the North pole. Where store of water is, there is it a thing impossible to want Sea, where Sea not onely doeth not want, but wareth deeper, there can be discouered no land, if finally, whence I pray you came the contrary ride, that M. Frobisher

mette withall after that he had sailed no small way in that passage, if there bee any Isthmos or straight of land betwixt the aforesayd Northwestern gulfe, and Mar del Zur, to ioyne Asia and America together: That conclusion frequented in scholes Quicquid preter, &c. was meant of the partes of the world then knowen, and so is it of right to be vnderstood.

Sol. 5.

The first obiection requireth for answere wisdom and policie in the trauailer, to winne the Barbarians fauour by some good meanes: and so to arme and strengthen himselfe, that when he shal haue the repulse in one coast, he may safely trauaile to an other, commodiously taking his conuenient times, and discretely making choise of them with whom hee will througely deale. To force a violent entry, would for vs Englishmen be very hard, considering the strength and valour of so great a Nation, farre distant from vs, and the attempt thereof might be most perillous vnto the doers, vnlesse their part were very good.

Touching their lawes against strangers, you shall reade neuertheless in the same relations of Galeotto Perera, that the Cathaian king is wont to graunt free accesse vnto all forreiners that trade into his Countrey for Marchandise, and a place of libertie for them to remaine in: as the Moores had, vntill such time as they had brought the Loutea or Lieutenant of that coast to bee a circumcised Saracene: wherefore some of them were put to the sword, the rest were scattered abroad: at Fuquien a great citie in China, certaine of them are yet this day to be seene. As for the Iapans they be most desirous to be acquainted with strangers. The Portingals though they were strictly handled there at the first, yet in the ende they found great fauour at the Prince his hands, insomuch that the Loutea or president that misused them was therefore put to death. The rude Indian Canoa halleth those seas, the Portingals, the Saracenes, and Moores trauaile continually by and downe that reach from Iapan to China, from China to Malacca, from Malacca to the Moluccas: and shall an Englishman, better appointed then any of them all (that I say no more of our Nauie) feare to saile in that Ocean: What seas at all doe want piracie: what Nauigation is there voyde of perill:

Sol. 6.

To the last argument. Our trauailers neede not to seeke their returne by the Northeast, neither shall they be constrained, except they list, either to attempt Magellans straight at the South-west, or to be in danger of the Portingals for the Southeast: they may returne by the Northwest, that same way they doe goe forth, as experience hath shewed.

The reason alleadged for prooofe of the contrary may be disproued after this maner. And first it may be called in controuersie, whether any current continually be forced by the motion of Primum mobile, round about the world, or no: For learned men doe diuersly handle that question. The naturall course of all waters is downeward, wherefore of congruence they fall that way where they finde the earth most lowe and deepe: in respect whereof, it was erst sayd, the seas doe strike from the Northen landes Southerly. Violently the seas are tossed and troubled diuers wayes with the windes, encreased and diminished by the course of the Moone, hoisted by & downe through the sundry operations of the Sunne and the starres: finally, some be of opinion, that the seas be caried in part violently about the world, after the dayly motion of the highest moueable heauen, in like maner as the elements of ayre and fire, with the rest of the heauenly spheres, are from the East vnto the West. And this they doe call their Easterne current, or leuant streame. Some such current may not be denied to be of great force in the hot Zone, for the neerenesse thereof vnto the centre of the Sunne, and blustering Easterne windes violently driuing the seas Westward: howbeit, in the temperate climes, the Sunne being further off, & the windes more diuers, blowing as much from the North, the West and South, as from the East, this rule doeth not effectually withhold vs from trauailing Eastward, neither be we kept euer backe by the aforesaid Leuant windes and streame. But in Magellans streight wee are violently driuen backe Westward: Ergo, though the Northwestern straight or Anian frette shall we not be able to returne Eastward: It followeth not. The first, for that the northwestern straight hath more sea roome at the least by one hundred English myles, then Magellans frette hath, the onely want whereof causeth all narrow passages generally to be most violent. So would I say in the Anian gulfe, if it were so narrow as Don Diego and Zalerius haue painted it out, any returne that way to bee full of difficulties, in respect of such streightnesse thereof, not for the neerenesse of the Sunne, or Easterne windes, violently forcing that way any leuant streame: But in that place there is more sea roome by many degrees, if the Cardes of Cabora, and Gemma Frisius, and that which Tramezine imprinted, be true.

Luc. lib. 1.
Pharal.What the
Easterne cur-
rent is.Lib. 1. Geog.
Cap. 2.

And hitherto reason see I none at all, but that I may as well giue credite vnto their doings, as to any of the rest. It must be Peregrinationis historia, that is, true reportes of skillfull trauailers, as Ptolome writeth, that in such controuersies of Geographie must put vs out of doubt.

Ortelius

Ortelius in his vniuersall tables, in his particular Mappes of the West Indies, of all Asia, of the Northren kingdomes, of the East Indies, Mercator in some of his globes, and generall Mappes of the world, Moletius in his vniuersall table of the Globe diuided, in his sea Tarde, and particular tables of the East Indies, Zalterius, and Don Diego, with Ferdinando Bertely, and others, doe so much differ from Gemma Frisius and Cabora, among themselves, and in diuers places from themselves, concerning the diuers situation and sundry limits of America, that one may not so rashly, as truely surmise, these men either to be ignorant in those paines touching the aforesaid region, or that the Mappes they haue giuen out vnto the world, were collected onely by them, and neuer of their owne drawing.

The first Voyage of M. Martine Frobisher, to the Northwest,
for the search of the straight or passage to China, written by Christopher Hall,
Master in the *Gabriel*, and made in the yeere of our Lord 1576.

The 7. of June being Thursday, the two Barks, viz. the *Gabriel*, and the *Michael* & our Pinnesse set saile at Ratcliffe, and bare down to Derford, and there we ancred: the cause was, that our Pinnesse burst her boultspit, and for mast aboard of a ship that rode at Derford, else wee meant to haue past that day by the Court the next at Greenwich.

June.

¶ M. Matthew
Kinderline
was Captaine
of the *Michael*

The 8. day being Friday, about 12 of the clocke we wayed at Derford, and set saile all three of vs, and bare downe by the Court, where we shotte off our ordinance and made the best shew we could: Her Maiestie beholding the same, commended it, and bade vs fare well, with shaking her hand at vs out of the window. Afterward shee sent a Gentleman aboord of vs, who declared that her Maiestie had good liking of our doings, and thanked vs for it, and also willed our Captaine to come the next day to the Court to take his leaue of her.

The same day towards night M. Secretarie Woolly came aboord of vs, and declared to the company, that her Maiestie had appointed him to giue them charge to be obedient, and diligent to their Captaine, and gouernours in all things, and wished vs happy successe.

The 12. day being ouer against Grauesend, by the castle or blockehouse, we obserued the latitude, which was 51. degrees 33. min. And in that place the variation of the Compasse is 11. degrees and a halfe.

The 24. day at 2. of the clocke after noone, I had sight of Faire yle, being from vs 6. leagues North and by East, and when I brought it North west and by North, it did rise at the Southermost ende with a litle hominocke, and swampe in the middes.

Faire Island.

The 25. day from 4. to 8. a clocke in the forenoone, the winde at North west and by North a fresh gale, I cast about to the Westward, the Southermost head of Shorland called Swinborne head North west from me, and the land of Faire yle, West South west from me. I sailed directly to the North head of that said land, sounding as I ranne in, hauing 60. 50. and 40. fathoms, and gray redde shels: and within halfe a mile of that Island, there are 36. fathoms, for I sailed to that Island to see whether there were any roadsteede for a North west winde, and I found by my sounding hard rockes, and foule ground, and deepe water, within two cables length of the shoare, 28. fathome, and so did not ancre but plied to and fro with my foresaile, and mizen till it was a high water vnder the Island. The tide setteth there North west and Southeast: the flood setteth Southeast, and the ebbe North west.

Shorland.

The 26. day hauing the winde at South a faire gale, sayling from Faire yle to Swinborne head, I did obserue the latitude, the Island of Fowlay being West North west from me 6. leagues, and Swinborne head East Southeast from me, I found my elevation to be 37. degr. and my declination 22. degr. 46. min. So that my latitude was 59. degr. 46. min. At that present being nere to Swinborne head, hauing a leake which did trouble vs, as also to take in fresh water, I plyed roome with a sound, which is called S. Tronions, and there did ancre in seuen fathoms water, and faire sande. You haue comming in the sounds mouth in the entring 17. 15. 12. 10. 9. 8. and 7. fathoms, and the sound lyeth in North north west, and there we roade to a West sunne, & stopped our leake, and hauing refreshed our selues with water, at a North north west sunne, I set saile from S. Tronions the winde at South Southeast, and turned out till wee were cleare of the sound, and so sailed West to go cleare of the Island of Fowlay. And running off toward Fowlay, I sounded, hauing fiftie fathome, and streamie ground, and also I sounded Fowlay being North from mee one league off that Islande, hauing fiftie fathome at the South head, and streamie ground, like

* By elevation
he meaneth the

sunne from the
zenith.
S. Tronions.

Fowlay Island

Latitude 59.
deg. 59. min.
Here they be-
gan to saile
West and by
North.

broken otwell, and one shell being redde and white like mackerell.

The 27. day at a South sunne I did obserue the latitude, the Island of Fowlay being from me two leagues East North-east: I found my selfe to be in latitude 59. degrees, 59. min. truly ob-
serued, the winde at South South-west: I sailed West and by North.

From 12. to foure a clocke afternoone, the wind at South, a faire gale the shippe sailed West and by North 6. leagues, and at the ende of this watch, I sounded hauing 60. fathome, with little stones and shels, the Island from vs 8. leagues East.

July the first.

The first of July, from 4. to 8. a clocke, wee sailed West 4. glasses 4. leagues, and at that pre-
sent we had so much winde that we spooned afoze the sea South-west 2. leagues.

3.

The 3. day we found our Compasse to bee varied one point to the Westwards: this day from 4. to 8. a clocke we sailed West and by North 6. leagues.

The Compasse
varping West-
wards one
point.

From 8. to 12. a clocke at noone West and by North 4. leagues. At that present I found our
Compasse to be varied 11. deg. and one 4. part to the Westwards, which is one point.

11.
The Island of
Friseland.

The 11 day at a Southeast sunne we had sight of the land of Friseland bearing from vs West
north-west 16. leagues, and rising like pinacles of steeples, and all couered with snowe. I found
my selfe in 61. deg. of latitude. We sailed to the shoare and could finde no ground at 150. fa-
thoms, we hoised out our boate, and the Captaine with 4. men rowed to the shoare to get on land,
but the land lying full of yce, they could not get on land, and so they came aboord againe: We had
much adoe to get cleare of the yce by reason of the fogge. Yet from Thursday 8. a clocke in the
morning to Friday at noone we sailed South-west 20. leagues.

18.

The variation
of the needle,
two points
and a halfe to
the West.
A great dyist
of yce.
The latitude
of 62. degrees
2. min.
Sight of land
supposed to
haue bene La-
brador.

The 18. day at a Southeast sunne I found the sunne to be eleuated 33. deg. And at a South-
southeast sunne 40. deg. So I obserued it till I found it at the highest, and then it was eleuated
52. deg. I iudged the variation of the Compasse to be 2. points and a halfe to the Westward.

The 21. day we had sight of a great dyist of yce, seeming a firme lande, and we saild Westward
to be cleare of it.

The 26. we had sight of a land of yce: the latitude was 62. degrees, and two minutes.

The 28. day in the morning was very foggie: but at the clearing by of the fogge, wee had
sight of lande, which I supposed to be Labrador, with great store of yce about the land: I ranne
in towards it, and sounded, but could get no ground at 100. fathom, and the yce being so thicke,
I could not get to the shoare, and so lay off, and came cleare of the yce. Upon Sunday we came
within a mile of the shoare, and sought a harborowe: all the sound was full of yce, and our
boate rowing a shoare, could get no ground at a 100. fathom, within a Cables length of the
shoare: then we sailed East-north-east along the shoare, for so the lande lyeth, and the current is
there great, setting North-east, and South-west: and if we could haue gotten anker ground, wee
would haue seene with what force it had runne, but I iudge a ship may dyue a league and a halfe,
in one houre, with that tide.

31.

This day at 4. of the cloke in the morning, being faire and cleere, we had sight of a head land,
as we iudged, bearing from vs north, and by East, and we sailed North-east, and by North to that
land, and when we came thither, wee could not get to the lande for yce: for the yce stretched along
the coast, so that we could not come to the land, by five leagues.

August.

1.

2.

Wednesday the first of August it calmed, and in the after noone I caused my boate to be hoy-
sed out, being hard by a great Island of yce, and I and foure men rowed to that yce, and sound-
ded within two Cables length of it, and had sixteene fathome, and little stones, and after that
soundded againe within a Pinion shot, and had ground at an hundred fathome, and faire sand:
we soundded the next day a quarter of a myle from it, and had firtie fathome rough ground, and at
that present being aboord, that great Island of yce fell one part from another, making a noyse
as if a great cliffe had fallen into the Sea. And at foure of the clocke I soundded againe, and
had 90. fathome, and small blacke stones, and little white stones, like pearles. The tide here did
set to the shoare.

10.

The tenth I tooke foure men, and my selfe, and rowed to shoare to an Island one league from
the maine, and there the flood setteth South-west alongest the shoare, and it floweth as neere as I
could iudge so too, I could not carry to prooue it, because the ship was a great way from me, and
I feared a fogge: but when I came a shoare, it was a low water. I went to the top of the Island,
and before I came backe, it was hied a foote water, and so without carrying I came aboord.

11.

They enter the
Strait in the
latitude of 63.
deg. and 8. min.

The 11. we found our latitude to be 63. deg. and eight minutes, and this day we entred the
stright.

12.

The 12. wee set saile towards an Island, called the Gabriels Island, which was 10. leagues
then from vs.

We

We espied a sound, and bare with it, and came to a sandie Baye, where we came to an anker, the land bearing East southeast off vs, and there we rode al night in 8. fathome water. It floweth there at a Southeast Poone. We called it Priors sowne, being from the Gabriels Island, tennie leagues.

13

The 14. we waied, and ranne into another sowne, where wee ankered in 8. fathome water, faire sand, and blacke oaze, and there calked our ship, being weake from the wales upward, and tooke in fresh water.

14

The 15. day we waied, and sailed to Priors Bay, being a mile from thence.

15

The 16. day was calme, and we rode still, without yce, but presently within two houres it was frozen round about the ship, a quarter of an ynch thicke, and that day very faire, and calme.

16

The 17. day we waied, and came to Thomas Williams Island.

17

The 18. day we sailed North north west, and ankered againe in 23. fathome, and tough oaze, vnder Burchers Island, which is from the former Island, ten leagues.

18

The 19. day in the morning, being calme, and no winde, the Captaine and I tooke our boate, with eight men in her, to rowe vs a shoare, to see if there were there any people, or no, and going to the toppe of the Island, we had sight of seuen boates, which came rowing from the East side, toward that Island: whereupon we returned aboord againe: at length we sent our boate with five men in her, to see whither they rowed, and so with a white cloth brought one of their boates with their men along the shoare, rowing after our boate, till such time as they sawe our ship, and then they rowed a shoare: then I went on shoare my selfe, and gaue euery of them a threadden point, and brought one of them aboord of me, where hee did eate and drinke, and then carried him on shoare againe. Whereupon all the rest came aboord with their boates, being nineteene persons, and they spake, but we vnderstoode them not. They bee like to Tartars, with long blacke haire, broad faces, and flatte noses, and tawnie in colour, wearing Seale skinner, and so doe the women, not differing in the fashon, but the women are marked in the face with blew streekes downe the cheekes, and round about the eyes. Their boates are made all of Seales skinner, with a keele of wood within the skin: the proportion of them is like a Spanish Gallie, saue only they be flat in the bottome, and sharpe at both ends.

Sight of the Countrey people.

The description of the people.

19

The twentieth day wee waied, and went to the East side of this Island, and I and the Captaine, with foure men more went on shoare, and there we sawe their houses, and the people espying vs, came rowing towards our boate: whereupon we plied toward our boate: and wee being in our boate and they ashore, they called to vs, and we rowed to them, and one of their company came into our boate, and we carried him a boord, and gaue him a Bell, and a knife: so the Captaine and I willed five of our men to set him a shoare at a rocke, and not among the company, which they came from, but their wilfulnesse was such, that they would goe to them, and so were taken themselves, and our boate lost.

20

5. of our men taken by the people.

The next day in the morning, we stood in neere the shoare, and shotte off a fauconet, and sounded our trumpet, but we could heare nothing of our men: this sound wee called the five mens sound, and plyed out of it, but ankered againe in thirtie fathome, and oaze: and riding there all night, in the morning, the snow lay a foote thicke vpon our hatches.

21

The 22. day in the morning we waied, and went againe to the place where we lost our men, and our boate. We had sight of foureteene boates, and some came neere to vs, but wee could learne nothing of our men: among the rest, we intised one boate to our ships side, with a Bell, and in giuing him the Bell, we tooke him, and his boate, and so kept him, and so rowed downe to Thomas Williams Island, and there ankered all night.

22

The 26. day we waied, to come homeward, and by 12. of the clocke at noone, we were thwart of Trummers Island.

23

They returns.

The next day we came thwart of Gabriels Island, and at 8. of the clocke at night we had the Cape Labrador as we supposed West from vs, ten leagues.

24

The 28. day we went our course Southeast.

25

We sailed Southeast, and by East, 22. leagues.

26

The first day of September in the morning we had sight of the land of Friseland, being eight leagues from vs, but wee could not come neerer it, for the monstrous yce that lay about it. From this day, till the sixth of this Moneth, we ranne along Island, and had the South part of it at eight of the clocke, East from vs ten leagues.

27

September.

The seuenth day of this moneth we had a very terrible storme, by force whereof, one of our men was blown into the sea out of our waste, but he caught hold of the foresaile sheate, and there held till the Captaine pluckt him againe into the ship.

28

The

The Sheld.

The 25. day of this moneth we had sight of the Island of Orkney, which was then East from vs. The first day of October we had sight of the Sheld, and so sailed about the coast, and ankered at Yarmouth, and the next day we came into Harwich.

The language of the people of *Meta incognita.*

Argoteyt, a hand.

Cangnawe, a nose.

Arered, an eye.

Keiotot, a tooth.

Murchater, the head.

Chewat, an eare.

Callagay, a paire of breeches.

Attegay, a coate.

Polleueragay, a knife.

Accaskay, a shippe.

Coblone, a thumbe.

Teckkere, the foremost finger.

Ketteckle, the middle finger.

Mekellacane, the fourth finger.

Yacketrone, the litle finger.

The second voyage of Master Martin Frobisher, made to the West and Northwest Regions, in the yeere 1577. with a description of the Countrey, and people: Written by Master *Dionise Settle.*

On Whitsunday, being the five and twentieth of May, in the yeere of our Lord God 1577. Captaine Frobisher departed from Blacke Wall, with one of the Queenes Maiesties ships, called The Aide, of nine scope tunnes, or therabouts: and two other litle Barkes likewise, the one called The Gabriel, whereof Master Fenton, a Gentleman of my Lord of Warwikes, was Captaine: and the other, The Michael, whereof Master Yorke, a Gentleman of my Lord Admirals was Captaine, accompanied with seuen score Gentlemen, souldiers, and sailers, well furnished with victuals, and other provision necessarie for one halfe yeere, on this his second voyage, for the further discovering of the passage to Cathay, and other Countreys therunto adiacent, by West and Northwest navigations: which passage or way, is supposed to bee on the North and Northwest parts of America: and the said America to be an Island inuironed with the sea, where through our Merchants may haue course and recourse with their merchandize, from these our Northernmost parts of Europe, to those Orientall coasts of Asia, in much shorter time, and with greater benefite then any others, to their no litle commoditie and profite that do or shall frequent the same. Our said Captaine and General of this present voyage and company hauing the yeere before, with two litle pinnelles, to his great danger, and no small commendations, given a worthy attempt towards the performance thereof, is also prest, when occasion shall be ministred (to the benefite of his Prince, and native Countrey) to aduenture himselfe further therein. As for this second voyage, it seemeth sufficient, that he hath better explored and searched the commodities of those people and Countreys, which in his first voyage the yeere before he had found out.

Upon which considerations, the day and yeere before expessed, we departed from Blacke Wall to Harwich, where making an accomplishment of things necessary, the last of May we hoised vp sailes, and with a merrie wind the 7. of June we arriued at the Islands called Orcades, or vulgarly Orkney, being in number 30, subiect and adiacent to Scotland, where we made provision of fresh water: in the doing whereof our Generall licensed the Gentlemen and souldiers for their recreation, to goe on shoze. At our landing, the people fled from their poore cottages, with shrieks and alarms, to warne their neighbours of enemies, but by gentle perswasions we reclaimed them to their houses. It seemeth they are often frighted with Pirats, or some other enemies, that moue them to such sudden feare. Their houses are very simply builded with pibble stone, without any chimneis, the fire being made in the middell thereof. The good man, wife, children, and other of their family eate and sleepe on the one side of the house, and the cattell on the other, very beastly and rudely, in respect of ciuilitie. They are destitute of wood, their fire is turfes, and Cowshards. They haue corne, bigge, and oates, with which they pay their Kings rent, to the maintenance of his house. They take great quantitie of fish, which they dry in the wind and Sunne. They dresse their meat very filchily, and eate it without salt. Their apparell is after the rudest sort of Scotland. Their money is all base. Their Church and religion is reformed according to the Scots. The fisher men of England can better declare the dispositions of those people then I: wherefore I remitt other their vlags to their reports, as peerelely repairers thither, in their course to and from Island for fish.

The Islands Orcades, or Orkney.

The Orcades and upon final occasion flee their home.

No wood in Orkney.

Fisher men of England haue daily traffike to Orkney.

We departed hence the 8. of June, and followed our course betwene West and North-west, vntill the 4. of July: all which time we had no night, but that easily, and without any impediment we had when we were so disposed, the fruition of our bookes, and other pleasures to passe away the time: a thing of no small moment, to such as wander in vnknown seas, and long navigations, especially, when both the winds and raging surges do passe their common and wonted course. This benefite endureth in those parts not 6. weekes, while the sunne is neere the Tropike of Cancer: but where the pole is raised to 70. or 80. degrees, it continueth much longer.

In June and July no night in those West and North-west regions.

All along these seas, after we were sixe dayes sailing from Orkney, we met floating in the sea, great Firre trees, which as we iudged, were with the furie of great floods rooted vp, and so driuen into the sea. Island hath almost no other wood nor fuell, but such as they take vp vpon their coastes. It seemeth, that these trees are driuen from some part of the New found land, with the current that setteth from the West to the East.

Great abundance of Firre trees floating in the sea. Inquire further of this current.

The 4. of July we came within the making of Frisland. From this shoare 10. or 12. leagues, we met great Islands of yce, of halfe a mile, some more, some lesse in compasse, she wing aboue the sea, 30. or 40. fathoms, and as we supposed fast on ground, where with our lead we could scarce sound the bottome for depth.

Here, in place of odoriferous and fragrant sinels of sweete gums, & pleasant notes of muscall birdes, which other Countreys in more temperate Zones do yeeld, wee tasted the most boisterous Boreal blasts mixt with snow and haile, in the moneths of June and July, nothing inferior to our vntemperate winter: a sudden alteration, and especially in a place of Parallele, where the Pole is not eleuate aboue 61. degrees: at which height other Countreys more to the North, yea vnto 70. degrees, shew themselves more temperate then this doth.

Ice, snow, and haile in June and July.

All along this coast ycelieth, as a continuall bulwarke, & so defendeth the Countrey, that those that would land there, incur great danger. Our Generall 3. dayes together attempted with the ship boate to haue gone on shoare, which for that without great danger he could not accomplish, he deferred it vntill a more convenient time. All along the coast lie very high mountaines covered with snow, except in such places, where through the steepenes of the mountaines of force it must needs fall. Foure dayes coasting along this land, we found no signe of habitation. Little birds, which we iudged to haue lost the shore, by reason of thicke fogges which that Countrey is much

Frisland subject to fogge.

subject vnto, came flying into our ships, which causeth vs to suppose, that the Countrey is both more tollerable, and also habitable within, then the outward shore maketh shew of signification. From hence we departed the eight of July: and the 16. of the same, we came with the making of land, which land our Generall the yere before had named The Queenes foreland, being an Island as we iudge, lying neere the supposed continent with America: and on the other side, opposite to the same, one other Island called Halles Ile, after the name of the Master of the ship, neere adiacent to the firme land, supposed continent with Asia. Betwene the which two Islands there is a large entrance of freight, called Frobishers freight, after the name of our Generall, the first finder thereof. This said freight is supposed to haue passage into the sea of Sur, which I leave vnknown as yet.

Frobishers freight.

It seemeth that either here, or not farre hence, the sea should haue more large entrance, then in other parts within the frozen or vntemperate Zone: and that some contrary tide, either from the East or West, with maine force casteth out that great quantity of yce, which cometh floating from this coast, euen vnto Frisland, causing that Countrey to seeme more vntemperate then others, much more Northerly then the same.

I cannot iudge that any temperature vnder the Pole, the time of the Sunnes Northerne declination being halfe a yere together, and one whole day, (considering that the Sunnes eleuation surmounteth not 23. degrees and 30. minuts) can haue power to dissolue such monstrous and huge yce, comparable to great mountaines, except by some other force, as by swift currents and tides, with the helpe of the said day of halfe appeere.

Islands of yce comparable to mountaines.

Before we came within the making of these lands we tasted cold stormes, in so much that it seemed we had changed summer with winter, if the length of the dayes had not remooued vs from that opinion.

At our first coming, the freights seemed to be shut vp with a long mure of yce, which gaue no litle cause of discomfort vnto vs all: but our Generall, (to whose diligence imminent dangers, and difficult attempts seemed nothing, in respect of his willing mind, for the commoditie of his Prince and Countrey,) with two litle Pinnesles prepared of purpose, passed twise thorow them to the East shore, and the Islands therunto adiacent: and the ship, with the two Barks lay off and on something further into the sea, from the danger of the yce.

Captaine Frobisher his speciall care and diligence for the benefite of his Prince and Countrey.

men.

Whilest he was searching the Countrey neere the shoare, some of the people of the Countrey thewep themselves leaping and dauncing, with strange shrikes and cries, which gaue no little admiration to our men. Our Generall desirous to allure them vnto him by faire meanes, caused kniues, and other things to be profered vnto them, which they would not take at our hands: but being laid on the ground, and the party going away, they came and tooke vp, leauing some thing of theirs to counteruaile the same. At the length two of them leauing their weapons, came downe to our Generall and Master, who did the like to them, commanding the company to stay, and went vnto them: who after certaine dumbe signes, and mute congratulations, began to lay handes vpon them, but they deliuerly escaped, and ranne to their bowes and arrowes, and came fiercely vpon them, (not respecting the rest of our companie which were ready for their defence) but with their arrowes hurt diuers of them: we tooke the one, and the other escaped.

Whilest our Generall was buied in searching the Countrey, and those Islands adiacent on the East shoare, the ship and barkes hauing great care, not to put farre into the sea from him, for that he had small store of victuals, were forced to abide in a cruell tempest, chancing in the night, amongst and in the thickest of the pee, which was so monstrous, that euen the least of a thousand had bene of force sufficient, to haue shiuered our ship and barks into small portions, if God (who in all necessities, hath care vpon the infirmities of man) had not prouided for this our extremitie a sufficient remedie through the light of the night, whereby we might well discerne to flee from such imminent dangers, which we auoyded with 14. Bourdes in one watch the space of 4. houres. If we had not incurred this danger amongst these monstrous Islands of pee, we should haue lost our Generall and Master, and the most of our best sailers, which were on the shoare destitute of victuals: but by the valure of our Master Sumner, Master Lackman, and Andrew Dier, the Masters Hates, men expert both in nauigation, and other good qualities, wee were all content to incur the dangers afore rehearsed, before we would with our owne safetie, runne into the sea, to the destruction of our sayd Generall, and his company.

The day following, being the 19. of Iulie, our Captaine returned to the ship, with report of supposed riches, which shewed it selfe in the bowels of those barren mountaines, wherewith wee were all satisfied.

Within foure daies after we had bene at the entrance of the streights, the Northwest and West winds disperled the pee into the sea, & made vs a large entrance into the streights, so that without any impediment, on the 19. of Iulie we entred them, and the 20. thereof, our Generall and Master with great diligence, sought out and sounded the West shoare, and found out a faire Harbough for the ship and barkes to ride in, and named it after our Masters mate, Lackmans found, and brought the ship, barkes, and all their company to safe anker, except one man, which died by Gods visitation.

At our first arriuall, after the ship rode at anker, our generall, with such company as could well be spared from the ships, in marching order entred the lande, hauing speciall care by exhortations, that at our entrance thereinto, wee should all with one voyce, kneeling vpon our knees, chiefly thanke God for our safe arriuall: secondly beseech him, that it would please his diuine Matetie, long to continue our Queene, for whom he, and all the rest of our company in this order tooke possession of the Countrey: and thirdly, that by our Christian studie and endeour, those barbarous, people trained vp in Paganism, and infidelitie, might be reduced to the knowledge of true religion, and to the hope of saluation in Christ our Redeemer. With other words very apt to signifie his willing mind, and affection toward his Prince and Countrey: whereby all suspicion of an vndutifull subject, may credibly be iudged to be vnterly exempted from his mind. All the rest of the Gentlemen and other deserue worthisly herein, their due praise and commendation.

These things in this order accomplished, our Generall commanded all the company to be obedient in things needfull for our owne safegard, to Master Fenton, Master Yorke, and Master Beak his Lieutenant, while he was occupied in other necessarie affaires, concerning our coming thither.

After this order we marched through the Countrey, with Ensigne displayed, so farre as was thought needfull, and now and then heaped by stones on high mountaines, and other places in token of possession, as likewise to signifie vnto such as hereafter may chance to arriue there, that possession is taken in the behalfe of some other Prince, by those who first found out the Countrey.

Who so maketh nauigations to those Countreys, hath not onely extreme winds, and furious seas to encounter withall, but also many monstrous and great Islands of pee: a thing both rare, wonderfull, and greatly to be regarded.

We were forced sundry times, while the ship did ride here at anker, to haue continuall watch, with

with boats & men ready with halbers to knit fast unto such pee, as with the ebbe & flood were tossed to and fro in the harborough, & with force of oares to hale them away, for endangering the ship.

Our Generall certaine dayes searched this supposed continent with America, and not finding the commodity to answere his expectation, after he had made triall thereof he departed thence with two litle barks, and men sufficient to the East Shore being the supposed continent of Asia, and left the ship with most of the Gentlemen, souldiers, and sailors, untill such tyme as he either thought good to send or come for them.

The stones of this supposed continent with America be alsogeth sparkled, and glitter in the Sunne like gold: so likewise doth the sand in the bright water, yet they verifie the old proverbe: All is not gold that glistereth.

On this West Shore we found a dead fish floating, which had in his nose a horne straight and torquet, of length two yards lacking two ynches, being broken in the top, where we might perceive it hollow, into the which some of our sailors putting spiders they presently died. I saw not the triall hercof, but it was reported unto me of a trueth: by the vertue whereof we supposed it to be the sea Unicorne.

After our Generall had found out good harborough for the ship and barks to anker in, and also such store of supposed gold ore as he thought himselfe satisfied withall, he returned to the Michael, whereof Master Yorke afore said was Captaine, accompanied with our master and his Mate, who coasting along the West Shore not farre from whence the ship rode, they perceived a faire harborough, and willing to sound the same, at the entrance thereof they espied two tents of Seale skins, unto which the Captaine, our said Master, and other company resorted. At the sight of our men the people fled into the mountaines: nevertheless they went to their tents, where leaving certaine trifles of ours, as glasses, bells, knives, and such like things they departed, not taking any thing of theirs except one dogge. They did in like manner leave behind them a letter, pen, yncke, and paper, whereby our men whom the Captaine lost the yere before, and in that peoples custody might (if any of them were alive) be advertised of our presence and being there.

On the same day after consultation had, all the Gentlemen, and others likewise that could be spared from the ship, under the conduct and leading of Master Philpot, (unto whom in our Generall his absence, and his Lieutenant Master Beest, al the rest were obedient) went a Shore, determining to see, if by faire means we could either allure them to familiarity, or otherwise take some of them, and so attaine to some knowledge of those men whom our Generall lost the yere before.

At our coming backe againe to the place where their tents were before, they had remooved their tents further into the said Bay or Sound, where they might if they were driven from the land, flee with their boates into the sea. We parting our selves into two companies, and compassing a mountaine came suddenly upon them by land, who espying us, without any tarrying fled to their boates, leaving the most part of their oares behind them for halfe, and rowed to the bay, where our two Himmies met them and drove them to Shore: but if they had had all their oares, so swift are they in rowing, it had bene lost time to have chased them.

When they were landed they fiercely assaulted our men with their bowes and arrowes, who wounded three of them with our arrowes: and perceiuing themselves thus hurt, they desperately leapt off the Rocks into the Sea, and drowned themselves: which if they had not done, but had submitted themselves, or if by any meanes we could have taken them alive (being their enemies as they judged) we would both have saved them, & also have sought remedy to cure their wounds received at our hands. But they altogether voyd of humanity, and ignorant what mercy meaneth, in extremities looke for no other then death: and perceiuing they should fall into our hands, thus miserably by drowning rather desired death then otherwise to be saved by us: the rest perceiuing their fellows in this distresse, fled into the high mountaines. Two women not being so apt to escape as the men were, the one for her age, and the other being incombred with a yong child, we tooke. The old wretch, whom divers of our Saylers supposed to be eyther a deuill, or a witch, had her buskins plucked off, to see if she were clouen footed, and for her ugly hew and deformity we let her goe: the yong woman and the child we brought away. We named the place where they were slaine, Bloodie point: and the Bay or Harborough, Yorks sound, after the name of one of the Captaines of the two Barks.

Having this knowledge both of their fiercenesse and crueltie, and perceiuing that faire meanes as yet is not able to allure them to familiarity, we disposed our selves, contrary to our inclination, something to be cruel, returned to their tents and made a spyle of the same: where we found an old shirt, a doublet, a girdle, and also shooes of our men, whom we lost the yere before: on nothing else unto them belonging could we set our eyes.

Boates of
skinner.

Their riches are not gold, silver or precious Drapery, but their said tents and boates, made of the skins of red Deere and Seale skins: also dogges like unto woolues, but for the most part black, with other cristles, moze to be wondered at for their strangenesse, then for any other commodity needefull for our vse.

Our departure
from the West
shore.

Thus returning to our ship the 3. of August, we departed from the West shore supposed firme with America, after we had ankered there 13. dayes: and so the 4. thereof we came to our Generall on the East shore, and ankered in a faire Harbrough named Anne Warwicksound, vnto which is annexed an Isle both named after the Countesse of Warwicke, Anne Warwicksound and Isle.

The countrey
people shew
themselves
vnto vs.

In this Isle our Generall thought good for this voyage, to freight both the ship and barkes, with such stone or supposed gold minerall, as he iudged to counteruaile the charges of his first, and this his second nauigation to these Countreys.

In the meane time of our abode here some of the countrey people came to shew themselves vnto vs, sundry times on the maine shore, neere adiacent to the said Isle. Our Generall desirous to haue some newes of his men, whom he lost the yeere before, with some company with him repaired with the ship boat to common, or signe with them for familiaritie, wherunto he is perswaded to bring them. They at the first shew made tokens, that three of his true men were alue, and desired penne, yuck, and paper, and that within three or foure dayes they would returne, and (as we iudged) bring those of our men which were liuing, with them.

Their usage in
traffique or
change.

They also made signes or tokens of their King, whom they called Cacough, & how he was carried on mens shoulders, and a man farre surmounting any of our company, in bignesse and stature.

With these tokens and signes of writing, penne, yucke, and paper was deliuered them, which they would not take at our hands, but being laid vpon the shore, and the partie gone away, they tooke by: which likewise they do when they desire any thing for change of theirs, laying for that which is left so much as they thinke will counteruaile the same, and not comming neere together. It seemeth they haue bene bled to this trade or traffique, with some other people adioyning, or not farre distant from their Countrey.

The people
shew them-
selves the
third time.

After 4. dayes some of them shewed themselves vpon the firme land, but not where they were before. Our General very glad thereof, supposing to heare of our men, went from the Isle, with the boat, and sufficient company with him. They seemed very glad, and allured him about a certaine point of the land: behind which they might perceiue a company of the crafty villaines to lye lurking, whom our Generall would not deale withall, for that he knew not what company they were, and so with few signes dismissed them and returned to his company.

The people
shew them-
selves againe
on firme land.

An other time as our said Generall was coasting the Countrey with two little Pinnelles, whereby at our returne he might make the better relation thereof, three of the crafty villaines, with a white skin allured vs to them. Once againe our generall, for that he hoped to heare of his men, went towards them: at our comming neere the shore whereon they were, we might perceiue a number of them lie hidden behind great stones, & those 3. in sight labouring by al meanes possible that some would come on land: and perceiuing we made no halt by words nor friendly signes, which they bled by clapping of their hands, and being without weapon, and but 3. in sight, they sought further means to prouoke vs thereto. One alone laid flesh on the shore, which we tooke by with the Boat hooke, as necessary victuals for the relieuing of the man, woman, and child, whom we had taken: for that as yet they could not digest our meat: whereby they perceiued themselves deceived of their expectation, for all their crafty allurements. Yet once againe to make (as it were) a full shew of their craftie natures, and subtile sleights, to the intent thereby to haue intrapped and taken some of our men, one of them counterfeited himselfe impotent and lame of his legs, who seemed to descend to the water side, with great difficulty: and to couer his craft the moze, one of his fellowes came downe with him, and in such places where he seemed unable to passe, he tooke him on his shoulders, set him by the water side, and departed from him, leaving him (as it should seeme) all alone, who playing his counterfait pageant very well, thought thereby to prouoke some of vs to come on shore, not fearing, but that one of vs might make our party good with a lame man.

Compassion
to cure a crafty
lame man.

Our Generall hauing compassion of his impotency, thought good (if it were possible) to cure him thereof: wherefore he caused a souldier to shooe at him with his Calceuer, which grased before his face. The counterfeit villaine deliuerly fled without any impediment at all, and got him to his bow and arrowes, and the rest from their lurking holes, with their weapons, bowes, arrows, slings, and darts. Our Generall caused some calceuers to be shot off at them, whereby some being hurt, they might hereafter stand in moze feare of vs.

This

This was all the answer for this time we could haue of our men, or of our Generals letter. Their crafty dealing at these three severall times being thus manifest unto vs, may plainly shew their disposition in other things to be correspondent. We iudged that they vied these stratagemes, thereby to haue caught some of vs, for the deliuering of the man woman and child whom we had taken.

They are men of a large corporature, and good proportion: their colour is not much unlike the Sunne burnt Countrey man, who laboureth daily in the Sunne for his liuing.

They weare their haire something long, and cut before either with stone or knife, very disorderly. Their women weare their haire long, and knit by with two loupes, shewing forth on either side of their faces, and the rest folded upon a knot. Also some of their women race their faces proportionally, as chinne, cheekes, and forehead, and the wrists of their hands, whereupon they lay a colour which continueth darke azurine.

They eate their meat all raw, both flesh, fish, and foule, or something per boyled with blood and a little water which they drinke. For lacke of water they will eate yce, that is hard frozen, as pleasantly as we will do Sugar Candie, or other Sugar.

If they for necessities sake stand in need of the premises, such grasse as the Countrey yeeldeth they plucke by and eate, not deinitely, or salletwise to allure their stomacks to appetite: but for necessities sake without either salt, oyles, or washing, like brute beasts deuouring the same. They neither vse table, stoole, or table cloth for comelines: but when they are imbued with blood knuckle deepe, and their knives in like sort, they vse their tongues as apt instruments to lick them cleane: in doing whereof they are assured to loose none of their victuals.

They frack or keepe certaine dogs not much unlike Molues, which they yoke together, as we do oxen & horses, to a sled or traile: and so carry their necessities ouer the yce and snow from place to place: as the captiue, whom we haue, made perfect signes. And when those dogs are not apt for the same vse: or when with hunger they are constrained for lacke of other victuals, they eat them: so that they are as needfull for them in respect of their bignesse, as our oxen are for vs.

Dogges like
unto wolues.

They eate
dogs flesh.

They apparell themselves in the skins of such beasts as they kill, sewed together with the sinewes of them. All the foule which they kill, they skin, and make thereof one kind of garment or other, to defend them from the cold.

They make their apparel with hoods and taites, which taites they giue when they thinke to gratifie any friendship shewed vnto them: a great signe of friendship with them. The men haue them not so lide as the women.

Hoods and
taites is their
apparell.

The men and women weare their hose close to their legges, from the waist to the knee without any open before, as well the one kind as the other. Upon their legges they weare hose of leather, with the furre side inward two or three paire on at once, and especially the women. In those hose they put their knives, needles, and other things needfull to beare about. They put a bone within their hose, which reacheth from the foote to the knee, whereupon they draw their said hose, and so in place of garters they are holden from falling downe about their feete.

They dresse their skinnies very soft and souple with the haire on. In cold weather or Winter they weare the furre side inward: and in Summer outward. Other apparell they haue none but the said skinnies.

Those beasts, fishes, and foules which they kill, are their meat, drinke, apparell, houses, bedding, hose, shoes, thread, and taites for their boates, with many other necessities whereof they stand in need, and almost all their riches.

Their houses are tents made of Seale skins, pitched by with 4. Firre quarters foure square meeting at the top, and the skins sewed together with sinewes, and laid thereupon: they are so pitched by, that the entrance into them is alwayes South or against the Sunne.

Their houses
of Seale skins
and furre.

They haue other sorts of houses which we found not to be inhabited, which are raised with stones and Whale bones, and a skinnelapd over them, to withstand the raine or other weather: the entrance of them being not much unlike an Duens mouth, whereto I thinke they resort for a time to fish, hunt, and foule, and so leaue them untill the next time they come thither againe.

Their weapons are bowes, arrowes, darts, and slings. Their bowes are of wood of a yard long, line wed at the back with strong sinewes, not glued too, but fast girded and tyed on. Their bow strings are like wise sinewes. Their arrowes are three pieces nocked with bone, and ended with bone, with those two ends, and the wood in the midst, they passe not in length halfe a yard or little more. They are feathered with two feathers the penne end being cut away, and the feathers layd vpon the arrow with the broad side to the wood: in so much that they seeme when they

Their weapons
of defence.

Three sorts of
heads to their
arrowes.

are tyed on, to haue foure fethers. They haue also three sorts of heads to those arrowes: one sort of stone or yron, proportioned like to a heart: the second sort of bone, much like vnto a stoep head, with a hooke on the same: the third sort of bone like wise made sharpe at both sides, and sharpe pointed. They are not made very fast but lightly tyed to, or else set in a nocke, that vpon small occasion the arrowes leaue these heads behind them: and they are of small force, except they be very neere when they shoote.

Two sorts of
darts.

Their Darts are made of two sorts: the one with many forkes of bones in the foze end, and like wise in the midst: their proportions are not much vnlike our toasting yrons but longer: these they cast out of an instrument of wood, very readily. The other sort is greater then the first aforesayd, with a long bone made sharpe on both sides not much vnlke a Rapier, which I take to bee their most hurtfull weapon.

Two sorts of
boates made
of leather.

They haue two sorts of boates made of leather, set out on the inner side with quarters of wood, artificially tyed together with thongs of the same: the greater sort are not much vnlike our wherries, wherein sixteene or twenty men may sit: they haue for a sayle ozell the guts of such beasts as they kill very fine and thinne, which they sew together: the other boate is but for one man to sit and row in with one oare.

They vse to
foule, fish, and
hunt.
It is to be
supposed that
their inhabi-
tants is elles
where.

Their order of fishing, hunting, and fouling are with these said weapons: but in what sort, or how they vse them we haue no perfect knowledge as yet.

I can suppose their abode or habitation not to be here, for that neither their houses or apparell, are of such force to withstand the extremity of cold, that the Countrey seemeth to be infected with all: neither do I see any signe likely to perforce me the same.

Those houses or rather denues which stand there, haue no signe of footway, or any thing else troden, which is one of the chiefest tokens of habitation. And those tents which they bring with them, when they haue sufficiently hunted and fished, they remoue to other places: and when they haue sufficiently stored them of such victuals, as the Countrey yeeldeth or bringeth forth, they returne to their winter stations or habitations. This coniecture do I make, for the infertility which I coniecture to be in that Countrey.

Their vse of
yron.

They haue some yron whereof they make arrow heads, kniues, and other little instruments, to worke their boates, bowes, arrowes, and darts withall, which are very vnapt to doe any thing withall but with great labour.

It seemeth that they haue conuersation with some other people, of whom for exchange they should receiue the same. They are greatly delighted with any thing that is bright, or giveth a sound.

Anthropophagi.

What knowledge they haue of God, or what Idoll they adore, we haue no perfect intelligence. I thinke them rather Anthropophagi, or deuourers of mans flesh then other wise: for that there is no flesh or fish which they find dead (smell is neuer so filthy) but they will eate it, as they finde it without any other dressing. A loathsome thing, either to the beholders or hearers.

Signes of
gold eare.

There is no manner of creeping beast hurtfull, except some Spiders (which as many affirme, are signes of great store of gold) and also certaine stinging Gnattes, which bite so fiercely, that the place where they bite shortly after swelleth and it cheth very soze.

Signes of
gold from
other people.
Description of
the Countreys.

They make signes of certaine people that weare bright plates of gold in their foreheads, and other places of their bodies.

The Countreys on both sides the streights lye very high with rough stony mountaines, and great quantitie of snow thereon. There is very little plaine ground and no grasse, except a little which is much like vnto mosse that groweth on soft ground, such as we get Turkes in. There is no wood at all. To be brieue there is nothing fit or profitable for the vse of man, which that Countrey with roote yeeldeth or bringeth forth: Howbeit there is great quantitie of Deere, whose skins are like vnto Asses, there be also or hoznes doe farre exceede, as well in length as also in breadth, any in these our parts or Countreys: their feete likewise are as great as our orengs, which we measure to be seuen or eight ynches in breadth. There are also hares, wolues, fishing beares, and sea foule of sundry sorts.

As the Countrey is barren and infertile, so are they rude and of no capacitie to culture the same to any perfection: but are contented by their hunting, fishing, and fouling, with raw flesh and warme blood to satisfie their greedy panches, which is their only glory.

A signe of
Earthquakes
or thunder.

There is great likelihood of Earthquakes or thunder: for that there are huge and monstrous mountaines, whose greatest substance are stones, and those stones so shaken with some extraordinary meanes that one is separated from another, which is discordant from all other Quarries.

There

There are no riuers, or running springs, but such as through the heate of the Sunne, with such water as descendeth from the mountaines and hilles, whereon great quantities of snow do lie, are ingendred.

No riuers, but such as the Sunne doth cause to come of snow. A probability that there should be neither spring of riuers in the ground.

It argueth also that there should be none: for that the earth, which with the extremitie of the Winter is so frozen within, that that water which should haue recourse within the same to maintaine springs, hath not his motion, whereof great waters haue their originall, as by experience is seene other where. Such valleis as are capable to receiue the water, that in the Summer time by the operation of the Sunne descendeth from great abundance of snowe, which continually lyeth on the mountaines and hath no passage, sinketh into the earth and so vanissheth away, without any runnell aboue the earth, by which occasion or continuall standing of the said water, the earth is opened, and the great frost yeeldeth to the force thereof, which in other places foure or five fathoms within the ground for lacke of the said moisture, the earth (euen in the very Summer time) is frozen, and so combineth the stones together, that scarcely instruments with great force can vnknit them.

Also where the water in those valleis can haue no such passage away, by the continuance of time in such order as is before rehearsed, the yeerely descent from the mountaines filleth them full, that at the lowest banke of the same, they fall into the valley, and so continue as fishing Ponds or Stagnes in Summer time full of water, and in the Winter hard frozen: as by skarres that remaine thereof in Summer may easily be perceiued: so that the heat of Summer is nothing comparable or of force to dissolue the extremitie of cold that cometh in Winter.

Neuerthelesse I am assured that below the force of the frost within the earth, the waters haue recourse, and empye themselves out of sight into the sea, which through the extremitie of the frost are constrained to doe the same: by which occasion the earth within is kept the warmer, and springs haue their recourse, which is the onely nutriment of golde and Mineralls within the same.

Springs nourish gold.

There is much to be sayd of the commodities of these Countreys, which are couched within the bowels of the earth, which I let passe till moze perfect triall be made thereof.

The 24. of August, after we had satisfied our minds with freight sufficient for our vessels, though not our couetous desires with such knowledge of the Countrey, people, and other commodities as are before rehearsed, we departed thence. The 17. of September we fell with the land end of England, and so sailed to Milford Hauen, from whence our Generall rode to the Court for order, to what Port or Hauen to conduct the ship.

Our departure from those Countreys.

We lost our two Barkes in the way homeward, the one the 29. of August, the other the 31. of the same moneth, by occasion of great tempest and fogge. Howbeit God restored the one to Bristowe, and the other made his course by Scotland to Yermouth. In this voyage we lost two men, one in the way by Gods visitation, and the other homeward cast ouer boarde with a surge of the sea.

How & when we lost our 2. Barkes, which God neuertheless restored.

I could declare vnto the Readers, the latitude and longitude of such places and regions as we haue bene at, but not altogether so perfectly as our masters and others, with many circumstances of tempests and other accidents incident to Sea faring men, which seeme not altogether strange, but I let them passe to their reports as men most apt to set forth and declare the same. I haue also left the names of the Countreys on both the shores vntouched, for lacke of vnderstanding the peoples language: as also for sundry respects, not needfull as yet to be declared.

The conclusion.

Countreys new discovered where commoditie is to be looked for, doe better accord with a new name giuen by the discoverers, then an vncertaine name by a doubtfull Authour.

Our general named sundry Islands, Mountaines, Capes, and Harbours after the names of diuers Noble men and other gentlemen his friends, as wel on the one shore as also on the other.

The third and last voyage vnto Meta Incognita, made by M. Martin Frobisher, in the yeere 1578. Written by Thomas Ellis.

These are to let you know, that vpon the 25. of May, the Thomas Allen being Viceadmirall, whose Captaine was M. Yorke, M. Gibbes Master, Christopher Hall Pilot, accompanied with the Reareadmirall named the Hopewell, whose Captaine was M. Henric Carewe, the M. Andrewe Dier, and certaine other ships came to Grauesend, where wee ankred and abode the comming of certaine of our flecte which were not yet come.

Charles Jack-
man.The Countesse
of Warwicks
found.

The 27. of the same moneth our Fleete being nowe come together, and all things prest in a readinesse, the wind fauouring, and tide seruing, we being of sailes in number eight, waied anchors and hoisted our sailes toward Harwich to meete with our Admirall, and the residue which then and there abode our arriual: where we safely arriued the 28. thereof, finding there our Admirall, whom we with the discharge of certaine pieces saluted, according to order and duety, and were welcommed with the like courtesie: which being finished we landed: where our Generall continued mustering his souldiers and Miners, and setting things in order appertaining to the voyage untill the last of the said moneth of May, which day we hoisted our sailes, and committing our selues to the conuocing of Almighty God, we set forward toward the west Countrey in such luckie wise and good successe, that by the fift of June we passed the Durlies, being the vnmest part of Ireland to the Westward.

And here it were not much amisse nor farre from our purpose, if I should a little discourse and speake of our aduentures and chances by the way, as our landing at Plymouth, as also the meeting certaine poore men, which were robbed and spoiled of all that they had by Pirates and Rovers: amongst whom was a man of Bristol, on whom our Generall vied his liberality, and sent him away with letters into England.

But because such things are impertinent to the matter, I will returne (without any more mentioning of the same) to that from the which I haue digressed and swarued, I meane our ships now sailing on the surging seas, sometime passing at pleasure with a wished Easterne wind, sometime hindered of our course againe by the Westerne blasts, vntill the 20. day of the foresayd moneth of June, on which day in the morning we fell with Frizeland, which is a very hie and cragged land and was almost cleane couered with snow, so that we might see nought but cragge rockes and the tops of high and huge hilles, sometimes (and for the most part) all couered with foggie mists. There might we also perceiue the great Isles of yce lying on the seas, like mountaines, some small, some big, of sundry kinds of shapes, and such a number of them, that wee could not come nere the shore for them.

Thus sailing alongst the coast, at the last we saw a place somewhat boyd of yce, where our Generall (accompanied with certaine other) went a shore, where they sawe certaine tents made of beards skines, and boates much like vnto theirs of Meta Incognita. The tents were furnished with flesh, fish, skins, and other trifles: amongst the which was found a bore of nailes: whereby we did coniecture, that they had either Artificers amongst them, or els a traffike with some other nation. The men ran away, so that wee could haue no conference or communication with them. Our Generall (because hee would haue them no more to flee, but rather encouraged to stay through his courteous dealing) gaue commaundement that his men should take nothing away with them, sauing onely a couple of white dogs, for the which he left pinnes, poynts, knives, and other trifling things, and departed without taking or hurting any thing, and so came aboard, and hoisted sailes, and passed forward.

But being scarce out of the sight thereof, there fell such a fogge and hidious mist that we could not see one another: wherupon we strooke our drums, and sounded our trumpets, to the ende we might keepe together: and so continued all that day and night till the next day that the mist brake by: so that we might easily perceiue all the ships thus sailing together all that day, vntill the next day, being the 22. of the same: on which day wee sawe an infinite number of yce, from the which we cast about to shun the danger thereof.

But one of our small Barkes named the Michael, whose Captaine was Haster Kinderslie, the Haster Barcholomew Bull, lost our company, insomuch that we could not obtaine the sight of her many dayes after, of whom I meane to speake further anon when occasion shall be ministred, and opportunitie serue. Thus we continued in our course vntill the second of July, on which day we fell with the Quernes forzeland, where we saw so much yce, that we thought it vnpossible to get into the Straights: yet at the last we gaue the aduenture and entered the yce.

Being amongst it wee sawe the Michael, of whom I spake before, accompanied with the Iudith, whose Captaine was Haster Fenton, the Haster Charles Jackman, bearing into the foresayd yce, farre distant from vs, who in a storme that fell that present night, (whereof I will at large God willing, discourse hereafter) were seuered from vs, and being in, wandzed by and downe the Straights amongst the yce many dayes in great perill, till at the last, (by the prouidence of God) they came safely to harbor in their wished Port, in the Countesse of Warwicks found, the 20. of July aforesayd, tenne dayes before any of the other shippes: who going on shore found where the people of the Countrey had bene, and had hid their provision in great heapes of stones being both of flesh and fish, which they had killed: whereof wee also found great store in other

other places after our arrival. They found also diuers engins, as bowes, slings, and darts. They found likewise certaine pieces of the Pinnesse which our Generall left there the yee before, which Pinnesse he had sunke, minding to haue it againe the next yee.

Now seeing I haue entreated so much of the Iudith and the Michael: I will returne to the rest of the other ships, and will speake a litle of the storme which fell, with the mishaps that we had, the night that we put into the yce: whereof I made mention before.

At the first entring into the yce in the mouth of the Straights, our passage was very narrow, and difficult but being once gotten in, we had a faire open place without any yce for the most part, being a league in compasse, the yce being round about vs and inclosing vs, as it were, within the pales of a parke. In which place, (because it was almost night) we minded to take in our sailes, and lie a hull all that night. But the storme so increased, and the waues began to mount aloft, which brought the yce so neere vs, and comming on so fast vpon vs, that we were faine to beare in and out, where we might espie an open place. Thus the yce comming on vs so fast, we were in great danger, looking euery houre for death. And thus passed we on in that great danger, seeing both our selues and the rest of our ships so troubled and tossed amongst the yce, that it would make the strongest heart to relent.

At the last the Barke Dionysc being but a weake ship, and bruised afore amongst the yce, being so leake that no longer she could tarry about the water, ranke without sauing any of the goods which were within her: which sight so abashed the whole flete, that we thought verily we should haue tasted of the same sauce. But neuerthelesse we seeing them in such danger, manned our boates and saued all the men in such wise, that not one perished: God be thanked.

The storme still increased and the yce inclosed vs, so that we were faine to take downe top and top mastes: for the yce had so inuironed vs, that we could see neither land nor sea, as farre as we could keene: so that we were faine to cut our cables to hang ouer boord for fenders, somewhat to eale the ships sides from the great and drye strokes of the yce: some with Capitan barres, some sending off with oares, some with planks of two ynches thicke, which were broken immediately with the force of the yce, some going out vpon the yce to beare it off with their shoulders from the ships. But the rigoroulnes of the tempest was such, and the force of the yce so great, that that not onely they burst and spoyled the foresaid provision, but likewise so rased the sides of the ships, that it was pitifull to behold, and caused the heares of many to faint.

Thus we continued all that dismall and lamentable night plunged in this perplexity, looking for instant death: but our God (who neuer leaueh them destitute which faithfully call vpon him, although he often punisheth for amendements sake) in the morning caused the winds to cease, and the fogge which all that night lay on the face of the water to cleare: so that we might perceiue about a mile from vs, a certaine place cleare from any yce, to the which with an easie breath of wind which our God sent vs, we bent our selues. And furthermore, hee provided better for vs then we deserued or hoped for: for when we were in the foresaid cleare place, he sent vs a fresh gale at West or at West South west, which let vs cleare without all the yce. And further he added more: for he sent vs so pleasant a day as the like we had not of a long time before, as after punishment consolation.

Thus we ioyfull wights being at libertie, tooke in all our sailes and lay a hull, praying God for our deliuerance, and stayed to gather together our flete: which once being done, we seeing that none of them had any great hurt, neither any of them wanted, sauing onely they of whom I spake before and the ship which was lost, then at the last wee hoised our sailes, and laybulting off and on, till such time as it would please God to take away the yce that wee might get into the Straights.

And as we thus lay off and on we came by a marueilous huge mountaine of yce, which surpassed all the rest that euer we saw: for we iudged it to be neere fourescore fathomes about water, and we thought it to be a ground for any thing that we could perceiue, being there nine score fathoms deepe, and of compasse about halfe a mile.

Also the sixt of July there fell a bidious fogge and mist, that continued till the nineteenth of the same: so that one shippe could not see another. Therefore we were faine to beare a small stayle and to obserue the tyme: but there ran such a current of a tide, that it let vs to the North west of the Queenes foeland the backside of all the Straights: where (through the contagious fogge having no sight either of Sunne or Starre) we scarce knew where we were. In this fogge the tenth of July we lost the company of the Viceadmirall, the Anne Francis, the Busse of Bridgewater, and the Francis of Foy.

The 16. day one of our small Barkes named the Gabriel was sent by our Generall to beare in

The people offered to traffike with vs.

with the land to discerie it, where being on land, they met with the people of the Countrey, which seemed very humane and ciuill, and offered to traffike with our men, profering them foules and skins for knives, and other trifles: whose courtesie caused vs to thinke, that they had small conuersation with other of the Straights.

Then we bare backe againe to goe with the Queenes foze land: and the eighteenth day wee came by two Islands whereon we went on shore, and found where the people had bene: but we saw none of them. This day wee were againe in the yce, and like to be in as great perill as we were at the first. For through the darknesse and obscuritie of the foggie mist, we were almost run on rocks and Islands before we saw them: But God (euen miraculously) provided for vs, opening the foggies that we might see clearly, both where and in what danger we presently were, and also the way to escape: or els without faile we had ruinously runne vpon the rocks.

When we knew perfectly our instant case, wee cast about to get againe on Sea-bord, which (God be thanked) by night we obtained and praised God. The cleare continued scarce an houre, but the foggie fell againe as thicke as euer it was.

Warning pieces of safe passage discharged.

Then the Rearadmirall and the Beare got themselves cleare without danger of yce and rocks, strooke their sailes and lay a hull, staying to haue the rest of the Fleete come forth: which as yet had not found the right way to cleare themselves from the danger of rocks and yce, vntill the next morning, at what time the Rearadmirall discharged certaine warning pieces to giue notice that she had escaped, and that the rest (by following of her) might set themselves free, which they did that day.

A faire sound betweene the Queenes foze land and Jackmans sound.

Then hauing gathered our selues together we proceeded on our purposed voyage, bearing off, and keeping our selues distant from the coast till the 19. day of Iuly: at which time the foggies brake vp and disperfed, so that we might plainly and clearly behold the pleasant ayre, which so long had bene taken from vs, by the obscuritie of the foggie mists: and after that time we were not much encombyed therewith vntill we had left the confines of the Countrey.

Then we espying a fayre sound, supposed it to goe into the Straights betweene the Queenes foze land and Jackmans sound, which proued as we imagined. For our Generall sent forth againe the Gabriel to discouer it, who passed through with much difficultie: for there ran such an extreme current of a tide, with such a horrible gulfe, that with a fresh gale of wind they were scarce able to stemme it: yet at the length with great trauaile they passed it, and came to the Straights, where they met with the Thomas Allen, the Thomas of Ipswich, and the Busse of Bridgewater: who altogether aduentured to beare into the yce againe, to see if they could obtaine their wished Port. But they were so incombied that with much difficultie they were able to get out againe, yet at the last they escaping, the Thomas Allen, and the Gabriel bare in with the Westerne shore, where they found harbour, and there moored their ships vntill the fourth of August, at which time they came to vs in the Countesse of Warwicks sound. The Thomas of Ipswich caught a great leake which caused her to cast againe to Seabord and so was mended.

An horrible snowe fell in Iuly.

We sailed along still by the coast vntill we came to the Queenes foze land, at the point where of we met with part of the gulfe aforesayd, which place or gulfe (as some of our Masters doe credibly report) doeth flow nine houres, and ebs but thre. At that point wee discovered certaine lands Southward, which neither time nor opportunitie would serue to search. Then being come to the mouth of the Straights we met with the Anne Francis, who had laine bulking vp and downe euer since her departure alone, neuer finding any of her company. We met then also the Francis of Foy, with whom againe we intended to venture and get in: but the yce was yet so thicke, that we were compelled againe to retyre and get vs on Sea-bord.

There fell also the same day being the 26. of Iuly, such an horrible snow, that it lay a foot thicke vpon the hatches which froze as it fell.

We had also at other times diuers cruell stormes both of snow and haile, which manifestly declared the disemperature of the Countrey: yet for all that wee were so many times repulsed and put backe from our purpose, knowing that lingering delay was not profitable for vs, but hurtfull to our voyage, we mutually consented to our valiant Generall once againe, to giue the onset.

The time of our setting forthward, &c.

The 28. day therefore of the same Iuly we assayed, and with little trouble (God be prayfed) we passed the dangers by day light. Then night falling on the face of the earth, wee hulled in the cleare, till the chearefull light of the day had chased away the nopsome darkenesse of the night: at which time we set forthward to wards our wished Port: by the 30. day wee obtained our expected desire, where we found the Iudith, and the Michael: which brought no small ioy vnto the General, and great consolation to the heauie hearts of those wearied wighes.

The

The 30. day of July we brought our ships into the Countesse of Maricks sound, and moored them, namely these ships, The Admirall, the Rearadmirall, the Francis of Foy, the Beare, Armenel, the Salomon, and the Buss of Bridge water: which being done, our Generall commaunded vs all to come a shoꝛe vpon the Countesses Island, where he set his Piners to worke vpon the Mine, giuing charge with expedition to dispatch with their lading.

Our Generall himselfe, accompanied with his Gentlemen, diuers times made rodes into sundry partes of the Countrey, as well to finde new Mines, as also to finde out and see the people of the Countrey. He found out one Mine vpon an Island by Beares sound, and named it the Countesse of Suffex Island. One other was found in Winters Foznace, with diuers others, to which the ships were sent sunderly to be laden. In the same rodes he mette with diuers of the people of the Countrey at sundry times, as once at a place called Dauids sound: who shot at our men, and very desperately gaue them the onset, being not aboue thre or foure in number, there being of our Countrey men aboue a dosen: but seeing themselves not able to preuaile, they tooke themselves to flight: whom our men pursued, but being not vled to such craggie clifles, they soone lost the sight of them, and so in vaine returned.

The Countesse
of Suffex Island.
Winters Foz-
nace.

Dauids sound,

We also saw of them at Beares sound, both by Sea and land in great companies: but they would at all times keepe the water betweene them and vs. And if any of our ships chanced to be in the sound (as they came diuers times, because the Harboꝛ was not very good) the ship laded, and departed againe: then so long as any ships were in sight, the people would not be seene. But when as they perceiued the ships to be gone, they would not only shew themselves standing vpon high clifles, and call vs to come ouer vnto them: but also would come in their Botes very neere to vs, as it were to brag at vs: whereof our Generall hauing aduertisement, sent for the Capitaines and Gentlemen of the Ships, to accompany and attend vpon him, with the Capitaine also of the Anne Francis, who was but the night before come vnto vs. For they, and the Fleebote hauing lost vs the 26. day in the great snowe, put into an harbour in the Queenes foze land, where they found good Dare, where with they laded themselves, and came to seeke the Generall: so that now we had all our Shippes, sauing one Barke, which was lost, and the Thomas of Ipswich, who (compelled by what furie I knowe not) forooke our company, and returned home without lading.

The policie of
the people for
safetie of them-
selves.

Our Generall accompanied with his Gentlemen, (of whom I spake) came all together to the Countesse of Suffex Island, neere to Beares sound: where he manned our certaine Pinettes, and went ouer to the people: who perceiuing his arriual, fledde away with all speede, and in haste left certaine darters and other engines behinde them, which we found: but the people we could not finde.

Their speech
sight at our
Generals ar-
riual.

The next morning our Generall perceiuing certaine of them in botes vpon the Sea, gaue chase to them in a Pinnette vnder saile, with a fresh gale of winde, but could by no meanes come neere vnto them: for the longer he sailed, the further off he was from them: which well shewed their cunning and actiuitie. Thus time wearing away, and the day of our departure appoaching, our Generall commaunded vs to lade with all expedition, that we might be againe on Seaboꝛd with our ships: for whilst we were in the Countrey, we were in continual danger of freezing in: for often snow and haile often falling, the water was so much frosen and congealed in the night, that in the morning we could scarce row our botes or Pinettes, especially in Diers sound, which is a calme and still water: which caused our Generall to make the more haste, so that by the 30. day of August we were all laden, and made all things ready to depart.

But before I proceede any further herein, to shew what fortune befell at our departure, I will turne my penne a litle to M. Capitaine Fenton, and those Gentlemen which should haue inhabited all the yeere in those Countreies, whose valliant mindes were much to be commended: For doubtlesse they had done as they intended, if lucke had not withstoode their willingnesse.

Gentlemen
should haue
inhabited the
Countrey.

For the Barke Dionysie which was lost, had in her much of their house which was prepared and should haue bene builded for them, with many other implements. Also the Thomas of Ipswich which had most of their prouision in her, came not into the Streights at all: neither did we see her since the day we were separated in the great snow, of which I spake before. For these causes, hauing not their house, nor yet prouision, they were disappointed of their pretence to tarie, and therefore laded their ships, and so came away with vs.

But before we tooke shipping, we builded a litle house in the Countesse of Warwicks Island, and garnished it with many kinds of trifles, as Pinnes, Points, Laces, Glasses, Kombes, Baxes on horsebacke and on foote, with innumerable other such fanlies and toys: thereby to allure and entice the people to some familiaritie against other yeeres.

An house tri-
cked and garni-
shed with di-
uers trinkets.

Thus

An outragi-
ous tempest.

Thus having finished all things we departed the Countrey, as I sayd before: but because the Busse had not lading enough in her, she put into Beares sound to take in a little more. In the meane while the Admirall, and the rest without at Sea stayed for her. And that night fell such an outrageous tempest, beating on our ships with such vehement rigor, that anchor and cable a-uailed nought: for we were broken on rockes and Islands of yce, insomuch that (had not the great goodnesse of God bene miraculously shewed to vs) we had bene cast away euery man. This danger was more doubtfull and terrible, then any that preceded or went before: for there was not any one shippe (I thinke) that escaped without damage. Some lost anchor and also cables, some botes, some Pinusses: some anchor, cables, boates and Pinusses.

Our entering
the coastes
dangerous.

This boystrous storme so seuered vs one from another, that one shippe knewe not what was become of another. The Admirall knewe not where to finde the Viceadmirall or Rearadmirall, or any other ship of our company. Our Generall being on land in Beares sound could not come to his shippe, but was compelled to goe aboard the Gabriel where he continued all the way homeward: for the boystrous blasts continued so extremely and so long a time, that they sent vs homeward (which was Gods fauour towarde vs) will we, nill we, in such haste, as not any one of vs were able to keepe in company with other, but were separated. And if by chance any one shippe did ouertake other, by swiftnesse of sayle, or mette, as they often did: yet was the rigor of the wind so hidious, that they could not continue company together the space of one whole night.

Thus our iourney outward was not so pleasant, but our comming thither, entering the coastes and countrey, by narrow Streights, perillous yce, and swift rides, our times of aboade there in snowe and stormes, and our departure from thence the 31. of August with dangerous blustering windes and tempests, which that night arose, was as uncomfortable: separating vs so as wee sayled, that not any of vs mette together, untill the 28. of September, which day we fell on the English coastes, betweene Sylley and the landes ende, and passed the channell, untill our arrival in the riuer of Thames.

The report of *Thomas Viars* passenger in the *Emanuel*, otherwise called the *Busse of Bridgewater*, wherein *James Leech* was Master, one of the ships in the last Voyage of Master *Martin Frobisher* 1578. concerning the the discouerie of a great Island in their way homeward the 12. of September.

The Island in
length 25.
leagues.
This Island is
in the latitude
of 57. degrees
and 1. second
part.
Two harbo-
roughs in this
Island.

The Busse of Bridgewater was left in Beares sound at Meta incognita, the second day of September behinde the flecte in some distresse; through much winde, ryding neere the Lee shoare, and forced there to ride it out upon the hazard of her cables and anchors, which were all aground but two. The third of September being fayre weather, and the winde North north west she set sayle, and departed thence, and fell with Frisland on the 8. day of September at five of the clocke at night, and then they set off from the Southwest point of Frisland, the wind being at East, and East Southeast, but that night the winde beared Southerly, and shifted oftentimes that night: but on the tenth day in the morning, the wind at West north west faire weather, they steered Southeast, and by South, and continued that course untill the 12. day of September, when about 11. a clocke before noone, they descryed a lande, which was from them about five leagues, and the Southermost part of it was Southeast by East from them, and the Northmost next, North North east, or North east. The Master accounted that the Southeast poynt of Frisland was from him at that instant when hee first descryed this new Islande, North west by North, 50. leagues. They account this Island to be 25. leagues long, and the longest way of it Southeast, and North west. The Southerne part of it is in the latitude of 57. degrees and 1. second part, or there about. They continued in sight of it, from the 12. day at a 11. of the clocke, till the 13. day three of the clocke in the after noone, when they left it: and the last part they saw of it, bare from them North west by North. There appeared two Harbours upon that coast: the greatest of them seven leagues to the Northwards of the Southermost poynt, the other but foure leagues. There was very much yce neere the same land, and also twentie or thirty leagues from it, for they were not cleare of yce, till the 15. day of September after noone. They piped their Voyage homewards, and fell with the West part of Ireland about Galway, and had first sight of it on the 25. day of September.

Notes

Notes framed by M. Richard Hakluyt of the middle Temple Esquire, giuen to certaine Gentlemen that went with *M. Frobisher in his* North west discouerie, for their directions: And not vnfit to be committed to print, considering the same may stirre vp considerations of these and of such other things, not vnmeet in such new voyages as may be attempted hereafter.

That the first Seate be chosen on the seashoe, so as (if it may be) you may haue your owne Hauie within Bay, riuer or lake, within your Seate safe from the enemye: and so as the enemye shalbe forced to lie in open rode abroad with- out, to be dispersed with all windes and tempests that shall arise. Thus seated you shall be least subject to annoy of the enemye, so may you by your Hauie within passe out to all parts of the world, and so may the Shippes of England haue access to you to supply all wants, so may your commodities be caried away also. This seat is to be chosen in a temperate Climat, in sweete ayre, where you may possesse alwayes sweete water, wood, seacoales or turfe, with fish, flesh, graine, fruites, herbes and rootes, or so many of those as may suffice very necesserie for the life of such as shall plant there. And for the possessing of mines of golde, of siluer, copper, quicksiluer, or of any such precious thing, the wants of those needfull things may be supplied from some other place by sea, &c.

Stone to make Lyme of,

Slate stone to tyle withall, or such clay as maketh tyle,

Stone to wall withall, if Byrke may not bee made,

Timber for buylding easely to be conuei- ed to the place,

Reede to couer houses or such like, if tyle or slate be not.

are to be looked for as things without which no Citie may be made nor people in ciuil sort be kept together,

The people there to plant and to continue are eyther to liue without traffique, or by traffique and by trade of marchandise. If they shall liue without sea traffique, at the first they become naked by want of linnen and woollen, and very miserable by infinite wants that will otherwise ensue, and so will they be forced of themselves to depart, or else easely they will be consumed by the Spanyards, by the Frenchmen, or by the naturall inhabitants of the countrey, and so the enter- prize becomes reprochfull to our Nation, and a let to many other good purposes that may be ta- ken in hand.

And by trade of marchandise they can not liue, except the Sea or the Land there may yeelde commoditie. And therefore you ought to haue most speciall regard of that poynt, and so to plant, that the naturall commodities of the place and seate may draw to you access of Nauigation for the same, or that by your owne Nauigation you may cary the same out, and fetch home the supply of the wants of the seate.

Such Nauigation so to be employed shall, besides the supply of wants, be able to encounter with forreine force.

And for that in the ample vent of such things as are brought to you out of England by Sea, standeth a matter of great consequence, it behoueth that all humanitie and curtesie and much for- bearing of reuenge to the Inland people be vsed: so shall you haue firme amitie with your neigh- bours, so shall you haue their inland commodities to mainteine traffique, and so shall you waie rich and strong in force. Diuers and seuerall commodities of the inland are not in great plenty to be brought to your hands, without the ayde of some portable or Nauigable riuer, or ample lake, and therefore to haue the helpe of such a one is most requisite: And so is it of effect for the disperling of your owne commodities in exchange into the inlands.

Nothing is more to be indeyoured with the Inland people then familiarity. For so may you best discouer all the natural commodities of their countrey, & also all their wants, al their strengths, all their weaknesse, and with whom they are in warre, and with whom confederate in peace and amitie, &c. which knowen you may worke many great effects of greatest consequence.

And in your planting the consideration of the climate and of the soyle be matters that are to be respected. For if it be so that you may let in the salt sea water, not mixed with the fresh into flats, where the sunne is of the heate that it is at Rochel, in the Bay of Portugal, or in Spaine, then may you procure a man of skill, and so you haue wonne one noble commoditie for the fishing, and for trade of marchandize by making of Salt.

Or if the soyle and clymate be such as may peelo you the Grape as good as that at Burdeaux, as that in Portugal, or as that about Siuil in Spaine, or that in the Islands of the Canaries, then there resteth but a workeman to put in execution to make Wines, and to dresse Reliquins of the sunne and other, &c.

Or if ye finde a soyle of the temperature of the South part of Spaine or Barbarie in the which you finde the Olive tree to growe: Then you may be assured of a noble marchandize for this Realme, considering that our great trade of clothing doeth require oyle, and weying how deere of late it is become by the vent they haue of that commoditie in the West Indies, and if you finde the wilde Olive there it may be grafted.

Or if you can find the berrie of Cochenile with which we colour Stammeltes, or any Roote, Berrie, Fruite, wood or earth fitte for dying, you winne a notable thing fitte for our state of clothing. This Cochenile is naturall in the West Indies on that firme.

Or if you haue Hides of beasts fitte for sole Leather, &c. It will be a marchandize right good, and the Sauages there yet can not tanne Leather after our kinde, yet excellently after their owne manner.

Or if the soyle shall yeeld Figges, Almonds, Sugar Canes, Quinces, Oranges, Lemonds, Potatos, &c. there may arise some trade and traffique by Figs, Almonds, Sugar, Parmelade, Sucket, &c.

Or if great woods be found, if they be of Cypres, chests may be made, if they be of some kinde of trees, Pitch and Tarre may be made, if they be of some other, then they may yeeld Rosin, Turpentine, &c. and all for trade and traffique, and Caskes for wine and oyle may be made, likewise ships and houses, &c.

And because traffique is a thing so materiall, I wish that great obseruation be taken what euery soyle yeeldeth naturall, in what commoditie soeuer, and what it may be made to yeelde by indouour, and to send vs notice home, that thereupon we may deuise what meanes may be thought of to raise trades.

Now admit that we might not be suffered by the Sauages to enioy any whole country or any more then the scope of a citie, yet if we might enioy traffique, and be assured of the same, we might be much enriched, our Maie might be increased, and a place of safetie might there be found, if change of religion or ciuill warres should happen in this realme, which are things of great benefit. But if we may enioy any large territorie of apt soyle, we might so vse the matter, as we should not depend vpon Spaine for oyles, sacks, reliques, oranges, lemons, spanish skins, &c. Nor vpon France for wood, bay salt, and Gascoyne wines, nor on Eastland for flaxe, pitch, tarre, mastes, &c. So we should not so exhaust our treasure, and so exceedingly enrich our doubtfull friends, as we doe, but should purchase the commodities that we want for halfe the treasure that now wee doe: and should by our owne industries and the benefites of the soyle there cheaply purchase oyles, wines, salt, fruits, pitch, tarre, flaxe, hempe, mastes, boozes, fish, golde, silver, copper, tallow, hides and many commodities: besides if there be no flats to make salt on, if you haue plentie of wood you may make it in sufficient quantitie for common vses at home there.

If you can keepe a safe Hauen, although you haue not the friendship of the neere neighbours, yet you may haue traffique by sea vpon one shoze or other, vpon that firme in time to come, if not present.

If you find great plentie of tymber on the shoze side or vpon any portable riuier, you were best to cut downe of the same the first winter, to be seasoned for ships, barks, boates and houses.

And if neere such wood there be any riuier or brooke vpon the which a sawing mill may be placed, it would doe great seruice, and therefore consideration would be had of such places.

And if such port & chosen place of setting were in possession and after fortified by arte, although by the land side our Englishmen were kept in, and might not enioy any traffique with the next neighbours, nor any victuals: yet might they victuall themselves of fish to serue very necessitie, and enter into amitie with the enemies of their next neighbours, and so haue vent of their marchandize of England & also haue victual, or by meanes hereupon to be bled, to force the next neighbours to amitie. And keeping a nauy at the setting place, they should find out along the tract of the land to haue traffique, and at diuers Islands also. And so this first seat might in time become a stapling place of the commodities of many countreys and territories, and in time this place might become of all the prouinces round about the only gouernour. And if the place first chosen should not so well please our people, as some other more lately found out: There might be an easie remoue, and that might be raised, or rather kept for others of our nation to auoyd an ill neighbour.

If the soyles adioyning to such conuenient Hauen and setting places be found marishie and boggie,

boggie, then men skillful in drayning are to be carped thither. For arte may worke wonderful effects therein, and make the soyle rich for many uses.

To plant vpon an Island in the mouth of some notable riuer, or vpon the point of the land entering into the riuer, if no such Island be, were to great end. For if such riuer were nauigable or portable farre into the land, then would arise great hope of planting in fertile soyles, and traffike on the one or on the other side of the riuer, or on both, or the linking in amitie with one or other petty king contending there for dominion.

Such riuers found, both Barges and Boates may be made for the safe passage of such as shall pierce the same. These are to be couered with doubles of course linnen artificially wrought, to defend the arrow or the dart of the sauage from the tower.

Since euery soile of the world by arte may be made to yeeld things to feede and to clothe man, bying in your returne a perfect note of the soile without and within, and we shall deuise if neede requite to amend the same, and to draw it to more perfection. And if you finde not frutes in your planting place to your liking, we shall in due orders furnish you with such kindes of plants to be carped thither the winter after your planting, as shall the very next summer following yeeld you some fruite, and the yeere next following, as much as shall suffice a towne as bigge as Calice, and that shortly after shall be able to yeeld you great store of strong durable good sider to drinke, and these trees shall be able to encrease you within lesse then seven yeres as many trees presently to beare, as may suffice the people of diuers parishes, which at the first settling may stand you in great stead, if the soile haue not the commoditie of frutes of goodnesse already. And because you oughe greedily to hunt after things that yeeld present reliefe, without trouble of carriage thither, therefore I make mention of these thus specially, to the end you may haue it specially in minde.

A true Discourse of the three Voyages of discouerie, for the finding of a passage to Cathaya, by the Northwest, vnder the conduct of Martin Frobisher Generall: Before which, as a necessary Preface is prefixed a two-folde discourse, containing certaine reasons to proue all partes of the World habitable. Penned by Master George Best, a Gentleman employed in the same voyages.

What commodities and instructions may be reaped by diligent reading this Discourse.

- 1 **F**irst, by example may be gathered, how a Discoverer of new Countreies is to proceede in his first attempt of any Discouerie.
- 2 Item, how he should be provided of shipping, victuals, munition, and choice of men.
- 3 How to proceede and deale with strange people, be they neuer so barbarous, cruell and fierce, either by lenitie or other wise.
- 4 How trade of Merchandize may be made without money.
- 5 How a Pilot may deale, being inuironed with mountaines of yce in the frozen Sea.
- 6 How length of dayes, change of seasons, Summers and Winters doe differ in sundry regions.
- 7 How dangerous it is to attempt new Discoueries, either for the length of the voyage, or the ignorance of the language, the want of Interpreters, new and vnaccustomed Elements and ayres, strange and vnfauoury meates, danger of theues and robbers, fiercenesse of wilde beastes and fishes, hugenesse of woods, dangerousnesse of Seas, dread of tempestes, feare of hidden rockes, steepnesse of mountaines, darkenesse of sudden falling fogges, continuall paines taking without any rest, and infinite others.
- 8 How pleasant and profitable it is to attempt new Discoueries, either for the sundry sights and shapes of strange beastes and fishes, the wonderfull workes of nature, the different maners and fashions of diuers nations, the sundry sortes of government, the sight of strange trees, fruite, foules, and beastes, the infinite treasure of Pearle, Golde and Silver, the netues of newe found landes, the sundry positions of the Sphere, and many others.
- 9 How valiant Captaines vse to deale vpon extremitie, and otherwise.
- 10 How trustie souldiers dutifully vse to serue.
- 11 Also here may bee seene a good example to be obserued of any priuate person, in taking notes, and making obseruations of all such things as are requisite for a Discoverer of newe Countreies.
- 12 Lastly,

12 Lastly, the Reader here may see a good paterne of a well governed service, sundry instructions of matters of Cosmographie, Geographie, and Navigation, as in reading more at large may be seene.

Experiences and reasons of the Sphere, to prooue all partes of the worlde habitable, and thereby to confute the position of the five Zones.

Experience to
proue that Tor-
rida Zona is ha-
bitable.

First, it may be gathered by experience of our Englishmen in Anno 1553. For Captaine Windam made a Voyage with Merchandise to Guinea, and entred so farre within the Torrida Zona, that he was within three or foure degrees of the Equinoctiall, and his company abiding there certaine Moneths, returned with gaine.

Marochus more
hote then a-
bout the Equi-
noctiall.

Also the Englishmen made another Voyage very prosperous and gainefull, An. 1554. to the coasts of Guinea, within 3. degrees of the Equinoctiall. And yet it is reported of a truerh, that all the tract from Cape de las Palmas trending by C. de tres puntas alongst by Benin, vnto the Ile of S. Thomas (which is perpendicular vnder the Equinoctiall) all that whole Bay is more subiect to many blooming and smothering heates, with infectious and contagious ayres, then any other place in all Torrida Zona: and the cause thereof is some accidents in the land. For it is most certaine, that mountains, Seas, woods and lakes &c. may cause through their sundry kinde of situation, sundry strange and extraordinary effects, which the reason of the clyme other wise would not giue. I mention these Voyages of our Englishmen, not so much to prooue that Torrida Zona may bee, and is inhabited, as to shew their readinesse in attempting long and dangerous Navigations. Wee also among vs in England haue blacke Moores, Ethiopians, out of all partes of Torrida Zona, which after a small continuance, can well endure the colde of our Countrey, and why should not we as well abide the heate of their Countrey? But what should I name any more experiences, seeing that all the coastes of Guinea and Benin are inhabited of Portugals, Spanyardes, French, and some Englishmen, who there haue built Castles and Townes. Onely this I will say to the Merchants of London, that trade peerele to Marochus, it is very certaine, that the greatest part of the burning Zone is farre more temperate and coole in Iune, then the Countrey of Marochus, as shall appeare by these reasons and experiences following. For let vs first consider the breadth and bignesse of this burning Zone (which as euery man knoweth, is 47. degrees) each Tropicke, which are the bounders thereof, being 23. degrees and a halfe distant from the Equinoctiall. Imagine againe two other Parallels, on each side the Equinoctiall one, eyther of them distant from the Equinoctiall about 20. degrees, which Parallels may be described either of them twice a peere by the Sunne, being in the first degrees of Gemini the 11. of May, and in Leo the 13. of Iuly, hauing North latitude. And againe, the Sunne being in the first degrees of Sagittarius, the 12. of Nouember, and in Aquarius the 9. of Ianuary, hauing South latitude, I am to prooue by experience and reason, that all that distance included betwene these two Parallels last named (conteyning 40. degrees in latitude, going round about the earth, according to longitude) is not onely habitable, but the same most fruitfull and delectable, and that if any extremitie of heate bee, the same not to be within the space of twenty degrees of the Equinoctiall on either side, but onely vnder and about the two Tropickes, and so proportionally the neerer you doe approach to eyther Tropicke, the more you are subiect to extremitie of heate (if any such be) and so Marochus being situate but five or seuen degrees from the Tropicke of Cancer, shall be more subiect to heate, then any place vnder or neere the Equinoctiall line.

Marvellous
fruitfull soile
vnder the E-
quinoctiall.

And first by the experience of sundry men, yea thousands, Trauailers and Merchants, to the East and West Indies in many places both directly vnder, and hard by the Equinoctiall, they with one consent affirme, that it aboundeth in the middest of Torrida Zona with all manner of Graine, Pearbes, grasse, fruite, woods and cattell, that we haue heere, and thousandes other sortes, farre more wholesome, delectable and pretious, then any wee haue in these Northerne climates, as very well shall appeare to him that will reade the Histories and Navigations of such as haue traueiled Arabia, India intra & extra Gangem, the Islands Molucca, America, &c. which all lye about the middle of the burning Zone, where it is truly reported, that the great hearbes, as are Radish, Lettuce, Colewortes, Bozage, and such like, doe more ripe, greater, more sauourie and delectable in taste then ours, within fiftene dayes after the seede is sown. Theate being sowed the first of Februarie, was found ripe the first of May, and generally, where it is

it is lesse fruitfull, the wheate will be ripe the fourth moneth after the seed is sowne, and in some places will bring forth an eare as bigge as the wrist of a mans arme containing 1000. graines; Beanes, pease, &c. are there ripe twice a yeere. Also grasse being cut downe, will grow vp in fixe dayes aboute one foote high. If our cattell be transported thither, within a small time they yong-ones become of bigger stature, and more fat then euer they would haue bene in these countreys. There are found in euery wood in great numbers, such timber trees as twelue men holding handes together are not able to fatchome. And to be short, all they that haue bene there with one consent affirme, that there are the goodliest greene medowes and plaines, the fairest mountaines covered with all sorts of trees and fruites, the fairest valleys, the goodliest pleasant fresh rivers, stozed with infinite kinde of fishes, the thickest woods, greene and bearing fruite all the whole yeere, that are in all the world. And as for gold, siluer, and all other kinde of Metals, all kinde of spices and delectable fruites, both for delicacie and health, are there in such abundance, as hitherto they haue bene thought to haue bene byed no where else but there. And in conclusion, it is now thought that no where else but vnder the Equinoctiall, or not farre from thence, is the earthly Paradise, and the onely place of perfection in this worlde. And that these things may seeme the lesse strange, because it hath bene accompted of the olde Philosophers, that there coulde nothing prosper for the extreme heat of the Sunne continually going ouer their heades in the Zodiacke, I thought good here to alleadge such naturall causes as to me seeme very substantiall and sure reasons.

Great trees.

Commodities and pleasures vnder the Equinoctiall.

First you are to vnderstand that the Sunne doeth worke his more or lesse heat in these lower parts by two meanes, the one is by the kinde of Angle that the Sunne beames doe make with the earth, as in all Torrida Zona it maketh perpendicularly right Angles in some place or other at noone, and towards the two Poles very oblique and vniuen Angles. And the other meane is the longer or shorter continuance of the Sunne aboute the Horizon. So that where soeuer these two causes do most concurre, there is most excelle of heat: and when the one is wanting, the rigor of the heat is lesse. For though the Sunne beames do beat perpendicularly vpon any region subiect vnto it, if it hath no continuance or abode aboute the Horizon, to worke his operation in, there can no hote effect proceed. For nothing can be done in a moment. And this second cause mora Solis supra Horizontem, the time of the sunnes abiding aboute the Horizon, the olde Philosophers neuer remembred, but regarded onely the maner of Angles that the Sunne beames made with the Horizon, which if they were equall and right, the heat was the greater, as in Torrida Zona: if they were vnequall and oblique, the heat was the lesse, as towards both Poles, which reason is very good and substantiall: for the perpendicular beames reflect and reuerberate in themselves, so that the heat is doubled, euery beame striking twice, & by uniting are multiplid, and continue strong in forme of a Columne. But in our Latitude of 50. and 60. degrees, the Sunne beames descend oblique and slanting wise, and so strike but once and depart, and therefore our heat is the lesse for any effect that the Angle of the Sunne beames make. Yet because wee haue a longer continuance of the Sunnes presence aboute our Horizon then they haue vnder the Equinoctiall; by this continuance the heat is increased, for it shineth to vs 16. or 18. houres sometime, when it continueth with them but twelue houres alwayes.

Great is called by two meanes that is by his maner of Angle and by his continuance.

Note this reason.

And againe, our night is very short wherein cold vapours vse to abound, being but fixe or eithe houres long, whereas theirs is alwayes twelue houres long, by which two aduantages of long dayes and short nights, though we want the equalitie of Angle, it commeth to passe that in Sommer our heat here is as great as theirs is there, as hath bene proued by experience, and is nothing dissonant from good reason. Therefore whosoever will rightly way the force of colde and heat in any region, must not onely consider the Angle that the Sunne beames make, but also the continuance of the same aboute the Horizon. As first to them vnder the Equinoctiall the Sunne is twice a yeere at noone in their Zenith perpendicular ouer their heades, and therefore during the two houres of those two dayes the heat is very vgent, and so perhaps it will be in foure or five dayes more an houre euery day, vntill the Sunne in his proper motion haue crossed the Equinoctiall; so that this extreme heat caused by the perpendicular Angle of the Sunne beames, endureth but two houres of two dayes in a yeere. But if any man say the Sunne may scalde a good while before and after it come to the Meridian, so farre forth as reason leaueh, I am content to allow it, and therefore I will measure and proportion the Sunnes heat, by comparing the Angles there, with the Angles made here in England, because this temperature is best known vnto vs. As for example, the 11. day of March, when vnder the Equinoctiall it is halfe houre past eight of the clocke in the morning, the Sunne will be in the East about 38. degrees aboute the Horizon, because there it riseth alwayes at fixe of the clocke, and mooueth euery houre 15. degrees,

E

and

and so high very neere will it be with vs at London the said eleuenth day of March at noone. And therefore looke what force the Sunne hath with vs at noone, the eleuenth of March, the same force it seemeth to haue vnder the Equinoctiall at half an houre past eight in the morning, or rather lesse force vnder the Equinoctiall. For with vs the Sunne had bene already sixe houres aboue the Horizon, and so had purified and clenfed all the vapours, and thereby his force encreased at noone; but vnder the Equinoctiall, the Sunne hauing bene by but two houres and an halfe, had sufficient to doe, to purge and consume the cold and moyst vapours of the long night past, and as yet had wrought no effect of heate. And therefore I may boldly pronounce, that there is much lesse heate at halfe an houre past eight vnder the Equinoctiall, then is with vs at noone; a fortiori. But in March we are not onely contented to haue the Sunne shining, but we greatly desire the same. Likewise the 11 of June, the Sunne in our Meridian is 62 degrees high at London: and vnder the Equinoctiall it is so high after 10 of the clocke, and seeing then it is beneficiall with vs; a fortiori it is beneficiall to them after 10 of the clocke.

And thus haue wee measured the force of the Sunnes greatest heate, the hottest dayes in the peere, vnder the Equinoctiall, that is in March and September, from sixe till after tenne of the clocke in the morning, and from two vntill Sunne set. And this is concluded, by respecting onely the first cause of heate, which is the consideration of the Angle of the Sunne beames, by a certaine similitude, that where as the Sunne shineth neuer aboue twelue houres, more then eight of them would bee coole and pleasant euen to vs, much more to them that are acquainted alwayes with such warme places. So there remaineth lesse then foure houres of any excessive heate, and that onely in the two Sommer dayes of the peere, that is the eleuenth day of March, and the foureteenth of September: for vnder the Equinoctiall they haue two Sommers, the one in March, and the other in September, which are our Spring and Autumne: and likewise two Winters, in June and December, which are our Sommer and Winter, as may well appeare to him that hath onely tasted the principles of the Sphere. But if the Sunne bee in either Tropicke, or approaching neere thereunto, then may wee more easily measure the force of his Meridian altitude, that it striketh vpon the Equinoctiall. As for example, the twelfth of June the Sunne will be in the first degree of Cancer. Then looke what force the heate of the Sunne hath vnder the Equinoctiall, the same force and greater it hath in all that Parallel, where the Pole is eleuated betweene fourtie and seuen, and fourtie and eight degrees. And therefore Paris in France the twelfth day of June sustaineth more heate of the Sunne, then Saint Thomas Iland lying neere the same Meridian doeth likewise at noone, or the Ilands Taprobana, Molucca, or the firme lande of Peru in America, which all lye vnderneath the Equinoctiall. For vpon the twelfth day of June aforesaide, the Sunne beames at noone doe make an Isosceles Triangle, whose Vertex is the Center of the Sunne, the Basis a line extended from Saint Thomas Iland vnder the Equinoctiall, vnto Paris in France neere the same Meridian: therefore the two Angles of the Base must needs be equal per 5. primi, Ergo the force of the heat equal, if there were no other cause then the reason of the Angle, as the olde Philosophers haue appointed. But because at Paris the Sunne riseth two houres before it riseth to them vnder the Equinoctiall, and setteth likewise two houres after them, by meanes of the obliquitie of the Horizon, in which time of the Sunnes presence foure houres in one place more then the other, it worketh some effect more in one place then in the other, and being of equall height at noone, it must then needs follow to be more hote in the Parallel of Paris, then it is vnder the Equinoctiall.

Paris in France
is as hote as
vnder the E-
quinoctiall in
June.

In June is
greater heat
at Paris then
vnder the E-
quinoctiall.

The twilights
are shorter, and
the nights
darker vnder
the Equinoctiall
then at
Paris.

Also this is an other reason, that when the Sunne setteth to them vnder the Equinoctiall, it goeth very deepe and lowe vnder their Horizon, almost euen to their Antipodes, whereby their twilights are very short, and their nights are made very extreme darke and long, and so the moisture and colnesse of the long nights wonderfully encreaseth, so that at length the Sunne rising can hardly in many houres consume and drie away the colde humours and moyst vapours of the night past, which is cleane contrary in the Parallel of Paris: for the Sunne goeth vnder their Horizon but very little, after a sloping sort, whereby their nights are not very darke, but lightsome, as looking into the North in a cleare night without cloudes it doeth manifestly appeare, their twilights are long: for the Parallel of Cancer cutteth not the Horizon of Paris at right Angles, but at Angles very vneuen, and unlike as it doeth the Horizon of the Equinoctiall. Also the Sommer day at Paris is sixteene houres long, and the night but eight: where contrarywise vnder the Equinoctiall the day is but twelue houres long, and so long is also the night, in whatsoever Parallel the Sunne be: and therefore looke what oddes and difference of proportion there is betweene the Sunnes abode aboue the Horizon in Paris, and the abode it hath vnder the Equinoctiall, (it being in Cancer) the same proportion would seeme to be betweene the heate of the one place,

place and heate of the other: for other things (as the Angle of the whole arke of the Sunnes progresse that day in both places) are equall.

But vnder the Equinoctiall the presence and abode of the Sunne aboute the Horizon is equall to his absence, and abode vnder the Horizon, eche being twelue houres. And at Paris the continuance and abode of the Sunne is aboute the Horizon sixteene houres long, and but eight houres absence, which proportion is double, from which if the proportion of the equalitie be subtracted to finde the difference, there will remaine still a double proportion, whereby it seemeth to follow, that in Iune the heate at Paris were double to the heate vnder the Equinoctiall. For (as I haue said) the Angles of the Sunne beames are in all points equall, and the cause of difference is, *Mora Solis supra Horizontem*, the stay of the Sunne in the one Horizon more then in the other. Therefore, whoeuer could finde out in what proportion the Angle of the Sunne beames heateth, and what encrease the Sunnes continuance doeth adde thereunto, it might expressely be set downe, what force of heat and cold is in all regions.

In what proportion the Angle of the Sun beames heateth.

Thus you partly see by comparing a Climate to vs well knowen, and familiarly acquainted by like height of the Sunne in both places, that vnder the Equinoctiall in Iune is no excessive heat, but a temperate aire rather tending to cold. For as they haue there for the most part a continuall moderate heat, so yet sometime they are a little pinched with colde, and vse the benefite of fire as well as we, especially in the euening when they goe to bed, for as they lye in hanging beds tied fast in the vpper part of the house, so will they haue fires made on both sides their bed, of which two fires, the one they deuise superstitiously to driue away spirits, and the other to keepe away from them the coldnesse of the nights.

They vse and haue neede of fire vnder the Equinoctiall.

Also in many places of *Torrida Zona*, especially in the higher landes somewhat mountainous, the people a litle shyncke at the cold, and are often forced to prouide themselves clothing, so that the Spaniards haue found in the West Indies many people clothed, especially in Winter, whereby appeareth, that with their heat there is colde intermingled, else would they neuer prouide this remedy of clothing, which to them is rather a grieve and trouble then otherwise. For when they goe to warres, they will put off all their apparell, thinking it to be combersome, and will alwayes goe naked, that they thereby might be more nimble in their fight.

Cold intermingled with heat vnder the Equinoctiall.

Some there be that thinke the middle Zone extreme hot, because the people of the countrey can, and doe liue without clothing, wherein they childishly are deceiued: for our Climate rather tendeth to extremitie of colde, because wee cannot liue without clothing: for this our double lining, furring, and wearing so many clothes, is a remedy against extremitie, and argueth not the goodnesse of the habitation, but inconuenience and iniury of colde: and that is rather the moderate, temperate, and delectable habitation, where none of these troublesome things are required, but that we may liue naked and bare, as nature bringeth vs forth.

Others againe imagine the middle Zone to be extreme hot, because the people of Africa, especially the Ethiopians, are so cole blacke, and their haire like wooll curled short, which blacknesse and curled haire they suppose to come onely by the parching heat of the Sunne, which how it should be possible I cannot see: for euen vnder the Equinoctiall in America, and in the East Indies, and in the Islands Moluccæ the people are not blacke, but tawney and white, with long haire vncurled as wee haue, so that if the Ethiopians blacknesse came by the heat of the Sunne, why should not those Americans and Indians also be as blacke as they, seeing the Sunne is equally distant from them both, they abiding in one Parallel: for the concave and conuexe Superficies of the Dybe of the Sunne is concentricke, and equidistant to the earth; except any man should imagine somewhat of *Aux Solis*, and *Oppositum*, which indifferently may be applied aswel to the one place as to the other. But the Sunne is thought to giue no otherwise heat, but by way of Angle in reflection, and not by his neerenesse to the earth: for throughout all Africa, yea in the midst of the middle Zone, and in all other places vpon the tops of mountaines there lyeth continuall snow, which is neerer to the Dybe of the Sunne, then the people are in the valley, by so much as the height of these mountaines amount vnto, and yet the Sunne notwithstanding his neerenesse, can not melt the snow for want of conuenient place of reflections. Also the middle region of the aire where all the haile, frost, and snow is engendred, is neerer vnto the Sunne then the earth is, and yet there continueth perpetuall cold, because there is nothing that the Sunne beames may reflect against, whereby appeareth that the neerenesse of the body of the Sunne worketh nothing.

Ethiopians blacke, with curled haire.

The Sunne heateth not by his neerenesse, but onely by reflection.

Therefore to retorne againe to the blacke Moores, I my selfe haue seene an Ethiopian as blacke as a cole brought into England, who taking a faire English woman to wife, begat a sonne in all respects as blacke as the father was, although England were his native countrey, and an English woman his mother: whereby it seemeth this blacknesse proceedeth rather of some natural

A black Moores sonne begotten in England.

The colour
of the people
in Meta Incog-
nita.
The complexi-
on of the peo-
ple of Meta in-
cognita.

infection of that man, which was so strong, that neither the nature of the Climate, neither the good complexion of the mother concurring, coulde any thing alter, and therefore wee cannot impute it to the nature of the Climate. And for a more fresh example, our people of Meta Incognita (of whom and for whom this discourse is taken in hande) that were brought this last yeere into England, were all generally of the same colour that many nations be, lying in the midst of the middle Zone. And this their colour was not onely in the face which was subject to Sunne and aire, but also in their bodies, which were still couered with garments as ours are, yea the very sucking childe of twelue moneths age had his skinne of the very same colour that most haue vnder the Equinoctiall, which thing cannot proceed by reason of the Climate, for that they are at least ten degrees more towards the North then wee in England are, No, the Sunne neuer cometh neere their Zenith by fourtie degrees: for in effect, they are within thre or foure degrees of that which they call the frozen Zone, and as I saide, fourtie degrees from the burning Zone, where- by it followeth, that there is some other cause then the Climate or the Sonnes perpendicular reflexion, that should cause the Ethiopians great blacknesse. And the most probable cause to my iudgement is, that this blacknesse proceedeth of some naturall infection of the first inhabitants of that Countrey, and so all the whole progenie of them descended, are still polluted with the same blot of infection. Therefore it shall not bee farre from our purpose, to examine the first originall of these blacke men, and howe by a lineall discent they haue hitherto continued thus blacke.

The cause of
the Ethiopians
blacknesse.

The Arke of
Noe.

Thus the sonne
of Cham accu-
sed.

Africa was cal-
led Chamefis.

It manifestly and plainly appeareth by holy Scripture, that after the generall inundation and ouerflowing of the earth, there remained no moe men aliue, but Noe and his thre sonnes, Sem, Cham, and Iaphet, who onely were left to possesse and inhabite the whole face of the earth: therefore all the sundry discents that vntill this present day haue inhabited the whole earth, must needes come of the off-spring either of Sem, Cham, or Iaphet, as the onely sonnes of Noe, who all thre being white, and their wiues also, by course of nature should haue begotten and brought forth white children. But the enuie of our great and continuall enemy the wicked Spirite is such, that as hee coulde not suffer our olde father Adam to liue in the felicitie and Angeliike state wherein hee was first created, but tempting him, sought and procured his ruine and fall: so againe, finding at this flood none but a father and thre sonnes liuing, hee so caused one of them to transgresse and disobey his fathers commaundement, that after him all his posteritie should bee accursed. The fact of disobedience was this: When Noe at the commaundement of God had made the Arke and entred therein, and the flood-gates of heauen were opened, so that the whole face of the earth, euery tree and mountaine was couered with abundance of water, hee straitely commaunded his sonnes and their wiues, that they should with reuerence and feare beholde the iustice and mighty power of God, and that during the time of the flood while they remained in the Arke, they should vse continencie, and abstaine from carnall copulation with their wiues: and many other precepts hee gaue vnto them, and admonitions touch- ing the iustice of God, in reuenging sinne, and his mercie in deliuering them, who nothing de- serued it. Which good instructions and exhortations notwithstanding his wicked sonne Cham disobeyed, and being perswaded that the first childe borne after the flood (by right and Lawe of nature) should inherite and possesse all the dominions of the earth, hee contrary to his fathers commaundement while they were yet in the Arke, vsed company with his wife, and craftily went about thereby to dis-inherite the off-spring of his other two brethren: for the which wicked and detestable fact, as an example for contempt of Almighty God, and disobedience of parents, God would a sonne should bee borne whose name was Chus, who not onely it selfe, but all his po- steritie after him should bee so blacke and lothsome, that it might remaine a spectacle of disobe- dience to all the worlde. And of this blacke and cursed Chus came all these blacke Moores which are in Africa, for after the water was vanishes from off the face of the earth, and that the lande was dry, Sem chose that part of the land to inhabite in, which now is called Asia, and Iaphet had that which now is called Europa, wherein wee dwell, and Africa remained for Cham and his blacke sonne Chus, and was called Chamefis after the fathers name, being perhaps a cur- sed, dry, sandy, and vnfruitfull ground, fit for such a generation to inhabite in.

Thus you see, that the cause of the Ethiopians blacknesse is the curse and naturall infection of blood, and not the distemperature of the Climate; Which also may bee proued by this ex- ample, that these blacke men are found in all parts of Africa, as well without the Tropickes, as within, euen vnto Capo de buona Speranza Southward, where, by reason of the Sphere, should be the same temperature that is in Sicilia, Morea and Candie, where al be of very good com- plexions. Therefore I conclude, that the blacknesse proceedeth not of the hotenesse of the Climate, but

but as I saide, of the infection of blood, and therefore this their argument gathered of the Africans blacknesse is not able to destroy the temperature of the middle Zone. Wee may therefore very well bee ascertained, that vnder the Equinoctiall is the most pleasant and desirable place of the worlde to dwell in; where although the Sunne for two houres in a yeere be direct ouer their heades, and therefore the heate at that time somewhat of force, yet because it commeth so seldome, and continueth so small a time, when it commeth, it is not to bee wayed, but rather the moderate heate of other times in all the yeere to be remembred. And if the heate at any time should in the short day ware somewhat vrgent, the coldnesse of the long night there would easily refresh it, according as Honterus saith, speaking of the temperature vnder the Equinoctiall,

Greatest temperature vnder the Equinoctiall.

Quódque die solis violento incanduit aestu,
Humida nox reficit, paribulque refrigerat horis.

If the heate of the Sunne in the day time doe burne or parch any thing, the moysture of the night doeth coole and refresh the same againe, the Sunne being as long absent in the night, as it was present in the day.

Also our Authour of the Sphere, Iohannes de Sacro Bosco, in the Chapter of the Zodiacke, deriueth the Etymologie of Zodiacus, of the Greeke word Zoe, which in Latine signifieth Vira, life; for out of Aristotle hee alleadgeth, that Secundum accessum & recessum solis in Zodiaco, sunt generationes & corruptiones in rebus inferioribus: according to the Sunnes going to and fro in the Zodiacke, the inferior bodies take their causes of generation and corruption. Then it followeth, that where there is most going too and fro, there is most generation and corruption: which must needs be betweene the two Tropicks; for there the Sunne goeth too and fro most, and no where else but there. Therefore betweene the two Tropicks, that is, in the middle Zone, is greatest increase, multiplication, generation, and corruption of things, which also wee finde by experience; for there is Sommer twice in the yeere, and twice Winter, so that they haue two Haruests in the yeere, and continuall Spring. Seeing then the middle Zone falleth out so temperate, it resteth to declare where the hottest part of the worlde should bee, for we finde some places more hote then others.

Under the Equinoctiall is greatest generation.

To answer this doubt, reason perswadeth, the hottest place in the worlde to bee vnder and about the two Tropicks; for there more then in any other place doe both the causes of heate concur, that is, the perpendicular falling of the Sunne beames, at right angles, and a greater continuance of the Sunne about the Horizon, the Pole there being eleuated three or foure and twentie degrees. And as before I concluded, that though the Sunne were perpendicular to them vnder the Equinoctiall, yet because the same continued but a small time, (their dayes being short, and their nights long) and the speedie departure of the Sunne from their Zenith, because of the suddaine crossing of the Zodiacke with the Equinoctiall, and that by such continuall course and recourse of hote and colde, the temperature grew moderate, and very well able to bee endured: so now to them vnder the two Tropicks, the Sunne hauing once by his proper motion declined twentie degrees from the Equinoctiall, beginneth to draw neere their Zenith, which may bee (as before) about the eleuenth day of May, and then beginneth to sende his beames almost at right Angles, about which time the Sunne entereth into the first degree of Gemini, and with this almost right Angle the Sunne beames will continue vntill it bee past Cancer, that is, the space of two moneths every day at noone, almost perpendicular ouer their heades, being then the time of Solstitium Aestiuale: which so long continuance of the Sunne about their Zenith may cause an extreme heate (if any be in the worlde) but of necessitie farre more heate then can bee vnder the Equinoctiall, where the Sunne hath no such long abode in the Zenith, but passeth away there-hence very quickly. Also vnder the Tropicks, the day is longer by an houre and a halfe, then it is vnder the Equinoctiall; wherefore the heate of the Sunne hauing a longer time of operation, must needs be increased, especially seeing the night wherein colde and moysture doe abound vnder the Tropicks, is lesse then it is vnder the Equinoctiall. Therefore I gather, that vnder the Tropicks is the hottest place, not onely of Torrida Zona, but of any other part of the worlde, especially because there both causes of heate doe concur, that is, the perpendicular falling of the Sunne beames two monethes together, and the longer abode of the Sunnes presence about the Horizon. And by this meanes more at large is proued, that Marochus in Sommer is farre more hote, then at any time vnder the Equinoctiall, because it is situate so neere the Tropick of Cancer, and also for the length of their dayes. Neither yet do I thinke, that the Regions situate vnder the Tropicks are not habitable, for they are found to be very fruitful also; although Marochus and some other parts of Africke neere the Tropick for the drynesse of the

Greatest heate vnder the Tropicks.

Marochus is the hottest place vnder the Tropicks.

Cuba.
Hispaniola.

native sandie soile, and some accidents may seeme to some to be intemperate for ouer much heat. For Ferdinandus Ouiedus speaking of Cuba and Hispaniola, Islands of America, lying hard vnder, or by the Tropike of Cancer, saith, that these Islands haue as good pasture for cattell, as any other countrey in the world.

Under the
Tropikes is
moderate tem-
perature.

Also, they haue most wholesome and cleare water, and temperate aire, by reason whereof the herds of beastes are much bigger, fatter, and of better taste, then any in Spaine, because of the ranke pasture, whose moisture is better digested in the hearbe or grasse, by continuall and temperate heate of the Sunne, whereby being made moze fat and vncious, it is of better and moze stedfast nourishment: For continuall and temperate heate doeth not onely drawe much moisture out of the earth to the nourishment of such things as growe, and are engendred in that Climate, but doeth also by moderation preserve the same from putrifying, digesting also, and condensing or thickning the said moist nourishment into a gumme and vncious substance, whereby appeareth also, that vnder the Tropikes is both wholesome, fruitfull, and pleasant habitation, whereby lastly it followeth, that all the middle Zone, which vntill of late dayes hath bene comp- ted and called the burning, broyling, and parched Zone, is now found to be the most delicate, tem- perate, commodious, pleasant, and delectable part of the world, and especially vnder the Equi- noctiall.

Having now sufficiently at large declared the temperature of the middle Zone, it remaineth to speake somewhat also of the moderate and continuall heate in colde Regions, as well in the night as in the day all the Sommer long, and also how these Regions are habitable to the inhabi- tants of the same, contrary to the opinion of the olde writers.

Of the temperature of colde Regions all the Sommer long, and also how in Winter the same is habitable, especially to the inhabi- tants thereof.

aine Clis-
mates.

he colde Regions of the world are those, which tending toward the Poles Arc- tike, and Antarktike, are without the circuite or boundes of the seven Cli- mates: which assertion agreeable to the opinion of the olde Writers, is found and set out in our authour of the Sphere, Iohannes de Sacrobosco, where hee plainly saith, that without the seventh Climate, which is bounded by a Paral- lel passing at fiftie degrees in Latitude, all the habitation beyonde is discom- modious and intollerable. But Gemma Frisus a late writer finding England and Scotland to be without the compasse of those Climates, wherein hee knewe to be very temperate and good habitation, added thereunto two other Climates, the vntermost Parallel whereof passeth by 56. degrees in Latitude, and therein comprehendeth ouer and aboue the first computation, England, Scotland, Denmarke, Moscouia, &c. which all are rich and mightie kingdomes.

A comparison
betweene Ma-
rochus and
England.

The olde writers perswaded by bare coniecture, went about to determine of those places, by comparing them to their owne complexions, because they felt them to be hardly tollerable to themselves, and so took thereby an argument of the whole habitable earth; as if a man borne in Marochus, or some other part of Barbarie, should at the latter end of Sommer vpon the suddaine, either naked, or with his thinne vesture, be brought into England, hee would iudge this Re- gion presently not to be habitable, because hee being brought by in so warme a Countrey, is not able here to liue, for so suddaine an alteration of the colde aire: but if the same man had come at the beginning of Sommer, and so afterward by little and little by certaine degrees, had felt and acquainted himselfe with the frost of Autumne, it would haue seemed by degrees to har- den him, and so to make it farre moze tollerable, and by vse after one yeere or two, the aire would seeme to him moze temperate. It was computed a great matter in the olde time, that there was a brasle pot broken in sunder with frosen water in Pontus, which after was brought and shewed in Delphis, in token of a miraculous colde region and winter, and therefore consecra- ted to the Temple of Apollo.

This effect being wrought in the Parallel of fouretie three degrees in Latitude, it was pre- sently counted a place very hardly and vneasily to be inhabited for the great colde. And how then can such men define vpon other Regions very farre without that Parallel, whether they were inhabited or not, seeing that in so neere a place they so grossely mistooke the matter, and others their followers being contented with the inuentions of the olde Authours, haue persisted willing- ly in the same opinion, with moze confidence their consideration of the cause: so lightly was that opi- nion receiued, as touching the uninhabitable Climate neere and vnder the Poles.

Therefore

Therefore I am at this present to proue, that all the land lying betwene the last climat euen vnto the point directly vnder either poles, is or may be inhabited; especially of such creatures as are ingendred and bred therein. For indeed it is to be confessed, that some particular living creature cannot liue in euery particular place or region, especially with the same toy and felicitie, as it did where it was first bred, for the certaine agreement of nature that is betwene the place and the thing bred in that place; as appeareth by the Elephant, which being translated and brought out of the second or third climat, though they may liue, yet will they neuer ingender or bring forth yong. Also we see the like in many kinds of plants and herbes; for example, the Orange trees, although in Naples they bring forth fruit abundantly, in Rome and Florence they will beare onely faire Greene leaues, but not any fruit: and translated into England; they will hardly beare either flowers, fruit, or leaues, but are the next Winter pinched and withered with colde: yet it followeth not for this, that England, Rome, and Florence should not be habitable.

All the North regions are habitable.

Orange trees.

Orange trees.

Two causes of heat.

In the prouing of these colde regions habitable, I shal be very short, because the same reasons serue for this purpose, which were alleged before in the prouing the middle Zone to be temperate, especially seeing all heat and colde proceed from the Sunne, by the meanes either of the Angle which his beames do make with the Horizon, or els by the long or short continuance of the Sunnes presence aboue ground: so that if the Sunnes beames do beat perpendicularly at right Angles, then there is one cause of heat, and if the Sunne do also long continue aboue the Horizon, then the heat thereby is much increased by access of this other cause, & so groweth to a kinde of extremity. And these two causes, as I sayd before, do most concurre vnder the two Tropicks, and therefore there is the greatest heat of the world. And likewise, where both these causes are most absent, there is greatest want of heat, and increase of colde (seeing that colde is nothing but the priuation and absence of heat) and if one cause be wanting, and the other present, the effect will grow indifferent. Therefore this is to be understood, that the nearer any region is to the Equinoctiall, the higher the Sunne doth rise ouer their heads at noone, and so maketh either right or neere right Angles, but the Sunne tarieth with them so much the shorter time, and causeth shorter dayes, with longer and colder nights, to restore the damage of the day past, by reason of the moisture consumed by vapour. But in such regions, ouer the which the Sunne riseth lower (as in regions extended towards either pole) it maketh there vnequall Angles, but the Sunne continueth longer, and maketh longer dayes, and causeth so much shorter and warmer nights, as retaining warme vapours of the day past. For there are found by experience Summer nights in Scotland and Gothland very hot, when vnder the Equinoctiall they are found very cold. This benefit of the Sunnes long continuance & increase of the day, both augment so much the more in colde regions as they are neerer the poles, and ceaseth not increasing untill it come directly vnder the point of the pole Arcticke, where the Sunne continueth aboue ground the space of six moneths or halfe a yere together, and so the day is halfe a yere long, that is the time of the Sunnes being in the North signes, from the first degree of Aries untill the last of Virgo, that is all the time from our 10 day of March untill the 14 of September. The Sunne therefore during the time of these six moneths without any offence or hindrance of the night, giueth his influence vpon those lands with heat that neuer ceaseth during that time, which maketh to the great increase of Summer, by reason of the Sunnes continuance. Therefore it followeth, that though the Sunne be not there very high ouer their heads, to cause right angle beames, and to giue great heat, yet the Sun being there sometime almost 24 degrees high doth cast a convenient and meane heat, which there continueth without hindrance of the night the space of six moneths (as is before sayd) during which time there followeth to be a convenient, moderate and temperate heat: or els rather it is to be suspected the heat there to be very great, both for continuance, and also, Quia virtus vnica crescit, the vertue and strength of heat vnited in one increaseth. If then there be such a moderate heat vnder the poles, and the same to continue so long time; what should moue the olde writers to say there cannot be place for habitation. And that the certainty of this temperate heat vnder both the poles might more manifestly appeare, let vs consider the position & quality of the sphere, the length of the day, and so gather the height of the Sunne at all times, and by consequent the quantity of his angle, and so lastly the strength of his heat.

Note nights here the pole. Colde nights vnder the Equinoctiall.

One day of six moneths.

Moderate heat vnder the poles.

Those lands and regions lying vnder the pole, and hauing the pole for their Zenith, must needs haue the Equinoctiall circle for their Horizon: therefore the Sunne rising into the North signes, and describing euery 24 houres a parallel to the Equinoctiall by the diurnall motion of Primus mobile, the same parallels must needs be wholly aboue the Horizon and so looke how many degrees there are from the first of Aries to the last of Virgo, so many whole reuolutions there are aboue their Horizon that dwell vnder the pole, which amount to 182; and so many of our dayes the

The Sunne neuer setteth in 182 dayes.

the Sunne continueth with them. During which time they haue there continuall day and light, without any hindrance of moist nights. Yet it is to be noted, that the Sunne being in the first degree of Aries, and last degree of Virgo, maketh his reuolution in the very horizon, so that in these 24 houres halfe the body of the Sunne is aboue the horizon, and the other halfe is vnder his only center, describing both the horizon and the equinoctiall circle.

Horizon and
Equinoctiall
all one vnder
the pole.

London.

London.

Commodious
dwelling vnder
the poles.

The nights
vnder the pole.

The nights
vnder the pole.

And therefore seeing the greatest declination of the Sunne is almost 24 degrees, it followeth, his greatest height in those countreys to be almost 24 degrees. And so high is the Sun at noone to vs in London about the 29 of October, being in the 15 degree of Scorpio, and likewise the 21 of January being in the 15 of Aquarius. Therefore looke what force the Sun at noone hath in London the 29 of October, the same force of heat it hath, to them that dwell vnder the pole, the space almost of two moneths, during the time of the Summer solticium, and that without intermingling of any colde night; so that if the heat of the Sunne at noone could be well measured in London (which is very hard to do, because of the long nights which ingender great moisture and cold) then would manifestly appeare by expresse numbers the manner of the heat vnder the poles, which certainly must needs be to the inhabitants very commodious and profitable, if it incline not to ouermuch heat, and if moisture do not want.

For as in October in England we finde temperate aire, and haue in our gardens hearths and floures notwithstanding our cold nights, how much more should they haue the same good aire, being continuall without night. This heat of ours continueth but one houre, while the Sun is in that meridian, but theirs continueth a long time in one height. This our heat is weake, and by the coolenesse of the night vanisheth, that heat is strong, and by continuall accesse is still increased and strengthened. And thus by a similitude of the equall height of the Sun in both places appeareth the commodious and moderate heat of the regions vnder the poles.

And surely I cannot thinke that the diuine prouidence hath made any thing vncommunicable, but to haue giuen such order to all things, that one way or other the same should be imployed, and that every thing and place should be tollerable to the next: but especially all things in this lower world be giuen to man to haue dominion and vse thereof. Therefore we need no longer to doubt of the temperate and commodious habitation vnder the poles during the time of Summer.

But all the controuersie consisteth in the Winter, for then the Sunne leaueth those regions, and is no more seene for the space of other six moneths, in the which time all the Sunnes course is vnder their horizon for the space of halfe a pere, and then those regions (say some) must needs be deformed with horrible darknesse, and continuall night, which may be the cause that beaasts can not seeke their food, and that also the colde should then be intollerable. By which double euils all liuing creatures should be constrained to die, and were not able to indure the extremity and iniury of Winter, and famine ensuing thereof, but that all things should perish before the Summer following, when they should bring forth their brood and young, and that for these causes the sayd Climate about the pole should be desolate and not habitable. To all which obiections may be answered in this manner: First, that though the Sunne be absent from them those six moneths, yet it followeth not that there should be such extreme darknesse; for as the Sunne is departed vnder their horizon, so is it not farre from them: and not so soone as the Sunne falleth so suddenly cometh the darke night; but the euening doth substitute and prolong the day a good while after by twilight. After which time the residue of the night receiueth light of the Moone and Starres, vntill the breake of the day, which giueth also a certaine light before the Sunnes rising; so that by these meanes the nights are seldome darke; which is verified in all parts of the world, but least in the middle Zone vnder the Equinoctiall, where the twilights are short, and the nights darker then in any other place, because the Sunne goeth vnder their horizon so deepe, euen to their antipodes. We see in England in the Summer nights, when the Sunne goeth not farre vnder the horizon, that by the light of the Moone & Starres we may trauell all night, and if occasion were, do some other labour also. And there is no man that doubteth whether our cattell can see to feed in the nights, seeing we are so well certified thereof by our experience: and by reason of the sphere our nights should be darker then any time vnder the poles.

The Astronomers consent that the Sunne descending from our vpper hemisphere at the 18 parallel vnder the horizon maketh an end of twilight, so that at length the darke night insueth, and that afterward in the morning the Sun appoaching againe within as many parallels, doth drive away the night by accesse of the twilight. Again, by the position of the sphere vnder the pole, the horizon, and the equinoctiall are all one. These reuolutions therefore that are parallel to the equinoctiall are also parallel to the horizon, so that the Sunne descending vnder that horizon, and there describing certaine parallels not farre distant, doth not bring darke nights to those regions

regions untill it come to the parallels distant 18 degrees from the equinoctiall, that is, about the 21 degree of Scorpio, which will be about the 4 day of our November, and after the Winter solsticium, the Sunne returning backe againe to the 9 degree of Aquarius, which will be about the 19 of January; during which time onely, that is, from the 4 day of November untill the 19 day of January, which is about six weeks space, those regions do want the commoditie of twilights: therefore, during the time of these sayd six moneths of darknesse under the poles, the night is destitute of the benefit of the Sunne and the sayd twilights onely for the space of six weeks or thereabout. And yet neither this time of six weeks is without remedy from heaven; for the Moone with her increased light hath accesse at that time, and illuminateth the moneths lacking light every one of themselves severally halfe the course of that moneth, by whose benefit it cometh to passe that the night named extreame darke possesseeth those regions no longer then one moneth, neither that continually, or all at one time, but this also divided into two sorts of shorter nights, of the which either of them indureth for the space of 15 dayes, and are illuminate of the Moone accordingly. And this reason is gathered out of the sphere, whereby we may testifie that the Summers are warme and fruitfull, and the Winters nights under the pole are tolerable to living creatures. And if it be so that the Winter and time of darknesse there be very colde, yet hath not nature left them unprouided therefore: for there the beasts are couered with haire so much the thicker in how much the vehemency of colde is greater; by reason whereof the best and richest furies are brought out of the coldest regions. Also the fowles of these colde countreys haue thicker skinnes, thicker feathers, and more stozed of downe then in other hot places. Our English men that trauell to S. Nicholas, and go a fishing to Wardhouse, enter farre within the circle Arctike, and so are in the frozen zone, and yet there, as well as in Island and all along those Northern Seas, they finde the greatest stoz of the greatest fishes that are; as Whales, &c. and also abundance of meane fishes; as Herrings, Cods, Haddocks, Brets, &c. which argueth that the sea as well as the land may be and is well frequented and inhabited in the colde countreys.

The regions under the poles want twilights but six weeks.

Winter nights under the pole tolerable to living creatures

But some perhaps will maruell there should be such temperate places in the regions about the poles, when at vnder 62 degrees in latitude our captaine Frobisher & his company were troubled with so many and so great mountaines of fleeting ice, with so great stozmes of colde, with such continuall snow on tops of mountaines, and with such barren soile, there being neither wood nor trees, but low shrubs, and such like. To all which objections may be answered thus: First, those infinite Islands of ice were ingendred and congealed in time of Winter, and now by the great heat of Summer were thawed, and then by ebs, floods, winds, and currents, were driuen to and fro, and troubled the fleet; so that this is an argument to proue the heat in Summer there to be great, that was able to thaw so monstrous mountaines of ice. As for continuall snow on tops of mountaines, it is there no other wise then is in the hottest part of the middle zone, where also lieth great snow all the Summer long upon tops of mountaines, because there is not sufficient space for the Sunnes reflection, whereby the snow should be molten. Touching the colde stormy winds and the barrenesse of the country, it is there as it is in Cornwall and Devonshire in England, which parts though we know to be fruitfull and fertile, yet on the North side thereof all alongst the coast within seven or eight miles off the sea there can neither hedge nor tree grow, although they be diligently by arte husbanded and seene unto: and the cause thereof are the Northern driving winds, which comming from the sea are so bitter and sharpe that they kill all the young & tender plants, and suffer scarce any thing to grow; and so is it in the Islands of Meta incognita, which are subject most to East & Northeastern winds, which the last yere choaked by the passage so with ice that the fleet could hardly recouer their port. Yet notwithstanding all the objections that may be, the countrey is habitable; for there are men, women, children, & sundry kind of beasts in great plenty, as beares, deere, hares, foxes and dogs: all kinde of flying fowles, as ducks, seamewes, willets, partridges, larks, crows, hawks, and such like, as in the third booke you shall vnderstand more at large. Then it appeareth that not onely the middle zone but also the zones about the poles are habitable.

Wit objection of Meta incognita.

Meta incognita inhabited.

Which thing being well considered, and familiarly knowne to our Generall captaine Frobisher, as well for that he is thorowly furnished of the knowledge of the sphere and all other skillies appertaining to the arte of navigation, as also for the confirmation he hath of the same by many yeres experience both by sea and land, and being perswaded of a new and neuer passage to Cataya then by Capo de buona Sperança, which the Portugals yere by: he began first with himselfe to deuise, and then with his friends to conferre, and layed a plaine plat vnto them that that voyage was not onely possible by the North west, but also he could proue easie to be performed. And further he determined and resolved with himselfe to go make full prooffe thereof, and to accomplish or bring

Captaine Frobishers first voyage.

bying true certificate of the truth, or els neuer to returne againe, knowing this to be the only thing of the world that was left yet vndone, whereby a notable minde might be made famous and fortunate. But although his will were great to performe this notable voyage, whereof he had conceived in his minde a great hope by sundry sure reasons and secret intelligence, which here for sundry causes I leaue vntouched, yet he wanted altogether meanes and ability to set forward, and performe the same. Long time he conferred with his priuate friends of these secrets, and made also many offers for the performing of the same in effect vnto sundry merchants of our countrey aboute 15 yerres before he attempted the same, as by good witness shall well appeare (albeit some euill willers which challenge to themselves the fruits of other mens labours haue greatly iniured him in the reports of the same, saying that they haue bene the first authours of that action, and that they haue learned him the way, which themselves as yet haue neuer gone) but perceiuing that hardly he was hearkened vnto of the merchants, which neuer regard vertue without sure, certaine, and present gaines, he repaired to the Court (from whence, as from the fountaine of our Common wealth, all good causes haue their chiefe increase and maintenance) and there layed open to many great estates and learned men the plot and summe of his deuce. And amongst many honourable minds which fauoured his honest and commendable enterpryse, he was specially bound and beholding to the right honourable Ambrose Dudley earle of Warwicke, whose fauourable minde and good disposition hath alwayes bene ready to countenance and aduance all honest actions with the authours and executers of the same: and so by meanes of my lord his honourable countenance he receiued some comfort of his cause, and by litle and litle, with no small expence and paine brought his cause to some perfection, and had drawen together so many aduenturers and such summes of money as might well defray a reasonable charge to furnish himselfe to sea withall.

He prepared two small barks of twenty and five and twenty tunne a piece, wherein he intended to accomplish his pretended voyage. Wherefore, being furnished with the foresayd two barks, and one small pinnelle of ten tun burthen, hauing therein victuals and other necessities for twelue moneths prouision, he departed vpon the sayd voyage from Blacke-wall the 15 of Iune anno Domini 1576.

One of the barks wherein he went was named *The Gabriel*, and the other *The Michael*; and sailing Northwest from England vpon the 11 of Iuly he had sight of an high and ragged land, which he iudged to be *Frisland* (whereof some authours haue made mention) but durst not approach the same by reason of the great floze of ice that lay alongst the coast, and the great mists that troubled them not a litle. Not farre from thence he lost company of his small pinnelle, which by meanes of the great floze he supposed to be swallowed by of the Sea, wherein he lost onely foure men.

Also the other barke named *The Michael* mistrusting the matter, conueyed themselves pritiuily away from him, and returned home, with great report that he was cast away.

The worthy captaine notwithstanding these discomforts, although his mast was sprung, and his toppe mast blowen ouerboord with extreame foule weather, continued his course towards the Northwest, knowing that the sea at length must needs haue an ending, & that some land should haue a beginning that way; and determined therefore at the least to bring true prooofe what land and sea the same might be so farre to the Northwestwards, beyond any man that hath heretofore discovered. And the twentieth of Iuly he had sight of an high land, which he called *Queene Elizabeths Forland*, after her Maiesties name. And sailing more Northerly alongst that coast, he descried another forland with a great gut, bay, or passage, diuiding as it were two maine lands or continents asunder. There he met with floze of exceeding great ice all this coast along, and coueting still to continue his course to the Northwards, was alwayes by contrary winde detained ouerthwart these straights, and could not get beyond. Within few dayes after he perceiued the ice to be well consumed and gone, either there ingulfed in by some swift currents or indrafts, carried more to the Southwards of the same straights, or els conueyed some other way: wherefore he determined to make prooofe of this place, to see how farre that gut had continuance, and whether he might carry himselfe thowto the same into some open sea on the backe side, whereof he conceived no small hope, and so entred the same the one and twentieth of Iuly, and passed aboute fifty leagues therein, as he reported, hauing vpon either hand a great maine or continent. And that land vpon his right hand as he sailed Westward he iudged to be the continent of Asia, and there to be diuided from the firme of America, which lieth vpon the left hand ouer against the same.

This place he named after his name, *Frobishers Streights*, like as *Magellanus* at y South west end

*The Michael
Returned
Home.*

*Frobishers first
entrance with
in y Straights.*

*Frobishers
Streights.*

end of the world, hauing discovered the passage to the South sea (where America is diuided from the continent of that land, which lieth vnder the South pole) and called the same straights, Magellanes Straits.

After he had passed 60 leagues into this foresayd straight, he went ashore, and found signes where fire had bene made.

He saw mighty deere that seemed to be mankinde, which ranne at him, and hardly he escaped Deere, with his life in a narrow way, where he was faine to vse defence and policy to saue his life.

In this place he saw and perceiued sundry tokens of the peoples resorting thither. And being ashore vpon the top of a hill, he perceiued a number of small things fleeting in the sea as farre off, which he supposed to be porpoises or seales, or some kinde of strange fish; but comming neerer, he discovered them to be men in small boats made of leather. And before he could descend downe from the hill, certaine of those people had almost cut off his boat from him, hauing stolen secretly behind the rocks for that purpose, where he speedily hasted to his boat, and bent himselfe to his halberd, and narrowly escaped the danger, and saued his boat. Afterwards he had sundry conferences with them, and they came aboard his ship, and brought him salmon and raw flesh and fish, and greedily deuoured the same before our mens faces. And to shew their agility, they tried many matteries vpon the ropes of the ship after our mariners fashion, and appeared to be very strong of their armes, and nimble of their bodie. They exchanged coats of seales, and beares skinnies, and such like, with our men; and receiued belles, looking glasses, and other toys, in recompense thereof againe. After great curtesie, and many meetings, our mariners, contrary to their captaines direction, began more easily to trust them; and five of our men going ashore were by them intercepted with their boat, and were neuer since heard of to this day againe: so that the captaine being destitute of boat, barke, and all company, had scarcely sufficient number to conduct backe his barke againe. He could now neither conuey himselfe ashore to rescue his men (if he had bene able) for want of a boat; and againe the subtile traitours were so wary, as they would after that neuer come within our mens danger. The captaine notwithstanding desired us to bring him taken from thence of his being there, was greatly discontented that he had not before apprehended some of them: and therefore to deceiue the deceiuers he wrought a pretty policy; for knowing well how they greatly delighted in our toys, and specially in belles, he rang a pretty lowbell, making signes that he would giue him the same that would come and fetch it. And because they would not come within his danger for feare, he hung one bell vnto them, which of purpose he threw short, that it might fall into the sea and be lost. And to make them more greedy of the matter he rang a louder bell, so that in the end one of them came nere the ship side to receiue the bell; which when he thought to take at the captaines hand, he was thereby taken himselfe: for the captaine being readily prouided let the bell fall, and caught the man fast, and plucked him with maine force boat and all into his barke out of the sea. Whereupon when he found himselfe in captiuitie, for very choler and disdaine he bit his tongue in twaine within his mouth: notwithstanding, he died not thereof, but liued vntill he came in England, and then he died of cold which he had taken at sea.

Now with this new pray (which was a sufficient witnesse of the captaines farre and tedious trauell towards the vnknewen parts of the world, as did well appeare by this strange insidell, whose like was neuer seene, read, nor heard of before, and whose language was neither knowne nor vnderstood of any) the sayd captaine Frobisher returned homeward, and arriued in England in Harwich the 2 of October following, and thence came to London 1576, where he was highly commended of all men for his great and notable attempt, but specially famous for the great hope he brought of the passage to Cathaya.

And it is especially to be remembred that at their first arriual in those parts there lay so great store of ice all the coast along so thicke together, that hardly his boat could passe vnto the shore. At length, after diuers attempts he commanded his company, if by any possible meanes they could get ashore, to bring him whatsoever thing they could first finde, whether it were liuing or dead, Locke or stone, in token of Christian possession, which thereby he tooke in behalfe of the Queenes most excellent Maiesty, thinking that thereby he might iustify the hauing and inioying of the same things that grew in these vnknewen parts.

Some of his company brought floures, some greene grasse; and one brought a ptece of blacke stone much like to a sea cole in colour, which by the waight seemed to be some kinde of mettall or minerall. This was a thing of no account in the iudgement of the captaine at the first sight; and yet for nouelty it was kept in respect of the place from whence it came.

After his arriual in London, being demanded of sundry his friends what thing he had brought them home out of that countrey, he had nothing left to present them withall but a ptece of this blacke stone,

ing of ore.

stone. And it fortun'd a gentlewoman one of the adventures wives to have a piece thereof, which by chance she threw and burned in the fire, so long, that at the length being taken forth, and quenched in a little vinegar, it glittered with a bright marquet of golde. Whereupon the matter being called in some question, it was brought to certaine Goldfiners in London to make assay thereof, who gaue out that it held golde, and that very richly for the quantity. Afterwards, the same Goldfiners promised great matters thereof if there were any store to be found, and offered themselves to adventure for the searching of those parts from whence the same was brought. Some that had great hope of the matter sought secretly to have a lease at her Maiesties hands of those places, whereby to enjoy the masse of so great a publike profit unto their owne private gaires.

In conclusion, the hope of more of the same golde ore to be found kindled a greater opinion in the hearts of many to aduance the voyage againe. Whereupon preparation was made for a new voyage against the yere following, and the captaine more specially directed by commission for the searching more of this golde ore then for the searching any further discovery of the passage. And being well accompanied with diuers resolute and forward gentlemen, her Maiesty then lying at the right honourable the lord of Warwicks house in Essex, he came to take his leaue, and kissing her highnesse hands, with gracious countenance & comfortable words departed toward his charge.

A true report of such things as happened in the second voyage of captaine *Frobisher*, pretended for the discovery of a new passage to *Cataya*, *China*, and the *East India*, by the Northwest. *Ann. Dom. 1577.*

Being furnished with one tall ship of her Maiesties, named *The Ayde*, of two hundred tunne, and two other small barks, the one named *The Gabriel*, the other *The Michael*, about thirty tun a piece, being fully appointed with men, munition, victuals, and all things necessary for the voyage, the sayd captaine *Frobisher*, with the rest of his company came aboard his ships riding at *Blackwall*, intending (with Gods helpe) to take the first winde and tide seruing him, the 25 day of *May*, in the yere of our Lord God 1577.

The names of such gentlemen as attempted this discovery, and the number of souldiers and mariners in ech ship, as followeth.

Aboard the *Ayd* being Admirall were the number of 100 men of all sorts, whereof 30 or 40 were Gentlemen and Souldiers, the rest sufficient and tall Sailers.

Aboard the *Gabriel* being Viceadmirall, were in all 18 persons, whereof five were Souldiers, the rest Mariners.

Aboard the *Michael* were 16 persons, whereof five were Souldiers, the rest Mariners.

Aboard the *Ayde*
was

On this Sunday being the 26 of May, Anno 1577, early in the morning, we weighed anchor at Blackwall, and fell that tyde downe to Grauesend, where we remained vntill Monday at night.

On Monday morning the 27 of May, aboard the Ayde we receiued all the Communion by the Minister of Grauesend, and prepared vs as good Christians towards God, and resolute men for all fortunes: and towards night we departed to Tilbery Hope.

Tuesday the eight and twenty of May, about nine of the clocke at night, we arrived at Harwich in Essex and there stayed for the taking in of certaine victuals, vntill Friday being the thirtieth of May, during which time came letters from the Lordes of the Councell, straitly commanding our Generall, not to exceede his complement and number appointed him, which was, one hundred and twentie persons: whereupon he discharged many proper men which with vnwilling mindes departed.

We also dismissed all his condemned men, which he thought for some purposes very needefull for the voyage, and towards night vpon Friday the one and thirtieth of May we set saile, and put to the Seas againe. And sayling Northward alongst the East coasts of England and Scotland, the seventh day of June we arrived in Saint Magnus Sound in Orkney Islands, called in latine Orcades, and came to anchor on the South side of the Bay, and this place is reckoned from Blackwall where we set saile first leagues.

Here our companie going on lande, the Inhabitants of these Ilandes begonne to flee as from the enemye, whereupon the Lieutenant willed euery man to stay together, and went himselfe vnto their houses to declare what we were and the cause of our comming thither, which being vnderstood, after their poore maner they friendly entreated vs, and brought vs for our money such things as they had. And here our Goldsmiths found a Mine of siluer.

Orkney is the principall of the Isles of the Orcades, and standeth in the latitude of fiftie nine degrees and a halfe. The countrey is much subiect to colde, answerable for such a climate, and yet yeldeth some fruites, and sufficient maintenance for the people contented so poorely to liue.

There is plentie ynough of Poultrye, store of eggges, fish, and foule.

For their beead they haue Dairie Cakes, and their drinke is Swes milke, and in some partes Ale.

Their houses are but poore without and fluttish ynough within, and the people in nature thereunto agreeable.

For their fire they burne heath and turf, the Countrey in most parts being void of wood.

They haue great want of Leather, and desire our old shoes, apparell, and old ropes (before money) for their victuals, and yet are they not ignorant of the value of our coine. The chiefe towne is called Kyrway.

In this Island hath bene sometime an Abbey or a religious house called Saint Magnus, being on the West side of the Ile, whereof this sound beareth name, through which we passed. Their Gouvernour or chiefe Lord is called the Lord Robert Steward, who at our being there, as we vnderstood, was in durance at Edinburgh, by the Regents commandement of Scotland.

After we had prouided vs here of matter sufficient for our voyage the eight of June wee set sayle againe, and passing through Saint Magnus Sound hauing a merrie winde by night, came cleare and lost sight of all the land, and keeping our course West Northwest by the space of two dayes, the winde shifted vpon vs so that we lay in trauerse on the Seas, with contrary windes, making good (as neere as we could) our course to the westward, and sometime to the Northward, as the winde shifted. And hereabout we met with 3 saile of English fishermen from Iceland, bound homeward, by whom we wrote our letters vnto our friends in England. We trauersed these Seas by the space of 26 dayes without sight of any land, and met with much drift wood, & whole bodies of trees. We sawe many monstrous fishes and strange foules, which seemed to liue onely

Great bodies of trees drifting in the seas. Monstrous fish & strange foules lining the Sea.

onely by the Sea, being there so farre distant from any land. At length God fauoured vs with moze prosperous windes, and after wee had sayled foure dayes with good winde in the Poop, the fourth of July the Michaell being foremost a head shot off a peece of Ordnance, and strooke all her sayles, supposing that they descried land, which by reason of the thicke mistes they could not make perfit: howbeit, as well our account as also the great alteration of the water, which became moze blacke and smooth, did plainly declare we were not farre off the coast. Our Generall sent his Master aboard the Michaell (who had bene with him the yere before) to beare in with the place to make prooffe thereof, who descried not the land perfect, but sawe sundry huge Islands of yce, which we deemed to be not past twelue leagues from the shore, for about tenne of the clocke at night being the fourth of July, the weather being moze cleare, we made the land perfect and knew it to be Frislande. And the heighth being taken here, we found our selues to be in the latitude of 60 degrees and a halfe, and were fallen with the Southermost part of this land. Betweene Orkney and Frisland are reckoned leagues.

broken by tem-
pest.
The first en-
trance of the
straights.

This Frislande sheweth a ragged and high lande, hauing the mountaines almost coue-
red ouer with snow alongst the coast full of dyft yce, and seemeth almost inaccessible, and is
thought to be an Island in bignesse not inferiour to England, and is called of some Autho-
rs, West Frislande, I thinke because it lyeth moze West then any part of Europe. It exten-
deth in latitude to the Northward very farre as seemed to vs, and appeareth by a description
set out by two byethzen Venerians, Nicholaus and Antonius Zeni, who being driuen off from
Ireland with a violent tempest made shipwracke here, and were the first known Christians that
discovered this land about two hundred yeares sithence, and they haue in their Sea-cards set
out euery part thereof and described the condition of the inhabitants, declaring them to be as
ciuill and religious people as we. And for so much of this land as we haue sayled alongst, com-
paring their Carde with the coast, we finde it very agreeable. This coast seemeth to haue good
fishing, for we lying becalmed let fall a hooke without any bayte and presently caught a great
fish called a Hollibut, who serued the whole companie for a dayes meate, and is dangerous
meate for surfering. And sounding about fise leagues off from the shore, our leade brought vp
in the tallow a kinde of Corall almost white, and small stones as bright as Chryfall: and
it is not to be doubted but that this land may be found very rich and beneficial if it were throug-
hly discovered, although we sawe no creature there but little birdes. It is a maruellous thing
to behold of what great bignesse and depth some Islands of yce be here, some seuentie, some
eightie sadome vnder water, besides that which is aboue, seeming Islands moze then halfe a
mile in circuit. All these yce are in taste fresh, and seeme to be bredde in the sounds therea-
bouts, or in some lande neere the pole, and with the winde and tides are driuen alongst the
coastes. We found none of these Islands of yce salt in taste, whereby it appeareth that they
were not congealed of the Ocean Sea water which is alwayes salt, but of some standing or lit-
tle mouing lakes or great fresh waters neere the shore, caused eyther by melted snowe from
tops of mountaines, or by continuall accesse of fresh riuers from the land, and intermingling
with the Sea water, bearing yet the dominion (by the force of extreame frost) may cause some
part of salt water to freeze so with it, and so seeme a little brackish, but otherwise the maine
Sea freezeth not, and therefore there is no Mare Glaciale or frozen Sea, as the opinion hi-
therto hath bene. Our Generall proued landing here twice, but by the suddaine fall of mistes
(whereunto this coast is much subiect) he was like to loose sight of his ships, and being great-
ly endangered with the driuing yce alongst the coast, was forced aboard and faine to surcease
his pretence till a better opportunitie might serue: and hauing spent foure dayes and nightes
sayling alongst this land, finding the coast subiect to such bitter colde and continuall mistes, he
determined to spend no moze time therein, but to beare out his course towards the straights
called Frobishers straights after the Generals name, who being the first that euer passed beyond
58 degrees to the Northwardes, for any thing that hath bene yet known of certaintie of
New found land, otherwise called the continent or firme land of America, discovered the saide
straights this last yere 1576.

Betweene Frisland and the straights we had one great storme, wherein the Michaell was
somewhat in danger, hauing her Stirrage broken, and her toppes Mastes blown ouer boord,
& being not past 50 leagues short of the straights by our account, we strooke sayle & lay a hull, fea-
ring the continuance of of the storme, the winde being at the North-east, and hauing lost companie
of the Barkes in that flaw of winde, we happily met againe the seuenteenth day of July, hauing
the euening before seene diuers Islands of fleeting yce, which gaue an argument that we were
not farre from land. Our Generall in the morning from the maine top (the weather being rea-
sonable

sonable cleare) descried land, but to be better assured he sent the two Barks two contrarie courses, whereby they might discry either the South or North foreland, the Ayde lying off and on at Sea, with a small sayle by an Island of yce, which was the marke for vs to meete together againe. And about noone, the weather being more cleare, we made the North foreland perfit, which otherwile is called Halles Island, and also the small Island bearing the name of the sayde Hall whence the Dre was taken vp which was brought into England this last yeere 1576 the sayd Hall being present at the finding & taking vp thereof, who was then Maister in the Gabriell with Captaine Frobisher. At our arriual here all the Seas about this coast were so covered ouer with huge quantitie of great yce, that we thought these places might onely deserue the name of Mare Glaciale, and be called the Ise Sea.

Halles Island.

This North foreland is thought to be deuided from the continent of the Northerland, by a little sound called Halles sound, which maketh it an Island, and is thought little lesse then the Ile of Wight, and is the first entrance of the straights vpon the North side, and standeth in the latitude of fiftie two degrees and fiftie minutes, and is reckoned from Frisland leagues. God hauing blessed vs with so happie a land-fall, we bare into the straights which runne in next hand, and somewhat further vp to the Northwarde, and came as neere the shore as wee might for the yce, and vpon the eighteenth day of Iuly our Generall taking the Goldfiners with him, attempted to goe on shore with a small rowing Pirnesse, vpon the small Islande where the Dre was taken vp, to proue whether there were any store thereof to be found, but he could not get in all that Island a peece so bigge as a Walnut, where the first was found. But our men which sought the other Islands thereabouts found them all to haue good store of the Dre, where vpon our Generall with these good tidings returned aboord about tenne of the clocke at night, and was toypfully welcommed of the company with a volie of shot. He brought egges, foules, and a young Seale aboord, which the companie had killed ashore, and hauing found vpon those Islands ginses set to catch fowle, and sticke newe cut, with other things, he well perceived that not long before some of the countrey people had resorted thither.

The description of the straights.

No more gold Dre found in the first Island.

Eggs & foules of Meta incognita. Snares set to catch birds withall.

Hauing therefore found those tokens of the peoples access in those parts, and being in his first voyage well acquainted with their subtil and cruell disposition, hee provided well for his better safetie, and on Friday the nineteenth of Iuly in the morning early, with his best companie of Gentlemen and souldiers, to the number of fortie persons, went on shore, aswell to discover the Inland and habitation of the people, as also to finde out some fit harborowe for our shippes. And passing towardes the shore with no small difficultie by reason of the abundance of yce which lay alongst the coast so thicke together that hardly any passage through them might be discovered, we arrived at length vpon the maine of Halles greater Island, and found there also aswell as in the other small Islands good store of the Dre. And leauing his boates here with sufficient garde we passed vp into the countrey about two English miles, and recovered the topp of a high hill, on the top whereof our men made a Colunne or Crosse of stones heaped vp of a good heigh together in good sort, and solemnely sounded a Trumpet, and saide certaine prayers kneeling about the Ensigne, and honoured the place by the name of Mount Warwicke, in remembrance of the Right Honorable the Lord Ambrose Dudley Earle of Warwick, whose noble mind and good countenance in this, as in all other good actions, gaue great encouragement and good furtherance. This done, we retyred our companies not seeing any thing here worth further discouerie, the countrey seeming barren and full of ragged mountaines and in most parts covered with snow.

The building of a Colunne, called Mount Warwicke.

And thus marching towards our botes, we espied certaine of the countrey people on the top of Mount Warwicke with a flag wafting vs backe againe and making great noise, with cries like the howling of Buls seeming greatly desirous of conference with vs: whereupon the Generall being therewith better acquainted, answered them againe with the like cries, whereat and with the noise of our trumpets they seemed greatly to reioyce, skipping, laughing and dancing for ioy. And hereupon we made signes vnto them, holding vp two fingers, commanding two of our men to go a part from our companies, whereby they might do the like. So that forthwith two of our men & two of theirs met together a good space from company, neither partie hauing their weapons about the. Our men gaue them pins and points and such trifles as they had. And they like wise bestowed on our men two bow cases and such things as they had. They earnestly desired our men to goe vp into their countrey, and our men offered them like kinnesse aboord our ships, but neither part (as it seemed) admitted or trusted the others curtesie. Their maner of traffique is thus, they doe vse to lay downe of their marchandise vpon the ground, so much as they meane to part withal, and so looking that the other partie with whom they make trade should doe the like, they themselves

The first sight of the countrey people, wafting with a flagge.

The meeting a part of two Englishmen, with two of that countrey.

The order of their traffique.

doe depart, and then if they doe like of their Part they come againe, and take in exchange the others marchandise; otherwise if they like not, they take their owne and depart. The day being thus well neere spent, in haſte we retired our companies into our boates againe, minding forthwith to ſearch alongſt the coaſt for ſome harborow ſit for our ſhippes, for the preſent neceſſitie thereof was much, conſidering that all this while they lay off and on betweene the two landes, being continually ſubiect alſo to great danger of ſleeting yce, which environed them, as to the ſodaine ſlawes which the coaſt ſeemeth much ſubiect unto. But when the people perceived our departure, with great tokens of affection they earneſtly called vs backe againe, following vs almoſt to our boates: whereupon our Generall taking his Maſter with him, who was beſt acquainted with their maners, went apart unto two of them, meaning, if they could lay ſure hold vpon them, forcibly to bring them aboard, with intent to beſtow certaine toys and apparell vpon the one, and ſo to diſmiſſe him with all arguments of curteſie, and retaine the other for an Interpreter. The Generall and his Maſter being met with their two companions together, after they had exchanged certaine things the one with the other, one of the Saluages for lacke of better marchandise, cut off the tayle of his coat (which is a chiefe ornament among them) and gaue it vnto our Generall for a preſent. But he preſently vpon a watchword giuen with his Maſter ſodainely laid hold vpon the two Saluages. But the ground underfoot being ſlipperie with the ſnow on the ſide of the hill, their handſt fayled and their prey eſcaping ranne away and lightly recovered their bow and arrowes, which they had hid not farre from them behind the rockes. And being onely two Saluages in ſight, they ſo fiercely, deſperately, and with ſuch fury aſſaulted and purſued our Generall and his Maſter, being altogether vnarmed, and not miſtruſting their ſubtiltie that they chaſed them to their boates, and hurt the Generall in the buttocke with an arrow, who the rather ſpeedily fled backe, becauſe they ſuſpected a greater number behind the rockes. Our ſouldiers (which were commanded befoze to keepe their boates) perceiuing the danger, and hearing our men calling for ſhot came ſpeedily to reſcue, thinking there had bene a greater number. But when the Saluages heard the ſhot of one of our caliuers (and yet hauing firſt beſtowed their arrowes) they ranne away, our men ſpeedily following them. But a ſeruant of my Lord of Warwicke, called Nicholas Conger a good footman, and vncombed with any furniture hauing only a dagger at his backe ouertooke one of them, and being a Corniſhman and a good waſtler, ſhewed his companion ſuch a Corniſh trick, that he made his ſides ake againſt the ground for a moneth after. And ſo being ſtayed, he was taken aliue and brought away, but the other eſcaped. Thus with their ſtrange and new prey our men repaired to their boates, and paſſed from the maine to a ſmall Iſland of a mile compaſſe, where they reſolved to tarrie all night; for euen now a ſodaine ſtorme was growen ſo great at ſea, that by no meanes they could recover their ſhips. And here euery man reſreſhed himſelfe with a ſmall portion of victuals which was laide into the boates for their dinners, hauing neither eate nor drunke all the day befoze. But becauſe they knewe not how long the ſtorme might laſt, nor how farre off the ſhippes might be put to ſea, nor whether they ſhould euer recover them againe or not, they made great ſpate of their victuals, as it greatly beſeued them: For they knew full well that the beſt cheare the countrey could yeeld them, was rockes and ſtones, a hard food to liue withall, and the people moze readie to eate them then to giue them wherewithall to eate. And thus keeping verie good watch and warde, they lay there all night vpon hard cliffes of ſnow and yce both wet, cold, and comfortleſſe.

Theſe things thus hapning with the company on land, the danger of the ſhips at Sea was no leſſe perilous. For within one houre after the Generals departing in the morning by negligence of the Cooke in ouer-heating, and the workman in making the chimney, the Ayde was ſet on fire, and had bene the conſuſion of the whole if by chance a boy eſpying it, it had not bene ſpeedily with great labour and Gods helpe well extinguiſhed.

This day alſo were diuerſe ſtormes and ſlawes, and by nine of the clocke at night the ſtorme was growen ſo great, & continued ſuch vntill the morning, that it put our ſhips at ſea in no ſmall perill: for hauing mountaines of ſleeting yce on euery ſide, we went roomer for one, and looſed for another, ſome ſcraped vs, and ſome happily eſcaped vs, that the leaſt of a ſhip were as dangerous to ſtrike as any rocke, and able to haue ſplit aſunder the ſtrongeſt ſhip of the world. We had a ſcope of cleare without yce, (as God would) wherein we turned, being otherwiſe compaſſed on euery ſide about: but ſo much was the winde and ſo little was our ſea roome, that being able to beare onely our forecourſe we caſt ſo oft about, that we made foureteene hozdes in eight glaſſes running, being but foure houres: but God being our beſt Stereſman, & by the induſtry of Charles Iackman and Andrew Dyer the maſters mates, both very expert Mariners, & Richard Cox y^e maiſter Gunner,

with other very careful sailers, then within boze, and also by the helpe of the cleare nights which are without darkenesse, we did happily auoide those present dangers, whereat since wee haue more maruelled then in the present danger feared, for that euery man within boze, both better and worse had ynough to doe with his hands to hale ropes, and with his eyes to looke out for danger. But the next morning being the 20 of July, as God would, the storme ceased, and the Generall espying the ships with his new Captiue and whole company, came happily aboard, and reported what had passed a shoare, whereupon altogether vpon our knees we gaue God humble and hartie thanks, for that it had pleased him, from so speedy peril to send vs such speedy deliuerance, and so from this Northernne shoze we strooke ouer towards the Southerland.

Right without darknes in that countrey.

The one and twentieth of July, we discovered a bay which ranne into the land, that seemed a likely harborow for our ships, wherefore our Generall rowed thither with his boats, to make prooue thereof, and with his goldfiners to search for Ore, hauing neuer assayed any thing on the South shoze as yet, and the first small Island which we landed vpon. Here all the sands and cliffs did so glister and had so bright a marquesite, that it seemed all to be gold, but vpon tryall made, it prooued no better then black-lead, and verified the proverbe. All is not gold that glistereth.

Our first coming on the Southerland of the sayd straights.

A Mine of Blakke lead.

Upon the two and twentieth of July we bare into the sayde sound, and came to anker a reasonable bredth off the shoze, where thinking our selues in good securitie, we were greatly endangered with a peece of dytt yce, which the Ebbe brought forth of the sounds and came thwart vs ere we were aware. But the gentlemen and souldiers within boze taking great paines at this pinch at the Capstone, ouercame the most danger thereof, and yet for all that might be done, it strooke on our sterne such a blow, that we feared least it had striken away our rudder, and being forced to cut our Cable in the hawse, we were faine to set out fore saile to runne further vp within, and if our strirage had not bene stronger then in the present time we feared, we had runne the ship vpon the rockes, hauing a very narrow Channell to turne in, but as God would, all came well to passe. And this was named Iackmans sound, after the name of the Pastors mate, who had first liking vnto the place.

Iackmans sound

Upon a small Island, within this sound called Smithes Island (because he first set vp his forge there) was found a Mine of Silver, but was not wonne out of the rockes without great labour. Here our goldfiners made say of such Ore as they found vpon the Northernland, and found foure sortes thereof to holde gold in good quantitie. Upon another small Island here was also found a great dead fish, which as it should seeme, had bene embayed with yce, and was in proportion round like to a Porpoise, being about twelue foote long, and in bignesse answerable, hauing a horne of two yardes long growing out of the snoute or nostrils. This horne is wreathed and stratte, like in fashion to a Taper made of ware, and may truely be thought to be the sea Unicorne. This horne is to be seene and reserued as a Iewell by the Queenes Maiesties commandement, in her Wardrope of Robes.

Smiths Island.

The finding of an Unicorne horne.

Tuesday the thre and twentieth of July, our Generall with his best company of gentlemen, souldiers and saylers, to the number of seuenie persons in all, marched with ensigne displayde, vpon the continent of the Southerland (the supposed continent of America) where, commanding a Trumpet to sound a call for euery man to repaire to the ensigne, he declared to the whole company how much the cause imported for the seruice of her Maiestie, our countrey, our credites, and the safetie of our owne liues, and therefore required euery man to be conformable to order, and to be directed by those he should assigne. And he appointed for leaders, Captaine Fenton, Captaine Yorke, and his Lieutenant George Beste: which done, we cast our selues into a ring, and altogether vpon our knees, gaue God humble thanks for that it had pleased him of his great goodness to preferue vs from such imminent dangers, beseeching likewise the assistance of his holy spirite, so to deliuer vs in safetie into our Countrey, whereby the light and truth of these secrets being knowne, it might redound to the more honour of his holy name, and consequently to the advancement of our common wealth. And so, in as good sort as the place suffered, we marched towards the tops of the mountaines, which were no lesse painfull in climbing then dangerous in descending, by reason of their steepnesse & yce. And hauing passed about fise miles, by such untwieldie wayes, we returned vnto our ships without sight of any people, or likelihood of habitation. Here diuerse of the Gentlemen desired our Generall to suffer them to the number of twentie or thirtie persons to march by thirtie or fortie leagues in the countrey, to the end they might discover the Inland, and doe some acceptable seruice for their countrey. But he not contented with the matter he sought for, and well considering the short time he had in hand, and the greedie desire our countrey hath to a present sauiour and returne of gaine, bent his whole indouour only to find a Mine to freight his ships, and to leaue the rest (by Gods helpe) hereafter to be well accomplished.

And therefore the twentieth five of July he departed ouer to the Northland, with the two barkes, leaving the Ayde ryding in Lackmans sound, and went (after hee had found conuenient harborow, and fraight there for his ships) to discover further for the passage. The Barkes came the same night to ancker in a sound vpon the Northerland, where the tydes did runne so swift, and the place was so subject to indrafts of yce, that by reason thereof they were greatly endangered, & hauing found a very rich Wyne, as they supposed, and got almost twentie tunne of Wyne together, vpon the 28 of July the yce came driuing into the sound where the Barkes rode, in such sort, that they were therewith greatly distressed. And the Gabriell riding afterne the Michael, had her Cable gauld asunder in the hawse with a peece of driuing yce, and lost another ancker, and hauing but one cable and ancker left, for she had lost two before, and the yce still driuing vpon her, she was (by Gods helpe) well fenced from the danger of the rest, by one great Island of yce, which came a ground hard a head of her, which if it had not so chanced, I thinke surely shee had bene cast vpon the rockes with the yce. The Michael moored ancker vpon this great yce, and roade vnder the lee thereof: but about midnight, by the weight of it selfe, and the setting of the Tydes, the yce brake within halfe the Barkes length, and made vnto the companie within boord a sodaine and fearefull noyse. The next flood toward the morning we weyed ancker, and went further by the straights, and leaving our Wyne behind vs which we had digged, for haff left the place by the name of Beares sound after the Masters name of the Michael, and named the Island Lecesters Island. In one of the small Islands here we found a Tombe, wherein the bones of a dead man lay together, and our sauage Captiue being with vs, & being demanded by signes whether his countrey-men had not slaine this man and eat his flesh so from the bones, he made signes to the contrary, and that he was slaine with Wolves and wild beasts. Here also was found hid vnder stones good store of fish, and sundry other things of the inhabitants; as sleddes, brydles, kettels of fish-skimmes, knives of bone, and such other like. And our Sauage declared vnto vs the vse of all those things. And taking in his hand one of those countrey brydles, he caught one of our dogges and hampryd him handsomely therein, as we doe our horses, and with a whip in his hand, he taught the dogge to drawe in a sled as we doe horses in a coach, setting himselfe thereupon like a guide: so that we might see they vse dogges for that purpose that we do our horses. And we found since by experience, that the lesser sort of dogges they feede fatte, and keepe them as domestick cattell in their tents for their eating, and the greater sort serue for the vse of drawing their sleds.

The twentieth ninth of July, about fve leagues from Beares sound, we discovered a Bay which being fenced on ech side with small Islands lying off the maine, which brake the force of the tides, and make the place free from any indrafts of yce, did prouoe a very fit harborow for our ships, where we came to ancker vnder a small Islande, which now together with the sound is called by the name of that right Honourable and vertuous Ladie, Anne Countesse of Warwicke. And this is the furthest place that this yeere we haue entred by within the streites, and is reckoned from the Cape of the Queenes foreland, which is the entrance of the streites not about 30 leagues. Vpon this Island was found good store of the Wyne, which in the washing helde gold to our thinking plainly to be seene: whereupon it was thought best rather to load here, where there was store and indifferent good, then to seeke further for better, and spend time with leopordie. And therefore our Generall setting the Wyners to worke, and shewing first a good president of a painefull labourer and a good Captaine in himselfe, gaue good examples for others to follow him: whereupon euery man both better and worse, with their best endenours willingly layde to their helping hands. And the next day, being the thirtieth of July, the Michael was sent ouer to Lackmans sound, for the Ayde and the whole companie to come thither. Vpon the maine land ouer against the Countesses Island we discovered and behelde to our great maruell the poore caues and houses of those countrey people, which serue them (as it should seeme) for their winter dwellings, and are made two fadome vnder grounde, in compasse round, like to an Duen, being toynd fast one by another, hauing holes like to a Foxe or Conny herry, to keepe and come togither. They vnder-trenched these places with gutters so, that the water falling from the hillies aboue them, may slide away without their annoyauce: and are seated commonly in the foote of a hill, to shield them better from the cold winde, hauing their doore and entrance euer open towards the South. From the ground vponward they builde with whales bones, for lacke of timber, which bending one ouer another, are handsomely compacted in the top together, and are couered ouer with Sealeskinnes, which in stead of tiles, fence them from the raine. In which house they haue only one roome, hauing the one halfe of the floure raised with broad stones a foot higher than y other, whereon drawing Wolfe, they make their nests to sleep in. They

They defile these demes most filthily with their beastly feeding, & dwell so long in a place (as we thinke) vntill their sturtiness loching them, they are forced to seeke a sweeter ayre, and a new seate, and are (no doubt) a dispersed and wandring nation, as the Tartarians, and liue in hordes and troupes, without any certaine abode, as may appeare by sundry circumstances of our experience.

The sturtiness of these people.

Here our captiue being ashore with vs, to declare the vse of such things as we saw, staid him selfe alone behind the company, and did set by fise small stickes round in a circle one by another, with one smal bone placed iust in the midst of all: which thing when one of our men perceiued, he called vs backe to behold the matter, thinking that hee had meant some charme or witchcraft therein. But the best coniecture we could make thereof was, that hee would thereby his countreymen should vnderstand, that for our fise men which they betrayed the last yeere (whom he signified by the fise stickes) he was taken and kept prisoner, which he signified by the bone in the midst. For afterwards when we shewed him the picture of his countreiman, which the last yeere was brought into England (whose counterfeite we had drawn, with boate and other furniture, both as he was in his own, & also in English apparel) he was vpon the sudden much amazed thereat, and beholding aduisedly the same with silence a good while, as though he would streine courtseye whether should begin the speech (for he thought him no doubt a liuely creature) at length began to question with him, as with his companion, and finding him dumb and mute, seemed to suspect him, as one disbeinfull, and would with a little helpe haue growen into choller at the matter, vntill at last by feeling and handling, hee found him but a deceiuing picture. And then with great noyse and cryes, ceased not wondring, thinking that we could make men liue or die at our pleasure.

A signe set by the savage captiue, & the meaning thereof.

The savage captiue amazed at his countreimans picture.

And thereupon calling the matter to his remembrance, he gaue vs plaine to vnderstand by signes, that he had knowledge of the taking of our fise men the last yeere, and confessing the manner of each thing, numbred the fise men vpon his fise fingers, and pointed vnto a boat in our ship, which was like vnto that wherein our men were betrayed: And when we made him signes, that they were slaine and eaten, he earnestly denied, and made signes to the contrary.

The last of Iuly the Michael returned with the Aide to vs from the Southerland, and came to anker by vs in the Countesse of Warwicks sound, and reported that since we departed from Iackmans sound there happened nothing among them there greatly worth the remembrance, vntill the thirtieth of Iuly, when certaine of our company being a shoare vpon a small Island within the sayd Iackmans sound, neere the place where the Aide rode, did espie a long boat with diuers of the countrey people therein, to the number of eightene or twenty persons, whom so soone as our men perceiued, they returned speedily aboard, to giue notice thereof vnto our company. They might perceiue these people climbing by to the top of a hill, where with a flagge, they waited vnto our ship, and made great outcries and noyses, like so many Buls. Hereupon our men did presently man foorth a small skiffe, hauing not aboue fise or seuen persons therein, which rowed neere the place where those people were, to prooue if they could haue any conference with them. But after this small boate was sent a greater, being wel appointed for their rescue, if need required.

Another shew of twenty persons of that countrey in one boate.

As soone as they espied our company comming neere them, they tooke their boates and hastened away, either for feare, or else for pollicie, to draw our men from rescue further within their danger: wherefore our men construing that their comming thither was but to seeke aduantage, followed speedily after them, but they rowed so swiftly away, that our men could come nothing neere them. Howbeit they failed not of their best endeour in rowing, and hauing chased them aboue two miles into the sea, returned into their ships againe.

The morning following being the first of August, Captaine Yorke with the Michael came into Iackmans sound, and declared vnto the company there, that the last night past he came to anker in a certaine baye (which sithens was named Yorke's sound) about foure leagues distant from Iackmans sound, being put to lee ward of that place for lacke of winde, where he discovered certaine tents of the countrey people, where going with his company ashore, he entered into them, but found the people departed, as it should seeme, for feare of their comming. But amongst sundry strange things which in these tents they found, there was rawe and new killed flesh of vnknown sorts, with dead carcases and bones of dogs, and I know not what. They also beheld (to their greatest maruelle) a dublet of Canuas made after the English fashion, a shirt, a girdle, three shoes for contrary feete, and of vnequall bignesse, which they well coniectured to be the apparell of our English countreymen, which were intercepted the last yeere by these Countrey people, about foure leagues from this place, further within the Straights. Whereupon our men being in good hope

hope, that some of them might be here, and yet living: the Captaine deuising for the best left his mind behind him in writing, with pen, ynce, and paper also, whereby our poore captiue countrymen, if it might come to their hands, might know their friends minds, and of their arriual, and likewise returne their answer. And so without taking any thing away in their tents, leauing there also looking glasses, points, and other of our toys (the better to allure them by such friendly meanes) departed aboard his Barke, with intent to make haste to the Aide, to giue notice vnto the company of all such things as he had there discovered: and so meant to returne to these tents againe, hoping that he might by force or policie intrappe or intice the people to some friendly conference. Which things when he had deliuered to the whole company there, they determined forthwith to go in hand with the matter. Whereupon Captaine Yorke with the master of the Aide and his mate (who the night before had bene at the tents, and came ouer from the other side in the Michael with him) being accompanied with the Gentlemen and souldiours to the number of thirty or forty persons in two small rowing Pinnaßes made towards the place, where the night before they discovered the tents of those people, and setting Charles lackman, being the masters Mate, ashore with a conuenient number, for that he could best guide them to the place, they marched ouer land, meaning to compasse them on the one side, whilst the Captaine with his boates might entrap them on the other side. But landing at last at the place where the night before they left them, they found them with their tents remoued. For withstanding, our men which marched vp into the countrey, passing ouer two or three mountaines, by chance espied certaine tents in a valley vnderneath them neere vnto a creeke by the Sea side, which because it was not the place where the guide had bene the night before, they iudged them to be another company, and besetting them about, determined to take them if they could. But they hauing quickly discried our company, lanchd one great & another smal boat, being about 16 or 18 persons, and very narrowly escaping, put themselves to sea. Whereupon our souldiers discharged their Caliuers, and followed them, thinking the noise thereof being heard to our boats at sea, our men there would make what speede they might to that place. And thereupon indeede our men which were in the boates (crossing vpon them in the mouth of the sound whereby their passage was let from getting sea roome, wherein it had bene impossible for vs to overtake them by rowing) forced them to put themselves ashore vpon a point of land within the sayd sound (which vpon the occasion of the slaughter there, was since named The bloody point) whereunto our men so speedily followed, that they had little leifure left them to make any escape. But so soone as they landed, ech of them brake his Dare, thinking by that meanes to preuent vs, in carying away their boates for want of Dares. And desperately returning vpon our men, resisted them manfully in their landing, so long as their arrowes and darts lasted, and after gathering vp those arrowes which our men shot at them, yea, and plucking our arrowes out of their bodie incountred afresh againe, and maintained their cause vntill both weapons and life fayled them. And when they found they were mortally wounded, being ignorant what mercy meaneth, with deadly fury they cast themselves headlong from off the rockes into the sea, least perhaps their enemies should receiue glozy or prey of their dead carcaises, for they supposed vs belike to be Canibals or eaters of mans flesh. In this conflict one of our men was dangerously hurt in the belly with one of their arrowes, and of them were slaine fve or sixe, the rest by flight escaping among the rockes, sauing two women, whereof the one being old and vgly, our men thought shee had bene a deuill or some witch, and therefore let her goe: the other being yong, and cumbrd with a sucking childe at her backe, hiding her selfe behind the rockes, was espied by one of our men, who supposing she had bene a man, shot through the haire of her head, and pierced through the childes arme, whereupon she cried out, and our Surgeon meaning to heale her childes arme, applyed salues thereunto. But she not acquainted with such kind of surgery, plucked those salues away, and by continuall licking with her owne tongue, not much unlike our dogs, healed by the childes arme. And because the day was welnere spent, our men made haste vnto the rest of our company which on the other side of the water remained at the tents, where they found by the apparell, letter, and other English furniture, that they were the same company which Captaine Yorke discovered the night before, hauing remoued themselves from the place where he left them.

And now considering their sudden flying from our men, and their desperate maner of fighting, we began to suspect that we had heard the last newes of our men which the last yere were betrayed of these people. And considering also their rauenous and bloody disposition in eating any kind of raw flesh or carrion howseuer stinking, it is to bee thought that they had slaine and deuoured our men: For the dublet which was found in their tents had many holes therein being made with their arrowes and darts.

They

But now the night being at hand, our men with their captiues and such pooze stuffe as they found in their tents, returned towards their ships, when being at sea, there arose a sudden flau of winde, which was not a little dangerous for their small boates: but as God would they came all safely aboard. And with these good newes they returned (as before mentioned) into the Countesse of Warwicks sound vnto vs. And betweene Iackmans sound, from whence they came, and the Countesse of Warwicks sound betweene land and land, being thought the narrowest place of the Straights were iudged nine leagues ouer at the least: and Iackmans sound being vps the Southerland, lyeth directly almost ouer against the Countesses sound, as is reckoned scarce thirty leagues within the Straights from the Queenes Cape, which is the entrance of the Streits of the Southerland. This Cape being named Queene Elizabeths Cape, standeth in the latitude of 62 degrees and a halfe to the Northwards of New foundland, and vpon the same continent, for any thing that is yet knowen to the contrary.

The narrowest place of the Straits is 9. leagues ouer.

The Queenes Cape.

The manner of the meeting of the two captiues, and their entertainment

Having now got a woman captiue for the comfort of our man, we brought them both together, and euery man with silence desired to behold the manner of their meeting and entertainment, the which was moze worth the beholding than can be well expessed by writing. At their first encountering they beheld each the other very wisely a good space, without speech or word vttered, with great change of colour and countenance, as though it seemed the griefe and disdeine of their captiuitie had taken away the vse of their tongues and vtterance: the woman at the first very suddenly, as though she disdeined or regarded not the man, turned away, and began to sing as though she minded another matter: but being againe brought together, the man brake vp the silence first, and with sterne and stayed countenance, began to tell a long solemne tale to the woman, whereunto she gaue good hearing, and interrupted him nothing, till he had finished, and afterwards, being growen into moze familiar acquaintance by speech, they were turned together, so that (I thinke) the one would hardly haue liued without the comfort of the other. And for so much as we could perceine, albeit they liued continually together, yet they did neuer vse as man & wife, though the woman spared not to doe all necessary things that appertained to a good houswife indifferently for them both, as in making cleane their Cabin, and euery other thing that appertained to his ease: for when he was seasliffe, she would make him cleane, she would kill and flea the dogs for their eating, and dresse his meate. Only I thinke it worth the noting, the continencie of them both: for the man would neuer shife himselfe, except he had first caused the woman to depart out of his cabin, and they both were most shamefast, least any of their priuie partes should be discouered, either of themselves, or any other body.

The shamefastnes and chastity of those Savage captiues.

On Monday the sixth of August, the Lieutenant with all the Souldiers, for the better garde of the Pyners and the other things afoze, pitched their tents in the Countesses Island, and fortified the place for their better defence as well as they could, and were to the number of forty persons, when being all at laboure, they might perceiue vpon the top of a hill ouer against them a number of the countrey people wafting with a flag, and making great outcries vnto them, and were of the same companie, which had encountred lately our men vpon the other shoze, being come to complaine their late losses, and to entreate (as it seemed) for restitution of the woman and child, which our men in the late conflict had taken and brought away; whereupon the Generall taking the sauage captiue with him, and letting the woman where they might best perceiue her in the highest place of the Island, went ouer to talke with them. This captiue at his first encounter of his friends fell so out into teares that he could not speake a word in a great space, but after a while, ouercomming his kindnesse, he talked at full with his companions, and bestowed friendly vpon them such toys and trifles as we had giuen him, whereby we noted, that they are very kind one to another, and greatly sorrowfull for the losse of their friends. Our Generall by signes required his five men which they tooke captiue the last yere, and promised them, not only to release those which he had taken, but also to reward them with great gifts and friendship. Our Sauage made signes in answer from them that our men should be deliuered vs, and were yet liuing, and made signes likewise vnto vs that we should write our letters vnto them, for they knew very well the vse we haue of writing, and receiued knowledge thereof, either of our pooze captiue countrey men which they betrayed, or else by this our new captiue who hath serued vs daily write, and repeate againe such words of his language as we desired to learne: but they for this night, because it was late, departed without any letter, although they called earnestly in haile for the same. And the next morning early being the seventh of August, they called againe for the letter, which being deliuered vnto them, they speedily departed, making signes with three fingers, and pointing to the Sunne, that they meant to returne within 3 dayes, vntill which time we heard no moze of them, & about the time appointed they returned, in such sort as you shal afterwards heare.

Another appearance of the countrey people.

These people know the vse of writing.

A letter sent vnto the five English captiues.

This

This night because the people were very neere vnto vs, the Lieutenant caused the Drummer to sound a call, and euery man in the Island repaying to the Ensigne, he put them in minde of the place so farre from their countrey wherein they liued, and the danger of a great multitude which they were subiect vnto, if good watch and warde were not kept, for at euery low water the enimie might come almost by foot from the mayne vnto vs, wherefore he willed euery man to prepare him in good readinesse vpon all sudden occasions, and so giuing the watch their charge, the company departed to rest.

I thought the Captaines letter well worth the rememb'ring, not for the circumstance of curious ending, but for the substance and good meaning therein contained, and therefore haue repeated here the same, as by himselfe it was hastily written.

The forme of M. Martin Frobishers letter to the English captiues.

IN the name of God, in whom we all beleue, who (I trust) hath preserued your bodies and soules amongst these Infidels, I commend me vnto you. I will be glad to seeke by al means you can deuise for your deliuerance, either with force, or with any commodities within my ships, which I will not spare for your sakes, or any thing else I can doe for you. I haue aboard, of theirs, a man, a woman, and a child, which I am contented to deliuer for you, but the man which I caried away from hence the last yeere is dead in England. Moreover you may declare vnto them, that if they deliuer you not, I will not leaue a man aliue in their countrey. And thus, if one of you can come to speake with mee, they shall haue either the man, woman, or childe in pawne for you. And thus vnto God whom I trust you doe serue, in hast I leaue you, and to him wee will dayly pray for you. This Tuesday morning the seuenth of August. Anno 1577.

Yours to the uttermost of my power,

MARTIN FROBISHER.

Postscript.

I haue sent you by these bearers, penne, ynke, and paper, to write backe vnto me againe, if personally you cannot come to certifie me of your estate.

The cause why
M. Frobisher
entred no fur-
ther within
the Streites
this pere.

Now had the Generall altered his determination for going any further into the Streites at this time for any further discouery of the passage hauing taken a man and a woman of that countrey, which he thought sufficient for the vse of language: & hauing also met with these people here, which intercepted his men the last pere, (as the apparell and English furniture which was found in their tents, very well declared) he knew it was but a labour lost to seeke them further off, when he had found them there at hand. And considering also the short time he had in hand, he thought it best to bend his whole endeuour for the getting of Wyne, and to leaue the passage further to be discouered hereafter. For his commission directed him in this voyage, onely for the searching of the Dye, and to deferre the further discouery of the passage vntill another time.

Bests bulwarke

On Thursday the ninth of August we began to make a small fort for our defence in the Countesses Island, and entrenches a corner of a cliffe, which on three parts like a wall of good height was compassed and well fenced with the sea, and we finished the rest with calkes of the earth, to good purpose, and this was called Bests bulwarke, after the Lieutenants name, who first deuised the same. This was done for that wee suspected more lest the desperate men might oppresse vs with multitude, then any feare we had of their force, weapons, or policie of battel: but as wisdom would vs in such place (so farre from home) not to be of our selues altogether carelesse: so the signes which our captiue made vnto vs, of the comming downe of his Gouvernour or Prince, which he called Catchoe, gaue vs occasion to foresee what might ensue thereof, for he shewed by signes that this Catchoe was a man of higher stature farre then any of our nation is, and he is accustomed to be caried vpon mens shoulders.

Their King
called Catchoe.
How he is
honoured.

About midnight the Lieutenant caused a false Alarme to be giuen in the Island, to proue as well the readines of the company there as how, as also what help might be hoped for vpon the sudden fro the ships if need so required, & euery part was found in good readines vpon such a sudden.

Saturday the eleuenth of August the people shewed themselves againe, & called vnto vs from the side of a hil ouer against vs. The General (with good hope to heare of his men, and to haue answer of his letter) went ouer vnto them, where they presented themselves not about three in sight, but were hidden indeede in greater numbers behind the rocks, and making signes of delay with vs to intrappe some of vs to redeeme their owne, did onely seeke aduantage to craine our boat about a point of land from sight of our companie: whereupon our men iustly suspecting them

them kept aloofe without their danger, and yet let one of our company ashore, which tooke up a great bladder which one of them offered vs, and leauing a looking glasse in the place, came into the boate againe. In the meane while our men which stood in the Countesses Island to beholde, who might better discern them, then those of the boate, by reason they were on higher ground, made a great outcrie vnto our men in the boate, for that they saw diuers of the Sauages creeping behind the rockes towards our men, wherupon the Generall presently returned without tidings of his men.

Concerning this bladder which we receiued, our Captiue made signes that it was giuen him to keepe water and drinke in, but we suspected rather it was giuen him to swimme and shift away withall, for he and the woman sought diuers times to escape, hauing loosed our boates from a sterne our ships, and we neuer a boate left to pursue them withall, and had preuailed very farre, had they not bene very timely espied and preuented therein.

After our Generalls comming away from them they mustred themselves in our sight, vpon the top of a hill, to the number of twenty in a rancke, all holding hands ouer their heads, and dancing with great noise and songs together: we supposed they made this dance and shew for vs to vnderstand, that we might take view of their whole companies and force, meaning belike that we should doe the same. And thus they continued vpon the hill tops vntill night, when hearing a peece of our great Ordnance, which thundred in the hollownesse of the high hills, it made vnto them so fearefull a noise, that they had no great will to tarie long after. And this was done moze to make them know our force then to doe them any hurt at all.

On Sunday the 12 of August, Captaine Fenton trained the company, and made the souldiers maintaine skirmish among themselves, as well for their exercise, as for the countrey people to behold in what readines our men were alwaies to be found, for it was to be thought, that they lay hid in the hills thereabout, and obserued all the manner of our proceedings.

On Wednesday the fourteenth of August, our Generall with two small boates well appointed, for that hee suspected the countrey people to lie lurking thereabout, went up a certaine Bay within the Countesses sound, to search for Dre, and met againe with the countrey people, who so soone as they saw our men made great outcries, and with a white flag made of bladders sowed together with the guts and sinewes of beasts, waisted vs amaine vnto them, but shewed not aboue three of their company. But when wee came neere them, wee might perceiue a great multitude creeping behinde the rockes, which gaue vs good cause to suspect their traiterous meaning: wherupon we made them signes, that if they would lay their weapons aside, and come forth, we would deale friendly with them, although their intent was manifested vnto vs: but for all the signes of friendship we could make them they came still creeping towards vs behind the rockes to get moze aduantage of vs, as though we had no eyes to see them, thinking belike that our single wits could not discouer so bare deuises and simple drifts of theirs. Their spokesman earnestly perswaded vs with many inticing shewes, to come eate and sleepe ashore, with great arguments of courtesie, and clapping his bare hands ouer his head in token of peace and innocencie, willed vs to doe the like. But the better to allure our hungry stomacks, he brought vs a trimme baite of raw flesh, which for fashion sake with a boat-hooke wee caught into our boate: but when the cunning Cater perceiued his first sold morzell could nothing sharpen our stomacks, he cast about for a new traine of warme flesh to procure our appetites, wherfore he caused one of his fellowes in halting manner, to come forth as a lame man from behind the rockes, and the better to declare his kindnes in caruing, he hoisted him vpon his shoulders, and bringing him hard to the water side where we were, left him there limping as an easie prey to be taken of vs. His hope was that we would bite at this baite, and speedily leape ashore within their danger, wherby they might haue apprehended some of vs, to ransom their friends home againe, which before we had taken. The gentlemen and souldiers had great will to encounter them ashore, but the Generall moze carefull by procelle of time to winne them, then wilfully at the first to spoile them, would in no wise admit that any man should put himselfe in hazards ashore, considering the matter he now intended was for the Dre, and not for the Conquest: notwithstanding to prooue this cripples footemanship, he gaue liberty for one to shoote: wherupon the cripple hauing a parting blow, lightly recovered a rocke and went away a true and no fained cripple, and hath learned his lesson for euer halting afoze such cripples againe. But his fellowes which lay hid before, full quickly then appeared in their likenesse, and maintained the skirmish with their slings, bowes and arrowes very fiercely, and came as neere as the water suffred them: and with as desperate minde as hath bene seene in any men, without feare of shotte or any thing, followed vs all along the coast, but all their shot fell short of vs, and are of little danger. They had belayed all the coast

A bladder changed for a looking glasse.

No newes of the English captiues.

To what end the bladder was deliuered.

Those people dancing vpon the hill toppes.

A skirmish shewed to those people.

Their flags made of bladders.

Great offers.

20 hundred
Sauages.

coast along for vs, and being disperfed so, were not well to be numbred, but wee might difcerne of them aboue an hundred persons, and had caule to fufpect a greater number. And thus without losse or hurt we returned to our fhips againe.

Now our worke growing to an end, and hauing, onely with five poore Miners, and the helpe of a few gentlemen and fouldiers, brought aboard almost two hundred tunne of Ore in the fpace of twenty dayes, euery man therewithall well comforted, determined luftily to worke a freffh for a bone voyage, to bring our labour to a fpeedy and happy ende.

And vpon Wednesday at night being the one and twentieth of Auguft, we fully finished the whole worke. And it was now good time to leaue, for as the men were well wearied, fo their fhooes and clothes were well worn, their baskets bottoms torne out, their tooles broken, and the fhips reasonably well filled. Some with ouer-ftaining themfelues receiued hurts not a little dangerous, fome hauing their bellies broken, and others their legs made lame. And about this time the yce began to congeale and freeze about our fhips fides a night, which gaue vs a good argument of the Sunnes declining Southward, & put vs in mind to make more hafte homeward.

It is not a little worth the memorie, to the commendation of the gentlemen and fouldiers here, fit, who leauing all reputation apart, with fo great willingneffe and with couragious ftomackes, haue themfelues almoft overcome in fo fhort a time the difficultie of this fo great a labour. And this to be true, the matter, if it bee well weyed without further prooffe, now brought home doth well witneffe.

Thursday the 22 of Auguft, we plucked downe our tents, and euery man hafted homeward, and making bonafires vpon the top of the higheft Mount of the Ifland, and marching with Enfigne difplayed round about the Ifland, wee gaue a vollie of fhotte for a farewell, in honour of the righ honourable Lady Anne, Counteffe of Warwicke, whole name it beareth: and fo departed aboard.

The 23 of Auguft hauing the wind large at Weft, we fet faile from out of the Counteffes fount homeward, but the wind calming we came to anker within the point of the fame fount againe.

They returne.
Snow halfe a
foote deepe in
Auguft.

The 24 of Auguft about thre of the clocke in the morning, hauing the wind large at Weft, we fet faile againe, and by nine of the clocke at night, wee left the Queenes Fozeland afterne of vs, and being cleere of the Streites, we bare further into the maine Ocean, keeping our courfe more Southerly, to bring our felues the fooner vnder the latitude of our owne climate.

The wind was very great at fea, fo that we lay a hull all night, & had fnow halfe a foote deepe on the hatches.

From the 24 vntill the 28 we had very much wind, but large, keeping our courfe Southsouth-eaft, and had like to haue loft the Barkes, but by good hap we met againe. The height being taken, we were in degrees and a halfe.

The 29 of Auguft the wind blew much at Northeaft, fo that we could beare but onely a bunt of our fozefaille, and the Barkes were not able to cary any fayle at all.

The Michael loft company of vs and fhaped her courfe towards Orkney becaufe that way was better knowne vnto them, and arriued at Yermouth.

The Mafter of
the Gabriel
ftrooken ouer-
board.

The 30 of Auguft with the force of the wind, and a furge of the fea, the Mafter of the Gabriel and the Boatwain were ftriken both ouerboard, & hardly was the Boatwain recouered, hauing hold on a roape hanging ouerboard in the fea, and yet the Barke was laced foze and after with ropes a breaft high within board.

This Mafter was called William Smith, being but a yong man and a very fufficient mariner, who being all the morning before exceeding pleafant, told his Captaine he dreamed that he was caft ouerboard, and that the Boatwain had him by the hand, and could not faue him, and fo immediately vpon the end of his tale, his dreame came right euilly to paffe, and indeed the Boatwain in like fort held him by one hand, hauing hold on a rope with the other, vntill his force fayled, and the Mafter drowned. The height being taken we found our felues to be in the latitude of degrees and a halfe, and reckoned our felues from the Queenes Cape homeward about two hundred leagues.

The laft of Auguft about midnight, we had two or thre great and fudden flawes or ftormes.

The firft of September the ftorme was growen very great, and continued almoft the whole day and night, and lying a hull to carrie for the Barkes our fhip was much beaten with the fea, euery fea almoft ouertaking our poope, fo that we were constrained with a bunt of our faile to trie it out, and ease the rolling of our fhip. And fo the Gabriel not able to beare any fayle to keepe company with vs, and our fhip being higher in the poope, and a tall fhip, whereon the winde had more

more force to driue, went so fast away that we lost sight of them, and left them to God and their good fortune of Sea. The second day of September in the morning, it pleased God of his goodness to send vs a calme, whereby we perceiued the Rudder of our ship to be in twaine, and almost ready to fall away. Wherefore taking the benefite of the time, we slung halfe a dozen couple of our best men ouer boord, who taking great paines vnder water, driuing planks, and binding with ropes, did well strengthen and mend the matter, who returned the most part more then halfe dead out of the water, and as Gods pleasure was, the sea was calme vntill the worke was finished. The first of September, the height of the Sunne being taken, we found our selues to be in the latitude of degrees and a halfe. In this voyage commonly wee tooke the latitude of the place by the height of the Sunne, because the long day taketh away the light not onely of the Polar, but also of all other fixed Starres. And here the North Starre is so much eleuated about the Horizon, that with the Staffe it is hardly to be well obserued, and the degrees in the Astrolabe are too small to obserue minutes. Therefore wee alwaies vsed the Staffe and the Sunne as fittest instruments for this vse.

The Rudder of the Aide to be in twaine.

How the latitudes were alwaies taken in this voyage rather with the Staffe then Astrolabe.

Having spent foure or fve dayes in trauesel of the seas with contrary winde, making our Souther way good as neere as we could, to raise our degrees to bring our selues with the latitude of Sylley, wee tooke the height the tenth of September, and found our selues in the latitude of degrees and ten minutes. The eleuenth of September about five a clocke at night the winde came good Southwest, we vered sheat and set our course Southeast.

And vpon Thursday, the twelfth of September, taking the height, wee were in the latitude of and a halfe, and reckoned our selues not past one hundred and fifty leagues short of Sylley, the weather faire, the winde large at Westsouthwest, we kept our course Southeast.

The thirteenth day the height being taken, wee found our selues to be in the latitude of degrees, the wind Westsouthwest, then being in the height of Sylley, and we kept our course East, to run in with the flecue or chanel so called, being our narrow seas, and reckoned vs short of Sylley twelue leagues.

Sunday, the 15 of September about foure of the clocke, we began to sound with our lead, and had ground at 61 fadome depth, white small sandy ground, and reckoned vs vpon the backe of Sylley, and set our course East and by North, Eastnortheast, and Northeast among.

The sixteenth of September, about eight of the clocke in the morning sounding, we had 65 fadome of ey sand, and thought our selues thwart of S. Georges channell a little within the banks. And hearing a small saile all night, we made many soundings, which were about fortie fadome, and so shallow, that we could not well tell where we were.

The seuenteenth of September we sounded, and had 50 fadome, and were not farre off the lands end, finding bzanded sand with small wormes and Cockle shelles, and were shotte betwene Sylley and the lands ende, and being within the bay, we were not able to double the pointe with a South and by East way, but were faine to make another boord, the wind being at Southwest and by West, and yet could not double the point to come cleere of the lands end, so beare along the channell: and the weather cleered vp when we were hard aboord the shoze, and we made the lands end perfit, and so put vp along Saint Georges chanel. And the weather being very foule at sea, we couered some harborough, because our steerage was broken, and so came to ancoze in Padstow road in Cornwall. But riding there a very dangerous roade, we were aduised by the countrey, to put to Sea againe, and of the two euils, to choole the lesse, for there was nothing but present perill where we roade: whereupon we plyed along the channell to get to Londy, from whence we were againe driuen, being but an open roade, where our Anker came home, and with force of weather put to Seas againe, and about the three and twentieth of September, arrived at Milford Hauen in Wales, which being a very good harborough, made vs happy men, that we had receiued such long desired safetie.

The arrival of the Aide at Padstow in Cornwall.

Our coming to Milford Hauen.

About one moneth after our arriual here, by order from the Lords of the Counsell, the ship came up to Bristow, where the Oze was committed to keeping in the Castell there. Here we found the Gabriel one of the Barkes, arrived in good safetie, who hauing neuer a man within boord very sufficient to bring home the ship, after the Master was lost, by good fortune, when she came vpon the coast, met with a ship of Bristow at sea, who conducted her in safety thither.

The arriual of the Gabriel at Bristow.

Here we heard good tidings also of the arriual of the other Barke called the Michael, in the North parts, which was not a little topful vnto vs, that it pleased God so to bring vs to a safe meeting againe, and wee lost in all the voyage only one man, besides one that dyed at sea, which was sicke before he came aboard, and was so desirous to follow this enterprise, that he rather chose to dye therein, then not to be one to attempt so notable a voyage.

The Michael arrived in the North parts.

Only one man died the voyage.

The third voyage of Captaine *Frobisher*, intended for the discovery of *Cataia*, by *Meta Incognita*, Anno Do. 1578.

He Generall being returned from the second voyage, immediately after his arrivall in England, repaired with all hast to the Court being then at Windsor, to aduertise her Maiestie of his prosperous proceeding, and good successe in this last voyage, & of the plenty of gold Ore, with other matters of importance which he had in these Septentrionall parts discovered. He was courteously enterprised, and hartely welcommed of many noble men, but especially for his great ad-

M. Frobisher commended of her Maiestie.

A hundred men appointed to inhabit there.

Fiftene ships.

venture, commended of her Maiestie, at whose hands he receiued great thanks, and most gracious countenance, according to his deserts. Her Highnesse also greatly commended the rest of the Gentlemen in this seruice, for their great forwardnes in this so dangerous an attempt: but especially she reioyced very much, that among them there was so good order of gouernement, so good agreement, euery man so ready in his calling, to do whatsoeuer the General should command, which due commendation gratioisly of her Maiestie remembred, gaue so great encouragement to all the Captaines and Gentlemen, that they, to continue her Highnesse so good and honourable opinion of them, haue since neither spared labour, limme, nor life, to bring this matter (so well begun) to a happie and prosperous ende. And finding that the matter of the golde Ore had appeared, & made shew of great riches & profit, & the hope of the passage to *Cataya*, by this last voyage greatly increased, her Maiestie appointed speciall Commissioners chosen for this purpose, gentlemen of great iudgement, art, and skill, to looke thorowly into the cause, for the true trial and due examination thereof, and for the full handling of all matters therunto appertaining. And because that place and countrey hath neuer heretofore bene discovered, and therefore had no speciall name, by which it might be called and knowen, her Maiestie named it very properly *Meta Incognita*, as a marke and bound vnto hitherto vnknewen. The commissioners after sufficient trial and prooffe made of the Ore, and hauing vnderstood by sundrie reasons, and substantiall grounds, the possibilitie and likelihood of the passage, aduertised her highnesse, that the cause was of importance, and the voyage greatly woorthy to be aduanced againe. Whereupon preparation was made of ships and all other things necessary, with such expedition, as the time of the yeere then required. And because it was assuredly made accompt of, that the commoditie of Mines, there already discovered, would at the least counteruaile in all respects the aduenturers charge, and giue further hope & likelihood of greater matters to follow: it was thought needfull, both for the better guard of those parts already found, and for further discovery of the Inland and secrets of those countreys, & also for further search of the passage to *Cataya* (whereof the hope continually more & more increaseth) that certaine numbers of chosen souldiers and discret men for those purposes should be assigned to inhabit there. Whereupon there was a strong fort or house of timber, artificially framed, & cunningly deuised by a notable learned man here at home, in ships to be caried thither, wherby those men that were appointed to winter & stay there the whole yeere, might as well bee defended from the danger of the snow and cold ayre, as also fortified from the force or offence of those countrey people, which perhaps otherwise with too great multitudes might oppresse them. And to this great aduenture and notable exploit many well minded and forward Gentlemen of our countrey willingly haue offered themselves. And first Captaine Fenton Lieutenant generall for Captaine Frobisher, and in charge of the company with him there, Captaine Best, and Captaine Filpot, vnto whose good discretions the gouernment of that seruice was chiefly commended, who, as men not regarding peril in respect of the profit and common wealth of their countrey, were willing to abide the first brunt & aduenture of those dangers among a savage and brutish kinde of people, in a place hitherto euer thought for extreme cold not habitable. The whole number of men which had offered, and were appointed to inhabit *Meta Incognita* all the yeere, were one hundred persons, wherof 40 should be mariners for the vse of ships, 30 Miners for gathering the gold Ore together for the next yeere, and 30 souldiers for the better guard of the rest, within which last number are included the Gentlemen, Goldsmiths, Bakers, Carpenters, & all necessary persons. To each of the Captaines was assigned one ship, as well for the further searching of the coast & countrey there, as for to returne & bring backe their companies againe, if the necessity of the place so byged, or by miscarriage of the fleet the next yeere, they might be disappointed of their further prouision. Being therfore thus furnished with all necessaries, there were ready to depart vpon the said voyage 15 saile of good ships, wherof the whole number was to returne againe with their loading of gold Ore in the end of the sommer, except those 3 ships, which should be left for the vse of those Captains which should inhabit there the whole yeere. And being in so good readinesse

readinesse, the Generall with all the Captaines came to the Court, then lying at Greenwich, to take their leaue of her Maestie, at whose hands they all receiued great encouragement, and gracious countenance. Her highnesse besides other good gifts, and greater promises, bestowed on the Generall a faire chaine of golde, and the rest of the Captaines kissed her hand, tooke their leaue, and departed euery man towards their charge.

The sayd fiftene saile of ships arriued and met together at Harwich, the seuen and twentieth day of May Anno 1578, where the Generall and the other Captaines made view, and mustred their companies. And euery seuerall Captaine receiued from the Generall certaine Articles of direction, for the better keeping of order and company together in the way, which Articles are as followeth.

Articles and orders to be obserued for the Fleete, set downe by Captaine Frobisher Generall, and deliuered in writing to euery Captaine, as well for keeping company, as for the course, the 31 of May.

1 In primis, to banish swearing, dice, and card-playing, and filthy communication, and to serue God twice a day, with the ordinary seruice vsuall in Churches of England, and to cleare the glasse, according to the old order of England.

2 The Admirall shall carie the light, & after his light be once put out, no man to goe a head of him, but euery man to sit his sailes to follow as neere as they may, without endangering one another.

3 That no man shall by day or by night depart further from the Admirall then the distance of one English mile, and as neere as they may, without danger one of another.

4 If it chance to grow thicke, and the wind contrary, either by day or by night, that the Admirall be forced to cast about, before her casting about shee shall giue warning, by shooting off a peece, and to her shall answer the Viceamirall and the Rereamirall each of them with a peece, if it bee by night, or in a fogge; and that the Viceamirall shall answer first, and the Rereamirall last.

5 That no man in the Fleete descreyng any sayle or sayles, giue vpon any occasion any chace before he haue spoken with the Admirall.

6 That euery euening all the Fleete come by and speake with the Admirall, at seuen of the Clocke, or betweene that and eight, and if the weather will not serue them all to speake with the Admirall, then some shall come to the Viceamirall, and receiue the order of their course of Dafter Hall chiefe Pilot of the Fleete, as he shall direct them.

7 If to any man in the Fleete there happen any mishchance, they shal presently shoote off two peeces by day, and if it be by night, two peeces, and shew two lights.

8 If any man in the Fleete come by in the night, & hale his fellow, knowing him not, he shall giue him this watch-word, Before the world was God. The other shal answer him (if he be one of our Fleete) After God came Christ his Sonne. So that if any be found amongst vs, not of our

owne company, he that first descrieth any such sayle or sayles, shall giue warning to the Admirall by himselfe or any other that he can speake to, that sailles better then he, being neereest vnto him.

9 That euery ship in the fleete in the time of fogs, which continually happen with little winds, and most part calmes, shall keepe a reasonable noise with trumpet, drumme, or other wise, to keepe themselves cleere one of another.

10 If it fall out so thicke or mistie that we lay it to hull, the Admirall shall giue warning with a piece, and putting out three lightes one ouer another, to the end that euery man may take in his sailles, and at his setting of sayles againe doe the like, if it be not cleere.

11 If any man discover land by night, that he giue the like warning, that he doth so for mischances, two lightes, and two pieces, if it be by day one piece, and put out his flagge, and strike all his sailles he hath aboard.

12 If any ship shall happen to lose company by force of weather, then any such ship or ships shall get her into the latitude of , and so keepe that latitude vntill they get Frisland. And after they be past the West parts of Frisland, they shall get them into the latitude of , and , and not to the Northward of ; and being once entered within the Streites, al such ships shall euery watch shoote off a good piece, and looke out well for smoke and fire which those that get in first shall make euery night, vntill all the fleete be come together.

13 That vpon the sight of an Ensigne in the mast of the Admirall (a piece being shot off) the whole fleete shall repaire to the Admirall, to vnderstand such conference as the Generall is to haue with them.

14 If we chance to meete with any enemies, that foure ships shall attend vpon the Admirall, viz. the Francis of Foy, the Moone, the Barke Dennis, and the Gabriel: and foure vpon my Lieutenant generall in the Iudith, viz. the Hopewel, the Armenal, the Beare, and the Salomon: and the other foure vpon the Vizadmirall, the Anne Francis, the Thomas of Ipswich, the Emmanuel, and the Michael.

15 If there happen any disordered person in the fleete, that he be taken and kept in safe custodie vntill he may conueniently be brought aboard the Admirall, and there to receiue such punishment as his or their offences shall deserue.

By me *Martin Frobisher.*

Our departure from England.

Cape Cleare the
first of June.

A charitable
deede.

Marke this
current.

Hauing receiued these articles of direction we departed from Harwich the one and thirtieth of May. And sayling along the South part of England Westward, we at length came by the coast of Ireland at Cape Cleare the sixth of June, and gaue chase there to a small barke which was supposed to be a Pyrat, or Rouer on the Seas, but it fell out indeede that they were poore men of Bristow, who had met with such company of Frenchmen as had spoiled and slaine many of them, and left the rest so fore wounded that they were like to perishe in the sea, hauing neither hand nor foote hole to helpe themselves with, nor victuals to sustaine their hungry bodies. Our Generall, who well vnderstood the office of a Souldier and an Englishman, and knew well what the necessitie of the sea meaneth, pitying much the miserie of the poore men, relieved them with Surgerie and salues to heale their hurtes, and with meate and drinke to comfort their pining hearts; some of them hauing neither eaten nor drunke more then oliues and stinking water in many dayes befoze, as they reported. And after this good deede done, hauing a large wind, we kept our course vpon our sayd voyage without staying for the taking in of fresh water, or any other prouision, whereof many of the fleete were not thoroughly furnished: and sayling towards the Northwest parts from Ireland, we mette with a great current from out of the Southwest, which caried vs (by our reckoning) one point to the Northeastwards of our sayd course, which current seemed to vs to continue it selfe towards Norway, and other the Northeast parts of the world, whereby we may be inducued to beleue, that this is the same which the Portugals meete at Capo de buona Speranza, where striking ouer from thence to the Streites of Magellan, and finding no passage there for the narrownesse of the sayde Streites, runneth along into the great Bay of Mexico, where also hauing a let of land, it is forced to strike backe againe towards the Northeast, as we not onely here, but in another place also, further to the Northwards, by good experience this yeere haue found, as shalbe hereafter in this place more at large declared.

Now had we sayled about foureteene dayes, without sight of any land, or any other liuing thing, except certaine fowles, as Willets, Robies, Gullies, &c. which there seeme onely to liue by sea.

The twentieth of June, at two of the clocke in the morning, the General descried land, & found

it to be West Frisland, now named West England. Here the Generall, & other Gentlemen went ashore, being the first knowen Christians that we haue true notice of, that euer set foot vpon that ground: and therefore the Generall tooke possession thereof to the vse of our Soueraigne Lady the Queenes Maiestie, and discouered here a goodly harborough for the ships, where were also certaine little boates of that countrey. And being there landed, they espied certaine tents and people of that countrey, which were (as they iudge) in all sorts, very like those of Meta Incognita, as by their apparell, and other things which we found in their tents, appeared.

West England.

The Sauage and simple people so soone as they perceiued our men comming towards them, (supposing there had bene no other world but theirs) fled fearefully away, as men much amazed at so strange a sight, and creatures of humane shape, so farre in apparell, complexion, and other things different from themselves. They left in their tents all their furniture for haste behind them, where amongst other things were found a boxe of small nailes, and certaine red Herrings, boords of Fire tree well cut, with diuers other things artificially wrought: whereby it appeareth, that they haue trade with some ciuill people, or else are indeede themselves artificiall workemen.

Our men brought away with them onely two of their dogs, leauing in recompense belles, looking-glasses, and diuers of our countrey toys behinde them.

This countrey, no doubt, promisseth good hope of great commoditie and riches, if it may be well discouered. The description whereof you shall finde moze at large in the second voyage.

Some are of opinion, that this West England is firme land with the Northeast partes of Meta Incognita, or else with Groenland. And their reason is, because the people, apparel, boates, and other things are so like to theirs: and another reason is, the multitude of Islands of yce, which lay betweene it and Meta Incognita, both argue, that on the North side there is a bay, which cannot be but by conioyning of the two lands together.

Frisland supposed to be conioyned with Groenland.

And hauing a faire and large winde we departed from thence towards Frobishers Streites, the 23 of June. But first wee gaue name to a high cliffe in West England, the last that was in our sight, and for a certaine similitude, we called it Charing crosse. Then wee bare Southerly towards the Sea, because to the Northwardes of this coast we met with much dyiuing yce, which by reason of the thicke mistes and weather might haue bene some trouble vnto vs.

The 23 of June.

Charing crosse.

On Monday the last of June, wee met with many great Whales, as they had bene Porpoises.

This same day the Salamander being vnder both her coyses and bonets, happened to strike a great Whale with her full stemme, with such a blow that the ship stode still, and stirred neither forward nor backward. The Whale thereat made a great and ugly noise, and cast vp his body and taile, and so went vnder water, and within two daies after, there was found a great Whale dead swimming aboue water, which wee supposed was that which the Salamander strooke.

A Whale strooke a ship.

The second day of July early in the morning we had sight of the Queenes Forland, and bare in with the land all the day, and passing thorow great quantity of yce, by night were entred somewhat within the Streites, perceiuing no way to passe further in, the whole place being frozen ouer from the one side to the other, and as it were with many walles, mountaines, and bulwarks of yce, choked vp the passage, and denied vs entrance. And yet doe I not thinke that this passage or Sea hereabouts is frozen ouer at any time of the yere: albeit it seemet so vnto vs by the abundance of yce gathered together, which occupied the whole place. But I doe rather suppose these yce to bee bred in the hollow soundes and freshets thereabouts: which by the heate of the sommers Sunne, being loosed, doe emptie themselves with the ebbes into the sea, and so gather in great abundance there together.

Frobishers Streites choked vp with yce.

And to speake somewhat here of the ancient opinion of the frozen sea in these parts: I doe thinke it to be rather a bare coniecture of men, then that euer any man hath made experience of any such sea. And that which they speake of Mare glaciale, may be truly thought to be spoken of these parts: for this may well be called indeede the ycie sea, but not the frozen sea, for no sea consisting of salt water can be frozen, as I haue moze at large herein shewed my opinion in my second voyage, for it seemeth impossible for any sea to bee frozen which hath his course of ebbing and flowing, especially in those places where the tides doe ebbe and flowe aboue ten fadome. And also all these aforesayd yce, which we sometime met a hundred mile from lande, being gathered out of the salt Sea, are in taste fresh, and being dissolued, become sweete and hole some water.

Salt water cannot freeze.

And the cause why this yere we haue bene more combred with yce then at other times before, may be by reason of the Easterly & Southerly winds, which brought vs more timely thither now then we looked for. Which blowing from the sea directly vpon the place of our Streits, hath kept in the yce, and not suffered them to be caried out by the ebbe to the maine sea, where they would in more short time haue bene dissolued. And all these fleeting yce are not only so dangerous in that they wind and gather so neere together, that a man may passe sometimes tenne or twelue miles as it were vpon one firme Island of yce: but also for that they open and shut together againe in such sort with the tides and sea-gate, that whilest one ship followeth the other with full sayles, the yce which was open vnto the foremost will iopne and close together before the latter can come to follow the first, whereby many times our shippes were brought into great danger, as being not able so sodainely to take in our sayles, or stay the swift way of our ships.

We were forced many times to stemme and strike great rockes of yce, and so as it were make way through mighty mountaines. By which meanes some of the fleete, where they found the yce to open, entred in, and passed so farre within the danger thereof, with continuall desire to recouer their port, that it was the greatest wonder of the world that they euer escaped safe, or were euer heard of againe. For euen at this present we missed two of the fleete, that is, the *Ludich*, wherein was the Lieutenant generall Captaine Fenton; and the *Michael*, whom both we supposed had bene utterly lost, hauing not heard any tidings of them in moe then 20 dayes before.

Barke Dennis
sunke.

And one of our fleete named the *Barke Dennis*, being of an huntzeth tunne burden, seeking way in amongst these yce, receiued such a blow with a rocke of yce that she sunke downe therewith in the sight of the whole fleete. Howbeit hauing signified her danger by shooting off a peece of great Ordnance, new succour of other ships came so readily vnto them, that the men were all saued with boats.

Part of the
house lost.

Within this ship that was drowned there was parcell of our house which was to bee erected for them that should stay all the winter in *Mera Incognita*.

This was a more fearefull spectacle for the fleete to beholde, for that the outrageous storme which presently followed, threatned them the like fortune and danger. For the fleete being thus compassed (as *aforsayd*) on euery side with yce, hauing left much behinde them, thorow which they passed, and finding more before them, thorow which it was not possible to passe, there arose a sudden terrible tempest at the Southeast, which blowing from the maine sea, directly vpon the place of the Streites, brought together all the yce a sea-boorde of vs vpon our backs, and thereby debard vs of turning backe to recouer sea-roome againe: so that being thus compassed with danger on euery side, sundry men with sundry deuises sought the best way to saue themselves. Some of the ships, where they could find a place more cleare of yce, and get a little birch of sea roome, did take in their sayles, and there lay a drift. Other some fastened & moored Anker vpon a great Island of yce, and roade vnder the Lee thereof, supposing to be better guarded thereby from the outrageous winds, and the danger of the lesser fleeting yce. And againe some were so fast shut vp, and compassed in amongst an infinite number of great countreys and Islands of yce, that they were faine to submit themselves and their ships to the mercy of the vnnmercifull yce, and strengthened the sides of their ships with iunkes of cables, beds, Mattes, planks and such like, which being hanged ouer boord on the sides of their ships, might the better defend them from the outrageous sway and strokes of the said yce. But as in greatest distresse, men of best valour are best to bee discerned, so it is greatly worthy commendation and noting with what inuincible minde euery Captaine encouraged his company, and with what incredible labour the painefull Mariners and poore Miners (vnacquainted with such extremities) to the euermlasting renowne of our nation, did overcome the hant of these so great and extreme dangers: for some, euen without boord vpon the yce, and some within boord vpon the sides of their ships, hauing poles, pikes, pieces of timber, and Axes in their handes, stood almost day and night without any rest, bearing off the force, and breaking the sway of the yce with such incredible paine and perill, that it was wonderfull to beholde, which otherwise no doubt had striken quite through and through the sides of their ships, notwithstanding our former prouision: for planks of timber of more then three inches thicke, and other things of greater force and bignesse, by the surging of the sea and billowe, with the yce were shiuered and cut in sunder, at the sides of our ships, so that it will seeme more then credible to be reported of. And yet (that which is more) it is faithfully and plainly to bee proued, and that by many substantiall witnesses, that our ships, euen those of greatest burdens, with the meeting of contrary waues of the sea, were heaued vp betweene Islands of yce, a foote welneere out of the sea about their watermarke, hauing

hauing their knees and timbers within boord both bowed and broken therewith.

And amidst these extremes, whilst some laboured for defence of the ships; and sought to saue their bodies, other some of more milder spirit sought to saue the soule by deuout prayer and meditation to the Almighty, thinking indeede by no other meanes possible then by a diuine Miracle to haue their deliuerance: so that there was none that were either idle, or not well occupied, and he that helde himselfe in best securitie had (God knoweth) but onely bare hope remaining for his best safetie.

Thus all the gallant flecte and miserable men without hope of euer getting forth againe, distressed with these extremities remayned here all the whole night and part of the next day, excepting foure ships, that is, the Anne Francis, the Moone, the Francis of Foy, and the Gabriell, which being somewhat a Seaboord of the flecte, and being fast ships by a winde, hauing a more scope of cleare, tryed it out all the time of the storme vnder sayle, being hardly able to beare a roast of each.

And albeit, by reason of the fleeting yce, which were dispersed here almost the whole sea ouer, they were brought many times to the extreamest point of perill, mountaines of yce renne thousand times scaping them scarce one ych, which to haue striken had bene their present destruction, considering the swift course and way of the ships, and the vniuersallnesse of them to stay and turne as a man would wish: yet they esteemed it their better safetie, with such perill to seeke Sea-roome, than without hope of euer getting libertie to lie struing against the streame, and beating amongst the Ice mountaines, whose hugeness and monstrous greatnesse was such, that no man would credite, but such as to their paines sawe and felt it. And these foure shippes by the next day at noone got out to Sea, and were first cleare of the yce, who now enioying their owne libertie, begonne a new to sorrow and feare for their fellowes safeties. And deuoutly kneeling about their maine Mast, they gaue vnto God humble thankes, not only for themselves, but besought him likewise highly for their friendes deliuerance. And euen now whilst amidst these extremities this gallant flecte and valiant men were altogether ouerlaboured and forewatched, with the long and fearefull continuance of the forelaid dangers, it pleased God with his eyes of mercie to looke downe from heauen to sende them helpe in good time, giuing them the next day a more fauourable winde at the West Northwest, which did not onely disperse and driue forth the yce before them, but also gaue them libertie of more scope and Sea-roome, and they were by night of the same day following perceiued of the other foure shippes, where (to their greatest comfort) they enioyed againe the fellowship one of another. Some in mending the sides of their ships, some in setting vp their top Mastes, and mending their sayles and tacklings; Again, some complaining of their false Stemme bozne away, some in stopping their leakes, some in recounting their dangers past, spent no small time & labour. So that I dare well auouch, there were neuer men more dangerously distressed, nor more mercifully by Gods prouidence deliuered. And hereof both the tozne ships, and the forewared bodies of the men arriued doe beare most euident marke and witnesse. And now the whole flecte plyed off to Seaward, resolving there to abide untill the Sunne might consume, or the force of winde disperse these yce from the place of their passage: and being a good birch off the shoze, they tooke in their sailes, and lay adrift.

The seuenth of Iuly as men nothing yet dismayed, we cast about towards the inward, and had sight of land, which rose in forme like the Northland of the straights, which some of the flecte, and those not the worst Harriners, iudged to be the North fozeland: howbeit other some were of contrary opinion. But the matter was not well to be discerned by reason of the thicke fogge which a long time hung vpon the coast, & the new falling snow which yeerely altereth the shape of the land, and taketh away oftentimes the Hariners markes. And by reason of the darke mists which continued by the space of twentie dayes together, this doubt grewe the greater and the longer perillous. For whereas indeede we thought our selues to be vpon the Northeast side of Frobishers straights, we were now caried to the Southwestwards of the Queenes Foreland, and being deceiued by a swift current comming from the Northeast, were brought to the Southwestwards of our laid course many miles more then we did thinke possible could come to passe. The cause whereof we haue since found, and it shall be at large hereafter declared.

Here we made a point of land which some mistooke for a place in the straights called Mount Warwicke: but how we should be so farre shot by so suddainely within the laid straights the expert Hariners began to maruell, thinking it a thing impossible that they could be so farre overtaken in their accounts, or that any current could deceiue them here which they had not by former experience prououed and found out. Howbeit many confessed that they found a swifter course

course of flood then before time they had obserued. And truly it was wonderfull to heare and see the rushing and noise that the tides do make in this place with so violent a force that our ships lying a hull were turned sometimes round about euen in a moment after the maner of a whirle-poolle, and the noyse of the freame no lesse to be heard a farre off, then the waterfall of London Bridge.

James Beare a
good Mariner.

Christopher Hall
chiefe Pilot.

But whilst the Fleet lay thus doubtfull amongst great store of yce in a place they knew not without sight of Sunne, whereby to take the height, and so to know the true eleuation of the pole, and without any cleere of sight to make perfit the coast, the Generall with the Captaines & Masters of his ships, began doubtfully to question of the matter, and sent his Pinelle aboard to heare each mans opinion, and specially of Iames Beare, Master of the Anne Francis, who was knowen to be a sufficient and skilful Mariner, and hauing bene there the yere before, had wel obserued the place, and drawn out Cardes of the coast. But the rather this matter grew the more doubtfull, for that Christopher Hall chiefe Pilot of the voyage, deliuered a plaine and publique opinion in the hearing of the whole Fleet, that hee had neuer seene the foresayd coast before, and that he could not make it for any place of Frobishers Streits, as some of the Fleet supposed, and yet the landes doolie and trend so like, that the best Mariners therein may bee de- ceitued.

The tenth of Iuly, the weather still continuing thicke and darke, some of the ships in the fogge lost sight of the Admirall and the rest of the fleet, and wandring to and fro, with doubtfull opinion whether it were best to seeke backe againe to seaward through great store of yce, or to follow on a doubtfull course in a Sea, Bay, or Streites they knew not, or along a coast, whereof by reason of the darke mistes they could not discern the dangers, if by chance any rocke or broken ground should lie off the place, as commonly in these parts it doth.

The Viceadmirall Captaine Yorke considering the foresayd opinion of the Pilot Hall, who was with him in the Thomas Allen, hauing lost sight of the Fleet, turned backe to sea againe, hauing two other ships in company with him.

Also the Captaine of the Anne Francis hauing likewise lost company of the Fleet, and being all alone, held it for best to turne it out to sea againe, vntill they might haue cleere weather to take the Sunnes altitude, and with incredible paine and perill got out of the doubtfull place, into the open Sea againe, being so narrowly distressed by the way, by meanes of continuall fogge and yce, that they were many times ready to leape vpon an Island of yce to auoide the present danger, and so hoping to prolong life awhile meant rather to die a pining death.

Hard shifts to
saue mens
liues.

Some hoped to saue themselves on chesses, and some determined to tie the Hatches of the ships together, and to binde themselves with their furniture fast thereunto, and so to be towed with the ship-bore ashore, which otherwise could not receiue halfe of the companie, by which meanes if happily they had arriued, they should epyther haue perished for lacke of foode to eate, or else should themselves haue bene eaten of those rauenous, bloodie, and Men-eating people.

The coast as
long as South
side of Gron-
land so leagues

The rest of the Fleet following the course of the Generall which led them the way, passed vpon aboute fiftie leagues within the saide doubtfull and supposed straights, hauing alwayes a faire continent vpon their Starreboorde side, and a continuance still of an open Sea before them.

Mistaken
straights
which in-
deede are no
straights.

The Generall albeit with the first perchance he found out the error, and that this was not the olde straights, yet he perswaded the Fleet alwayes that they were in their right course, and knowen straights. Wherein I suppose he rather dissembled his opinion therein then other- wise, meaning by that policie (being himselfe led with an honourable desire of further discou- rie) to induce the Fleet to follow him, to see a further prooffe of that place. And as some of the companie reported, he hath since confessed that if it had not bene for the charge and care he had of the Fleet and freighted ships, he both would and could haue gone through to the South Sea, called Mar del Sur, and dissolued the long doubt of the passage which we seeke to find to the rich countrey of Caraya.

Frobisher could
haue passed to
Caraya.

Faire open
way.

Reasons to
prooue a pas-
sage here.

1 Of which mistaken straights, considering the circumstance, we haue great cause to con- firme our opinion, to like and hope well of the passage in this place. For the foresayd Bay or Sea, the further we sayled therein, the wider we found it, with great likelihood of endlesse continuance. And where in other places we were much troubled with yce, as in the entrance of the same, so af- ter we had sayled fiftie or fiftie leagues therein we had no let of yce, or other thing at all, as in other places we found.

2 Also this place seemeth to haue a maruellous great indraft, and draweth vnto it most of the drift

drift yce, and other things which doe fleete in the Sea, either to the North or Eastwards of the same, as by good experience we haue found.

Great in-
drifts.

3 For here also we met with boordes, lathes, and diuers other things drining in the Sea, which was of the wracke of the ship called the Barke Dennis, which perished amongst the yce as before said, being lost at the first attempt of the entrance ouerthwart the Queenes forelande in the mouth of Frobishers straights, which could by no meanes haue bene so brought thither, nei-ther by winde nor tyde, being lost so many leagues off, if by force of the said current the same had not bene violently brought. For if the same had bene brought thither by tide of flood, looke how farre the said flood had carried it, the ebbe would haue recarried it as farre backe againe, and by the winde it could not so come to passe, because it was then sometime calme, and most times contrarie.

A current to
the West.

And some Mariners doe affirme that they haue diligently obserued, that there runneth in this place nine houres flood to three ebbe, which may thus come to passe by force of the sayd current: for whereas the Sea in most places of the world, doth more or lesse ordinarily ebbe and flow once euery twelue houres with sixe houres ebbe, and sixe houres flood, so also would it doe there, were it not for the violence of this hastning current, which forceth the flood to make appearance to be- ginne before his ordinary time one houre and a halfe, and also to continue longer than his natu- rall course by an other houre and a halfe, vntill the force of the ebbe be so great that it will no lon- ger be resisted: according to the saying, Naturam expellas furca licet, vique recurrit. Although nature and naturall courses be forced and resisted neuer so much, yet at last they will haue their owne way againe.

Nine houres
flood to three
houres ebbe.

Whereouer it is not possible that so great course of floods and current, so high swelling tides with continuance of so deepe waters, can be digested here without unburdening themselves into some open Sea beyond this place, which argueth the more likelihood of the passage to be hereabouts. Also we suppose these great indrafts doe growe and are made by the reuerberation and reflection of that same current, which at our comming by Ireland, met and crossed vs, of which in the first part of this discourse I spake, which comming from the bay of Mexico, pas- sing by and washing the Southwest parts of Ireland, reboundeth ouer to the North-east parts of the world, as Norway, Island, &c. where not finding any passage to an open Sea, but rather being there encreased by a new access, and another current meeting with it from the Scythian Sea, passing the bay of Saint Nicholas Westward, it doth once againe rebound backe, by the coastes of Groenland, and from thence vpon Frobishers straights being to the Southwestwardes of the same.

5 And if that principle of Philosophie be true, that Inferiora corpora reguntur à superioribus, that is, if inferiour bodie be gouerned, ruled, and caried after the manner and course of the supe- rior, then the water being an inferior Element, must needs be gouerned after the superior hea- uen, and so follow the course of Primum mobile from East to West.

The sea mo-
ueth from
East to West
continually.

6 But euery man that hath written or consider. d any thing of this passage, hath more doub- ted the returne by the same way by reason of a great downefall of water, which they imagine to be thereabouts (which we also by experience partly find) than any mistrust they haue of the same passage at all. For we find (as it were) a great downefall in this place, but yet not such but that we may returne, although with much a doe. For we were easlier carried in one houre then we could get forth againe in three. Also by another experience at another time, we found this cur- rent to deceiue vs in this sort: That whereas we supposed it to be 15 leagues off, and lying a hull, we were brought within two leagues of the shore contrarie to all expectation.

Authentie.

Hard but yet
possible tur-
ning backe as
gaine.

Our men that sayled furthest in the same mistaken straights (hauing the maine land vpon their starboord side) affirme that they met with the outlet or passage of water which commeth thro- row Frobishers straights, and followeth as all one into this passage.

Some of our companie also affirme that they had sight of a continent vpon their larboord-side being 60 leagues within the supposed straights: howbeit except certaine Islands in the entrance hereof we could make no part perfect thereof. All the foresaid tract of land seemeth to be more fruitfull and better stozed of Grasse, Deere, Wilde fowle, as Partridges, Larkes, Seamewes, Gulls, Wilmots, Falcons and Tassel gentils, Rauens, Beares, Hares, Foxes, and other things, than any other part we haue yet discovered, and is more populous. And here Luke Ward, a Gentleman of the companie, traded marchandise, and did exchange knives, bels, looking glasses, &c. with those countrey people, who brought him foule, fish, beares skinnes, and such like, as their countrey yeeldeth for the same. Here also they saw of those greater boats of the countrey, with twentie persons in a peece.

straights.

Great dan-
gers.

Anne Francis
met with some
of the fleet.

Francis of Foy.

Bridgewater ship.

Now after the Generall had bestowed these many dayes here, not without many dangers, he returned backe againe. And by the way sayling alongst this coast (being the backside of the supposed continent of America) and the Queenes Foreland, he perceiued a great sound to goe thorow into Frobishers Straights. Whereupon he sent the Gabriel the one and twentieth of July, to proue whether they might goe thorow and meete againe with him in the straights, which they did: and as wee imagined before, so the Queenes foreland proued an Island, as I thinke most of these supposed continents will. And so he departed towarde the straights, thinking it were high time now to recouer his Port, and to prouide the Fleet of their lading, whereof he was not a little carefull, as shall by the procelle and his resolute attempts appeare. And in his returne with the rest of the fleet he was so intangled by reason of the darke fogge amongst a number of Islands and broken ground that lye off this coast, that many of the shippes came ouer the top of rockes, which presently after they might perceiue to lie dry, hauing not halfe a foote water more then some of their ships did draw. And by reason they could not with a smal gale of wind stemme the force of the flood, whereby to goe cleere off the rockes, they were faine to let an anker fall with two bent of Cable together, at an hundred and odde fadome depth, where otherwise they had bene by the force of the tydes caried vpon the rockes againe, and perished: so that if God in these fortunes (as a mercifull guide, beyond the expectation of man) had not caried vs thorow, we had surely perished amidst these dangers. For being many times driuen hard aboord the shore without any sight of land, vntill we were ready to make shipwracke thereon, being forced commonly with our boats to sound before our ships, least we might light thereon before we could discern the same; it pleased God to giue vs a cleare of Sunne and light for a short time to see and auoyde thereby the danger, hauing bene continually darke before, and presently after. Manie times also by meanes of fogge and currents being driuen neere vpon the coast, God lent vs euen at the very pinch one prosperous breath of winde or other, whereby to double the land, and auoid the perill, and when that we were all without hope of helpe, euery man recommending himselfe to death, and crying out, Lord now helpe or neuer, now Lord looke downe from heauen and saue vs sinners, or else our safetie cometh too late: euen then the mightie maker of heauen, and our mercifull God did deliuer vs: so that they who haue bene partakers of these dangers doe euen in their soules confesse, that God euen by miracle hath sought to saue them, whose name he prayesd euermore.

Long time now the Anne Francis had layne beating off and on all alone before the Queenes foreland, not being able to recouer their Port for yce, albeit many times they dangerously attempted it, for yet the yce choaked by the passage, and would not suffer them to enter. And hauing neuer scene any of the fleet since twenty dayes past, when by reason of the thicke mistes they were seuered in the mistaken straights, they did now this present 23 of July ouerthwart a place in the straights called Hattons Hedland, where they met with seuen ships of y^e fleet againe, which good hap did not onely reioyce them for themselves, in respect of the comfort which they receiued by such good companie, but especially that by this meanes they were put out of doubt of their deare friends, whose safeties long time they did not a little suspect and feare.

At their meeting they hailed the Admirall after the manner of the Sea, and with great ioy welcommed one another with a thundring volley of shot. And now euery man declared at large the fortunes and dangers which they had passed.

The foure and twentieth of July we met with the Francis of Foy, who with much adoe sought way backe againe through the yce from out of the mistaken straights, where (to their great perill) they proued to recouer their Port. They brought the first newes of the Vizeadmirall Captaine Yorke, who many dayes with themselves, and the Busse of Bridgewater was missing. They reported that they left the Vizeadmirall reasonably cleare of the yce, but the other ship they greatly feared, whom they could not come to helpe, being themselves so hardly distressed as neuer men more. Also they told vs of the Gabriel, who hauing got thorow from the backside, and Western point of the Queenes foreland, into Frobishers Straights, fell into their company about the cape of Good hope.

And vpon the seuen and twentieth of July, the ship of Bridgewater got out of the yce and met with the Fleet which lay off and on vnder Hattons Hedland. They reported of their marvellous accidents and dangers, declaring their ship to be so leake that they must of necessitie seeke harborow, hauing their stem so beaten within their huddings, that they had much adoe to keepe themselves aboue water. They had (as they say) five hundred strokes at the pump in lesse then halfe a watch, being scarce two houres; their men being so ouer-wearied therewith, and with the former dangers that they desired helpe of men from the other ships. Moreover they declared that

that there was nothing but yce and danger where they had bene, and that the Straights within were frozen vp, and that it was the most impossible thing of the world, to passe vp vnto the Countesse of Warwicks sound, which was the place of our Port.

The Straights
frozen ouer.

The report of these dangers by these ships thus published amongst the fleete, with the remembrance of the perils past, and those present before their face, brought no small feare and terror into the hearts of many considerate men. So that some beganne priuily to murmure against the Generall for this wilfull manner of proceeding. Some desired to discouer some harborow thereabouts to refresh themselves and reforme their broken vessels for a while, vntill the North and Northwest windes might disperse the yce, and make the place more free to passe. Other some forgetting themselves, spake more vndutifully in this behalfe, saying: that they had as leeuue be hanged when they came home, as without hope of safetie to seeke to passe, and so to perish amongst the yce.

The Generall not opening his eares to the peeuisht passion of any priuate person, but chiefly respecting the accomplishment of the cause he had vnderaken (wherein the chiefe reputation and fame of a Generall and Captaine consisteth) and calling to his remembrance the short time he had in hand to prouide so great number of ships their loading, determined with this resolution to passe and recouer his Port, or else there to burie himselfe with his attempt.

20 balliant
minds of M.
Frobisher.

Notwithstanding somewhat to appease the feeble passions of the fearefuller sort, and the better to entertaine time for a season, whilst the yce might the better be dissolued, he haled on the Fleete with beleefe that he would put them into harborow: thereupon whilst the shippes lay off and on vnder Hattons Hedland, he sought to goe in with his Pinnesses amongst the Flaudes there, as though hee meant to search for harborowe, where indeede he meant nothing lesse, but rather sought if any Dre might be found in that place, as by the sequele appeared.

In the meane time whilst the Fleete lay thus doubtfull without any certaine resolution what to do, being hard aboord the lee-shore, there arose a sodaine and terrible tempest at the South-southeast, whereby the yce began maruellously to gather about vs.

Whereupon euery man, as in such case of extremitie he thought best, sought the wisest way for his owne safetie. The most part of the Fleete which were further shot vp within the Straights, and so farre to the leeward, as that they could not double the land, following the course of the Generall, who led them the way, tooke in their Sayles, and layde it a hull amongst the yce, and so passed ouer the storme, and had no extremitie at all, but for a short time in the same place.

Howbeit the other ships which plyed out to Seaward, had an extreme storme for a longer season. And the nature of the place is such, that it is subiect diuersly to diuers windes, according to the sundry situation of the great Alps and mountaines there, euery mountaine causing a seuerall blast, and pirrie, after the manner of a Leuant.

In this storme being the five and twentieth of Iuly, there fell so much snow, with such bitter cold aire, that we could not scarce see one another for the same, nor open our eyes to handle our ropes and sayles, the snow being aboue halfe a foote deepe vpon the hatches of our ship, which did so wet thorow our poore Mariners clothes, that hee that had five or sixe shifts of apparell had scarce one drye theed to his backe, which kind of wet and coldnesse, together with the ouerlabouring of the poore men amidst the yce, bred no small sicknesse amongst the fleete, which somewhat discouraged some of the poore men, who had not experience of the like before, euery man perswading himselfe that the winter there must needes be extreme, where they found so vnseasonable a Sommer.

Snow in Iuly

Extreme winter.
Great heat in
Meta Incognita.

And yet notwithstanding this cold aire, the Sunne many times hath a marvellous force of heate amongst those mountaines, insomuch that when there is no breath of winde to bring the colde aire from the dispersed yce vpon vs, we shall be wearie of the bloming heate and then suddenly with a perry of winde which commeth downe from the hollownesse of the hilles, we shall haue such a breath of heate brought vpon our faces as though we were entred within some bath-stoue or hote-house, and when the first of the pirry and blast is past, we shall haue the winde suddenly a new blow cold againe.

Unconstant
weather.

In this storme the Anne Francis, the Moone, and the Thomas of Ipswich, who found themselves able to hold it vp with a saile, and could double about the Cape of the Queenes foreland, plyed out to the Seaward, holding it for better policie and safetie to seeke Searoom, then to hazard the continuance of the storme, the danger of the yce, and the lee-shore.

And being vncertaine at this time of the Generalls priuate determinations, the weather being

so

so darke that they could not discerne one another, nor perceiue which way he wrought, betooke themselves to this course for best and safest.

The Generall
recouereth his
port.

The General, notwithstanding the great storme, following his own former resolution, fought by all meanes possible, by a shorter way to recouer his Port, and where he saw the yce neuer so little open, he gate in at one gappe and out at another, and so himselfe valiantly led the way thorow befoze to induce the flecte to follow after, and with incredible paine and perill at length gat through the yce, and vpon the one and thirtieth of July recouered his long wished Port after many attempts and sundry times being put backe, and came to anker in the Countesse of Warwicks sound, in the entrance whereof, when he thought all perill past, he encountered a great Island of yce which gaue the Ayde such a blow, hauing a little befoze wayed her anker a cocke bill, that it stroke the anker flouke through the ships bowes vnder the water, which caused so great a leake, that with much adoe they preserued the ship from sinking.

At their arriual here they perceiued two ships at anker within the harborough, whereat they began much to maruell and greatly to reioyce, for those they knew to be the Michael, wherein was the Lieutenant generall Captaine Fenton, and the small Barke called the Gabriel, who so long time were missing, and neuer heard of befoze, whom euery man made the last reckoning, neuer to heare of againe.

Maister Wolfall
Preacher.

Here euery man greatly reioyced of their happie meeting, and welcommed one another after the Sea manner with their great Ordinance, and when each partie had ripped vp their sundry fortunes and perills past, they highly prayed God, and altogether vpon their knees gaue him due, humble and hearty thanks, and Maister Wolfall a learned man, appointed by her Maiesties Councell to be their Minister and Preacher made vnto them a godly sermon, exhorting them especially to be thankefull to God for their strange and miraculous deliuerance in those so dangerous places, and putting them in mind of the vncertainetie of mans life, willed them to make themselves alwayes readie as resolute men to enioy and accept thankfully whatsoever aduerture his diuine Providence should appoint. This maister Wolfall being well seated and settled at home in his owne Countrey, with a good and large liuing, hauing a good honest woman to wife and very towardly childe, being of good reputation among the best, refused not to take in hand this painefull voyage, for the onely care he had to saue soules, and to reforme those Infidels if it were possible to Christianitie: and also partly for the great desire he had that this notable voyage so well begunne, might be brought to perfection: and therefore he was contented to stay there the whole yeare if occasion had serued, being in euery necessary action as forward as the resolute men of all. Wherefore in this behalfe he may rightly be called a true Pastor and minister of Gods word, which for the profite of his flocke spared not to venture his owne life.

medies.

Ward his.

But to retorne againe to Captaine Fentons company, and to speake somewhat of their dangers (albeit they be moze then by writing can be expessed) they reported that from the night of the first storme which was about the first day of July untill seven dayes befoze the Generals arriual, which was the five and twentieth of the same, they neuer saw any one day or houre, wherein they were not troubled with continuall danger and feare of death, and were twentie dayes almost together fast amongst the yce. They had their ship stricken through and through on both sides, their false stemme bozne quite away, and could goe from their ships in some places vpon the yce very many miles, and might easily haue passed from one Island of yce to another euen to the shore, and if God had not wonderfully provided for them and their necessitie, and time had not made them moze cunning and wise to seeke strange remedies for strange kindes of dangers, it had bene impossible for them euer to haue escaped: for among other deuises, wheresoeuer they found any Island of yce of greater bignesse then the rest (as there be some of moze then halfe a mile compasse about, and almost forty fadome high) they commonly coueted to recouer the same, and thereof to make a bulwarke for their defence, whereon hauing moored anker, they rood vnder the lee thereof for a time, being thereby garded from the danger of the lesser diuing yce. But when they must needs forgoe this new found fort by meanes of other yce, which at length would vndermine and compasse them round about, and when that by heauing of the billow they were therewith like to be bzused in peeces, they vsed to make fast the shippe vnto the most firme and broad peece of yce they could find, and binding her nose fast thereunto, would fill all their sayles whereon the winde hauing great power, would force forward the ship, and so the shippe bearing befoze her the yce, & so one yce diuing forward another, should at length get scope & sea-roome. And hauing by this meanes at length put their enemies to flight, they occupied the cleare place for a prettie season among sundry mountaines and Alpes of yce. One there was found by measure to be 65 fadome aboue water, which for a kind of similitude, was called Salomons porch.

Some

Some thinke those Ilands eight times so much under water as they are above, because of their monstrous weight. But now I remember I saw very strange wonders, men walking, running, leaping and thooing upon the mayne seas 40. mples from any land, without any Shippe or other vessell under them. Also I saw fresh Rivers running amidst the salt Sea a hundred myle from land, which if any man will not beleue, let him knowe that many of our company leapt out of their Shippe vpon Ilandes of yce, and running there vp and downe, did shoote at Buts vpon the yce, and with their Caliuers did kill great Seales, which vse to lye and sleepe vpon the yce, and this yce melting aboute at the toppes by reflection of the Sunne, came downe in sundry streames, which vnitng together, made a pretie Brooke able to driue a Mill.

The sayde Captaine Fenton recovered his Port tenne dayes before any man, and spent good tyme in searching for Mine, and hee found good store thereof. He also discouered about tenne Miles vp into the Countrey, where he perceiued neither Towne, Village, nor likelihood of habitation, but it seemeth (as he sayth) barren, as the other parts which as yet we haue entered vpon: but their victuals and prouision went so scant with them, that they had determined to returne homeward within seuen dayes after, if the Fleet had not then arriued.

The Generall after his arriual in the Countesses sound, spent no time in vaine, but immediately at his first landing called the chiefe Captaines of his Councell together, and consulted with them for the speedier execution of such things as then they had in hand. As first, for searching and finding out good Minerall for the Miners to be occupied on. Then to giue good Orders to bee obserued of the whole company on shore. And lastly, to consider for the erecting vp of the Fort and House for the vse of them which were to abide there the whole yeere. For the better handling of these, and all other like important causes in this seruice, it was ordeined from her Maiestie and the Councell, that the Generall should call vnto him certaine of the chiefe Captaines and Gentlemen in Councell, to conferre, consult and determine of all occurrents in this seruice, whose names are as here they follow.

Captaine Fenton.	}	{	Captaine Carew.
Captaine Yorke.			
Captaine Best.			Captaine Philpot.

And in Sea causes to haue as assistants, Christopher Hall and Charles Iackman, being both very good Pilots, and sufficient Mariners, whereof the one was chiefe Pilot of the Voyage, and the other for the discouerie. From the place of our habitation Westward, Master Selman was appointed Notarie, to register the whole maner of proceeding in these affaires, that true relation thereof might be made, if it pleased her Maiestie to require it.

The first of August euery Captaine by order, from the Generall and his councell, was commanded to bring ashore vnto the Countesses Iland all such Gentlemen, souldiers, and Pyners, as were under their charge, with such prouision as they had of victuals, tents, and things necessary for the speedy getting together of Mine, and freight for the Shippes.

The Muster of the men being taken, and the victuals with all other things viewed and considered, euery man was set to his charge, as his place and office required. The Pyners were appointed where to worke, and the Mariners discharged their Shippes.

Upon the second of August were published and proclaymed vpon the Countesse of Warwicks Iland with sound of Trumpet, certaine Orders by the Generall and his councell, appoynted to be obserued of the company during the time of their abiding there.

In the meane time, whilst the Mariners plyed their worke, the Captaines sought out new Pynes, the Goldfiners made tryall of the Ore, the Mariners discharged their Shippes, the Gentlemen for example sake laboured heartily, and honestly encouraged the inferiour sort to worke. So that the small tyme of that little leasure that was left to carrie, was spent in vaine.

The second of August the Gabriel arriued, who came from the Viceadmirall, and beeing distressed sore with Ice, put into Harbrough neere vnto Mount Oxford. And now was the whole Fleet arriued safely at their Port, excepting foure, besides the Shippe that was lost: that is, the Thomas Allen, the Anne Francis, the Thomas of Ipswich, and the Moone, whose absence was some lette vnto the workes and other proceedings, aswell for that these Shippes were furnished with the better sorte of Pyners, as with other prouision for the habitation.

The ninth of August the Generall with the Captaynes of his counsell assembled together, and began to consider and take order for the erecting vp of the house or Fort for them that were

Consultation
for inhabiting
Meta incognita.

An hundred
men appoint-
ed to inhabite.

No habitation
this yeere.

to inhabite there the whole yeere, and that presently the Masons and Carpenters might goe in hande therewith. First therefore they perused the Bills of lading, what euery man receiued into his Shippe, and found that there was arriued onely the Eastside, and the Southside of the house, and yet not that perfect and entier: for many pieces thereof were vsed for fenders in many Shippes, and so broken in pieces whilst they were distressed in the yce. Also after due examination had, and true account taken, there was found want of drinke and fuel to serue one hundred men, which was the number appoynted first to inhabite there, because their greatest store was in the Shippes which were not yet arriued. Then Captaine Fenton seeing the scarcitie of the necessary things aforesayd, was contented, and offered himselfe to inhabite there with sixtie men. Whereupon they caused the Carpenters and Masons to come before them, and demanded in what time they would take vpon them to erect by a lesse house for sixtie men. They required eight or nine weekes, if there were Tymber sufficient, whereas now they had but fixe and twentie dayes in all to remaine in that Countrey. Wherefore it was fully agreed vpon, and resolved by the Generall and his counsell, that no habitation should be there this yeere. And therefore they willed Master Selman the Register to set downe this decree with all their consents, for the better satisfiing of her Maestie, the Lords of the Counsell, and the Aduenturers.

The Anne Francis, since shee was parted from the Fleet, in the last storme before spoken of, could neuer recouer aboue five leagues within the streights, the winde being sometime contrary, and most times the yce compassing them round about. And from that time, being about the leuen and twentieth of July, they could neither heare nor haue sight of any of the Fleet, until the 3. of August, when they descried a sayle neere vnto Mount Oxford, with whom when they had spoken, they could vnderstand no newes of any of the Fleet at all. And this was the Thomas of Ipswich, who had layne beating off and on at Sea with very fowle weather, and contrary winde, euer since that fozesayd storme, without sight of any man. They kept company not long together, but were forced to loose one another againe, the Moone being consozt alwayes with the Anne Francis, and keeping very good company plyed vp together into the streights, with great desire to recouer their long wished Port: and they attempted as often, and passed as farre as possible the winde, weather, & yce gaue them leaue, which commonly they found very contrary. For when the weather was cleare and without fogge, then commonly the winde was contrary. And when it was eyther Easterly or Southerly, which would serue their turnes, then had they so great a fogge and darke miste therewith, that eyther they could not discerne way thorow the yce, or els the yce lay so thicke together, that it was impossible for them to passe. And on the other side, when it was calme, the Tydes had force to bying the yce so suddenly about them, that commonly then they were most therewith distressed, hauing no Winde to cary them from the danger thereof.

And by the first of August being with much adoe got vp as high as Leicester point, they had good hope to finde the Souther shore cleare, and so to passe vp towarde their Port. But being there becalmed and lying a hull openly vpon the great Bay which commeth out of the mistaken streights before spoken of, they were so suddenly compassed with yce round about by meanes of the swift Tydes which run in that place, that they were neuer afore so hardly beset as now. And in seeking to auoyde these dangers in the darke weather, the Anne Francis lost sight of the other two Ships, who being likewise hardly distressed, signified their danger, as they since reported, by shooting off their ordinance, which the other could not heare, nor if they had heard, could haue giuen them any remedie, being so busily occupied to winde themselves out of their owne troubles.

The Moone.

The Fleet boate called the Moone, was here heaued aboue the water with the force of the yce, and receiued a great leake thereby. Likewise the Thomas of Ipswich, and the Anne Francis were soze bzused at that instant, hauing their false stemples bozne away, and their ship sides stricken quite through.

Now considering the continuall dangers and contraries, and the little leasure that they had left to tarie in these partes, besides that euery night the ropes of their Shippes were so frozen, that a man could not handle them without cutting his handes, together with the great doubt they had of the Fleetes safety, thinking it an impossibilitie for them to passe vnto their Port, as well for that they saw themselves, as for that they heard by the former report of the Shippes which had prooued before, who affirmed that the streights were all frozen ouer within: They thought it now very hie time to consider of their estates and safeties that were yet left together. And hereupon the Captaines and masters of these Shippes, desired the Captaine of the Anne Francis to enter into consideration with them of these matters. Wherefore Captaine Tanfield of the Thomas of Ipswich, with his Pilot Richard Cox, and Captaine Vpcore of the Moone, with

The Anne Francis, the Thomas of Ipswich and the Moone consulted.

his

his master Iohn Lakes came aboarde the Anne Francis the eight of August to consult of these causes. And being assembled together in the Captaines Cabin, sundry doubts were there alledged. For the fearefuller sort of Mariners being ouertyped with the continuall labour of the former dangers, couered to returne homeward, saying that they would not againe tempt God so much, who had giuen them so many warnings, and deliuered them from so wonderfull dangers: that they rather desired to lose wages, freight, and all, then to continue and follow such desperate fortunes. Again, their Ships were so leake, and the men so wearie, that to amend the one, and refresh the other, they must of necessitie seeke into harborough.

But on the other side it was argued againe to the contrary, that to seeke into harborough thereabouts, was but to subiect themselves to double dangers: if happily they escaped the dangers of Rocks in their entring, yet being in, they were neuerthelesse subiect there to the danger of the Ice, which with the swift tydes and currents is carped in and out in most harboroughs thereabouts, and may thereby gaule their Cables asunder, driue them vpon the shoare, and bying them to much trouble. Also the coast is so much subiect to broken ground and rockes, especially in the mouth and entrance of euery Harborough, that albeit the Channell be sounded ouer and ouer againe, yet are you neuer the neerer to discern the dangers. For the bottome of the Sea holding like shape and forme as the Land, being full of hills, dales, and ragged Rocks, suffreth you not by your soundings to knowe and keepe a true gesse of the depth. For you shall sound vpon the side or hollownesse of one Hill or Rocke vnder water, and haue a hundred, fiftie, or fourtie fadome depth: and before the next cast, yet you shall be able to heaue your lead againe, you shall be vpon the toppe thereof, and come aground to your vtter confusion.

Another reason against going to harborough was, that the colde ayre did threaten a sudden freezing vpon the sounds, seeing that euery night there was new congealed yce, euen of that water which remayned within their shippes. And therefore it should seeme to be more safe to lye off and on at Sea, then for lacke of winde to bying them forth of harborough, to hazard by sudden frosts to be shut vp the whole yeere.

After many such dangers and reasons alledged, and large debating of these causes on both sides, the Captaine of the Anne Francis deliuered his opinion vnto the company to this effect. First concerning the question of returning home, hee thought it so much of honorable, as not to grow in any farther question: and againe to returne home at length (as at length they must needes) and not to be able to bying a certaine report of the Fleete, whether they were liuing or lost, or whether any of them had recovered their Port or not, in the Countesses sound, (as it was to bee thought the most part would if they were liuing) hee sayde that it would be so great an argument eyther of want of courage or discretion in them, as hee resolved rather to fall into any danger, then so shamefully to consent to returne home, protesting that it should neuer bee spoken of him, that hee would euer returne without doing his endeavour to finde the Fleete, and knowe the certaintie of the Generals safetie. Hee put his company in remembrance of a Pinnisse of fine tunne burthen, which hee had within his Shippe, which was carped in pieces, and vnmade vp for the vse of those which should inhabite there the whole yeere, the which, if they could finde meanes to ioyne together, hee offered himselfe to prooue before therewith, whether it were possible for any Boate to passe for yce, whereby the Shippe might bee brought in after, and might also thereby giue true notice, if any of the Fleete were arrived at their Port or not.

Captaine Bells resolution.

A Pinnisse for the inhabiteers.

But notwithstanding, for that he well perceined that the most part of his company were addicted to put into harborough, hee was willing the rather for these causes somewhat to encline thereunto. As first, to search alongst the same coast, and the soundes thereabouts, hee thought it to be to good purpose, for that it was likely to finde some of the Fleete there, which being leake, and soze bzused with the yce, were the rather thought likely to be put into an yll harborough, being distressed with foule weather in the last storme, then to hazard their vncertaine safeties amongst the yce: for about this place they lost them, and lest the Fleete then doubtfully questioning of harborough.

It was likely also, that they might finde some fitte harborough thereabouts, which might bee behoouefull for them against another time. It was not likewise impossible to finde some Dyne or Dyne thereabouts wherewithall to freight their Shippes, which would bee more commodious in this place, for the neerenesse to Seaward, and for a better outlet, then farther within the streights, being likely heere alwayes to loaden in a shorter time, howsoeuer the streight should be pestered with yce within, so that if it might come to passe that thereby they might eyther finde the Fleete, Dyne, or conuenient harborough, any of these three would serue their present turnes,

and giue some hope and comfort vnto their companies, which now were altogether comfortlesse. But if that all fortune should fall out so contrary, that they could neyther recouer their Port, nor any of these aforesayde helpes, that yet they would not depart the Coast, as long as it was possible for them to tary there, but would lye off and on at Sea athwart the place. Therefore his finall conclusion was set downe thus, First, that the Thomas of Ipswich and the Moone should consort and keepe company together carefully with the Anne Francis, as neere as they could, and as true Englishmen and faithfull friends, should supply one anothers want in all fortunes and dangers. In the morning following, euery Shippe to send off his Boate with a sufficient Pilot, to search out and sound the harboroughs for the safe bringing in of their Shippes. And being arrived in harborough, where they might finde conuenient place for the purpose, they resolved forthwith to ioyne and sette together the Pinnele, wherewithall the Captaine of the Anne Francis might, according to his former determination, discover by into the Streights.

After these determinations thus set downe, the Thomas of Ipswich the night following lost company of the other Shippes, and afterward shayed a contrary course homeward, which fell out as it manifestly appeared, very much against their Captaine Master Tanfieldes minde, as by due examination before the Lordes of her Maesties most honourable priue Counsell it hath since bene pproved, to the great discredite of the Pilot Cox, who specially perswaded his company against the opinion of his sayd Captaine, to returne home.

And as the Captaine of the Anne Francis doeth witnesse, even at their conference together, Captaine Tanfield tolde him, that he did not a little suspect the sayd Pilot Cox, saying that he had opinion in the man neither of honest duetie, manhoode, nor constancie. Notwithstanding the sayde Shippes departure, the Captaine of the Anne Francis being desirous to put in execution his former resolutions, went with his Shippeboate (being accompanied also with the Moones Skiffe) to prooue amongst the Ilands which lye vnder Hattons Hedland, if any conuenient harborough, or any knowledge of the Fleete, or any good Dre were there to be found. The Shippes lying off and on at Sea the while vnder Sayle, searching through many sounds, they sawe them all full of many dangers and broken ground: yet one there was, which seemed an indifferent place to harborough in, and which they did very diligently sound ouer, and searched againe.

Here the sayde Captaine found a great blacke Iland, whereunto hee had good liking, and certifying the company thereof, they were somewhat comforted, and with the good hope of his wordes rowed cheerefully vnto the place: where when they arrived, they found such plentie of blacke Dre of the same sort which was brought into England this last yeere, that if the goodnesse might answer the great plentie thereof, it was to be thought that it might reasonably suffice all the golde-gluttons of the world. This Iland the Captaine for cause of his good hap, called after his owne name, Bestes blessing, and with these good tydings returning aboard his Ship the ninth of August about tenne of the clocke at night, hee was ioyfully welcommed of his company, who before were discomfited, and greatly expected some better fortune at his handes.

Bestes blessing.

Anne Francis in danger.

The Moone in harborough.

The next day being the tenth of August, the weather reasonably fayre, they put into the forsayde Harborough, hauing their Boate for their better securitie sounding before their Shippe. But for all the care and diligence that could bee taken in sounding the Channele ouer and ouer againe, the Anne Francis came aground vpon a sunken Rocke within the Harborough, and lay thereon more then halfe dze vntill the next flood, when by Gods Almighty prouidence, contrary almost to all expectation, they came afloat againe, being forced all that time to vnderlette their Shippe with their mayne Parde, which otherwise was likely to ouerset and put thereby in danger the whole company. They had aboue two thousand strokes together at the Pumpe, before they could make their Shippe free of the water againe, so sore thee was brused by lying vpon the Rockes. The Moone came safely, and roade at anchor by the Anne Francis, whose helpe in their necessitie they could not well haue missed.

Now whilst the Mariners were romaging their Shippes, and mending that which was amisse, the Miners followed their labour for getting together of sufficient quantitie of Dre, and the Carpenters indeuoured to doe their best for the making vp of the Boate or Pinnele: which to bring to passe, they wanted two speciall and most necessarie things, that is, certaine principall tymbers that are called Knees, which are the chiefest strength of any Boate, and also nayles, wherewithall to ioyne the plancks together. Whereupon hauing by chance a Smyth amongst them, (and yet unfurnished of his necessary tooles to worke and make nayles withall) they

they were faine of a gunne chamber to make an Anvile to worke upon, and to vse a pickaxe in stead of a sledge to beate withall, and also to occupie two small bellows in steade of one payre of greater Smiths bellows. And for lacke of small Iron for the easier making of the nayles, they were forced to breake their tongs, grydiron, and firethouell in peeces.

The eleuenth of August the Captaine of the Anne Francis taking the Master of his Shippe with him, went vnto the toppes of Hartons Hedland, which is the highest land of all the streights, to the ende to descry the situation of the Countrey underneath, and to take a true plotte of the place, whereby also to see what store of Pee was yet left in the streights, as also to search what Mineral matter or fruite that soyle might yeelde: And the rather for the honour the said Captaine doeth owe to that Honourable name which himselfe gaue thereunto the last yeere, in the highest part of this Hedland he caused his company to make a Columne or Crosse of stone, in token of Christian possession. In this place there is plentie of blacke Ore, and diuers pretie Partie stone.

The seventeenth of August the Captaines with their companies chased and killed a great white Beare, which aduentured and gaue a fierce assault vpon twentie men being weaponed. And he serued them for good meate many dayes. A mightie white Beare.

The eighteenth of August the Pinnesse with much adoe being set together, the sayde Captaine Best determined to depart by the streights, to proue and make tryall, as before was pretended, some of his company greatly perswading him to the contrary, and specially the Carpenter that set the same together, who sayde that hee would not aduenture himselfe therein for five hundred pounds, for that the boate hung together but onely by the strength of the nayles, and lacked some of her principall knees and tymbers. A Pinnesse there built.

These wordes somewhat discouraged some of the company which should haue gone therein. Whereupon the Captaine, as one not altogether addicted to his owne selfe-will, but somewhat foreseeing how it might be afterwards spoken, if contrary fortune should happen him (Lo he hath followed his owne opinion and desperate resolutions, and so thereafter it is befallen him) calling the Master and Mariners of best iudgement together, declared vnto them how much the cause imported him in his credite to seeke out the Generall, as well to conferre with him of some causes of weight, as otherwise to make due examination and tryall of the goodnesse of the Ore, whereof they had no assurance but by gesse of the eye, and it was well like the other: which so to cary home, not knowing the goodnesse thereof, might be as much as if they should bring so many stones. And therefore hee desired them to deliuer their plaine and honest opinion, whether the Pinnesse were sufficient for him so to aduenture in or no. It was answered, that by carefull heede taking thereunto amongst the yce, and the foule weather, the Pinnesse might suffice. And hereupon the Masters mate of the Anne Francis called Iohn Gray, manfully and honestly offering himselfe vnto his Captaine in this aduenture and seruice, gaue cause to others of his Mariners to follow the attempt.

And vpon the nineteenth of August the sayd Captaine being accompanied with Captaine Vpcore of the Moone, and eightene persons in the small Pinnesse, hauing conuenient portion of victuals and things necessary, departed vpon the sayd pretended Voyage, leaving their shippe at anchor in a good readinesse for the taking in of their freight. And hauing little winde to sayle withall, they plyed alongst the Souther shore, and passed about 30. leagues, hauing the onely helpe of mans labour with Dares, and so intending to keepe that shore aboord until they were got vnto the farthest and narrowest of the streights, minded there to crosse ouer, and to search likewise alongst the Northerland vnto the Countesses sound, and from thence to passe all that coast along, whereby if any of the Fleet had bene distressed by wrecke of rocke or yce; by that meanes they might be perceiued of them, and so they thereby to giue them such helpe and reliefe as they could. They did greatly feare, and euer suspect that some of the Fleet were surely cast away, and dyuen to seeke lowe sallets amongst the colde cliffes. They aduenture by the streight in a weake Pinnesse.

And being shotte vnto about forty leagues within the Streights, they put ouer towarde the Norther shore, which was not a little dangerous for their small boates. And by meanes of a sudden flawe were dyruen, and faine to seeke harborough in the night amongst all the rockes and broken ground of Gabriels Islands, a place so named within the streights about the Countesse of Warwicks sound: And by the way where they landed, they did finde certaine great stones set vp by the Countrey people as it seemed, for markes, where they also made many Crosses of stone, in token that Christians had bene there. The 22. of August they had sight of the Countesses sound, and made the place perfect from the toppes of a hill, and keeping along the Norther shore, perceiued the smoke of a fire vnder a hils side: whereof they diuersly deemed. When they came 40. Leagues within the streights.
Gabriels Islands.

neerer the place, they perceiued people which waisted vnto them, as it seemed, with a flagge or ensigne. And because the Country people had vsed to doe the like, when they perceiued any of our boats to passe by, they suspected them to be the same. And comming somewhat neerer, they might perceiue certaine tents, and discerne this ensigne to be of mingled colour, blacke and white, after the English fashion. But because they could see no Shippe, nor likelihood of harborough within fise or sixe leagues about, and knewe that none of our men were wont to frequent those partes, they could not tell what to iudge thereof, but imagined that some of the ships being carried so high with the storme and mistes, had made shipwracke amongst the yce or the broken Islands there, and were spoyled by the countrey people, who might vse the sundry coloured flagge for a policie, to bring them likewise within their danger. Whereupon the sayd Captaine with his companies, resolved to recover the same ensigne, if it were so, from those base people, or els to lose their liues, and all together. In the ende they discerned them to be their countrey men, and then they deemed them to haue lost their Ships, and so to be gathered together for their better strength. On the other side, the company ashore feared that the Captaine hauing lost his Shippe, came to seeke forth the flecte for his reliefe in his pooze Pinisse, so that their extremities caused eche part to suspect the worst.

Proximus sum
egomet mihi.

The Captaine now with his Pinisse being come neere the shoare, commanded his Boate carefully to be kept ashoare, lest in their necessitie they might winne the same from him, and seeke first to saue themselves: for euery man in that case is next himselfe. They hailed one another according to the manner of the Sea, and demaunded what cheere: and either partie answered the other, that all was well: whereupon there was a sudden and ioyfull outshoote, with great flinging by of caps, and a braue voly of shotte to welcome one another. And truly it was a most strange case to see how ioyfull and gladd euey partie was to see themselves meete in safetie againe, after so strange and incredible dangers: Yet to be short, as their dangers were great, so their God was greater.

Captain Yorke
arrived.

And here the company were working vpon new Mines, which Captaine Yorke being here arrived not long before, had found out in this place, and it is named the Countesse of Suffex Mine.

After some conference with our friends here, the Captaine of the Anne Francis departed towards the Countesse of Warwicks sound, to speake with the Generall, and to haue tryall made of such mettall as he had brought thither, by the Goldsmiths. And so he determined to dispatch againe towards his ship. And hauing spoken with the General, he receiued order for all causes, and direction as well for the bringing by of his Shippe to the Countesses sound, as also to freight his Ship with the same Dare which he himselfe had found, which vpon triall made, was supposed to be very good.

The 23. of August, the sayd Captaine mette together with the other Captaines (Commissioners in counsell with the Generall) aboord the Ayde, where they considered and consulted of sundry causes, which being particularly registred by the Notarie, were appoynted where and how to be done against another yeere.

None of the
people will be
taken.

The 24. of August, the Generall with two Pinisses and good numbers of men went to Beares sound, commanding the sayd Captaine with his Pinisse to attend the seruice, to see if he could encounter or apprehend any of the people: for sundry times they shewed themselves busie thereabouts, sometimes with seuen or eyght Boates in one company, as though they minded to encounter with our company which were working there at the Mines, in no great numbers. But when they perceiued any of our Shippes to ryde in that roade (being belike moze amazed at the countenance of a Shippe, and a moze number of men) they did neuer shewe themselves againe there at all. Wherefore our men sought with their Pinisses to compass about the Island where they did vse, supposing there suddenly to intercept some of them. But before our men could come neere, hauing belike some watch in the toppes of the mountaines, they conueyed themselves priuily away, and left (as it should seeme) one of their great bartes behinde them for haste, which we found neere to a place of their caues and housing. Therefore, though our Generall were very desirous to haue taken some of them to haue brought into England, they being now growen moze wary by their former losses, would not at any time come within our dangers. About midnight of the same day, the captaine of the Anne Francis departed thence and set his course ouer the streights towards Hattons Hedland, being about 15. leagues ouer, and returned aboord his Shippe the 25. of August, to the great comfort of his company, who long expected his comming, where hee found his Shippes ready rigged and loden. Wherefore he departed from thence againe the next morning towards the Countesses sound, where

where he arrived the 28. of the same. By the way he set his Miners ashore at Beares sound, for the better dispatch and gathering the Ore together, for that some of the ships were behind hand with their freight, the time of the yeere passing suddenly away.

The thirtieth of August the Anne Francis was brought aground, and had 8. great leakes mended which she had received by meanes of the rocks and yce. This day the Parsons finished a house which Captaine Fenton caused to be made of lyme and stone upon the Countesse of Warwicks Island, to the ende we might proue against the next yeere, whether the snow could overwhelme it, the frost breake it up, or the people dismember the same. And the better to allure those brutish and vnciuill people to courtellie against other times of our comming, we left therein diuers of our Countrey toys, as belles, and kniues, wherein they specially delight, one for the necessary vse, and the other for the great pleasure thereof. Also pictures of men and women in lead, men on horsebacke, looking glasses, whistles, and pipes. Also in the house was made an Ouen, and bread left baked therein for them to see and taste.

A house builded and left there.

We buried the timber of our pretended fort. Also here we sowed pease, cozne, and other graine, to proue the fruitfulness of the soyle against the next yeere.

After Wollfall on Winters Fornace preached a goodly sermon, which being ended, he celebrated also a Communion upon the land, at the partaking whereof was the Captaine of the Anne Francis, and many other Gentlemen and Souldiers, Mariners, and Miners with him. The celebration of the diuine mystery was the first signe, seale, and confirmation of Christs name, death, and passion euer known in these quarters. The said W. Wollfall made sermons, and celebrated the Communion at sundry other times, in severall and sundry ships, because the whole company could neuer meet together at any one place. The Fleet now being in some good readinesse for their lading, the Generall calling together the Gentlemen and Captaines to consult, told them that he was very desirous that some further discouery should be attempted, and that he would not onely by Gods helpe bring home his Ships laden with Ore, but also meant to bring some certificate of a further discouery of the Countrey, which thing to bring to passe (hauing sometime therein consulted) they found very hard, and almost inuincible. And considering that already they had spent sometime in searching out the trending and fashion of the mistaken straites, therefore it could not be sayd, but that by this voyage they haue notice of a further discouery, and that the hope of the passage thereby is much furthered and encreased, as appeared before in the discourse thereof. Yet notwithstanding if any meanes might be further deuised, the Captaines were contented and willing, as the Generall shoulde appoint and commaund, to take any enterpryse in hand. Which after long debating was found a thing very impossible, and that rather consultation was to be had of returning homeward, especially for these causes following. First the darke foggy mists, the continuall falling snowe and stormy weather which they commonly were vnder with, and now daily euer more and more increased, haue no small argument of the Winters drawing neere. And also the frost euery night was so hard congealed within the sound, that if by euill hap they should bee long kept in with contrary winds, it was greatly to be feared, that they should be shut vp there fast the whole yeere, which being vtterly vnprouided, would be their vtter destruction. Again, drinke was so scant throughout all the Fleet by meanes of the great leakage, that not onely the prouision which was layd in for the habitation was wanting and wasted, but also each shippes severall prouision spent and lost, which many of our company to their great griefe found in their returne since, for all the way homewards they dranke nothing but water. And the great cause of this leakage and wasting was, for that the great timber and seacole, which lay so waighty vpon the barrells, brake, bruised, and rotted the hoopes insunder. Yet notwithstanding these reasons alleaged the Generall himselfe (willing the rest of the Gentlemen and Captaines euery man to looke to his severall charge and lading, that against a day appointed, they should be all in a readinesse to set homeward) went in a Pinasse, and discovered further Northward in the straights, and found that by Beares sound and Halles Island, the land was not firme, as it was first supposed, but all broken Islands in maner of an Archipelagus, and so with other secret intelligence to himselfe, he returned to the Fleet. Where presently vpon his arrivall at the Countesses sound, he began to take order for their returning homeward, and first caused certaine Articles to be proclaimed, for the better keeping of orders and courses in their returne, which Articles were deliuered to euery Captaine.

W. Wollfall a goodly Preacher.

Consultation for a further discouery.

Broken Islands in maner of an Archipelagus.

The Fleetes returning homeward.

HAuing now received Articles and directions for our returne homewards, all other things being in forwardnesse and in good order, the last day of August the whole Fleet departed from

Returne
homeward.

from the Countesses sound, excepting the Iudich, and the Anne Francis, who stayed for the taking in of fresh water, and came the next day and mette the Fleete lying off and on, athwart Beares sound, who stayed for the Generall, which then was gone ashore to dispatch the two Barkes and the Busse of Bridgewater, for their loading, whereby to get the companies and other things aboard. The Captaine of the Anne Francis hauing most part of his company ashore, the first of September went also to Beares sound in his Pinelle to fetch his men aboard, but the wind grew so great immediatly upon their landing, that the shippes at Sea were in great danger, and some of them forcibly put from their ankers, and greatly feared to be utterly lost, as the Hopewell, wherein was Captaine Carew and others, who could not tell on which side their danger was most: for hauing mightie rockes threatening on the one side, and drying Islands of cutting yce on the other side, they greatly feared to make shipwacke, the yce drying so neere them that it touched their bolt-sprit. And by meanes of the Sea that was growne so hie, they were not able to put to sea with their small Pinelles to recouer their shippes. And againe, the shippes were not able to carrie or lie athwart for them, by meanes of the outrageous windes and swelling seas. The Generall willed the Captaine of the Anne Francis with his company, for that night to lodge aboard the Busse of Bridgewater, and went himselfe with the rest of his men aboard the Barkes. But their numbers were so great, and the provision of the Barkes so scant, that they pestered one another exceedingly. They had great hope that the next morning the weather would be faire, whereby they might recouer their shippes. But in the morning following it was much worse, for the storme continued greater, the Sea being more swollen, and the Fleete gone quite out of sight. So that now their doubts began to grow great: for the ship of Bridgewater which was of greatest receipt, and whereof they had best hope and made most account, roade so farre to leeward of the harborowes mouth, that they were not able for the rockes (that lay betwene the wind and them) to lead it out to Sea with a saile. And the Barkes were already so pestered with men, and so slenderly furnished with provision, that they had scarce meat for sixe dayes for such numbers.

The Generall in the morning departed to Sea in the Gabriel to seeke the Fleete, leaving the Busse of Bridgewater, and the Michael behind in Beares sound. The Busse set saile, and thought by turning in the narrow channell within the harborow to get to windward: but being put to leeward more, by that meanes was faine to come to anker for her better safetie, amongst a number of rockes, and there left in great danger of euer getting forth againe. The Michael set saile to follow the Generall, and could giue the Busse no reliefe, although they earnestly desired the same. And the Captaine of the Anne Francis was left in hard election of two euils: eyther to abide his fortune with the Busse of Bridgewater, which was doubtfull of euer getting forth, or else to bee towed in his small Pinelle at the sterne of the Michael thorow the raging Seas, for that the Barke was not able to receiue or relieue halfe his company, wherein his danger was not a little perillous.

So after hee resolved to commit himselfe with all his company vnto that fortune of God and Sea, and was dangerously towed at the sterne of the Barke for many miles, untill at length they espyed the Anne Francis vnder saile, hard vnder their Lee, which was no small comfort vnto them. For no doubt, both those and a great number more had perished for lacke of victuals, and convenient roome in the Barkes without the helpe of the sayd Ship. But the honest care that the Master of the Anne Francis had of his Captaine, and the good regarde of duetie towards his Generall, suffered him not to depart, but honestly abode to hazard a dangerous roade all the night long, notwithstanding all the stormy weather, when all the Fleete besides departed. And the Pinelle came no sooner aboard the shippe, and the men entered, but shee presently shivered and fell in pieces and sunke at the ships sterne, with all the poore mens furniture: so weake was the boat with towing, and so forcible was the sea to bzuile her in pieces. But (as God would) the men were all saued.

At this present in this storme many of the Fleete were dangerously distressed, and were seuered almost all asunder. Yet, thanks be to God, all the Fleete arriued safely in England about the first of October, some in one place and some in another. But amongst other, it was most marueilous how the Busse of Bridgewater got away, who being left behind the Fleete in great danger of neuer getting forth, was forced to seeke a way Northward thorow an vnknown channell full of rockes, vpon the backe side of Beares sound, and there by good hap found out a way into the North sea, a very dangerous attempt: saue that necessitie, which hath no law, forced them to trie matters. This afore sayd North sea is the same which lyeth vpon the backe side of Frobishers Straits, where first the Generall himselfe in his Pinelle, and after some other of our company haue

An vnknown
channell into
the North sea,
discovered by
the Busse of
Bridgewater.

haue discovered (as they affirme) a great foze land, where they would haue also a great likelihood of the greatest passage towards the South sea, or Mar del Sur.

The Busse of Bridgewater, as she came home ward, to the Southeastward of Friseland, discovered a great Island in the latitude of 57 degrees and an halfe, which was neuer yet found before, and sailed three dayes alongst the coast, the land seeming to be fruitfull, full of woods, and a champion Countrey.

There died in the whole Fleet in all this voyage not above forty persons, which number is not great, considering how many ships were in the Fleet, and how strange fortunes we passed.

A generall and briefe description of the Countrey, and condition of the people, which are found in *Meta Incognita*.

Having now sufficiently and truly set forth the whole circumstance, and particular handling of euery occurrent in the 3. voyages of our worthy Generall, Captaine Frobisher, it shal not be from the purpose to speake somewhat in generall of the nature of this Countrey called *Meta Incognita*, and the condition of the sauages there inhabiting.

First therefore touching the Topographical description of the place, It is now found in the last voyage, that Queene Elizabeths Cape being situate in latitude at 61. degrees and a halfe, which before was supposed to be part of the firme land of America, and also al the rest of the South side of Frobishers Straites, are all seuerall Islands and broken land, and likewise so will all the North side of the said Straites fall out to be as I thinke. And some of our company being entred about 60. leagues within the mistaken Straites in the third voyage mentioned, thought certainly that they had discryed the firme land of America towards the South, which I thinke will fall out so to be.

These broken lands and Islands being very many in number, do seeme to make there an Archipelagus, which as they all differ in greatnesse, forme, and fashion one from another, so are they in goodnesse, colour, and soyle much unlike. They all are very high lands, mountaines, and in most parts couered with snowe even all the Sommer long. The Northward lands haue lesse store of snow, more grasse, and are more plaine Countreys: the cause whereof may be, for that the Souther Islands receiue all the snow, that the cold winds and percing ayre bring out of the North. And contrarily, the North parts receiue more warme blasts of mildet ayre from the South, whereupon may grow the cause why the people couet to inhabit more vpon the North parts then the South, as farre as we can yet by our experience perceiue they doe. These people I iudge to be a kind of Tartar, or rather a kind of Samoed, of the same sort and condition of life that the Samoeds bee to the Northward beyond Moscouy, who are called Samoeds, which is as much to say in the Moscouy tongue, as eaters of themselves, and so the Russians their borderers doe name them. And by late conference with a friend of mine (with whom I did sometime trauell in the parts of Moscouy) who hath great experience of those Samoeds and people of the Northward, I find that in all their maner of liuing, those people of the Northward, and these of the Northward are like. They are of the colour of a ripe Oliue, which how it may come to passe, being borne in so cold a climate, I referre to the iudgement of others, for they are naturally borne children of the same colour and complexion that all the Americans are, which dwell vnder the Equinoctiall line.

They are men very active and nimble. They are a strong people and very warlike, for in our sight vpon the toppes of the hilles they would often muster themselves, and after the maner of a skirmish trace their ground very nimbly, and mannage their bowes and darts with great dexterity. They go clad in coates made of the skinnies of beasts, as of Seales, Deere, Beares, Foxes, and Vares. They haue also some garments of feathers, being made of the cales of foules, finely sowed and compact together. Of all which sorts wee brought home some with vs into England, which we found in their tents. In Sommer they vse to weare the hairie side of their coates outward, and sometime goe naked for too much heate. And in Winter (as by signes they haue declared) they weare foure or fife folde vpon their bodies with the haire (for warmth) turned inward. Whereby it appeareth, that the ayre there is not indifferent, but either it is feruent hote, or els extreme cold, & farre more excellue in both qualities, then the reason of the climate shoulde yeelde. For there it is colder, being vnder 62. degrees in latitude, then it is at Wardhouse in the voyage to Saint Nicholas in Moscouie, being at about 72. degrees in latitude. The reason hereof perhaps may be, that this *Meta Incognita* is much frequented and vered with Easterne and North-eastern winds, which from the sea and yce bringeth often an intollerable cold ayre, which was also the cause that this yere our Straits were so long shut by with so great store of yce. But there is

great

Gold.

The Jewell.

These people are in nature very subtil and sharpe witted, ready to conceiue our meaning by signes, and to make answer well to be understood againe. And if they haue not seene the thing whereof you aske them, they will wincke, or couer their eyes with their hands, as who would say, it hath bene hid from their sight. If they vnderstand you not whereof you aske them, they will stop their eares. They will teach vs the names of each thing in their language which wee desire to learne, and are apt to learne any thing of vs. They delight in Musicke aboue measure, and will keepe time and stroke to any tune which you shall sing, both with their voyce, head, hand and feete, and will sing the same tune aptly after you. They will row with our Ores in our boates, and keepe a true stroke with our Mariners, and seeme to take great delight therein. They liue in Caves of the earth, and hunt for their dinners or praye, euen as the beare or other wild beastes do. They eat raw flesh and fish, and refuse no meat howsoever it be stinking. They are desperate in their fight, fullen of nature, and rancorous in their maner of feeding.

Their sullen & desperate nature both herein manifestly appeare, that a company of them being emironed by our men on the top of a hie cliffe, so that they could by no meanes escape our hands, finding themselves in this case distressed, chose rather to cast themselves headlong down the rocks into the sea, and so be bruised and drowned, rather then to yeeld themselves to our mens mercies.

For their weapons to offend their enemies or kill their prey withall, they haue darts, stings, bowes, and arrowes headed with sharpe stones, bones, and some with yron. They are exceeding friendly and kind hearted one to the other, and mourne greatly at the losse or harme of their fellows, and expresse their griefe of mind, when they part one from another with a mournful song, and Dirges. They are very shamefast in bewraying the secrets of nature, and very chaste in the maner of their living: for when the man, which wee brought from thence into England the last voyage, shoulde put off his coat or discouer his whole body for change, hee would not suffer the woman to bee present, but put her forth of his Cabin. And in all the space of two or three moneths, while the man liued in company of the woman, there was neuer any thing seene or perceiued betweene them, more then might haue passed betweene brother and sister: but the woman was in all things very seruiceable for the man, attending him carefully when he was sicke, and he likewise in all the meates which they did eate together, woulde carue vnto her of the sweetest, fattest, and best morsels they had. They wondered much at all our things, and were afraid of our horses and other beasts out of measure. They began to grow more ciuill, familiar, pleasant, and docible amongst vs in very short time.

They haue boates made of leather, and couered cleane ouer sauing one place in the middle to sit in, planked within with timber, and they vse to row therein with one Ore, more swiftly a great deale, then we in our boates can doe with twentie. They haue one sort of greater boates where- in they can carrie aboue twentie persons, and haue a Mast with a saile thereon, which saile is made of thinne skinned or bladders, sowed together with the sinewes of fishes.

They are good fishermen, and in their small Boates being disguised with their coates of Scales skinned, they deceiue the fish, who take them rather for their fellow Seales, then for deceiuing men.

They are good marke-men. With their dart or arrow they will commonly kill a Ducke, or any other foule in the head, and commonly in the eye.

When they shoote at a great fish with any of their darts, they vse to tye a bladder thereunto, whereby they may the better find them againe, and the fish not able to cary it so easily away (for that the bladder doth boy the dart) will at length be wearie, and dye therewith.

They vse to traffike and erchange their commodities with some other people, of whom they haue such things as their miserable Countrey, and ignorance of Art to make, denieth them to haue, as barres of yron, heads of yron for their darts, needles made foure square, certaine buttons of copper, which they vse to weare vpon their foreheads for ornament, as our Ladies in the Court of England doe vse great pearle.

Also they haue made signes vnto vs, that they haue seene gold, and such bright plates of metals, which are vled for ornaments amongst some people with whom they haue conference.

We found also in their tents a Guiny Beane of redde colour, the which doth vsually grow in they hote Countreys: whereby it appeareth they trade with other nations which dwell farre off, or else themselves are great traouellers.

They haue nothing in vse among them to make fire withall, sauing a kinde of Heath and Masse which groweth there.

And

And they kindle their fire with continuall rubbing and fretting one ſticke againſt another, as we doe with ſlints. They drawe with dogges in ſleads vpon the yce, and remooue their tents therewithall wherein they dwell in Sommer, when they goe a hunting for their praye and prouiſion againſt Winter. They doe ſometime parboyle their meat a little and ſecth the ſame in kettles made of beaſts ſkins: they haue alſo pannes cut and made of ſtone very artificially: they uſe pretty ginner wherewith they take foule. The women carry their ſucking children at their backes, and doe feede them with rawe fleſh, which firſt they do a little chaw in their owne mouths. The women haue their faces marked or painted ouer with ſmall blew ſpots: they haue blacke and long haire on their heads, and trimme the ſame in a decent order. The men haue but little haire on their faces, and very thinne beards. For their common drinke, they eate yce to quench their thirſt withall. Their earth yeeldeth no graine or fruit of ſuſtenance for man, or almoſt for beaſt to liue vpon: and the people will eate graſſe and ſhrubs of the ground, euen as our kine doe. They haue no wood growing in their Countrey thereabouts, and yet wee find they haue ſome timber among them, which we thinke doth grow farre off to the Southwards of this place, about Canada, or ſome other part of New ſound land: for there belike, the trees ſtanding on the cliffes of the ſea ſide, by the waight of yce and ſnow in Winter ouercharging them with waight, when the Sommer ſhaw cometh about, and alſo the Sea vnderfretting them beneath, which winneth dayly of the land, they are undermined and fall downe from thoſe cliffes into the Sea, and with the tydes and currents are driuen to and fro vpon the coaſtes further off, and by coniecture are taken by here by theſe Countrey people, to ſerue them to planke and ſtrengthen their boates withall, and to make darters, bowes, and arrowes, and ſuch other things neceſſarie for their vſe. And of this kind of dyſt wood we find all the Seas ouer great ſtoze, which being cut or ſawed aſunder, by reaſon of long lying in the Sea is eaten of wormes, and full of holes, of which ſort theirs is found to be.

How they
make fire.

Their kettles
and pannes.

The people
eate graſſe and
ſhrubs.

We haue not yet found any venemous Serpent or other hurtful thing in theſe parts, but there is a kind of ſmall flie or gnat that ſtingeth and offeneth ſorely, leauing many red ſpots in the face, and other places where he ſtingeth. They haue ſnow and haile in the beſt time of their Sommer, and the ground froſen three fadome deepe.

A ſtrange kind
of gnat.

Theſe people are great inchanters, and vſe many charmes of witchcraft: for when their heads doe ake, they tye a great ſtone with a ſtring vnto a ſticke, and with certaine prayers and wordes done to the ſticke, they liſt vp the ſtone from ground, which ſometimes with all a mans force they cannot ſtirre, and ſometime againe they liſt as eaſily as a feather, and hope thereby with certaine ceremonious wordes to haue eaſe and helpe. And they made vs by ſignes to vnderſtand, lying groueling with their faces vpon the ground, and making a noiſe downeward, that they worſhip the deuill vnder them.

Inchanters.

They haue great ſtoze of Deere, Beares, Hares, Foxes, and innumerable numbers of ſundry ſorts of wild foule, as Seawewes, Gulls, Wilnotes, Ducks, &c. wherof our men killed in one day fifteene hundred.

The beaſts
and foules of
the Countrey.

They haue alſo ſtoze of haukes, as Falkons, Taffels, &c. whereof two alighted vpon one of our ſhips at their returne, and were brought into England, which ſome thinke wil proue very good.

There are alſo great ſtoze of rauens, larkes, and partridges, wherof the Countrey people feed.

All theſe foules are farre thicker clothed with downe and feathers, and haue thicker ſkinnes then any in England haue: for as that countrey is colder, ſo nature hath prouided a remedie therein.

Our men haue eaten of their Beares, Hares, Partridges, Larkes, and of their wild foule, and find them reaſonable good meat, but not ſo delectable as ours.

Their wild foule muſt be all ſleine, their ſkins are ſo thicke: and they taſt beſt fryed in pannes.

The Countrey ſeemeth to be much ſubiect to Earthquakes.

The ayre is very ſubtile, piercing and ſearching, ſo that if any corrupted or infected body, eſpecially with the diſeaſe called Morbus Gallicus come there, it will preſently breake forth and ſhew it ſelfe, and cannot there by any kind of ſalue or medicine be cured.

Their longeſt Sommer day is of great length, without any darke night, ſo that in July at the night long, we might perfectly and eaſily write and reade whatſoever had pleaſed vs, which lightſome nights were very beneficiall vnto vs, being ſo diſtreſſed with abundance of yce as we were.

The Sunne ſeteth to them in the Evening at a quarter of an houre after tenne of the clocke, and riſeth againe in the morning at three quarters of an houre after one of the clocke, ſo that in Sommer their Sunne ſhineth to them twenty houres and a halfe, and in the night is abſent three houres and a halfe. And although the Sunne bee abſent theſe 3. houres and a halfe, yet it is not darke

The length of
their day.

A full revolution
of the
Moone about
their Horizon.

darke that time, for that the Sunne is neuer above three or foure degrees vnder the edge of their Horizon: the cause is, that the Tropicke of Cancer doth cut their Horizon at very vneuen and oblique Angles. But the Moone at any time of the yeere being in Cancer, hauing North latitude, doth make a full revolution about their Horizon, so that sometime they see the Moone about 24. houres together. Some of our company of the more ignorant sort, thought we might continually haue seene the Sunne and the Moone, had it not bene for two or three high mountaines.

The people are now become so warie, and so circumspect, by reason of their former losses, that by no meanes we can apprehend any of them, although wee attempted often in this last voyage. But to say trueth, wee could not bestow any great time in pursuing them, because of our great businesse in lading, and other things.

The Letters patents of the Queenes Maiestie, granted to Master
Adrian Gylbert and others, for the search and discouery of the North-
west Passage to *China*.

ELizabeth by the grace of God of England, France, and Ireland Queene, defender of the faith, &c. To all, to whome these presents shall come, greeting: Forasmuch as our trustie and welbeloued subiect *Adrian Gylbert* of Sandridge in the Countie of Deuon, Gentleman, to his great costes and charges, hath greatly and earnestly trauelled and sought, and yet doth trauell and seeke, and by diuers meanes indeuoureth and labourerth, that the Passage vnto *China* and the Isles of the Moluccas, by the North westward, North eastward, or Northward, vnto which part or partes of the world, none of our loyall Subjects haue hitherto had any traffique or trade, may be discouered, knowen, and frequented by the Subiectes of this our Realme: Knowe wee therefore that for the considerations aforesayd and for diuers other good considerations vs thereunto specially mouing, We of our grace especiall, certaine knowledge, and meere motion, haue giuen and granted, and by these presents for vs, our heires and successors, doe giue and grant free libertie, power, and full authoritie to the sayd *Adrian Gylbert*, and to any other person by him or his heires to be assigned, and to those his associates and assistants, whole names are written in a Scedule hereunto annexed, and to their heires, and to one assignee of each of them, and each of their heires at all times, and at any time or times after the date of these presents, vnder our Banners and Ensignes freely, without let, interruption, or restraint, of vs, our heires or successors, any law, statute, proclamation, patent, charter, or prouiso to the contrary notwithstanding, to saile, make voyage, and by any maner of meanes to passe and to depart out of this our Realme of England, or any our Realmes, Dominions, or Territories into all or any Isles, Countreys, Regions, Prouinces, Territories, Seas, Riuers, Portes, Bayes, Creekes, armes of the Sea, and all Hauens, and all maner of other places whatsoeuer, that by the sayde North westward, North eastward, or Northward, is to be by him, his associates or assignes discouered, and for and in the sayde sayling, voyage, and passage, to haue and vse so many shippes, Barkes, Pinnesses, or other vessels of any quantitie or burthen, with all the furniture of men, victuals, and all maner of necessary prouision, armour, weapons, ordinance, targets, and appurtinances whatsoeuer, as to such a voyage shall or may be requisite, conuenient or commodious, any lawe, statute, ordinance or prouiso to the contrary thereof notwithstanding. And also we doe giue and grant to the sayde *Adrian Gylbert*, and his sayde associates, and to such assignee of him, and his heires, and to the heires and one assignee of euery of his sayde associates for euer, full power and absolute authoritie to trade and make their reliance in any of the sayde Isles, Countreys, Regions, Prouinces, Territories, Seas, Riuers, Portes, Bayes, and Hauens, and all maner of other places whatsoeuer with all commodities, profites, and emoluments in the sayde places or any of them, growing and arising, with all maner of priuiledges, prerogatiues, iurisdiccions and royalties both by sea and land whatsoeuer, yeelding and paying therefore vnto vs, our heires and successors, the tenth part of all such golde and siluer oare, pearles, iewels, and precious stones, or the value thereof, as the sayd *Adrian Gylbert* and his sayd associates, their heires and assignes, seruants, factors, or workemen, and euery or any of them shall finde, the sayd tenth to bee deliuered duely to our Customes, or other officers by vs, our heires or successors thereunto assigned, in the Portes of London, Dartmouth, or Plimmouth, at which three places onely the sayde *Adrian Gylbert*, and his sayde associates, their sayde heires and assignes, shall lade, charge, arriue, and discharge all maner of wares, goods, and merchandizes whatsoeuer to the sayde voyage, and newe trade belonging or appertaining. And mozeouer, wee haue giuen, granted, and authorized, and

and by these presents for vs, our heires and successors, of our grace especiall, certaine knowledge, and meere motion, doe giue, graunt, and authorize the sayd Adrian Gilbert, and his sayd associats for euer, their heires and their said assignes & euery of them, that if the aforesayd Isles, Countreys, Regions, Prouinces, Territories, Seas, Riuers, Ports, Bayes, or Hauens, or any other of the premisses by the sayd Adrian Gylbert or his associats, their heires and their said assignes or any of them, to be found by them, discovered and traffiqued vnto by any trade as aforesayd, shall be by any other our subiects visited, frequented, haunted, traded vnto or inhabited by the wayes aforesayd, without the special licence in writing of the said Adrian Gylbert and his associats, and their heires and assignes for euer, or by the most part of them, so that the sayd Adrian Gilbert, his heires or assignes be one of them, that then aswell their ship, or ships in any such voyage or voyages vled, as all and singuler their goods, wares, and marchandizes, or any other things whatsoever, from or to any of the places aforesayd transported, that so shall presume to visit, frequent, haunt, trade vnto, or inhabite, shall be forfeited and confiscated, ipso facto, the onehalfe of the same goods and marchandizes, or other things whatsoever, or the value thereof to be to the vse of vs, our heires or successors, and the other moytie thereof to be to the vse of the sayd Adrian Gylbert and his sayd associats, their heires and assignes for euer: and vnto the sayd Adrian Gylbert and his sayd associats, their heires and assignes wee impose, giue, assigne, create and confirme this name peculiar to be named by, to sue and to be sued by, that is to wit, by the name of the Colleagues of the fellowship for the discouerie of the Northwest passage, and them for vs, our heires and successors by that name doe incorporate, and doe erect and create as one body corporate to haue continuance for euer. Moreouer vnto the sayd Adrian Gylbert, and his said associats, and vnto their heires and their sayd assignes for euer, by name of the Colleagues of the fellowship, for the discouerie of the Northwest passage, we haue giuen, graunted, and confirmed, and doe by these presents giue, grant, and confirme full power and authoritie from time to time, and at all times hereafter, to make order, decree and enact, constitute and ordeine, and appoynt all such ordinances, orders, decrees, lawes, and actes, as the sayd new corporation or body politique, Colleagues of the fellowship for the discouerie of the Northwest passage, shall thinke meete, necessary, and conuenient, so that they or any of them be not contrary to the lawes of this realme, and of this our present graunt.

The colleagues of the fellowship for the discouery of the Northwest passage.

And we by our Royall prerogatiue, and fulnesse of our authority, of our grace especiall, certaine knowledge and meere motion, do establish, confirme & ratifie all such ordinances, orders, decrees, lawes and actes to be in so full and great power and authority, as we, our heires or successors may or can in any such case graunt, confirme, or ratifie. And further for the better incouragement of our louing subiects in this discouerie, we by our Royall prerogatiue, and fulnesse of authority for vs, our heires and successors, doe giue, graunt, establish, confirme, ordeine, ratifie and allow by these presents, to the sayd Adrian Gylbert and to his associates, and to the heires and assignes of them and euery of them for euer, and to all other person or persons of our louing subiects whatsoever that shall hereafter trauaile, sayle, discover, or make voyage as aforesayd to any the Isles, Mainlands, Countreys or Territories whatsoever, by vertue of this our graunt to be discovered, that the heires and assignes of them and euery of them being borne within any of the Isles, Mainlands and Countreys, or Territories whatsoever before mentioned, shall haue and enjoy all the priuileges of free Denizens, as persons natiue borne within this our Realme of England, or within our allegiance for euer, in such like ample manner and forme, as if they were or had bene borne and personally resiant within our sayd Realme, any law, statute, proclamation, custome or vsage to the contrary hereof in any wise notwithstanding.

Free Denization granted.

Moreouer, for the consideration aforesayd by vertue hereof, we giue and graunt vnto the sayd Adrian Gylbert, his heires and assignes for euer, free libertie, licence and priuilege, that during the space of five yeeres next and immediately ensuing the date hereof, it shall not be lawfull for any person or persons whatsoever, to visit, haunt, frequent, trade, or make voyage to any Isles, Mainlands, Countreys, Regions, Prouinces, Territories, Seas, Riuers, Ports, Bayes, and Hauens, nor to any other Hauens or places whatsoever hitherto not yet discovered by any of our subiects by vertue of this graunt to be traded vnto, without the special consent and good liking of the said Adrian Gylbert, his heires or assignes first had in writing. And if any person or persons of the associats of the sayd Adrian, his heires or assignes, or any other person or persons whatsoever, free of this discouery, shall do any act or actes contrary to the tenour and true meaning hereof, during the space of the sayd five yeeres, that then the partie and parties so offending, they and their heires for euer shall loose (ipso facto) the benefite and priuilege of this our graunt, and shall stand and remaine to all intents and purposes as persons exempted out of this graunt.

This Patent remained in force five yeeres.

Mutinous
to p[re]cede at
Sea against
mutiners.

1583.

And further by vertue hereof wee giue and graunt, for vs, our heires and successours at all times during the space of five yeeres next ensuing the date hereof, libertie and licence, and full authority to the sayd Adrian Gylbert, and his heires and assignes, that if it shall happen any one or moe in any ship or ships sayling on their sayd voyage, to become mutinous, seditious, disordered, or any way vniuerty to the p[re]iudice or hinderance of the hope for the successe in the attempt or prosecuting of this discouerie or trade intended, to vse or execute vpon him or them so offending, such punishment, correction, or execution, as the cause shall be found in iustice to require by the verdict of twelue of the companie sworne thereunto, as in such a case apperteineth: That expresse mention of the certaintie of the p[re]misses, or of other gifts or graunts by vs to the sayd Adrian Gylbert and his associates before this time made is not mentioned in these presents, or any other lawe, act, statute, p[ro]viso, graunt, or proclamation heretofore made or hereafter to be made to the contrary hereof in any wise notwithstanding. In witnesse whereof we haue made these our Letters to bee made patens: Witnesse our selfe at Westminster, the sixt day of Februarie, in the sixe and twenty yeere of our reigne.

The first voyage of *M. Iohn Davis*, vndertaken in Iune 1585. for the discouerie of the Northwest passage, Written by *M. Iohn Ianes Marchant*, sometimes seruant to the worshipfull Master *William Sanderfon*.

Certaine Honourable personages and worthy Gentlemen of the Court & Countrey, with diuers worshipful Marchants of London and of the West Countrey, mooued with desire to aduance Gods glory and to seeke the good of their native Countrey, consulting together of the likelyhood of the Discouerie of the Northwest passage, which heretofore had bene attempted, but unhappily giuen ouer by accidents vnllooked for, which turned the enterprisers from their principall purpose, resolved after good deliberation, to put downe their aduentures to p[ro]uide for necessarie shipping, and a fit man to be chiefe Conductour of this so hard an enterprise. The setting forth of this Action was committed by the aduenturers, especially to the care of *M. William Sanderfon* Marchant of London, who was so forward therein, that besides his trauaile which was not small, hee became the greatest aduenturer with his purse, and commended vnto the rest of the companie one *M. Iohn Davis*, a man very well grounded in the principles of the Arte of Nauigation, for Captaine and chiefe Pilot of this exployt.

Mutians.

Thus therefore all things being put in a readines, wee departed from Dartmouth the seuenth of Iune, towards the discouerie of the aforesayd Northwest passage, with two Barks, the one being of 50. tunnes, named the Sunnesshine of London, and the other being 35. tunnes, named the Mooneshine of Dartmouth. In the Sunnesshine we had 23. persons, whose names are these following, *M. Iohn Davis* Captaine, *William Eston* Master, *Richard Pope* Masters mate, *Iohn Iane* Marchant, *Henry Daue* gunner, *William Crosse* boatswayne, *Iohn Bagge*, *Walter Archur*, *Luke Adams*, *Robert Coxworthie*, *Iohn Ellis*, *Iohn Kelley*, *Edward Helman*, *William Dicke*, *Andrew Maddocke*, *Thomas Hill*, *Robert Wats* Carpenter, *William Russell*, *Christopher Gorney* boy: *James Cole*, *Francis Ridley*, *Iohn Russell*, *Robert Cornish* Musicians.

The Mooneshine had 19. persons, *William Bruton* Captaine, *Iohn Ellis* Master, the rest Mariners.

The 7. of Iune the Captaine and the Master drew out a proportion for the continuance of our victuals.

The 8. day the wind being at Southwest and West southwest, we put in for Falmouth, where we remained until the 13.

The 13. the wind blew at North, and being faire weather we departed.

The 14. with contrary wind we were forced to put into Silley.

The 15. wee departed thence, hauing the wind North and by East moderate and faire weather.

The 16. wee were driuen backe againe, and were constrained to arrive at newe Grymby in Silley: here the winde remained contrary 12. dayes, and in that space the Captaine, the Master and I went about all the Islands, and the Captaine did plat out and describe the situation of all the Islands, rocks and harbours to the exact vse of Nauigation, with lines and scale thereunto conuenient.

They depart
from Silley.
Iulij.

The 28. in Gods name we departed the wind being Easterly, but calme.

The first of Iulij wee sawe great store of Popples; The Master called for an harping p[ro]u, and shot twice or thise: sometimes he missed, and at last shot one and strooke him in the side, and wound

wound him into the ship: when we had him aboard, the Master sayd it was a Darlie head.

The 2. we had some of the fish sodden, and it did eat as sweete as any mutton.

The 3. wee had more in sight, and the Master went to shoote at them, but they were so great, that they burst our pions, and we lost both fish, pions, pastime and all: yet neuertheless the Master shot at them with a pike, and had welnigh gotten one, but he was so strong that he burst off the barres of the pike and went away: then he tooke the boat-hooke, and hit one with that, but all would not preuaile: so at length we let them alone.

The 6. we saw a very great Whale, and euery day we saw whales continually.

The 16. 17. and 18. we saw great store of Whales.

Great store of
whales.

The 19. of July we fell into a great whirling and brussling of a tyde, setting to the Northwards: and sayling about halfe a league wee came into a very calme Sea, which bent to the Southsouthwest. Here we heard a mighty great roaring of the Sea, as if it had bene the breach of some shoare, the ayre being so foggie and full of thicke mist, that we could not see the one ship from the other, being a very small distance asunder: so the Captaine and the Master being in distrust how the tyde might set them, caused the Mooneshine to hoyle out her boate and to sound, but they could not finde ground in 300. fathoms and better. Then the Captaine, Master, and I went towards the breach, to see what it should be, giuing charge to our gunners that at euery glasse they should shoote off a musket-shot, to the intent we might keepe our selues from loosing them. Then comming nere to the breach, we met many Islands of yce floating, which had quickly compassed vs about: then we went vpon some of them, and did perceiue that all the roaring which we heard, was caused onely by the rowling of this yce together: Our companie seeing vs not to returne according to our appoyntment, left off shooting muskets, and began to shoote falkonets, for they feared some mishap had befallen vs, but before night we came aboard againe with our boat laden with yce, which made very good fresh water. Then wee bent our course toward the North, hoping by that meanes to double the land.

The rowling of
the yce toge-
ther made a
great roaring.

Yce turned into
water.

The 20. as we sayled along the coast the fogge brake vp, and we discovered the land, which was the most deformed rockie and mountainous land that euer we saw: The first sight whereof did shew as if it had bene in forme of a sugar-loafe, standing to our sight above the cloudes, for that it did shew ouer the fogge like a white list in the skie, the tops altogether couered with snow, and the shoare beset with yce a league off into the Sea, making such ykesome noyse as that it seemed to be the true patterne of desolation, and after the same our Captaine named it, The land of Desolation.

The land of
Desolation.

The 21. the winde came Northerly and querblew, so that we were constrained to bend our course South againe, for we perceined that we were runne into a very deepe Bay, where wee were almost compassed with yce, for we saw very much toward the Northnortheast, West, and Southwest: and this day and this night wee cleared our selues of the yce, running Southsouthwest along the shoare.

Upon Thursday being the 22. of this moneth, about thre of the clocke in the morning, wee hoysed out our boate, and the Captaine with sixe saylers went towards the shoare, thinking to find a landing place, for the night before we did perceiue the coast to be voyde of yce to our iudgement, and the same night wee were all perswaded that we had seene a Canoe rowing along the shoare, but afterwards we fell in some doubt of it, but we had no great reason so to doe. The Captaine rowing towards the shoare, willed the Master to beare in with the land after him, and before he came neere the shoare by the space of a league, or about two miles, hee found so much yce, that hee could not get to land by any meanes. Here our mariners put to their lines to see if they could get any fish, because there were so many seales vpon the coast, and the birds did beate vpon the water, but all was in vaine: The water about this place was very blacke and thicke like to a filthy standing poole, we sounded and had ground in 120. fathoms. While the Captaine was rowing to the shoare, our men sawe woods vpon the rocks like to the rocks of Newfoundland, but I could not discern them, yet it might be so very well: for we had wood floating vpon the coast euery day, and the Mooneshine tooke vp a tree at Sea not farre from the coast being sixtie foote of length and foureteene handfuls about, hauing the roote vpon it: After this the Captaine came aboard, the weather being very calme and faire we bent our course toward the South, with intent to double the land.

Very blacke
water.

Floting wood

The 23. we coasted the land which did lie Eastnortheast and Westsouthwest.

The 24. the winde being very faire at East, we coasted the land which did lie East and West, not being able to come neere the shoare by reason of the great quantitie of yce. At this place, because the weather was somewhat colde by reason of the yce, and the better to encourage our men,

Colde by rea-
son of yce.

their

their allowance was increased: the captaine and the master tooke order that euery melle, being five persons, should haue halfe a pound of bread and a kan of beere euery morning to breakfast. The weather was not very colde, but the aire was moderate like to our April-weather in England: when the winde came from the land, or the ice, it was somewhat colde, but when it came off the sea it was very hote.

Great famili-
arity with the
Savages.

The 25 of this moneth we departed from sight of this land at five of the clocke in the morning, directing our course to the Northwestward, hoping in Gods mercy to finde our desired passage, and so continued about four dayes.

The 29 of July we discovered land in 64 degrees 15 minutes of latitude, bearing North-east from vs. The winde being contrary to goe to the Northwestwards, we bare in with this land to take some view of it, being utterly void of the pestle of yce and very temperate. Comming neere the coast, we found many faire sounds and good roads for shipping, and many great inlets into the land, whereby we iudged this land to be a great number of Islands standing together. Deere hauing moored our barke in good order, we went on shoare vpon a small Island to seeke for water and wood. Upon this Island we did perceiue that there had bene people: for we found a small shoo and pieces of leather sowed with sinewes, and a piece of furre, and wooll like to Beuer. Then we went vpon another Island on the other side of our shippes: and the Captaine, the Master, and I, being got vp to the top of an high rocke, the people of the countrey hauing espied vs, made a lamentable noise, as we thought, with great outcries and skreechings: we hearing them, thought it had bene the howling of wolues. At last I halloed againe, and they likewise cried. Then we perceiuing where they stood, some on the shoare, and one rowing in a Canoa about a small Island fast by them, we made a great noise, partly to allure them to vs, and partly to warne our company of them. Whereupon P. Bruton and the Master of his shippe, with others of their company, made great haste towards vs, and brought our Musicians with them from our shippe, purposing either by force to rescue vs, if need should so require, or with courtesie to allure the people. When they came vnto vs, we caused our Musicians to play, our selues dancing, and making many signes of friendship. At length there came tenne Canoas from the other Islands, and two of them came so neere the shoare where we were, that they talked with vs, the other being in their boats a pretty way off. Their pronounciation was very holow thozow the throat, and their speech such as we could not vnderstand: onely we allured them by friendly imbracings and signes of curtesie. At length one of them pointing vp to the Sunne with his hand, would presently strike his breast so hard that we might heare the blow. This hee did many times before he would any way trust vs. Then Iohn Ellis the Master of the Mooneshine was appointed to vse his best policie to gaine their friendship; who strooke his breast, and pointed to the Sunne after their order: which when he had diuers times done, they beganne to trust him, and one of them came on shoare, to whom we threwe our cappes, stockings and gloues, and such other things as then we had about vs, playing with our musicke, and making signes of ioy, and dauncing. So the night comming, we bade them farewell, and went aboard our barks.

The next morning being the 30 of July there came 37 Canoas rowing by our ships, calling to vs to come on shoare: we not making any great haste vnto them, one of them went vp to the toppe of the rocke, and leapt and daunced as they had done the day before, shewing vs a seales skinne, and another thing made like a tumbrell, which he did beat vpon with a stick, making a noise like a small drumme. Whereupon we manned our boats and came to them, they all staying in their Canoas; we came to the water side where they were: and after we had sworne by the Sunne after their fashion, they did trust vs. So I thooke hands with one of them, and he kissed my hand, and we were very familiar with them. We were in so great credit with them vpon this single acquaintance, that we could haue any thing they had. We bought five Canoas of them: we bought their clothes from their backs, which were all made of seales skinnes & birds skinnes; their buskins, their hose, their gloues, all being commonly sowed and well dressed: so that we were fully perswaded that they haue diuers artificers among them. We had a paire of buskins of them full of fine wooll like beuer. Their apparell for heat was made of birds skinnes with their feathers on them. We saw among them leather dressed like Glouers leather, and thicke rhongs like white leather of a good length. We had of their darts and oares, and found in them that they would by no meanes displease vs, but would giue vs whatsoeuer we asked of them, and would be satisfied with whatsoeuer we gaue them. They tooke great care one of another: for when we had bought their boats, then two other would come and cary him away betweene them that had solde vs his. They are very tractable people, void of craft or double dealing, and easie to

to be brought to any civility or good order: but we iudge them to be idolaters and to worship the Sunne.

During the time of our abode among these Islands we found reasonable quantity of wood, both firre, spruce and juniper; which whether it came floating any great distance to these places where we found it, or whether it grew in some great Islands neere the same place by vs not yet discovered, we know not; but we iudge that it groweth there further into the land then we were, because the people had great store of darts and oares which they made none account of, but gave them to vs for small trifles, as points and pieces of paper. We saw about this coast marvellous great abundance of seales skulking together like skuls of small fish. We found no fresh water among these Islands, but onely snow water, whereof we found great pooles. The cliffes were all of such oare as M. Frobisher brought from Meta incognita. We had diuers shewes of Study or Huscoup glasse shining not altogether unlike to Christall. We found an herbe growing upon the rocks, whose fruit was sweet, full of red iuice, and the ripe ones were like corinths. We found also birch and willow growing like shrubbes low to the ground. These people haue great store of fures as we iudge. They made shewes unto vs the 30 of this present, which was the second time of our being with them, after they perceiued we would haue skinnes and fures, that they would go into the countrey and come againe the next day with such things as they had: but this night the winde comming faire, the captaine and the matter would by no meanes detract the purpose of our discovery. And so the last of this moneth about foure of the clocke in the morning in Gods name we set saile, and were all that day becalmed vpon the coast.

Diuers sorts of wood.

They may make much traine, if they had meanes how to vse it. Huscoup glasse. A fruit like corinths.

The first of August we had a faire winde, and so proceeded towards the Northwest for our discovery.

August.

The first of August we discovered land in 66 degrees 40 minuts of latitude, altogether void from the pester of ice: we ankered in a very faire rode vnder a braue mount, the cliffes whereof were as opient as golde. This mount was named Mount Raleigh. The rode where our ships lay at anker was called Toines rode. The sound which did compasse the mount was named Exeter sound. The sozeland towards the North was called Diers cape. The sozeland towards the South was named Cape Walsingham. So soone as we were come to an anker in Toines rode vnder Mount Raleigh, we espied foure white beares at the foot of the mount: we supposing them to be goats or wolues, manned our boats and went towards them: but when we came neere the shore, we found them to be white beares of a monstrous bignesse: we being desirous of fresh victuall and the sport, began to assault them, and I being on land, one of them came downe the hill right against me: my piece was charged with hailshot & a bullet: I discharged my piece and shot him in the necke; he roared a litle, and tooke the water straight, making small account of his hurt. Then we followed him with our boat, and killed him with boare-speares, & two more that night. We found nothing in their mawes; but we iudged by their dung that they fed vpon grasse, because it appeared in all respects like the dung of an horse, wherein we might very plainly see the very strawes.

Land in 66 degrees 40 min.

Foure white beares.

20 huge white beare.

The 7 we went on shore to another beare which lay all night vpon the top of an Island vnder Mount Raleigh, and when we came vp to him he lay fast asleep. I leuelled at his head, and the stone of my piece gaue no fire: with that he looked vp, and layed downe his head againe: then I shot being charged with two bullets, and strooke him in the head: he being but amazed fell backwards: whereupon we ran all vpon him with boare-speares, and thrust him in the body: yet for all that he gript away our boare-speares, and went towards the water; and as he was going downe, he came backe againe. Then our Matter shot his boare-speare, and strooke him in the head, and made him to take the water, and swimme into a coue fast by, where we killed him, and brought him aboard. The breadth of his soze foot from one side to the other was foureteene inches ouer. They were very fat, so as we were constrained to cast the fat away. We saw a rauen vpon Mount Raleigh. We found withies also growing like low shrubs & flowers like Primroses in the layd place. The coast is very mountainous, altogether without wood, grasse, or earth, and is onely huge mountaines of stone; but the brauest stone that euer we saw. The aire was very moderate in this countrey.

The 8 we departed from Mount Raleigh, coasting along the shoare, which lieth Southsouth-west, and Eastnortheast.

The 9 our men fell in dislike of their allowance, because it was too small as they thought: whereupon we made a new proportion; euery melle being due to a melle should haue foure pound of bread a day, twelue wine quarts of beere, six Newland fishes; and the flesh dayes a gill of pease more: so we restrained them from their butter and cheese.

The 11 we came to the most Southerly cape of this land, which we named The Cape of Gods mercy, as being the place of our first entrance for the discovery. The weather being very foggy we coasted this North land; at length when it brake up, we perceiued that we were shot into a very faire entrance or passage, being in some places twenty leagues broad, and in some thirty, altogether void of any pester of ice, the weather very tolerable, and the water of the very colour, nature and quality of the maine ocean, which gaue vs the greater hope of our passage. Having sailed North-west sixty leagues in this entrance we discovered certaine Islands standing in the midst thereof, hauing open passage on both sides. Whereupon our ships diuided themselves, the one sailing on the North side, the other on the South side of the sayd Isles, where we stayed five dayes, hauing the winde at Southeast, very foggy and foule weather.

The 14 we went on shoare and found signes of people, for we found stones layed by together like a wall, and saw the skull of a man or a woman.

The 15 we heard dogs howle on the shoare, which we thought had bene wolues, and therefore we went on shoare to kill them. When we came on land the dogges came presently to our boat very gently, yet we thought they came to pray vpon vs, and therefore we shot at them, and killed two: and about the necke of one of them we found a leatherne collar, whereupon we thought them to be tame dogs. There were twenty dogs like mastines with prickt eares and long bushy tailes: we found a bone in the pizels of their dogs. Then we went farther, and found two sleads made like ours in England: the one was made of firre, spruce and oken boozds sawen like inch boozds: the other was made all of whale bone, & there hung on the tops of the sleads three heads of beasts which they had killed. We saw here larks, rauens, and partridges.

The 17 we went on shoare, and in a litle thing made like an ouen with stones I found many small trifles, as a small canoa made of wood, a piece of wood made like an image, a bird made of bone, beads hauing small holes in one end of them to hang about their necks, & other small things. The coast was very barren without wood or grasse: the rocks were very faire like marble, full of vaines of diuers colours. We found a seale which was killed not long before, being fleane, and hid vnder stones.

Our Captaine and Master searched still for probabilities of the passage, and first found, that this place was all Islands, with great sounds passing betwene them.

Secondly, the water remained of one colour with the maine ocean without altering.

Thirdly, we saw to the West of those Isles three or foure whales in a kull, which they iudged to come from a Westerly sea, because to the Eastward we saw not any whale.

Also as we were rowing into a very great sound lying Southwest, from whence these whales came, vpon the sudden there came a violent counter-checke of a tide from the Southwest against the flood which we came with, not knowing from whence it was maintained.

Fiftly, in sailing twenty leagues within the mouth of this entrance we had sounding in 90 fadoms, faire gray osie sand, and the further we ran into the Westwards the deeper was the water; so that hard aboord the shoare among these Isles we could not haue ground in 330 fadoms.

Lastly, it did ebbe and flow six or seuen fadome by and downe, the flood comming from diuers parts, so as we could not perceiue the chiefe maintenance thereof.

The 18 and 19 our Captaine and Master determined what was best to doe, both for the safeguard of their credits, and satisfiing of the aduenturers, and resolved, if the weather brake up, to make further search.

The 20 the winde came directly against vs: so they altered their purpose, and reasoned both for proceeding and returning.

The 21 the winde being North-west, we departed from these Islands; and as we coasted the South shoare we saw many faire sounds, whereby we were perswaded that it was no firme land but Islands.

The 23 of this moneth the wind came Southeast, with very stormy and foule weather: so we were constrained to seeke harborow vpon the South coast of this entrance, where we fell into a very faire sound, & ankered in 25 fadoms Greene osie sand. Here we went on shoare, where we had manifest signes of people where they had made their fire, and layed stones like a wall. In this place we saw foure very faire faulcons; and M. Bruton tooke from one of them his prey, which we iudged by the wings and legs to be a snite, for the head was eaten off.

The 24 in the afternoone, the winde comming somewhat faire, we departed from this road, purposing by Gods grace to returne for England.

The 26 we departed from sight of the North land of this entrance, directing our course homeward vntill the tenth of the next moneth,

Their returne.

The

The 10. of September wee fell with The land of desolation, thinking to goe on shoare, but we could get neuer a good harborough. That night wee put to sea againe thinking to search it the next day: but this night arose a very great storme, and separated our ships, so that we lost the sight of the Mooneshine.

The 13. about noone (having tried all the night before with a goose wing) we set saile, & within two houres after we had sight of the Mooneshine againe: this day we departed from this land.

The 27. of this moneth we fell with sight of England. This night we had a marvellous storme and lost the Mooneshine.

The 30. of September wee came into Dartmouth, where wee found the Mooneshine being come in not two houres before.

The second voyage attempted by M. Iohn Davis with others, for the discovery of the Northwest passage, in Anno 1586.

The 7. day of May, I departed from the port of Dartmouth for the discovery of the Northwest passage, with a ship of an hundred and twentie tunnes named the Mermayd, a barke of 60. tunnes named the Sunneshine, a barke of 35. tunnes named the Mooneshine, and a pinnesse of tenne tunnes named the North Starre.

And the 15. of June I discovered land in the latitude of 60. degrees, and in longitude from the Meridian of London Westward 47. degrees, mightily pestered with yce and snow, so that there was no hope of landing: the yce lay in some places tenne leagues, in some 20. and in some 50. leagues off the shoare, so that wee were constrained to beare into 57. degrees to double the same, and to recover a free Sea, which through Gods favourable mercy we at length obtained.

The 29. of June after many tempestuous storms we againe discovered land, in longitude from the Meridian of London 58. degr. 30. min. and in latitude 64. being East from vs: into which course sith it pleased God by contrary winds to force vs, I thought it very necessary to beare in with it, & there to set by our pinnesse, provided in the Mermayd to be our scout for this discovery, and so much the rather because the yere before I had bene in the same place, and found it very convenient for such a purpose, wel stored with stote wood, & possessed by a people of tractable conversation: so that the 29. of this moneth we arrived within the Isles which lay before this land, lying North north west, and South south east, we know not how farre. This land is very high & mountainous, having before it on the West side a mighty company of Isles full of faire sounds, and harboroughs. This land was very litle troubled with snow, and the sea altogether voyd of yce.

The ships being within the sounds wee sent our boates to search for shole water, where wee might anker, which in this place is very hard to finde: and as the boat went sounding and searching, the people of the countrey having espied them, came in their Canoas towards them with many shoutes and cries: but after they had espied in the boat some of our company that were the peere before here with vs, they presently rowed to the boate, and tooke hold on the oare, and hung about the boate with such comfortable joy, as would require a long discourse to be uttered: they came with the boates to our ships, making signes that they knewe all those that the peere before had bene with them. After I perceived their joy and small feare of vs, my selfe with the Merchants & others of the company went a shoare, bearing with me twentie knives: I had no sooner landed, but they lept out of their Canoas and came running to mee and the rest, and embraced vs with many signes of heartie welcome: at this present there were eightene of them, and to each of them I gaue a knife: they offered skinnies to me for reward, but I made signes that they were not solde, but giuen them of courtesie: and so dismissed them for that time, with signes that they should returne againe after certaine houres.

The next day with all possible speede the pinnesse was landed vpon an Isle there to be finished to serue our purpose for the discovery, which Isle was so convenient for that purpose, as that we were very wel able to defend our selues against many enemies. During the time that the pinnesse was there setting by, the people came continually vnto vs sometime an hundred Canoas at a time, sometime fourtie, fiftie, more and lesse, as occasion serued. They brought with them seale skinnies, Ragge skinnies, white hares, Seale fish, samon peale, smal cod, dry caplin, with other fish, and birds such as the countrey did yeeld.

My selfe still desirous to haue a further search of this place, sent one of the shipboates to one part of the lande, and my selfe went to another part to search for the habitation of this people,

September.

The saile from The land of desolation to England in 14. dayes.

Land discovered in 60. degrees.

Gentle and louing Sauiages.

In 100 Canoas with diuers commodities.

with straight commandement that there should be no iniurie offered to any of the people, neither any gunne shot.

Images, crane
oyle, and Seale
skins in tan-
tubs.

A plaine
champion
countrey.
A goodly
riuier.

The boates that went from me found the tents of the people made with seale skinnies set vpon timber; wherein they found great store of dried Caplin, being a litle fish no bigger then a pilchard: they found bags of Crane oyle, many litle images cut in wood, Seale skinnies in tan-tubs, with many other such trifles, whereof they diminished nothing.

They also found tenne miles within the snowy mountaines a plaine champion countrey, with earth and grasse, such as our moory and waste grounds of England are: they went by into a riuer (which in the narrowest place is two leagues broad) about ten leagues, finding it still to continue they knewe not howe farre: but I with my company tooke another riuer, which although at the first it offered a large inlet, yet it proued but a deepe bay, the ende whereof in foure houres I attained, and there leaning the boat well manned, went with the rest of my company three or foure miles into the countrey, but found nothing, nor saw any thing, saue onely gripes, rauens, and small birds, as larkes and linnets.

The third of Iuly I manned my boat, and went with fifty Canoas attending vpon me by into another sound where the people by signes willed mee to goe, hoping to finde their habitation: at length they made signes that I should goe into a warme place to sleepe, at which place I went on shore, and ascended the toppes of an high hill to see into the countrey, but perceiuing my labor vaine, I returned againe to my boat, the people still following me, and my company very diligent to attend vs, and to helpe vs up the rockes, and like wise downe: at length I was desirous to haue our men leape with them, which was done, but our men did ouerleape them: from leaping they went to wrestling, we found them strong and nimble, and to haue skil in wrestling, for they cast some of our men that were good wrestlers.

A graue with
a crosse laid
ouer.
The Tartars
and people of
Iapon are also
small eyed.

The fourth of Iuly we landed our pinnelle, and had soztie of the people to helpe vs, which they did very willingly: at this time our men againe wrestled with them, and found them as before, strong and skilfull. This fourth of Iuly the Master of the Mermaid went to certaine Islands to stoze himselfe with wood, where he found a graue with diuers buried in it, only couered with seale skinnies, hauing a crosse laid ouer them. The people are of good stature, wel in body proportioned, with small slender hands and feet, with broad visages, and smal eyes, wide mouthes, the most part unbearded, great lips, and close toothed. Their custome is as often as they goe from vs, still at their returne to make a newe truce, in this sort, holding his hand vp to the Sun with a lowd voice he crieth Yyaoure, and striketh his brest with like signes, being promised safety, he giueth credit. These people are much giuen to bleed, and therefore stop their noses with deers haire, or the haire of an elan. They are idolaters and haue images geat store, which they weare about them, and in their boats, which we suppose they worship. They are witches, and haue many kinds of enchantments, which they often vset, but to small purpose, thanks be to God.

Their maner
of kindling fire
like to theirs
in America.
A fire made of
turkes.

Being among them at thore the fourth of Iuly, one of them making a long oration, beganne to kindle a fire in this maner: he tooke a peece of a board wherein was a hole halfe thorow: into that hole he puts the end of a round stick like vnto a bedstaffe, wetting the end thereof in Crane, and in fashion of a turner with a peece of lether, by his violent motion doeth very speedily produce fire: which done, with turkes he made a fire, into which with many wordes and strange gestures, he put diuers things, which wee supposed to be a sacrifice: my selfe and diuers of my company standing by, they were desirous to haue me goe into the smoke, I willed them likewise to stand in the smoke, which they by no meanes would do. I then tooke one of them, and thrust him into the smoke, and willed one of my company to tread out the fire, & to spurne it into the sea, which was done to shew them that we did contemne their forcery. These people are very simple in all their conuersation, but marvellous theewit, especially for iron, which they haue in great accost. They began through our lenitie to shew their vile nature: they began to cut our cables: they cut away the Moonelights boat from her sterne, they cut our cloth where it lay to aye, though we did carefully looke vnto it, they stole our oares, a caliner, a boare speare, a sword, with diuers other things, wherat the company and Masters being grieved, for our better securitie, desired me to dissolve this new friendship, and to leaue the company of these theewit miscreants: whereupon there was a caliner shot among them, and immediately vpon the same a faulcon, which strange noice did soze amaze them, so that with speed they departed: notwithstanding their simplicitie is such, that within ten houres after they came againe to vs to intreat peace: which being promised, we againe fell into a great league. They brought vs Seale skinnies, & sammon peale, but seeing iron, they could in no wise forbear stealing: which when I perceiued, it did but minister vnto mee an occasion of laughter, to see their simplicitie, and I willed that in no case they should see any more hardly vset, but that our owne company

Great theewit

company should be the more vigilant to keepe their things, supposing it to be very hard in so short time to make them know their evils. They eate all their meat raw, they live most upon fish, they drinke salt water, and eate grasse and ice with delight: they are neuer out of the water, but live in the nature of fishes, saue only when dead sleepe taketh them, and then vnder a warme rocke laying his boat vpon the land, hee lyeth downe to sleepe. Their weapons are all darts, but some of them haue bow and arrowes and slings. They make nets to take their fish of the sinne of a whale: they do all their things very artificially: and it should seeme that these simple the euish Islanders haue warre with those of the maine, for many of them are sore wounded, which wounds they receiued vpon the maine land, as by signes they gaue vs to vnderstand. We had among them copper oare, blacke copper, and red copper: they pronounce their language very hollow, and deepe in the throat: these wordes following we learned from them.

Great Is-
lands.

Slings.

The 7. of July being very desirous to search the habitation of this countrey, I went my selfe with our new pinnelle into the body of the land, thinking it to be a firme continent, and passing by a very large riuer, a great flaw of winde tooke me, whereby wee were constrained to seeke succour for that night, which being had, I landed with the most part of my company, and went to the top of a high mountaine, hoping from thence to see into the countrey: but the mountaines were so many and so mighty as that my purpose preuailed not: whereupon I againe returned to my pinnelle, and willing diuers of my company to gather muscles for my supper, whereof in this place there was great store, my selfe hauing espied a very strange sight, especially to me that neuer before saw the like, which was a mighty whirlwinde taking by the water in very great quantitie, furiously mounting it into the aire, which whirlwinde, was not for a puffe or blast, but continual, for the space of thre houres, with very little intermission, which sith it was in the course that I should passe, we were constrained that night to take by our lodging vnder the rocks.

The next morning the storme being broken by, we went forward in our attempt, and sailed into a mighty great riuer directly into the body of the land, and in briefe, found it to be no firme land, but huge, waste, and desert Isles with mighty sounds, and inlets passing betweene Sea and Sea. Thereupon we returned towards our shippes, and landing to stoppe a floud, wee found the burial of these miscreants: we found of their fish in bagges, plaices, and caplin dried, of which wee tooke onely one bagge and departed. The ninth of this moneth we came to our ships, where wee found the people desirous in their fashion, of friendship and barter: our Partners complained heavily against the people, and said that my lenitie and friendly vsing of them gaue them stomacke to mischief: for they haue stolen an anker from vs, they haue cut our cable very dangerously, they haue cut our boats from our sterne, and now since your departure, with slings they spare vs not with stones of halfe a pound weight: and wil you stil indure these iniuries? It is a shame to beare them, I desired them to be content, and said, I doubted not but al should be wel. The 10. of this moneth I went to the shore, the people following mee in their Canoas: I tolled them on shore, and vled them with much courtesie, and then departed aboord, they following me, and my company. I gaue some of them bracelets, & caused seuen or eight of them to come aboord, which they did willingly, and

and some of them went into the top of the ship: and thus curteously vsing them, I let them depart: the Sunne was no sooner downe, but they began to practise their deuillish nature, and with slings theyew stones very fiercely into the Moonelight, and strake one of her men then boatswaine, that he ouerthrew withall: whereat being moued, I changed my curtesie, and grew to hatred, my self in my owne boate well manned with shot, and the barks boat like wise pursued them, and gaue them diuers shot, but to small purpose, by reason of their swift rowing: so finally content we returned.

The 11. of this moneth there came five of them to make a new cruce: the master of the Admirall came to me to shew me of their comming, and desired to haue them taken and kept as prisoners vntill we had his anker againe: but when he sawe that the chiefe ringleader and master of mischiefe was one of the five, he then was vehement to execute his purpose, so it was determined to take him: he came crying Yliaout, and striking his brest offered a paire of gloues to sell, the master offered him a knife for them: so two of the came to vs, the one was not touched, but the other was soone captiue among vs: then we pointed to him and his fellowes for our anker, which being had, we made signes that he should be set at libertie: within one houre after he came aboard the winde came saue, whereupon we weped and set saile, and so brought the fellow with vs: one of his fellowes still following our ship close aboard, talked with him and made a kinde of lamentation, we still vsing him wel with Yliaout, which was the common course of curtesie. At length this fellow aboard vs spake foure or five words vnto the other and clapped his two hands vpon his face, whereupon the other doing the like, departed as we suppose with heauie chere. We iudged the couering of his face with his hands and bowing of his body downe, signified his death. At length he became a pleasant companion among vs. I gaue him a new sute of frize after the English fashion, because I saw he could not indure the colde, of which he was very fopfull, he trimmed vp his darts, and all his fishing tooles, and would make okam, and set his hand to a ropes end vpon occasion. He liued with the dy Caplin that I tooke when I was searching in the pinnis, and did eate dy Newland fish.

All this while, God be thanked, our people were in very good health, onely one young man excepted, who dyed at sea the fourteenth of this moneth, and the fifteenth, according to the order of the sea, with praise giuen to God by seruice, was cast ouerboard.

The 17 of this moneth being in the latitude of 63. degrees 8. minuts, we fell vpon a most mighty and strange quantitie of yce in one intire masse, so bigge as that we knew not the limits thereof, and being withall so very high in forme of a land, with bayes and capes and like high cliffe land, as that we supposed it to be land, and therefore sent our pinnesse off to discouer it: but at her returne we were certainly informed that it was onely yce, which bred great admiration to vs all considering the huge quantitie thereof, incredible to be reported in trueth as it was, and therefore I omit to speake any further thereof. This onely I thinke, that the like before was neuer scene: and in this place we had very stickle and strong currents.

We coasted this mightie masse of yce vntill the 30 of July, finding it a mightie barre to our purpose: the ayre in this time was so contagious and the sea so pestered with yce, as that all hope was banished of proceeding: for the 24 of July all our throwds, ropes and sailes were so frozen, and compassed with yce, onely by a grosse fogge, as seemed to me more then strange, such the last yeere I found this sea free and nauigable, without impediments.

Our men though this extremity began to grow sicke and feeble, and withall hopelesse of good successe: whereupon very orderly, with good discretion they intreated me to regard the state of this busines, and withall aduised me, that in conscience I ought to regard the saltie of mine owne life with the preservation of theirs, and that I should not through my ouerboldnes leaue their widowes and fatherlesse children to giue me bitter curses. This matter in conscience did greatly moue me to regard their estates: yet considering the excellencie of the businesse if it might be attained, the great hope of certaintie by the last yeeres discouery, and that there was yet a third way not put in practise, I thought it would growe to my great disgrace, if this action by my negligence should grow into discredite: whereupon seeking helpe from God, the fountaine of all mercies, it pleased his diuine maiestie to moue my heart to prosecute that which I hope shal be to his glory, and to the contentation of euery Christian minde. Whereupon falling into consideration that the Mermaid, albeit a very strong & sufficient ship, yet by reason of her burthen was not so conuenient and nimble as a smaller bark, especially in such desperate hazzards: further hauing in account her great charge to the aduenturers being at 100. li. the moneth, and that in doubtfull seruice: all the premisses considered with diuers other things, I determined to furnish the Moonelight with reuictualling and sufficient men, and to proceede in this action as God should direct me. Whereupon I altered our course from the yce, and bare Eastsoutheast to recouer the next shore where this thing might be performed: so with fauourable winde it pleased God that the first of August we discouered the land

One of the people taken which after dyed.

A huge quantitie of yce in 63. degrees of latitude.

The nature of fogges.

land in Latitude 66. degrees, 33. min. and in longitude from the Meridian of London 70. degrees boyd of trouble without snow or ice.

The second of August wee harboured our selues in a very excellent good road, where with all speed we graued the Moonelight, and reititualed her: wee searched this countrey with our pinnesse while the barke was trimming, which William Ekton did: he found all this land to be onely Islands, with a Sea on the East, a Sea on the West, and a Sea on the North. In this place wee found it very hot, and wee were very much troubled with a flie which is called Muskyto, for they did sting grievously. The people of this place at our first comming in caught a Seale, and with bladders fast tied to him sent him vnto vs with the floud, so as hee came right with our shippes, which we tooke as a friendly present from them.

Great heat.

66. degrees 19. minutes.

Great hope of a passage.

64. degr. 20. min.

A great current to the West.

Islands.

They runne 8. dayes Southward from 67 to 57. degrees upon the coast.

A harbouough in 56. degrees.

Faire woods.

Store of cods.

The fift of August I went with the two Masters and others to the toppe of a hill, and by the way William Ekton espied three Canoas lying vnder a rocke, and went vnto them: there were in them skinnies, darts, with diuers superstitious toys, whereof wee diminished nothing, but left vpon euery boat a silke point, a bullet of lead, and a pinne. The next day being the first of August, the people came vnto vs without feare, and did barter with vs for skinnies, as the other people did: they differ not from the other, neither in their Canoas nor apparel, yet is their pronuntiation more plaine then the others, and nothing hollow in the throat. Our Sauage aboord vs kept himselfe close, and made shew that he would faine haue another companion. Thus being provided, I departed from this lande the twelfth of August at sixe of the clocke in the morning, where I left the Mermaid at an anker: the foureteenth sailing West about fiftie leagues, we discouered land, being in latitude 66. degrees 19. minuts: this land is 70. leagues from the other from whence we came. This fourteenth day from nine a clocke at night till thre a clocke in the morning, wee ankered by an Island of yce, twelue leagues off the shore, being moored to the yce.

The fifteenth day at thre a clocke in the morning we departed from this land to the South, and the eighteenth of August we discouered land Northwest from vs in the morning, being a very faire promontory, in latitude 65. degrees, hauing no land on the South. Here wee had great hope of a thorough passage.

This day at thre a clocke in the afternoone wee againe discouered lande Southwest and by South from vs, where at night wee were becalmed. The nineteenth of this moneth at noone, by obseruation, we were in 64. degrees 20. minuts. If from the eighteenth day at noone vnto the nineteenth at noone, by precise ordinary care, wee had sailed 15. leagues South and by West, yet by art and more exact obseruation, we found our course to be Southwest, so that we plainly perceived a great current striking to the West.

This land is nothing in sight but Iles; which increaseth our hope. This nineteenth of August at sixe a clocke in the afternoone, it began to snow, and so continued all night with foule weather, and much winde, so that we were constrained to lie at hull all night fure leagues off the shore: In the morning being the twentieth of August, the fogge and storme breaking vp, we bare in with the lande, and at nine a clocke in the morning wee ankered in a very faire and safe road and locke for all weathers. At tenne of the clocke I went on shore to the toppe of a very high hill, where I perceived that this land was Islands: at foure of the clocke in the afternoone wee weyed anker, hauing a faire North northeast winde, with very faire weather: at six of the clocke we were cleare without the land, and so shaped our course to the South, to discouer the coast, where by the passage may be through Gods mercy found.

We coasted this land till the eight and twentieth of August, finding it still to continue towards the South, from the latitude of 67. to 57. degrees: we found marueilous great store of birds, gulls and mewes, incredible to be reported, whereupon being calme weather, we lay one glasse vpon the lee, to proue for fish, in which space we caught 100. of cod, although we were but badly provided for fishing, not being our purpose. This eight and twentieth hauing great distrust of the weather, we arriued in a very faire harbour in the latitude of 56. degrees, and sailed 10. leagues into the same, being two leagues broad, with very faire woods on both sides: in this place wee continued vntil the first of September, in which time we had two very great stormes. I landed, & went five miles by ghesse into the countrey, and found that the woods were firre, pineapple, alder, yew, withy, and birch: here wee saw a blacke beare: this place yeeldeth great store of birds, as fezzant, partridge, Barbary hennies or the like, wilde geese, ducks, blacke birdes, ieyes, thrushes, with other kinds of small birds. Of the partridge and fezzant we killed great store with bow and arrowes: in this place at the harbouough mouth we found great store of cod.

The first of September at tenne a clocke wee set saile, and coasted the shore with very faire weather. The thirde day being calme, at noone we strooke saile, and let fall a cadge anker, to proue whether

whether we could take any fish, being in latitude 54. degrees 30. minutes, in which place we found great abundance of cod, so that the hooke was no sooner ouerboord, but presently a fish was taken. It was the largest and the best fed fish that euer I sawe, and diuers fisher men that were with me sayd that they neuer saw a more suauile or better skull of fish in their liues: yet had they seene great abundance.

A perfect hope
of the passage
about 54. de-
grees and an
halfe.

The fourth of September at fve a clocke in the afternoone we ankered in a very good road among great store of Isles, the countrey low land, pleasant and very full of fayre woods. To the North of this place eight leagues, we had a perfect hope of the passage, finding a mightie great sea passing betweene two lands West. The South land to our iudgement being nothing but Isles: we greatly desired to goe into this sea, but the winde was directly against vs. We ankered in foure fathome fine sand. In this place is foule and fish mightie store.

Two of our
men slaine by
the Sauiages.

The first of September hauing a faire Northnorthwest winde, hauing trimmed our Barke we purposed to depart, and sent fve of our sailers yong men a shope to an Island, to fetch certaine fish which we purposed to weather, and therefore left it al night couered vpon the Isle: the brutish people of this countrey lay secretly lurking in the wood, and vpon the sudden assaulted our men: which when we perceiued, we presently let slip our cables vpon the halfe, and vnder our foresaile bare in to the shoare, and with all expedition discharged a double musket vpon them twise, at the noyse whereof they fled: notwithstanding to our very great grieffe, two of our men were slaine with their arrowes, and two grievously wounded, of whom at this present we stand in very great doubt, one ly one escaped by swimming, with an arrow shot thorow his arme. These wicked miscreants neuer offered parly or speech, but presently executed their cursed fury.

This present euening it pleased God further to increase our sorowes with a mighty tempestuous storme, the winde being Northnortheast, which lasted vnto the tenth of this moneth very extreme. We vnriggered our ship, and purposed to cut downe our masts, the cable of our shut-anker brake, so that we onely expected to be driuen on shoare among these Canibals for their pray. Yet in this deepe distresse the mightie mercie of God, when hope was past, gaue vs succour, and sent vs a faire lee, so as we recouered our anker againe and newe moored our ship: where we saw that God manifestly deliuered vs: for the straines of one of our cables were broken, and we only roade by an olde iunke. Thus being freshly moored a new storme arose, the winde being Westnorthwest, very forcible, which lasted vnto the tenth day at night.

The eleuenth day with a faire Westnorthwest winde we departed with trust in Gods mercie, shaping our course for England, and arriued in the West countrey in the beginning of October.

Master Davis being arriued, wrote his letter to M. William Sander-son of London, concerning his voyage, as followeth.

Ir, the Sunnes shine came into Dartmouth the fourth of this moneth: the hath bene at Island, and from thence to Groenland, and so to Estoriland, from thence to Desolation, and to our Marchants, where she made trade with the people, staying in the countrey twentie dayes. They haue brought home fve hundred seale skimes, and an hundred and fortie halfe skimes and pieces of skimes. I stand in great doubt of the pinnesse, God be mercifull vnto the poore men, and preserve them, if it be his blessed will.

I haue now experience of much of the Northwest part of the world, & haue brought the passage to that likelihood, as that I am assured it must bee in one of foure places, or els not at all. And further I can assure you vpon the perill of my life, that this voyage may be performed without further charge, nay with certaine profite to the aduenturers, if I may haue but your fauour in the action. I hope I shall finde fauour with you to see your Card. I pray God it be so true as the Card shal be which I will bring you: and I hope in God, that your skill in Nauigation shall be gaineful vnto you, although at the first it hath not proued so. And thus with my humble commendations I commit you to God, desiring no longer to liue, then I shall be yours most faithfullly to command. Exon this fourteenth of October. 1586.

Yours to command

IOHN DAVIS.

The

The relation of the course which the *Sunshine* a barke of fiftie runnes, and the *Northstarre* a small pinnesse, being two vessels of the flecte of M. Iohn Davis, helde after hee had sent them from him to discover the passage betweene *Groneland* and *Island*, written by Henry Morgan seruant to M. William Sander-son of London.

The seventh day of May 1586. wee departed out of Dartmouth haven foure sailes, to wit, the *Mermaid*, the *Sunshine*, the *Mooneshine*, & the *Northstarre*. In the *Sunshine* were sixteene men, whose names were these: Richard Pope Master, Marke Carter Masters mate, Henry Morgan Purser, George Draward, Iohn Mandie, Hugh Broken, Philip Iane, Hugh Hempson, Richard Borden, Iohn Philpe, Andrew Madock, William Wolcome, Robert Wag carpenter, Iohn Bruskome, William Ashe, Simon Ellis.

Our course was Westnorthwest the seventh and eight dayes: and the ninth day in the morning we were on head of the Carrole of Silley. Thus coasting along the South part of Ireland the 11. day, we were on head of the Dories: and our course was Southsouthwest untill sixe of the clocke the 12. day. The 13. day our course was Northwest. We remained in the company of the *Mermaid* and the *Mooneshine* untill we came to the latitude of 60. degrees: and there it seemed best to our Generall M. Davis to diuide his flecte, himselfe sayling to the Northwest, and to direct the *Sunshine*, wherein I was, and the pinnesse called the *Northstarre*, to seeke a passage Northward betweene *Groneland* and *Island* to the latitude of 80. degrees, if land did not let vs. So the seuenth day of June wee departed from them: and the ninth of the same we came to a firme land of yce, which we coasted along the ninth, the tenth, and the eleventh dayes of June: and the eleventh day at sixe of the clocke at night we saw land which was very high, which after ward we knew to be *Island*: and the twelfth day we harboured there, and found many people: the land lyeth East and

and by North in 66. degrees. Their commodities were greene fish, and *Island* lings, and stockfish, and a fish which is called *Scatefish*: of all which they had great store. They had also kine, sheep, and hoxles, and hay for their cattell, and for their hoxles. Wee saw also of their dogs. Their dwelling houles were made on both sides with stones, and wood layd crosse ouer them, which was couered ouer with turles of earth, and they are flat on the tops, and many of these stood hard by the shore. Their boates were made with wood and yron all along the keele like our English boates: and they had nayles for to nalle them w ithall, and fish-hookes and other things for to catch fish as we haue here in England. They had also brasen kettles, and girdles and purses made of leather, and knoppes on them of copper, and hatchets, and other small tooles as necessary as we haue. They dye their fish in the Sun, and when they are dry, they packe them up in the top of their houles. If we would goe thither to fishing more then we doe, we should make it a very good voyage: for wee got an hundred greene fish in one morning. Wee found heere two English men with a shippe, which came out of England about Easter day of this present yeere 1586, and one of them came aboard of vs, and brought vs two lambs. The English mans name was M. Iohn Roydon of Ipswich marchant: hee was bound for London with his ship. And this is the summe of that which I obserued in *Island*. We departed from *Island* the sixteenth day of June in the morning, and our course was Northwest, and we saw on the coast two small barkes going to an harborough: we went not to them, but saw them a farre off. Thus we continued our course vnto the end of this moneth.

The third day of July we were in betweene two firme lands of yce, and passed in betweene them all that day untill it was night: and then the Master turned backe againe, and so away we went towards *Groneland*. And the seventh day of July we did see *Groneland*, and it was very high, and it looked very blew: we could not come to harborough into the land, because we were hindered by a firme land as it were of yce, which was along the shoares side: but we were within three leagues of the land, coasting the same diuers dayes together. The seuenteenth day of July wee saw the place which our Captaine M. Iohn Davis the yeere before had named The land of Desolation, where we could not goe on shore for yce. The eighteenth day we were likewise troubled with yce, and went in amongst it at three of the clocke in the morning. After wee had cleared our selues thereof, wee ranged all along the coast of Desolation untill the ende of the aforesayd moneth.

The third of day August we came in sight of Gilberts sound in the latitude of 64. deg. 15. min. which was the place where wee were appoynted to meete our Generall and the rest of our flecte. Here we came to an harborough at 6. of the clocke at night.

May.

Groneland discovered.

The land of Desolation.

Groneland coasted from the 7. till the last of July.

August.

The houses of
Gronland.

The 4. day in the morning the Hatter went on shore with 10. of his men, and they brought vs foure of the people rowing in their boats aboord of the ship. And in the afternoone I went on shore with 6. of our men, and there came to vs seven of them when we were on land. We found on shore three dead people, and two of them had their staues lying by them, and their olde skimmes wrapped about them, and the other had nothing lying by, wherefore we thought it was a woman. We also saw their houses neere the Sea side, which were made with pieces of wood on both sides, and crossed ouer with poles and then couered ouer with earth: we found Foxes running vpon the hills: as for the place it is broken land all the way that we went, and full of broken Islands.

Our men play
at football
with the Sa-
uages.

The 21. of August the Hatter sent the boate on shore for wood with sixe of his men, and there were one and thirtie of the people of the countrey which went on shore to them, & they went about to kill them as we thought, for they shot their dartes towards them, and we that were aboord the ship did see them goe on shore to our men: whereupon the Hatter sent the pinnelle after them, and when they saw the pinnelle comming towards them, they turned backe, and the Hatter of the pinnelle did shoote off a caliuier to them the same time, but hurt none of them, for his meaning was onely to put them in feare. Diuers times they did waue vs on shore to play with them at the football, and some of our company went on shore to play with them, and our men did cast them downe as soone as they did come to strike the ball. And thus much of that which we did see and do in that harborough where we arrived first.

Sweete wood
found.

The 23. day wee departed from the Merchants Isle, where wee had beene first, and our course from thence was South & by West, and the wind was Northeast, and we ran that day and night about 5. or 6. leagues, untill we came to another harborough.

The 24. about eleuen of the clocke in the forenoone wee entred into the aforesayd new harborow, and as wee came in, we did see dogs running vpon the Islands. When we were come in, there came to vs foure of the people which were with vs before in the other harborough, and where we rode, we had sandie ground. We saw no wood growing, but found small pieces of wood vpon the Islands, & some small pieces of sweete wood among the same. We found great Harts hornes, but could see none of the Stagges where we went, but we found their footings. As for the bones which we receiued of the Sauages I cannot tell of what beasts they be.

A skirmish be-
tween the Sa-
uages and
our men.

The stones that we found in the countrey were black, and some white, as I thinke they be of no value, neuerthelesse I haue brought examples of them to you.

The 30. of August we departed from this harborough towards England, & the wind tooke vs contrary, so that we were faine to go to another harborough the same day at 11. of the clocke. And there came to vs 39. of the people, and brought vs 13. Seal skins, and after we receiued these skins of them, the Hatter sent the carpenter to change one of our boates which wee had bought of them before, and they would haue taken the boate from him perforce, and when they sawe they could not take it from vs, they shot with their dartes at vs, and stroke one of our men with one of their dartes, and Iohn Filpe shot one of them into the brest with an arrow. And they came to vs againe, and foure of our men went into the shipboate, and they shot with their dartes at our men: but our men tooke one of their people in his boate into the shipboate, and he hurt one of them with his knife, but we killed three of them in their boates: two of them were hurt with arrowes in the brests, and he that was aboord our boat, was shot in with an arrow, and hurt with a sword, and beaten with staues, whome our men cast ouerboord, but the people caught him and carried him on shore vpon their boates, and the other two also, and so departed from vs. And three of them went on shore hard by vs, where they had their dogs, and those three came away from their dogs, and presently one of their dogs came swimming towards vs hard aboord the ship, whereupon our Hatter caused the Gunner to shoote off one of the great pieces towards the people, and so the dog turned backe to land, and within an houre after there came of the people hard aboord the ship, but they would not come to vs as they did come before.

September.

The pinnelle
neuer return-
ed home.

The 31. of August we departed from Gylberts Sound for England, and when we came out of the harborough there came after vs 17. of the people looking which way we went.

The 2. of September we lost sight of the land at 12. of the clocke at noone.

The third day at night we lost sight of the Northstarre our pinnelle in a very great storme, and lay a hull tarying for them the 4. day, but could heare no more of them. Thus we shaped our course the 5. day Southsoutheast, and sayling untill the 27. of the sayd moneth, we came in sight of Cape Clere in Ireland.

The 30. day we entred into our owne chanell.

The 2. of October we had sight of the Isle of Wight.

The 3. we coasted all along the shore, and the 4. and 5.

The

The 6. of the sayd moneth of October wee came into the river of Thames as high as Ratcliffe in safetie God be thanked.

The third voyage Northwestward, made by M. John Davis Gentleman, as chiefe Captaine & Pilot generall, for the discovery of a passage to the Isles of the *Moluccas*, or the coast of China, in the yeere 1587. Written by M. John Ianes.

May.

The 19. of this present moneth about midnight wee weped our ankers, set sayle, and departed from Dartmouth with two Barkes and a Clincher, the one named the Elizabeth of Dartmouth, the other the Sunnesshine of London, and the Clincher called the Helene of Londō: thus in Gods name we set forwards with the wind at Northeast a good fresh gale. About 3. houres after our departure, the night being somewhat thicke with darknesse, we had lost the pinnelle: the Captaine imagining that the men had runne away with her, willed the Master of the Sunnesshine to stand to Seawards, and see if we could descry them, we bearing in with the shore for Plymouth. At length we descried her, bare with her, and demanded what the cause was: they answered that the tiller of their helme was burst. So shaping our course Westsouthwest, we went forward, hoping that a hard beginning would make a good ending, yet some of vs were doubtfull of it, falling in reckoning that she was a Clincher; neuertheless we put our trust in God.

The 21. we met with the Red Lion of London, which came from the coast of Spaine, which was afrayd that we had bene men of warre, but we hailed them, and after a little conference, we desired the Master to carie our letters for London directed to my vncle Sanderson, who promised vs a safe deliuerie. And after wee had heaued them a lead and a line, whereunto wee had made fast our letters, before they could get them into the ship, they fell into the Sea, and so all our labour and theirs also was lost; notwithstanding they promised to certifie our departure at London, and so we departed, and the same day we had sight of Silley. The 22. the wind was at Northeast by East with faire weather, and so the 23. and 24. the like. The 25. we layd our ships on the Lee for the Sunnesshine, who was a romaging for a leake, they had 500. strokes at the pumpe in a watch, the wind at Northwest.

The 26. and 27. wee had faire weather, but this 27. the pinnelles foremast was blowen ouerboord. The 28. the Elizabeth towed the pinnelle, which was so much braggd of by the owners report before we came out of England, but at Sea she was like a cart drawen with oxen. Sometimes we towed her because she could not saile for scant wind.

The 31. day our Captaine asked if the pinnelle were stanch, Peerson answered that she was as sound and stanch as a cup. This made vs something glad, when we sawe she would brooke the Sea, and was not leake.

June.

The first 6. dayes wee had faire weather: after that for 5. dayes wee had fogge and raine, the winde being South. The 12. wee had cleare weather. The Mariners in the Sunnesshine and the Master could not agree: the Mariners would goe on their voyage a fishing, because the yeere began to waste: the Master would not depart till hee had the companie of the Elizabeth, whereupon the Master told our Captaine that hee was afrayd his men would shape some contrary course while he was asleepe, and so he should lose vs. At length after much talke and many threatnings, they were content to bring vs to the land which we looked for daily.

The 14. day we discovered land at five of the clocke in the morning, being very great and high mountaines, the tops of the hills being couered with snow. Here the wind was variable, sometimes Northeast, Eastnortheast, and East by North: but we imagined our selues to be 16. or 17. leagues off from the shore.

The 16. we came to an anker about 4. or 5. of the clocke after nonne, the people came presently to vs after the old maner, with crying Ilyoute, and shewing vs Seales skinnes. The 17. we began to set vp the pinnelle that Peerson framed at Dartmouth, with the boords which hee brought from London.

The 18. Peerson and the Carpenters of the ships began to set on the plaukes. The 19. as we went about an Island, were found blacke Pumise stones, and salt kernald on the rockes very white and glistering. This day also the Master of the Sunnesshine tooke of the people a very strong lusty poong fellow.

Land descried.

Salt kernald on the rockes.

The 20. about two of the clocke in the morning, the Sauages came to the Island where our pinnace was built readie to bee launched, and toze the two upper strakes, and carried them away onely for the loue of the yron in the boords. While they were about this practise, we manned the Elizabeths boate to goe a shore to them: our men being either afrayd or amazed, were so long before they came to shore, that our Captaine willed them to stay, and made the Gunner giue fire to a Saker, and layd the piece leuell with the boate which the Sauages had turned on the one side because wee should not hurt them with our arrowes, and made the boate their bulwarke against the arrowes which we shot at them. Our Gunner hauing made all things readie, gaue fire to the piece, and fearing to hurt any of the people, and regarding the owners profite, thought belike hee would saue a Sakers shot, doubting wee should haue occasion to fight with men of warre, and so shot off the Saker without a bullet: we looking stil when the Sauages that were hurt should run away without legs, at length wee could perceiue neuer a man hurt, but all hauing their legges could carrie away their bodies: wee had no sooner shot off the piece, but the Master of the Sunne-shine manned his boate, and came rowing toward the Island, the very sight of whom made each of them take that hee had gotten, and flee away as fast as they could to another Island about two miles off, where they tooke the nayles out of the timber, and left the wood on the Isle. When we came on shore, and saw how they had spoiled the boat, after much debating of the matter, we agreed that the Elizabeth should haue her to fish withall: whereupon she was presently carped aboard, and stowed.

Now after this trouble, being resolved to depart with the first wind, there fell out another matter worse then all the rest, and that was in this maner. John Churchyard one whom our Captaine had appoynted as Pilot in the pinnace, came to our Captaine, and master Bruton, and told them that the good ship which we must all hazard our liues in, had three hundred strokes at one time as she rode in the harbour: This disquieted vs all greatly, and many doubted to goe in her. At length our Captaine by whom we were all to be gouerned, determined rather to end his life with credite, then to returne with infamie and disgrace, and so being all agreed, wee purposed to liue and die together, and committed our selues to the ship. Now the 21. hauing brought all our things aboard, about 11. or 12. of the clocke at night, we set saile and departed from those Isles, which lie in 64. degrees of latitude, our ships being all now at Sea, and wee shaping our course to goe, coasting the land to the Northwards vpon the Easterne shore, which we called the shore of our Marchants, because there we met with people which traffiqued with vs, but here wee were not without doubt of our ship.

The 24. being in 67. degrees, and 40. minutes, wee had great store of Whales, and a kinde of sea birds which the Mariners call Cortinous. This day about sixe of the clocke at night, we espied two of the countrey people at Sea, thinking at the first they had bene two great Seales, untill wee sawe their oares glittering with the Sunne: they came rowing towardes vs, as fast as they could, and when they came within hearing, they held vp their oares, and cryed Ilyaoute, making many signes: and at last they came to vs, giuing vs birdes for bracelets, and of them I had a dart with a bone in it, or a piece of Unicorns horne, as I did iudge. This dart he made store of, but when he saw a knife he let it go, being more desirous of the knife then of his dart: these people continued rowing after our ship the space of 3. howres.

The 25. in the morning at 7. of the clocke we descried 30. Sauages rowing after vs, being by iudgement 10. leagues off from the shore: they brought vs Salmon Peales, Birdes, and Caplin, and we gaue them pinnes, needles, bracelets, nailles, knives, bels, looking glasses, and other small trifles, and for a knife, a naille or a bracelet, which they call Ponigmah, they would sell their boate, coates, or any thing they had, although they were farre from the shore. Wee had but few skimmes of them, about 20. but they made signes to vs that if wee would goe to the shore, wee should haue more store of Chichsaneg: they stayed with vs till 11. of the clocke, at which time wee went to prayer, and they departed from vs.

The 28. and 29. were foggie with cloudes, the 30. day wee tooke the heighth, and found our selues in 72. degrees and 12. minutes of latitude both at noone and at night, the Sunne being 5. degrees above the Horizon. At midnight the compasse set to the variation of 28. degrees to the Westward. Now hauing coasted the land, which wee called London coast, from the 21. of this present, till the 30. the Sea open all to the Westwards and Northwards, the land on starboord side East from vs, the winde shifted to the North, whereupon we left that shore, naming the same Hope Sanderson, and shaped our course West, and ranne 40. leagues and better without the sight of any land.

July.

Isles in 64. degrees.

Store of Whales in 67. degrees.

72. deg. 12. min.
The great variation of the compasse.
London coast.

Betweene Gronland & the North of America about 40. leagues.

July.

The second of July wee fell with a mightie banke of yce West from vs, lying North and South, which banke wee would gladly haue doubled out to the Northwards, but the winde would not suffer vs, so that we were faine to coast it to the Southwards, hoping to double it out, that wee might haue run so farre West till wee had found land, or els to haue bene thorowly resolved of our pretended purpose.

The 3. wee fell with the yce againe, and putting off from it, we sought to the Northwards, but the wind crossed vs.

The 4. was foggie: so was the 5. also with much wind at the North.

The 6. being very cleare, we put our barke with oares through a gap in the yce, seeing the Sea free on the West side, as we thought, which falling out otherwise, caused vs to returne after we had stayed there betweene the yce. The 7. and the 8. about midnight, by Gods helpe we recovered the open Sea, the weather being faire and calme, and so was the 9. The 10. we coasted the yce. The 11. was foggie, but calme.

The 12. we coasted againe the yce, hauing the wind at Northnorthwest. The 13. bearing off from the yce, we determined to goe with the shoare and come to an anker, and to stay 5. or 6. dayes for the dissolving of the yce, hoping that the Sea continually beating it, and the Sunne with the extreme force of heat which it had alwayes shining vpon it, would make a quicke dispatch, that we might haue a further search vpon the Westerne shoare. Now when we were come to the Easterne coast, the water something deepe, and some of our companie fearefull withall, we durst not come to an anker, but bare off into the Sea againe. The poore people seeing vs goe away againe, came rowing after vs into the Sea, the waues being somewhat loftie. We truckt with them for a few skinnes and darters, and gaue them beads, nailes, pinnes, needles and cardes, they poynting to the shoare, as though they would shew vs some great friendship: but we little regarding their curtesie, gaue them the gentle farewell, and so departed.

The 14. wee had the wind at South. The 15. there was some fault either in the barke, or the set of some current, for wee were driuen five points beyond our course West. The 16. wee fell with the banke of yce West from vs. The 17. and 18. were foggie. The 19. at one a clocke after noone, wee had sight of the land which we called Mount Raleigh, and at 12. of the clocke at night, we were thwart the streights which we discovered the first yeere. The 20. wee trauesed in the mouth of the streight, the wind being at West, with faire and cleare weather. The 21. and 22. wee coasted the Northerne coast of the streights. The 23. hauing sayled threescore leagues Northwest into the streights, at two a clocke after noone wee ankered among many Isles in the bottome of the gulfe, naming the same The Earle of Cumberlands Isles, where riding at anker, a Whale passed by our ship and went West in among the Isles. Here the compasse set at thirtie degrees Westward variation. The 23. wee departed, shaping our course Southeast to recover the Sea. The 25. wee were becalmed in the bottome of the gulfe, the ayre being extreme hot. Master Bruton and some of the Partners went on shoare to coule dogs, where they found many Graues and Crane spilt on the ground, the dogs being so fat that they were scant able to run.

The 26. wee had a pretty storme, the winde being at Southeast. The 27. and 28. were faire. The 29. we were cleare out of the streights, hauing coasted the South shoare, and this day at noone we were in 62. degrees of latitude. The 30. in the afternoone wee coasted a banke of yce, which lay on the shoare, and passed by a great banke or Inlet, which lay between 63. and 62. degrees of latitude, which we called Lumleys Inlet. We had oftentimes as, we sailed alongst the coast, great ruttles, the water as it were whirling and ouerfalling, as if it were the fall of some great water through a bridge.

The 31. as we sayled by a Headland, which we named Warwicks Foreland, we fell into one of those ouersals with a fresh gale of wind, and bearing all our sailes, wee looking vpon an Island of yce betweene vs and the shoare, had thought that our barke did make no way, which caused vs to take markes on the shoare: at length wee perceiued our selues to goe very fast, and the Island of yce which we saw before, was carried very forcibly with the set of the current faster then our ship went. This day and night we passed by a very great gulfe, the water whirling and roaring as it were the meetings of tydes.

August.

August.

Chidley's cape.

The Iord Darcies Island.

The fishing place betwene 54 and 55 degrees of latitude.

Abundance of whales in 52 degrees.

They arrive at Dartmouth the 15 of September.

The first of August having coasted a banke of ice which was driven out at the mouth of this gulfe, we fell with the Southermost cape of the gulfe, which we named Chidley's cape, which lay in 61 degrees and 10 minutes of latitude. The 2 and 3 were calme and foggie, so were the 4, 5, and 6. The 7 was faire and calme: so was the 8, with a litle gale in the morning. The 9 was faire, and we had a litle gale at night. The 10 we had a frisking gale at Westnorth-west. The 11 faire, The 12 we saw five deere on the top of an Island, called by vs Darcies Island. And we hoised out our boat, and went ashore to them, thinking to have killed some of them. But when we came on shore, and had coursed them twice about the Island, theyooke the sea and swamme to wards Islands distant from that three leagues. When we perceiued that they had taken the sea we gaue them ouer because our boat was so small that it could not carrie vs, and rowe after them, they swamme so fast: but one of them was as bigge as a good pretty Cow, and very fat, their feet as bigge as Dre feet. Here vpon this Island I killed with my piece a graphare.

The 13 in the morning we saw three or foure white beares, but durst not go on shore to them for lacke of a good boat. This day we stroke a rocke seeking for an harborow, and receiued a leake: and this day we were in 54 degrees of latitude.

The 14 we stopt our leake in a storme not very outrageous, at noone.

The 15 being almost in 52 degrees of latitude, and not finding our ships, nor (according to their promise) any kinde of marke, token, or beacon, which we willed them to set vp, and they protested to do so vpon euery head land, Island or cape, within twenty leagues euery way off from their fishing place, which our captaine appointed to be betweene 54 and 55 degrees: This 15 I say we shaped our course home wards for England, hauing in our ship but litle wood, and halfe a hogthead of fresh water. Our men were very willing to depart, and no man moze forward then Peerson, for he feared to be put out of his office of Stewardship: but because euery man was so willing to depart, we consented to returne for our owne countrey: and so we had the 16 faire weather, with the winde at Southwest.

The 17 we met a ship at sea, and as farre as we could iudge it was a Viskaine: we thought she went a fishing for whales; for in 52 degrees or thereabout we saw very many.

The 18 was faire, with a good gale at West.

The 19 faire also, with much winde at West and by South.

And thus after much variable weather and change of winds we arriued the 15 of September in Dartmouth anno 1587, giuing thanks to God for our safe arriual.

A letter of the sayd M. Iohn Davis written to M. Sander son of London concerning his forewritten voyage.

God M. Sander son, with Gods great mercy I haue made my safe returne in health, with all my company, and haue sailed threescore leagues further then my determination at my departure. I haue bene in 73 degrees, finding the sea all open, and forty leagues betweene land and land. The passage is most practicable, the execution easie, as at my comming you shall fully know.

Yesterday the 15 of September I landed all weary; therefore I pray you pardon my shortnesse.

Sandridge this 16 of September anno 1587.

Yours equall as mine owne, which

by triall you shall best know,

JOHN DAVIS.

This day in the morning at five of the clocke we discovered land being distant from vs at the nearest place sixteen leagues. This land in generall Northw. and to the Westwards, being very mountainous. The wind at this day variable, and the aire sometime foggie, and sometime cleere. The foresaid land bare from vs (so neere as we could iudge) North, Northw. and Southeast.

The true course, &c. This 16 of June at 5 of the clocke in the afternoon being in the latitude of 64 degrees, through Gods helpe we came to an an among many low islands which lay before the high land. This 17 of June set by our pinnelle. The 20 she was spoiled by the Sauesages. At midn. the 21 of June we departed from this coast, our two barks for their fish voyage, and my selfe in the pinnelle for the discovery. From midnight the we shaped our course as followeth.

At this time we saw great store of whales.

THE DISCOVRSE.

Moneth. ne.	Days.	Howes.	Cowse.	Leagues.	Elevation of the pole. Deg Min.	The wind.	
Moone the 24	24	N. by E. Northw.	41	67	40	S. S. E.	The true course, &c. Here the weather was very hot. This 24 of June at 6 of the clocke at night we met two sauaiges at sea in their small canoes, unto whom we gave bracelets, and nailes, for skins & birds. At 9 of the clocke they departed from vs. The next day at 7 of the clocke in the morning, there came unto vs 30 sauaiges 20 leagues off the shore, intreating vs to goe to the shore. We had of them fish, birds, skinned, darts, and their coats from their backs, for bracelets, nailes, knives &c. They remained with vs foure houres, and departed.

Moone the 6	6	S. S. E.	16	68		N. N. W.	The true course, &c.
Moone the 7	7	E. by S.	20			S.	This day the people came to vs off the shore, and bartered with vs. Being within the isles, & not finding good anchorage, we bare off againe into the sea.
Moone the 8	8						
Moone the 9	9	N. by N.	11	67	50	S.	The true course, &c.
Moone the 10	10	N. S. W.	5	67	45	E.	The true course, &c. This day a great current set vs West 6 points from our course.
Moone the 11	11	S. by W. Westerly	22	67	10	S.	The true course, &c. This day we fell to a mighty banke of ice West of vs.
Moone the 12	12	S. by N.	20	65	22	N. fog.	The true course, &c. Collected by diuers experiments.
Moone the 13	13	N. Southerly.	12	65	20	S. fog.	The true course, &c. This 19 of July at one a clocke in the afternoon we had sight of the land of Mount Raleigh, and by 12. of the clocke at night wee were thwart the Streights, which (by Gods helpe) I discovered the first yere.
Moone the 14	14						The 20 day wee trauesled in the mouth of the sayd Streights with a contrary winde, being West, and faire weather.
Moone the 15	15						
Moone the 16	16						This 22 day at 2 of the clocke in the afternoon, hauing sailed 60 leagues Northw. we ankered among an huge number of isles lying in the bottome of the sayd supposed passage, at which place the water riseth 4 fadome high. Here as we rode at anker, a great tushale passed by vs, and swam West in among the isles. In this place a S. W. by N. moone maketh a full sea. Here the compasse varied 30 degrees.
Moone the 17	17						The 24 day at 5 of the clocke in the morning we set saile, departing from this place, and shaying our course S. E. to recouer the maine Ocean againe.
Moone the 18	18						This 25 we were becalmed almost in the bottome of the Streights, & had the weather maruellous extreame hot.
Moone the 19	19					S. E.	This day being in the Streights, we had a very quicke storme.
Moone the 20	20					S.	Being still in the Streight, we had this day faire weather.
Moone the 21	21						At this present we got cleere of the Streights, hauing coasted the South shore, the land trending from hence S. W. by S.
Moone the 22	22	S. S. W.	22	63			This day we coasted the shore, a banke of ice lying thereupon. Also this 30 of July in the afternoon we crossed ouer the entrance or mouth of a great in-let or passage, being 20 leagues broad, and situate betwene 62 & 63 degrees. In which place we had 8 or 9 great eales, currents or overfalls, lookt like crabs, like the rage of the waters under London bridge, and bending their course into the sayd gulfe.

Moneth	Dayes.	Hours.	Course.	Leagues.	Elevation of the pole. Deg.	Min.	The wind.	THE DISCOVERSE
July.	31	24	S. by W.	27	62		N.W.	This 31 at noon, coming close by a foze land of great cape, we fell in mightie rate, where an island of ice was carried by the force of the current fast as our barke could sail with him wind, all sails heaving. This cape it was the most southerly limit of the gulfe which we passed over the 30 of this moneth, so was it the North promontory of first beginning of another very great inlet, whose South limit at this present wee saw not. Which is of gulfe this afternoon, and in the night, we passed over: where to our admiration we saw the sea falling down into the gulfe with a mightie onset and roaring, and with divers circular motions like whirle pooles, in such sort forcible streames passe thorow the arches of hindges.
August								
Noone the	1	24	S. E. by S.	16	61	10	W. S. W.	The true course, &c. This first of August we fell with the promontory the sayd gulfe of second passage, having coasted by divers courses for our regard, a great banke of the ice driven out of that gulfe.
Noone the	2	48	S. S. E.	16	60	26	Variable.

	15							This 15 of September 1587 we arrived at Dartmouth.

Under the title of the *houres*, where any number exceedeth 24, it is the summe or casting vp of so many other dayes and parts of dayes going next before, as containe the foresayd summe.

A report of Master John Davis of his three Voyages made for the
discoverie of the Northwest passage, taken out of a Treatise of his, Intituled
The worlds Hydrographicall description.

Now there onely resteth the North parts of America, upon which coast my selfe haue had most experience of any in our age: for thise I was that waye imployed for the discoverie of this notable passage, by the honourable care and some charge of Syr Francis Walsingham knight, principall secretary to her Maiestie, with whom diuers noble men and worshipfull marchants of London ioynded in purse and willingness for the furtherance of that attempt, but when his honour dyed the voyage was friendlesse, and mens mindes alienated from aduenturing therein.

In my first voyage not experienced of the nature of those climates, and hauing no direction either by Chace, Globe, or other certaine relation in what altitude that passage was to be searched, I shaped a Northerly course and so sought the same toward the South, and in that my Northerly course I fell upon the shore which in ancient time was called Groenland, five hundred leagues distant from the Durleys Westnorthwest Northerly, the land being very high and full of mightie mountaines all couered with snow, no viewe of wood, grasse or earth to be seene, and the shore two leagues off into the sea so full of yce as that no shipping could by any meanes come neere the same. The lothsome view of the shore, and irksome noyse of the yce was such, as that it bred strange conceites among vs, so that we supposed the place to be wast and voyd of any sensible or vegitable creatures, whereupon I called the same Desolation: so coasting this shore towards the South in the latitude of sixtie degrees, I found it to trend towards the West, I still followed the leading ther of in the same height, and after fifty or sixtie leagues it fayled and lay directly North, which I still followed, and in thirtie leagues sayling upon the West side of this coast by me named Desolation, we were past al the yce and found many greene & pleasant Isles bordering upon the shore, but the hills of the maine were still couered with great quantities of snow, I brought my ship among those Isles and there moored to refresh our selues in our weary trauell, in the latitude of sixtie foure degrees or there about. The people of the countrey hauing espyed our shippes came downe vnto vs in their Canoas, & holding by their right hand to the Sunne and crying Yliaout, would strike their breasts: we doing the like the people came aboard our shippes, men of good stature, unbear- ded, small eyed and of tractable conditions, by whome as signes would permit, we understood that towards the North and West there was a great sea, and vsing the people with kindenes in gi- uing them nayles and knives which of all things they most desired, we departed, and finding the sea free from yce supposing our selues to be past al daunger we shaped our course Westnorthwest thinking thereby to passe for China, but in the latitude of sixtie five degrees we fell with another shore, and there found another passage of twenty leagues broad directly West into the same, which we supposed to be our hoped straight, we entered into the same thirty or forty leagues, finding it neither to wyden nor streighten, then considering that the peere was spent (for this was the fine of August) not knowing the length of the straight and dangers thereof, we tooke it our best course to returne with notice of our good successe for this small time of search. And so returning in a sharpe fret of Westely windes the 29. of September we ariued at Dartmouth. And acquainting ma- ster Secretary Walsingham with the rest of the honourable and worshipfull aduenturers of all our proceedings, I was appointed againe the second yere to search the bottome of this straight, be- cause by all likelihood it was the place and passage by vs laboured for. In this second attempt the marchants of Exeter, and other places of the West became aduenturers in the action, so that being sufficiently furnished for sixe moneths, and hauing direction to search these straights, untill we found the same to fall into another sea upon the West side of this part of America, we should a- gaine returne: for then it was not to be doubted, but shipping with trade might safely be conueied to China and the parts of Asia. We departed from Dartmouth, and arriuing upon the South part of the coast of Desolation coasted the same upon his West shore to the latitude of sixtie five degrees, and there ancozed among the Isles bordering upon the same, where we refreshed our selues, the people of this place came likewise vnto vs, by whom I understood through their signes that towards the North the sea was large. At this place the chiefe ship whereupon I trusted, cal- led the Mermayd of Dartmouth, found many occasions of discontentment, and being unwilling to proceed, shee there forsook me. Then considering how I had given my faith and most constant promise to my worshipfull good friend master William Sanderfon, who of all men was the great- est aduenturer in that action, and tooke such care for the performance thereof, that he hath to my knowledge

rica, all
Islands.

The 3. voyage.

knowledge at one time disbursed as much money as any five others whatsoeuer out of his owne purse, when some of the companie haue bene slacke in giuing in their aduenture: And also knowing that I should loose the fauor of *H. Secretary Wallingham*, if I should shrink from his direction; in one small barke of 30 Tunnes, whereof *H. Sanderson* was owner, alone without farther company I proceeded on my voyage, and arriuing at these straights followed the same 80 leagues, vntill I came among many Islands, where the water did ebbe and flow like sadome upright, and where there had bene great trade of people to make traine. But by such things as there we found, wee knew that they were not Christians of Europe that had vled that trade: in fine by searching with our boat, we found small hope to passe any farther that way, and therefore recovered the sea and coasted the shore towards the South, and in so doing (for it was too late to search towards the North) we found another great inlet neere 40 leagues broad, where the water entred in with violent swift-nesse, this we also thought might be a passage: for no doubt the North partes of America are all Islands by ought that I could perceiue therein: but because I was alone in a small barke of thirtie tunnes, and the yeere spent, I entred not into the same, for it was now the seventh of September, but coasting the shore towards the South wee saw an incredible number of birds: hauing diuers fishermen aboard our barke they all concluded that there was a great skull of fish, we being improuided of fishing furniture with a long spike nayle made a hooke, and fastened the same to one of our sounding lines, before the bait was changed we tooke more then fortie great Codds, the fish swimming so abundantly thicke about our barke as is incredible to bee reported, of which with a small portion of salt that we had, we preserved some thirtie couple, or thereabouts, and so returned for England. And hauing reported to *H. Secretarie Wallingham* the whole successe of this attempt, he commanded me to present vnto the most honourable Lord high Treasurour of England, some part of that fish: which when his Lordship saw, & heard at large the relation of this second attempt, I receiued fauourable countenance from his honour, aduising me to prosecute the action, of which his Lordship conceiued a very good opinion. The next yeere, although diuers of the aduenturers fell from the Action, as all the Westerne marchants, and most of those in London: yet some of the aduenturers both honorable & worshipfull continued their willing fauor and charge, so that by this meanes the next yeere two shippes were appointed for the fishing and one pinnesse for the discouerie.

Departing from Dartmouth, through Gods mercifull fauour, I arriued at the place of fishing, and there according to my direction I left the two shippes to follow that busines, taking their faithfull promise not to depart vntill my returne vnto them, which should be in the fine of August, and so in the barke I proceeded for the discouerie: but after my departure, in sixteene dayes the two shippes had finished their voyage, and so presently departed for England, without regard of their promise: my selfe not distrusting any such hard measure proceeded for the discouerie, and followed my course in the free and open sea betweene North and North-west to the latitude of 67 degrees, and there I might see America West from me, and Gronland, which I called Desolation, East: then when I saw the land of both sides I began to distrust it would prooue but a gulfe: notwithstanding desires to know the full certainty I proceeded, and in 68 degrees the passage enlarged, so that I could not see the Westerne shore: thus I continued to the latitude of 73 degrees, in a great sea, free from yce, coasting the Westerne shore of Desolation: the people came continually rowing out vnto me in their Canoas, twenty, forty, and one hundred at a time, and would giue me fishes dyed, Salmon, Salmon peale, Cod, Caplin, Lumpe, Stone-basse and such like, besides diuers kinds of birds, as Partridge, Felant, Gulls, Sea birds and other kindes of flesh: I still laboured by signes to know from them what they knew of any sea toward the North, they still made signes of a great sea as we vnderstood them, the I departed from that coast, thinking to discouer the North partes of America: & after I had sailed towards the West 40 leagues, I fel vpon a great banke of yce: the winde being North and blew much, I was constrained to coast the same toward the South, not seeing any shore West from me, neither was there any yce towards the North, but a great sea, free, large very salt and blew, & of an vnsearchable depth: So coasting towards the South I came to the place where I left the shippes to fish, but found them not. Then being forsaken & left in this distresse referring my selfe to the mercifull prouidence of God, I shaped my course for England, & vnhoped for of any, God alone releeuing me, I arriued at Dartmouth. By this last discouery it seemed most manifest that the passage was free & without impediment toward the North: but by reason of the Spanisch fleet & vnfortunate time of *H. Secretaries* death, the voyage was omitted & neuer sithens attempted. The cause why I vse this particuliar relation of all my proceedings for this discouery, is to stay this objection, why hath not Davis discouered this passage being thise that wayes imploied? How far I proceeded & in what forme this discouery lieth, doth appeare vpon the Globe which *H. Sanderson* to his very great charge hath published, for the which he deserueth great fauor & commendations.

The

The discouerie of the Isles of *Frisland, Iseland, Engroneland, Estotiland, Drogeo and Icaria*: made by two brethren, namely *M. Nicholas Zeno*, and *M. Antonio* his brother: Gathered out of their letters by *M. Francisco Marcolino*.

In the yere of our Lord 1200 there was in the Citie of Venice a famous Gentleman, named *Pesser Marino Zeno*, who for his great vertue and singular wisdom, was called and elected gouernour in certaine commonwealths of Italy: in the administration whereof he bore himselfe so discretly, that he was beloued of all men, and his name greatly reuerenced of those that neuer knew or saw his person. And amongst sundry his worthy workes, this is recorded of him, that he pacified certaine grievous ciuile dissentions that arose among the citizens of Verona: whereas otherwise, if by his graue aduise and great diligence they had not bene preuented, the matter was likely to breake out into hot broyles of warre. He was the first Podesta, or Ruler, that the Common wealth of Venice appointed in Constantinople in the yere 1205 when our state had rule thereof with the French Barons. This Gentleman had a sonne named *Pesser Pietro*, who was the father of the Duke *Rinieri*, which Duke dying without issue, made his heire *P. Andrea*, the sonne of *P. Marco* his brother. This *P. Andrea* was Captaine Generall and Procurator, a man of great reputation for many rare partes, that were in in him. He had a sonne *P. Rinieri*, a worthy Senatour and prudent Counsellour: of whom descended *P. Pietro* Captaine Generall of the league of the Christians against the Turkes, who was called *Dragon*, for that in his shield, in stead of a Manfrone which was his armes at the first, he bare a Dragon. He was father to *P. Carlo II* grande the famous Procurator and Captaine generall against the Genowayes in those cruell warres, when almost all the cheiffe Princes of Europe did oppugne and seeke to ouerthrow our Empire and libertie, wherein by his great valiancie and prowesse, as *Furius Camillus* deliuered Rome, so he deliuered his countrey from the present perill it was in, being ready to become a pray and spoile vnto the enemy: wherefore he was afterwarde surnamed the *Lyon*, and for an eternall remembrance of his fortitude and valiant exploits he gaue the *Lyon* in his armes. *P. Carlo* had two brethren, *P. Nicolo*, the knight and *P. Antonio*, the father of *P. Dragon*, of whom issued *P. Caterino*, the father *P. Pietro da i Crocicchieri*. This *P. Pietro* had sonnes *P. Caterino*, that died the last yere, being brother vnto *P. Francisco*, *P. Carlo*, *P. Battista*, and *P. Vincenzo*: Which *P. Caterino* was father to *P. Nicolo*, that is yet liuing.

Now *P. Nicolo*, the knight, being a man of great courage, after this aforesaid Genouan warre of *Chioggia* that troubled so our predecessours, entred into a great desire and fanisie to see the fashions of the worlde and to trauell and acquaint himselfe with the maners of sundry nations and learne their languages, whereby afterwards vpon occasions he might be the better able to doe seruice to his countrey, and purchase to himselfe credite and honour. Wherefore he caused a ship to be made, and hauing furnished her at his proper charges (as he was very wealthy) he departed out of our seas and passing the straites of *Gibraltar*, he sailed for certaine dayes vpon the Ocean, keeping his course still to the Northwards, with intent to see *England* and *Flanders*. Where being assailed in those Seas by a terrible tempest, he was so tossed for the space of many dayes with the sea and winde, that he knew not where he was, till at length he discouered land, and not being able any longer to susteine the violence of the tempest the ship was cast away vpon the Isle of *Frisland*. The men were saued, and most part of the goods that were in the ship. And this was in the yere 1380. The inhabitants of the Island came running in great multitudes with weapons to set vpon *P. Nicolo* and his men, who being sore weather-beaten and ouer-laboured at sea, and not knowing in what part of the worlde they were, were not able to make any resistance at all, much lesse to defend themselves couragiously, as it behooued them in such a dangerous case. And they should haue bene doubtlesse very discourteously intreated and cruelly handled, if by good hap there had not bene hard by the place a prince with armed people. Who vnderstanding that there was euen at that present a great ship cast away vpon the Island, came running at the noyle and outcries that they made against our poore Mariners, and dying away the inhabitants, spake in Latine and asked them what they were and from whence they came, and perceiuing that they came from Italy and that they were men of the said Countrey, he was surprised with maruelous great ioy. Wherefore promising them all, that they should receiue no discourtesie, and that they were come into a place where they should be well used and very welcome, he tooke them into his protection vpon his faith. This was a great Lord, and possessed certaine Islands called *Porland*, lying on the South side of *Frisland*, being the richest and most populous of all those parts, his name was *Zichmni*: and beside the said little Islands, he was Duke of *Sorani*, lying ouer against *Scotland*.

The ship of *P. N. Zeno* cast away vpon *Frisland* in Aug 1380.

A foraine prince hapning to be in *Frisland* with armed men, when *P. Zeno* suffered shipwacke there came vnto him and spake Latine.

Zichmni prince of *Porland* or Duke of *Zorani*.

Frisland the
king of Nor-
wayes.

Of these North parts I thought good to draw the copie of a Sea carde, which amongst other antiquities I haue in my house, which although it be rotten through many yeeres, yet it falleth out indifferent well: and to those that are delighted in these things, it may serue for some light to the vnderstanding of that, which without it cannot so easily be conceiued. Zichinni being Lord of those Sygnoies (as is said) was a very warlike and valiant man and aboue all things famous in Sea causes. And hauing the yere before giuen the ouerthrow to the king of Norway, who was Lord of the Island, being desirous to winne fame by feates of armes, hee was come on land with his men to giue the attempt for the winning of Frisland, which is an Island much bigger then Ireland. Wherefore seeing that M. Nicolo was a man of iudgement & discretion, and very expert both in sea matters and martiall affaires, hee gaue him commission to goe aboard his Navy with all his men, charging the captaine to honour him and in all things to vie his counsaile.

This Navy of Zichinni was of thirteene vessels, whereof two onely were rowed with oares, the rest small barkes and one ship, with the which they sayled to the Westwards and with little paines wonne Ledouo and Ilose and diuers other small Islands: and turning into a bay called Sudero, in the haue of the towne named Sanestol, they tooke certaine small barks laden with fish. And here they found Zichinni, who came by land with his armie conquering all the countrey as he went: they stayed here but a while, and led on their course to the Westwards till they came to the other Cape of the gulf or bay, then turning againe, they found certaine Islandes and broken lands which they reduced al vnto the Signorie & possession of Zichinni. These seas, for as much as they sailed, were in manner nothing but sholes & rocks, in so much that if M. Nicolo and the Venetian mariners had not bene their Pilots, the whole fleet in iudgement of all that were in it, had bene cast away, so small was the skill of Zichinnis men, in respect of ours, who had bene trained vp in the arte and practise of Nauigation all the dayes of their life. Now the fleet hauing done such things as are declared, the Captaine, by the counsaile of M. Nicolo, determined to goe a land, at a towne called Bondendon, to vnderstand what successe Zichinni had in his warres: where they heard to their great content, that he had fought a great battell and put to flight the armie of his enemy: by reason of which victorie, they sent Embassadors from all parts of the Island to yeeld the countrey vp into his handes, taking downe their ensignes in euery towne and castle: they thought good to stay in that place for his comming, it being reported for certaine that hee would be there very shortly. At his comming there was great congratulation and many signes of gladnesse shewed, as well for the victorie by land, as for that by sea: for the which the Venetians were honoured and extolled of all men, in such sort that there was no talke but of them, and of the great valour of M. Nicolo. Wherefore the prince, who was a great fauourer of valiant men and especially of those that could behaue themselves well at sea, caused M. Nicolo to be brought before him, and after hauing commended him with many honourable speeches, and praysed his great industrie and dexteritie of wit, by the which two things he acknowledged himselfe to haue receiued an inestimable benefite, as the sauing of his fleet and the winning of many places without any great trouble, he made him knight, and rewarded his men with many rich & bountifull gifts. Then departing from thence they went in triumphing maner toward Frisland, the chiefe cite of that Island, situate on the Southeast side of the Isle, within a gulf, as there are many in that Island. In this gulf or bay there is such great abundance of fish taken, that many ships are laden therewith to serue Flanders, Britain, England, Scotland, Norway, and Denmarke, and by this trade they gather great wealth.

And thus much is taken out of a letter, that M. Nicolo sent to M. Antonio his brother, requesting that he would seeke some meanes to come to him. Wherefore he who had as great desire to trauaile as his brother, bought a ship, and directed his course that way: & after he had sailed a great while and escaped many dangers, he arrived at length in safetie with M. Nicolo, who receiued him very ioyfully, for that he was his brother not onely in flesh and blood, but also in valour and good qualities. M. Antonio remained in Frisland and dwelt there for the space of 14 yeres, 4 yeres with M. Nicolo, and 10 yeres alone. Where they came in such grace and fauour with the Prince, that he made M. Nicolo Captaine of his Navy, and with great preparation of warre they were sent forth for the enterprise of Eskland, which lyeth vpon the coast betwene Frisland and Norway, where they did many dammages: but hearing that the king of Norway was coming towardes them with a great fleet, they departed with such a terrible flaw of winde, that they were driuen vpon certaine sholes: were a great part of their ships were cast away, the rest were saued vpon Grisland, a great Island but dishabited. The king of Norway his fleet being taken with the same storme, did vterly perish in those seas: Whereof Zichinni hauing notice, by a ship of his enemies that was cast by chance vpon Grisland, hauing repayred his fleet, and perceiuing himselfe rather neere vnto the Islands, determined to set vpon Island, which together with the rest, was subiect

to the king of Norway: but he found the countrey so well fortified and defended, that his fleete being so small, and very ill appointed both of weapons and men, he was glad to retire. And so he left that enterpryse without performing any thing at all: and in the same chanel he assaulted the other Isles called Islande, which are seven, Talas, Broas, Iscant, Trans, Mimant, Dambere, and Bres: and hauing spoyled them all, hee built a fort in Bres, where he left M. Nicolo, with certaine small barkes and men and munition. And now thinking he had done wel for this voyage, with those few ships which were left he returned safe into Frisland, M. Nicolo remaining now in Bres, determined in the spring to go forth and discouer land: wherefore arming out three small barkes in the moneth of July, he sayled to the Northwards, and arrived in Engroneland. Where he found a Monasterie of Fryers, of the order of the Predicators, and a Church dedicated to Saint Thomas, hard by a hill that casteth forth fire, like Vesuuus and Etna.

Engroneland,
Breaching
Fryers of
Saint Thomas,

There is a fountaine of hot burning water with the which they heate the Church of the Monasterie and the Fryers chambers, it commeth also into the kitchen so boyling hot, that they vse no other fire to dresse their meate: and putting their breade into brasle pots without any water, it doth bake as it were in an hot ouen. They haue also smal gardens couered ouer in the winter time, which being watered with this water, are defended from the force of the snow and colde, which in those partes being situate farre vnder the pole, is very extreme, and by this meanes they produce flowers and fruites and herbes of sundry sorts, euen as in other temperate countries in their seasons, in such sort that the rude and sauage people of those partes seeing these supernaturall effects, doe take those Fryers for Gods, and bring them many presents, as chickens, flesh, and diuers other things, and haue them all in great reuerence as Lords. When the frost and snowe is great, they heate their houses in maner before said, and wil by letting in the water or opening the windowes, at an instant temper the heate and cold at their pleasure. In the buildings of the Monasterie they vse no other matter but that which is ministred vnto them by the fire: for they take the burning stones that are cast out as it were sparkles or cinders at the ficrie mouth of the hill, and when they are most enflamed, cast water vpon them, whereby they are dissolued and become excellent white lime and so tough that being contriued in building it lasteth for euer. And the very sparkles after the fire is out of them doe serue in stead of stones to make walles and vaultes: for being once colde they wil neuer dissolue or breake, except they be cut with some iron toole, and the vaultes that are made of them are so light that they need no sustentacle or prop to holde them vp, and they will endure continually very faire and whole. By reason of these great commodities, the Fryers haue made there so many buildings and walles that it is a wonder to see. The couerts or roofes of their houses for the most part are made in maner following: first they rayse vp the wall vp to his full height, then they make it enclining or bowing in by litle and litle in fourme of a vault. But they are not greatly troubled with raine in those partes, because the climate (as I haue said) is extreme colde: for the first snow being fallen, it thaweth no more for the space of nine moneths, for so long dureth their winter. They feede of the flesh of wilde foule and of fish: for whereas the warme water falleth into the sea, there is a large and wide hauen, which by reason of the heate of the water, doeth neuer freeze all the winter, by meanes whereof there is such concourse and flocks of sea foule and such abundance of fish, that they take thereof infinite multitudes, whereby they maintaine a great number of people round about, which they kepe in continuall worke, both in building and taking of fowles and fish, and in a thousand other necessarie affaires and busines about the Monasterie.

Winter of 9
moneths.

Their houses are built about the hill on euery side, in forme round, and 25 foote broad, and in mounting vpwards they goe narrower and narrower, leauing at the top a litle hole, whereat the aire commeth in to giue light to the house, and the floze of the house is so hot, that being within they feele no cold at all. Whither in the Summer time come many barkes from the Islands their about, and from the cape about Norway, and from Trondon, and bring to the Fryers al maner of things that may be desired, taking in change thereof fish, which they dry in the sunne or in the cold, & skins of diuers kindes of beasts. For the which they haue wood to burne and timber very artificially carued, and cozne, and cloth to make them apparell. For in change of the two aforesaid commodities all the nations bordering round about them couet to trafficke with them, and so they without any trauell or expences haue that which they desire. To this Monasterie resort Fryers of Norway, of Sueria and of other countreys, but the most part are of Islande. There are continually in that part many barks, which are kept in there by reason of the sea being frozen, waiting for the spring of the yere to dissolue the yce. The fishers boates are made like vnto a weauers shuttle: taking the skins of fishes, they fashion them with the bones of the same fishes, and sowing them together in many doubles they make them so sure and substantiall, that it is miraculous to see, howe in tempests they will shut themselves close within and let the sea and winde earp them they care not whether,

from these
parts into
England.

ther without any feare either of breaking or drowning. And if they chance to be driven vpon any rocks, they remaine sound without the least bruse in the world: & they haue as it were a sleeue in the bottome, which is tyed fast in the middle, and when there cometh any water into the boat, they put it into the one halfe of the sleeue, then fastening the ende thereof with two pieces of wood and loosing the band beneath, they conuey the water forth of the boat: and this they doe as often as they haue occasion, without any perill or impediment at all.

Moreouer, the water of the Monastery, being of sulphurous or hyminstomie nature, is conueyed into the lodgings of the principall Fryers by certaine vesselles of brasse, tinn, or stone, so hot that it heateth the place as it were a stoue, not carying with it any stinke or other noysome smell.

Besides this they haue another conueyance to bring hot water with a wall vnder the ground, to the end it should not freeze, vnto the middle of the court, where it falleth into a great vessel of brasse that standeth in the middle of a boyling fountaine, and this is to heat their water to drinke & to water their gardens, & thus they haue from the hill the greatest commodities that may be wished: and so these Fryers employ al their trauaile and studie for the most part in trimming their gardens and in making faire and beautifull buildings, but especially handsome and commodious: neyther are they destitute of ingenious and painefull artificers for the purpose, for they giue very large payment, and to them that bring them fruits and seedes they are very bountifull, and giue they care not what. So that there is great resort of workemen and masters in diuers faculties, by reason of the good gaires and large allowance that is there.

In the Monastery of Saint Thomas most of them spake the Latine tongue. The end of the 2. letter.

The most of them speake the Latine tongue, and specially the superiours and principals of the Monastery. And this is as much as is knowen of Engloneland, which is all by the relation of M. Nicolo, who maketh also particular description of a riuer that he discovered, as is to be scene in the carde that I drew. And in the end M. Nicolo, not being vled & acquainted with these cruell coldes, fel sicke, and a litle while after returned into Frisland, where he dyed. He left behind him in Venice, two sonnes, M. Giouanni and M. Toma, who had two sonnes, M. Nicolo the father of the famous Cardinal Zeno, and M. Pietro of whom descended the other Zenos, that are liuing at this day.

N. Zeno dyed in Frisland.

Now M. Nicolo being dead, M. Antonio succeeded him both in his goods, and in his dignities and honour: and albeit he attempted diuers wayes, and made great supplication, he could neuer obtaine licence to returne into his countrey. For Zichmni, being a man of great courage and valour, had determined to make himself Lord of the sea. Wherefore vsing alwayes the counsaile and seruice of M. Antonio, he determined to send him with certaine barks to the Westwards, for that towards those parts, some of his fishermen had discouered certaine Islands very rich and populous: which discouery M. Antonio, in a letter to his brother M. Carlo, recounteth from point to point in this maner, sauing that we haue changed some old words, leauing the matter entire as it was.

The discouery of Estotiland Westward. Sixe fishermen taken.

Sixe and twentie yeeres agoe there departed foure fisher boats, the which, a mightie tempest arising, were tossed for the space of many dayes very desperately vpon the Sea, when at length, the tempest ceasing, and the wether waxing faire, they discovered an Island called Estotiland, lying to the Westwards about 1000 Miles from Frisland, vpon the which one of the boats was cast away, and sixe men that were in it were taken of the inhabitants and brought into a faire and populous citie, where the king of the place sent for many interpreters, but there was none could be found that vnderstood the language of the fishermen, except one that spake Latine, who was also cast by chance vpon the same Island, who in the behalfe of the king asked them what countrey men they were: and so vnderstanding their case, rehearsed it vnto the king, who willed that they should tary in the countrey: wherefore they obeying his commandement, for that they could not otherwise doe, dwelt sixe yeeres in the Island, & learned the language, and one of them was in diuers partes of the Island, and reporteth that it is a very rich countrey, abounding with all the commodities of the world, and that it is litle lesse then Island, but farre more fruitfull, hauing in the middle thereof a very high mountain, from the which there spring foure riuers that passe through the whole countrey.

Fishermen of Frisland speake Latine.

Sixe were sixe yeeres in Estotiland. One of the fishermen of Frisland, reporteth of Estotiland, that it is a very rich, abounding with all the commodities of the world. Abundance of golde. Trade from Estotiland, to Engloneland: Skins, brimstone, and pitch: golde, corne, and beere, of ale. Many cities and castles.

The inhabitants are very wittie people, and haue all artes and faculties, as we haue: and it is credible that in time past they haue had trafficke with our men, for he saith, that he saw Latin bookes in the kings Librarie, which they at this present do not vnderstand: they haue a peculiar language, and letters or characters to themselves. They haue mines of all maner of mettals, but especial they abound with gold. They haue their trade in Engloneland, from whence they bring furs, brimstone & pitch: and he saith, that to the Southwards, there is a great populous countrey very rich of gold. They sow corne, and make beere and ale, which is a kinde of drinke that North people do vse as we do wine. They haue mighty great woods, they make their buildings with wals, & there are many cities and castles. They build small barks and haue sayling, but they haue not the load stone, nor know not the vse of the compasse. Wherefore these fishers were had in great estimation, inso-

much

much that the king sent them with twelue barks to the Southwards to a countrey which they call Drogio: but in their voyage they had such contrary weather, that they thought to haue perished in the sea: but escaping that cruell death, they fell into another more cruell: for they were taken in the countrey and the most part of them eaten by the Sauage people, which fed vpon mans flesh, as the sweetest meat in their iudgements that is.

But that fisher with his fellowes shewing them the manner of taking fish with nets, saued their liues: and would goe euery day a fishing to the sea and in fresh riuers, and take great abundance of fish and giue it to the chiefe men of the countrey, whereby he gate himselfe so great fauour, that he was very well beloued and honoured of euery one.

The fame of this man being spread abroad in the countrey, there was a Lord there by, that was very desirous to haue him with him, and to see how he vsed his miraculous arte of catching fish, in so much that he made warre with the other Lord with whom he was before, and in the end preuailling, for that he was more mightie and a better warriour, the fisherman was sent vnto him with the rest of his company. And for the space of thirteene yeres that he dwelt in those parts, he saith, that he was sent in this order to more then 25 Lords, for they had continuall war amongst themselves, this Lord with that Lord, and he with another, onely to haue him to dwell with them: so that wandering by and downe the countrey without any certaine abode in one place, he knew almost all those parts. He saith, that it is a very great countrey & as it were a new world: the people are very rude and voide of all goodnesse, they goe all naked so that they are miserably vexed with colde, neither haue they the wit to couer their bodies with beasts skins which they take in hunting, they haue no kinde of mettall, they liue by hunting, they cary certaine lances of wood made sharpe at the point, they haue bowes, & strings wherof are made of beasts skins: they are very fierce people, they make cruell warres one with another, and eate one another, they haue gouernours & certaine lawes very diuers among themselves. But the farther to the Southwestwards, the more ciuillie there is, the ayre being somewhat temperate, so that there they haue cities and temples to idols, wherein they sacrifice men and afterwards eate them, they haue there some knowledge and vse of gold and silver.

Now this fisherman hauing dwelt so many yeres in those countreys purposed, if it were possible, to returne home into his countrey, but his companions despairing euer to see it againe, let him goe in Gods name, and they kept themselves where they were. Wherefore he bidding them farewell, fled through the woods towards Drogio, and was very well receiued of the Lord that dwelt next to that place, who knew him and was a great enemy of the other Lord: and so running from one Lord to another, being those by whom he had passed before, after long time & many trauels he came at length to Drogio, where he dwelt three yeres. When as by good fortune he heard by the inhabitants, that there were certaine boates arriued vpon the coast; wherefore entring into good hope to accomplish his intent, he went to the sea side, and asking them of what countrey they were, they answered of Estoriland, whereto he was exceeding glad, and requested that they would take him in to them, which they did very willingly, and for that he had the language of the countrey, and there was none that could speake it, they vsed him for their interpreter.

And afterward he frequented that trade with them in such sort, that he became very rich, and so furnishing out a barke of his owne, he returned into Frislande, where he made reporte vnto this Lord of that wealthy countrey.

And he is thoroughly credited because of the mariners, who approue many strange things, that he reporteth to be true. Wherefore this Lord is resolu'd to send me forth with a fleet towards those parts, and there are so many that desire to go in the voyage, for the noueltie and strangenesse of the thing, that I thinke we shall be very strongly appointed, without any publike expence at all. And this is the tenor of the letter before mentioned, which I haue here set downe to giue intelligence of another voyage that D. Antonio made, being set out with many barkes, and men, notwithstanding he was not captaine, as he had thought at the first he should: for Zichmni went in his owne person: and concerning that matter I haue a letter in forme following.

One great preparation for the voyage of Estoriland was begun in an vnlucky houre: for three dayes before our departure the fisherman died that should haue bene our guide: notwithstanding this Lord would not giue ouer the enterprize, but instead of the fisherman tooke certaine mariners that returned out of the Island with him: and so making our nauigation to the Westwards, we discovered certaine Islands subiect to Frisland, and hauing passed certaine shelles we stayed at Ledouo for the space of 7 dayes to refresh our selues, and to furnish the fleet with necessarie provision. Departing from thence we arriued the first of Iuly at the Isle of Ilose: and for that the wind made for vs, we stayed not there, but passed forth, and being vpon the maine sea, there arose immediately a cruel tempest, wherewith for eight dayes space we were miserably vexed, not knowing where we

A countrey called Drogio.

The 6 fishermen of Frisland onely saued, by shewing the manner to take fish.

The chiefe of the 6 fishers, specified before and his companions.

In the space of 13 yeres he serued 25 lords of Drogio.

He returned from Estoriland to Frisland, Zichmni minded to send D. Antonio Zeno, with a fleet towards those parts of Estoriland.

The 4 letter. The fisherman dyed that should haue bene interpreter. Certaine mariners taken in his neede, which came with him from Estoriland, Isle Ilose.

Zichmni his
discouerie of
the Island
Icaria.

An Island man
in Icaria.

The kings of
of Icaria called
Icari after the
name of the
first king of
that place,
who as they
report, was
sonne to Deda-
lus king of
Scots.
Icarian Sea.

The people
of Icaria best
rouns of the
Italian
tongue.
Ten men of
ten sundry
nations.

Infinite mul-
titudes of ar-
med men in
Icaria.

Zichmni depar-
ted from Icaria
Westwards.

100 men sent
to discerie the
countrey.

were & a great part of the barks were cast away, afterward the weather waxing faire, we gathered by the broken peices of the barks that were lost, and sayling with a prosperous winde we discouered land at West. Wherefore keeping our course directly vpon it, we arrived in a good and safe harborough, where we saw an infinit companie of people ready in armes, come running very furiously to the water side, as it were for defence of the Island. Wherefore Zichmni causing his men to make signes of peace vnto them, they sent 10 men vnto vs that could speake ten languages, but we could vnderstand none of them, except one that was of Island. He being brought before our prince and asked, what was the name of the Island, and what people inhabited it, & who gouerned it, answered, that the Island was called Icaria, and that all the kings that reigned there, were called Icari, after the name of the first king of that place, which as they say was the sonne of Dedalus king of Scotland, who conquered that Island, left his sonne there for king, and left them those lawes that they retaine to this present, and after this, he desiring to sayle further, in a great tempest that arose, was drowned, wherefore for a memoriall of his death, they call those seas yet, the Icarian Sea, and the kings of the Island Icari, and for that they were contented with that state, which God had giuen them, neither would they alter one iote of their lawes and customes, they would not receiue any stranger: wherefore they requested our prince, that hee would not seeke to violate their lawes, which they had receiued from that king of worthy memory and obserued very duly to that present: which if he did attempt, it would rebound to his manifest destruction, they being all resolutely bent rather to leaue their life, then to loose in any respect the vse of their lawes. Notwithstanding, that we should not thinke they did altogether refuse conuersation and traffick with other men, they tolde vs for conclusion that they would willingly receiue one of our men, & preferre him to be one of the chiefe amongst them, onely to learne my language the Italian tongue, and to be informed of our manners and customes, as they had already receiued those other ten of ten sundry nations, that came into their Island. To these things our prince answered nothing at all, but causing his men to seke some good harborough, he made signes as though he would depart, and sayling round about the Island, he espied at length a harborough on the East side of the Island, where hee put in with all his Fleet: the mariners went on land to take in wood and water, which they did with as great speede as they could, doubting least they should be assaulted by the inhabitants, as it fell out in deed, for those that dwelt therabouts, making signes vnto the other with fire and smoke, put themselves presently in armes and the other comming to them, they came all running downe to the sea side vpon our men, with bowes and arrowes, and other weapons, so that many were slaine and diuers sore wounded. And we made signes of peace vnto them, but it was to no purpose, for their rage increased more and more, as though they had fought for land and liuing. Wherefore we were forced to depart, and to sayle along in a great circuite about the Islande, being alwayes accompanied vpon the hill tops & the sea coasts with an infinite number of armed men: and so doubling the Cape of the Island towards the North, we found many great holdes, amongst the which for the space of ten dayes we were in continuall danger of loosing our whole fleet, but that it pleased God all that while to send vs faire weather. Wherefore proceeding on till we came to the East cape, we saw the inhabitants still on the hill tops and by the sea coast keepe with vs, and in making great outcries and shooting at vs a farre off, they vttered their old spitefull affection towards vs. Wherefore wee determined to stay in some safe harborough, and see if wee might speake once againe with the Islander, but our determination was frustrate: for the people more like vnto beasts then men stood continually in armes with intent to beat vs back, if we should come on land. Wherefore Zichmni seeing he could not preuaile, and thinking if he should haue perseuered and followed obstinately his purpose, their victuals would haue failed them, he departed with a fayre wind and sailed fixe dayes to the Westwards, but the winde changing to the Southwell, and the sea waxing rough, wee sayling 4 dayes with the wind the poeple, and at length discouering land, were afraid to approach nere vnto it, the sea being growen, and we not knowing what land it was: but God so prouided for vs, that the winde ceasing there came a great calme. Wherefore some of our company rowing to land with oares, returned & brought vs newes to our great comfort, that they had found a very good countrey and a better harborough: vpon which newes we towed our ships and smal barks to land, and being entred into the harborough, we saw a farre off a great mountain, that cast forth smoke, which gaue vs good hope that we should finde some inhabitants in the Island, neither would Zichmni rest, although it were a great way off, but sent 100 souldiers to search the countrey and bring report what people they were that inhabited it & in the meane time they tooke in wood and water for the prouision of the fleet, and catcht great store of fish and sea soule and found such aboundance of birds egges, that our men that were halfe famished, were filled therewithall. Whiles we were riding here, began the moneth of June, at which time the aire in the Island was

so temperate and pleasant as is impossible to expresse; but when we could see no people at all, we suspected greatly that this pleasant place was desolate and dishabited. We gaue name to the heauen calling it Trin, and the point that stretched out into the sea, we called Capo de Trin. The 100 soldiers that were sent forth, 8 dayes after returned, and brought word that they had bene through the Island and at the mountaine, and that the smoke was a naturall thing proceeding from a great fire that was in the bottome of the hill, and that there was a spring from which issued a certaine water like pitch which ran into the sea, and that thereabouts dwelt great multitudes of people halfe wilde, hiding themselves in caues of the ground, of small stature, and very fearefull; for as soone as they saw them they fled into their holes, and that there was a great riuer and a very good and safe harborough, Zichmni being thus informed, and seeing that it had a wholesome and pure aire, and a very fruitfull soyle and faire riuers, with sundry commodities, fell into such liking of the place, that he determined to inhabite it, and built there a citie. But his people being weary and faint with long and tedious trauell began to murmure, saying that they would returne into their countrey, for that the winter was at hand, and if they entred into the harborough, they should not be able to come out againe before the next Summer. Wherefore he retaining onely the barks with Dares and such as were willing to stay with him, sent all the rest with the shippes backe againe, and willed that J, (though unwilling) should be their captaine. I therefore departing, because I could not otherwise chuse, sayled for the space of twenty dayes to the Eastwards without sight of any land; then turning my course towards the Southeast, in 5. dayes I discovered land, and found my selfe vpon the Isle of Neome, and knowing the countrey, I perceiued I was past Island: wherefore taking in some fresh victuals of the inhabitants being subiect to Zichmni, I sayled with a faire winde in three dayes to Frisland, where the people, who thought they had lost their prince, because of his long absence, in this our voyage receiued vs very ioyfully.

The 100 soldiers returned which had bene through the Island, report what they saw and found.

Sp. Antonio Zeni, made chiefe captaine of those shippes which went back to Frisland,

What followed after this letter I know not but by coniecture, which I gather out of a piece of another letter, which I will set downe here vnderneath: That Zichmni built a towne in the port of the Island that he discovered, and that he searched the countrey very diligently and discovered it all, and also the riuers on both sides of Engroneland, for that I see it particularly described in the sea card, but the discourse or narration is lost. The beginning of the letter is thus.

The 5 letter,

Concerning those things that you desire to know of me, as of the men and their maners and customes, of the beasts, and of the countries adioynning, I haue made therof a particuler booke, which by Gods help I will bring with me: wherein I haue described the countrey, the monstrous fishes, the customes and lawes of Frisland, Island, Estland, the kingdome of Norway, Estoriland, Drogio, and in the end the life of Sp. Nicolo, the knight our brother, with the discovery which he made, and the state of Groneland. I haue also written the life and acts of Zichmni, a prince as worthy of immortall memory, as any that euer liued, for his great valiance and singular humanitie, wherein I haue described the discovery of Engroneland on both sides, and the citie that he builded. Therefore I will speake no further hereof in this letter, hoping to be with you very shortly, and to satisfie you in sundry other things by word of mouth.

All these letters were written by Sp. Antonio to Messer Carlo his brother: and it grieueth me, that the booke and diuers other writings concerning these purposes, are miserably lost: for being but a child when they came to my hands, and not knowing what they were, (as the maner of children is) I tore them, and rent them in pieces, which now I cannot cal to remembrance but to my exceeding great griefe. Notwithstanding, that the memory of so many good things should not bee lost: whatsoeuer I could get of this matter, I haue disposed and put in order in the former discourse, to the ende that this age might be partly satisfied, to the which we are more beholding for the great discoveries made in those partes, then to any other of the time past, being most studious of the newe relations and discoveries of strange counteries, made by the great mindes, and industrie of our ancestors.

For the more credite and confirmation of the former Historie of Messer Nicolas and Messer Antonio Zeni (which for some fewe respects may perhaps bee called in question) I haue heere annexed the iudgement of that famous Cosmographer Abraham Ortelius, or rather the yealding and submitting of his iudgement thereunto: who in his *Theatrum Orbis*, fol. 6. next before the map of *Mar del Zur*, boroweth prooffe and authoritie out of this relation, to shew that the Northeast parte of *America* called *Estoriland*, and in the original alwayes affirmed to bee an Islande, was about the yeere 1390 discovered by the aforesayd Venetian Gentleman Messer Antonio Zeno, about 100 yeeres before euer Christopher Columbus set saile for those Westerne Regions; and that the Northren Seas were euen then sayled by our European Pilots through the helpe of the loadstone: with diuers other particulars concerning

the customes, religion and wealth of the Southern *Americans*, which are most evidently confirmed by all the late and moderne Spanish Histories of *Nueva España* and *Peru*.

Estotiland first
discovered.

The second
discovery
thereof.

And here I shall not (as I suppose) commit any great inconvenience, or absurditie, in adding unto this History of the new world, certaine particulars as touching the first discovery thereof, not commonly known. Which discovery al the writers of our time ascribe (& that not unworthily) unto Christopher Columbus. For by him it was in a maner first discovered, made known, and profitably communicated unto the Christian world, in the yeere of our Lord 1492. Howbeit I finde that the North part thereof called Estotiland, which most of all extendeth toward our Europe and the Islands of the same, namely, Groneland, Island, and Frisland, was long ago found out by certaine fishers of the Isle of Frisland, driven by tempest vpon the shore thereof: and was afterward about the yeere 1390 discovered anew, by one Antonio Zeno a gentleman of Venice; which sayled thither vnder the conduct of Zichmni king of the saide Isle of Frisland, a prince in those parts of great valour, and renowned for his martiall exploits and victories. Of which expedition of Zichmni there are extant in Italian certaine collections or abridgements gathered by Francisco Marcolino out of the letters of S. Nicolo and Antonio Zeni two gentlemen of Venice which liued in those partes. Out of which collections I doe adde concerning the description of Estotiland aforesaid these particulars following.

Drogio.

Estotiland (saith he) aboundeth with all things necessary for mankind. In the mids thereof standeth an exceeding high mountaine, from which issue foure riuers that moisten all the countrie. The inhabitants are wittie and most expert in all Mechanicall arts. They haue a kinde of peculiar language and letters. Howbeit in this Kings Librarie are preserved certaine latine bookes, which they vnderstand not, being perhaps left there not many yeeres before by some Europeans, which trafficked thither. They haue all kinde of mettals; but especially golde, wherewith they mightily abound. They trafficke with the people of Groneland; from whence they fetch skimmes, pitch and brimstone. The inhabitants report that towardes the South, there are regions abounding with gold, and very populous: they haue many and huge woods, from whence they take timber for the building of ships and cities, whereof and of castles there are great store. The vse of the loadstone for Nauigation is vnknown vnto them. They make relation also of a certaine region toward the South, called Drogio, which is inhabited by Canibals, vnto whom mans flesh is delicate meat: wherof being destitute they liue by fishing, which they vse very much. Beyond this are large regions, and as it were a newe world: but the people are barbarous and goe naked: howbeit against the colde they cloath themselves in beastes skimmes. These haue no kinde of metall: and they liue by hunting. Their weapons are certaine long staues with sharpe points, and bowes. They wage warres one against another. They haue gouernours, and obey certaine lawes. But from hence more towardes the South the climate is much more temperate: and there are cities; and temples of idoles, vnto whom they sacrifice liuing men, whose flesh they afterwards deuoure. These nations haue the vse of siluer and gold.

Thus much of this tract of landes out of the aforesaid collections or abridgements. Wherein this also is worthy the obseruation, that euen then our European Pilots sayled those seas by the helpe of the loadstone. For concerning the vse thereof in Nauigation, I suppose there is not to be found a more ancient testimonie. And these things I haue annexed the rather vnto this table of Mar del Zur; considering that none of those Authours which haue written the Histories of the Newe world, haue in any part of their writings, mentioned one word thereof. Hitherto Ortelius.

THE

THE VOYAGES OF THE ENGLISH NATION TO NEWFOUNDLAND, TO

the Isles of *Ramea*, and the Isles of *Assumption* otherwise

called *Natiscotec*, situate at the mouth of the Riuer of *Canada*,

and to the Coastes of *Cape Briton*, and *Arambec*, corruptly

called *Norumbega*, with the Patents, letters, and

aduertisements thereunto belonging.

The voyage of the two ships, whereof the one was called the *Dominus vobiscum*, set out the 20 day of May in the 19 yere of king *Henry* the eight, and in the yere of our Lord God 1527. for the discouerie of the North partes.

After Robert Thorne of Bristoll, a notable member and ornament of his country, as wel for his learning, as great charity to the poore, in a letter of his to king *Henry* the 8 and a large discourse to doctor *Leigh*, his Ambassadour to *Charles* the Emperour, (which both are to be seene almost in the beginning of the first volume of this my work) exhorted the aforesaid king with very waightry and substantial reasons, to set forth a discouery euen to the North Pole. And that it may be knowne that this his motion tooke present effect, I thought it good herewithall to put downe the testimonies of two of our Chroniclers. *M. Hall*, and *M. Grafton*, who both write in this sort. This same moneth (say they) king *Henry* the 8 sent 2 faire ships wel manned & victualled, hauing in them diuers cunning men to seek strange regions, & so they set forth out of the *Thames* the 20 day of May in the 19 yeere of his raigne, which was the yere of our Lord, 1527.

And whereas master *Hal*, and master *Grafton* say, that in those ships there were diuers cunning men, I haue made great enquire of such as by their yeeres and delight in Nauigation, might giue me any light to know who those cunning men should be, which were the directers in the aforesaid voyage. And it hath bene tolde me by *Mr. Martine Frobisher*, and *Mr. Richard Allen*, a knight of the Sepulchre, that a Canon of *Saint Paul* in *London*, which was a great Mathematician, and a man indued with wealch, did much aduance the action, and went therein himselfe in person, but what his name was I cannot learne of any. And further they told me that one of the ships was called *The Dominus vobiscum*, which is a name likely to be giuen by a religious man of those dayes: and that sayling very farre Northwestward, one of the ships was call away as it entred into a dangerous gulph, about the great opening, betweene the North partes of *Newfoundland*, and the countrey lately called by her *Maestie*, *Meta Incognita*. Whereupon the other ship shaping her course towards *Cape Briton*, and the coastes of *Arambec*, and oftentimes putting their men on land to search the state of those unknowen regions, returned home about the beginning of *October*, of the yere aforesayd. And thus much (by reason of the great negligence of the writers of those times, who should haue vsed more care in preseruing of the memories of the worthy actes of our nation,) is all that hitherto I can learne, or finde out of this voyage.

The voyage of *M. Hore* and diuers other gentlemen, to *Newfoundland*, and *Cape Briton*, in the yere 1536 and in the 28 yere of king *Henry* the 8.

Mr. Hore of *London*, a man of goodly stature and of great courage, and giuen to the studie of Cosmographie, in the 28 yere of king *Henry* the 8 and in the yere of our Lord 1536 encouraged diuers Gentlemen and others, being assisted by the kings fauour and good countenance, to accompany him in a voyage of discouerie vpon the Northwest partes of *America*: wherein his perswasions tooke such effect, that within short space many gentlemen of the *Tymes* of court, and of the *Chancerie*, and diuers others of good worship, desirous to see the strange things of the world, very willingly entred into the action with him, some of whose names were as followeth: *M. Weekes* a gentleman of the West countrey of five hundred markes by the yeere liuing, *M. Tucke* a gentleman of *Kent*, *M. Tuckfield*, *M. Thomas Bues* the sonne of *Sir William Bues* knight, of *Norfolke*, which was lately liuing, and from whose mouth I wrote most of this relation. *M. Hardie*, *M. Biron*, *M. Carter*, *M. Wright*, *M. Rastall* Sericant *Rastals* brother, *M. Ridley*, and diuers other, which all were in the Admirall called the *Trinitie*, a ship of seven score tunnes, wherein *M. Hore* himselfe was imbarked. In the other ship whose name was the *Minion*,

M. Armigil Wade.

went a very learned and vertuous gentleman one *M. Armigil Wade*. Afterwardes Clerke of the Countsailes of king Henry the 8 and king Edward the sixth, father to the worshipfull *M. William Wade* now Clerke of the priuie Counsell, *M. Oliuer Dawbeney* marchant of London, *M. Ioy* afterward gentleman of the Kings Chappel, with diuers other of good account. The whole number that went in the two tall ships aforesaid, to wit, the *Trinitie* and the *Minion*, were about sixe score persons, whereof thirty were gentlemen, which all we mustered in warlike manner at *Graues-end*, and after the receiuing of the Sacrament, they embarked themselves in the ende of *April*. 1536.

Cape Briton. The Island of Penguin flatts hath about the latitude of 30. degrees.

From the time of their setting out from *Grauesend*, they were very long at sea, to witte, aboue two moneths, and neuer touched any land untill they came to part of the *West Indies* about *Cape Briton*, shaping their course thence *North-eastwardes*, untill they came to the *Island of Penguin*, which is very full of rockes and stones, whereon they went and found it full of great fowles white and gray, as big as geese, and they saw infinite numbers of their egges. They draue a great number of the fowles into their boates vpon their sayles, and tooke vp many of their egges, the fowles they slead and their skimes were very like hony combes full of holes being slead off: they dressed and ate them and found them to be very good and nourishing meat. They saw also store of beates both blacke and white, of whome they killed some, and tooke them for no bad foode.

M. Dawbeney report to M. Richard Hakluyt of the Temple.

M. Oliuer Dawbeney, which (as it is before mentioned) was in this boyage, and in the *Minion*, told *M. Richard Hakluyt* of the middle Temple these things following: to wit, That after their arriual in *Newfoundland*, and hauing bene there certaine dayes at ancre, and not hauing perceene any of the naturall people of the countrey, the same *Dawbeney* walking one day on the hatches, spied a boate with *Sauages* of those parts, rowing downe the Bay toward them, to gaze vpon the ship and our people, and taking vewe of their conning aloofe, hee called to such as were vnder the hatches, and willed them to come vp if they would see the natural people of the countrey, that they had so long and so much desired to see: whereupon they came vp, and tooke vewe of the *Sauages* rowing toward them and their ship, and vpon the vewe they manured out a ship-boate to meet them and to take them. But they spying our ship-boate making towards them, returned with maine force and fled into an *Island* that lay by in the Bay or riuer there, and our men pursued them into the *Island*, and the *Sauages* fledde and escaped: but our men found a fire, and the side of a beare on a wooden spit left at the same by the *Sauages* that were fled.

They beheld the Sauages of Newfoundland.

There in the same place they found a boote of leather garnished on the outward side of the calfe with certaine braue trades, as it were of rawe silke, and also found a certaine great warme mitten: And these carped with them, they returned to their shippe, not finding the *Sauages*, nor seeing any thing else besides the fowle, and the things growing in the same, which chiesly were store of firre and pine trees.

Extreme famine.

And further, the said *M. Dawbeney* told him, that lying there they grew into great want of victuals, and that there they found small reliefe, moze then that they had from the nest of an *Osprey*, that brought hourly to her yong great plentie of diuers sorts of fishes. But such was the famine that increased amongst them from day to day, that they were forced to seeke to relieue themselves of raw herbes and rootes that they sought on the maine: but the famine increasing, and the reliefe of herbes being to little purpose to satisfie their insatiable hunger, in the fieldes and deserts here and there, the fellowe killed his mate while he stooped to take by a roote for his reliefe, and cutting out pieces of his bodie whom he had murdered, broyled the same on the coles and greedily deuoured them.

Our men ate one another for famine.

By this meane the company decreased, and the officers knew not what was become of them; And it fortuned that one of the company driuen with hunger to seeke abroad for reliefe found out in the fieldes the saueur of broyled flesh, and fell out with one for that he would suffer him and his fellowes to sterue, enioying plentie as he thought: and this matter growing to cruell speeches, he that had the broyled meate, burst out into these wordes: If thou wouldst needes know, the broyled meate that I had was a piece of such a mans buttocke. The report of this brought to the ship, the Captaine found what became of those that were missing, & was perswaded that some of them were neither deuoured with wilde beastes, nor yet destroyed with *Sauages*: And hereupon hee stood vp and made a notable Oration, containing, Howe much these dealings offended the Almighty, and vouched the Scriptures from first to last, what God had in cases of distresse done for them that called vpon him, and told them that the power of the Almighty was then no lesse then in al former time it had bene. And added, that if it had not pleased God to haue helpen them in that distresse, that it had bene better to haue perished in body, and to haue liued euell lastingly then to haue relieved for a poore time their mortal bodies, and to bee condemned euell lastingly both body and soule to the vnquenchable fire of hell. And thus hauing ended to that effect, he began to exhort

The Captaines Oration.

to repentance, and besought all the company to pray, that it might please God to looke vpon their miserable present state, and for his owne mercie to relieue the same. The famine increasing, and the inconuenience of the men that were missing being found, they agreed amongst themselves rather then all should perish, to cast lots who should be killed: And such was the mercie of God, that the same night there arriued a French ship in that port, well furnished with vittaille, and such was the policie of the English, that they became masters of the same, and changing ships and vittailing them, they set saile to come into England.

The English
surprised a
French ship,
wherem they
returned
home.

In their iourney they were so farre Northwards, that they sawe mighty Islands of yce in the sommer season, on which were haukes and other fowles to rest themselves being weary of flying ouer farre from the maine. They sawe also certaine great white fowles with red bills and red legs, somewhat bigger then Herons, which they supposed to be Storpes. They arriued at S. Iues in Cornuwall about the ende of October. From thence they departed vnto a certaine castle belonging to sir Iohn Luttrell, where M. Thomas Buts, and M. Rastall and other Gentlemen of the voyage were very friendly entertained: after that they came to the Earle of Barthe at Barthe, and thence to Bristol, so to London. M. Buts was so changed in the voyage with hunger and miserie, that sir William his father and my Lady his mother knew him not to be their sonne, vntill they found a secret marke which was a wart vpon one of his knees, as hee told me Richard Hakluyt of Oxford himselfe, to whom I rode 200. miles onely to learne the whole truerth of this voyage from his own mouth, as being the onely man now aliuie that was in this discoverie.

Haukes and
other fowles,
Fowles sup-
posed to be
Storpes.

Certaine moneths after, those Frenchmen came into England, and made complaint to king Henry the 8: the king causing the matter to be examined, and finding the great distresse of his subjects, and the causes of the dealing so with the French, was so moued with pitie, that he punished not his subjects, but of his owne purse made full and royall recompence vnto the French.

The French
royally recom-
penced by king
Henry the 8.

In this distresse of famine, the English did somewhat relieue their vitall spirits, by drincking at the springes the fresh water out of certaine wooden cups, out of which they had drunke their Aqua composita before.

An act against the exaction of money or any other thing by any officer for licence to traffique into *Iseland & Newfoundland*, made in An. 2. Edwardi sexti.

As much as within these few yeeres now last past, there haue bene leuied, perceiued & taken by certaine of the officers of the Admiraltie, of such Marchants, and fishermen as haue vsed and practised the adventures and iourneys into *Iseland, Newfoundland, Ireland*, and other places commodious for fishing, and the getting of fish, in and vpon the Seas or otherwise, by way of Marchants in those parties, diuers great exactions, as summes of money, doles or shares of fish, and such other like things, to the great discouragement & hinderance of the same Marchants and fishermen, and to no little damage of the whole common wealth, and thereof also great complaints haue bene made, & informations also verely to the kings Maiesties most honourable counsell: for reformation whereof, and to the intent also that the sayd Marchants and fishermen may haue occasion the rather to practise & vse the same trade of marchandizing, & fishing freely without any such charges and exactions, as are before limited, wherby it is to be thought that more plentie of fish shall come into this Realme, and thereby to haue the same at more reasonable prices: Be it therfore enacted by the king our soueraigne Lord, and the lords and commons in this present parliament assembled, and by authoritie of the same, that neither the Admiral, nor any officer, or minister, officers or ministers of the Admiraltie for the time being, shall in any wise hereafter exact, receiue, or take by himselfe, his seruant, deputie, seruants, or deputies of any such Marchant or fisherman, any summe or summes of money, doles or shares of fish, or any other reward, benefite or aduantage whatsoeuer it be, for any licence to passe this Realme to the sayd voyages or any of them, nor vpon any respect concerning the said voyages, nor any of them, vpon paine to forfeit for the first offence treble the summe, or treble the value of the reward, benefite or aduantage, that any such officer or minister shall hereafter haue or take of any such Marchants or fishermen. If or the which forfeiture the party g. leued, and euery other person or persons whatsoeuer he or they be, shall and may sue for the same by information, bill, plaint, or action of debt in any of the kings courts of recorde: The king to haue the one moitie, and the party complaining the other moitie: in which suite no essaigne protection, or wager of law shall be allowed. And for the second offence the party so offending, not only to lose and forfeite his or their office or offices in the Admiraltie, but also to make fine and rancome at the kings will and pleasure.

By

By this acte it appeareth, that the trade out of England to Newfound land was common and frequented about the beginning of the raigine of Edward the 6. namely in the peere 1548. and it is much to be maruelled, that by the negligence of our men, the countrey in all this time hath bene no better searched.

A letter written to M. Richard Hakluyt of the middle Temple, containing a report of the true state and commodities of *Newfoundland*, by M. *Anthony Parkhurst* Gentleman, 1578.

M After Hakluyt, after most heartie commendations, with like thankes for your manifold kindnesse to me shewed, not for any meritis that hitherto haue bene mine, but wholly proceeding, I must needs confesse, of your owne good nature, which is so ready prest to benefit your countrey and all such poore men as haue any sparke in them of good desires, that you do not onely become their friend, but also humble your selfe as a seruauant in their affaires: for which I would to God I were once in place where I might cause your burning zeale to bee knowen to those that haue authoritie, power, and abilitie to recompense your trauellling mind and pen, wherewith you cease not day nor night to labour and trauell to bring your good and godly desires to some passe, though not possibly to that happy ende that you most thirst for: for such is the malice of wicked men the deuils instruments in this our age, that they cannot suffer any thing (or at least few) to proceed and prosper that tendeth to the setting forth of Gods glory, and the amplifying of the Christian faith, wherein hitherto princes haue not bene so diligent as their calling required. Alas, the labourers as yet are few, the harvest great, I trust God hath made you an instrument to increase the number, and to moue men of power, to redeeme the people of Newfoundland and those parts from out of the captiuitie of that spirituall Pharao, the deuill.

English. Now to answer some part of your letter touching the sundry nauies that come to Newfoundland, or Terra noua, for fish: you shal vnderstand that some fish not neere the other by 200. leagues, and therefore the certaintie is not known: and some yeres come many more then other some, as I see the like among vs: who since my first trauell being but 4. yeeres, are increased from 30. saile to 50. which commeth to passe chiefly by the imagination of the Westerne men, who thinke their neighbours haue had greater gaines then in very deed they haue, for that they see me to take such paines peerele to go in proper person: they also suppose that I find some secret commoditie by reason that I doe search the harboris, creekes and haucens, and also the land much more then euer any Englishman hath done. Surely I am glad that it so increaseth, whereof locuer it springeth. But to let this passe, you shal vnderstand that I am informed that there are about 100. saile of Spaniards that come to take Cod (who make all wet, and do drie it when they come home) besides 20. or 30. more that come from Biskaye to kill Whale for Traine. These be better appoynted for shipping and furniture of munition, then any nation sauing the Englishmen, who commonly are lords of the harboris where they fish, and do vse all strangers helpe in fishing if need require, according to an old custome of the countrey, which thing they do willingly, so that you take nothing from them more then a boat or twaine of salt, in respect of your protection of them against roueris or other violent intruders, who do often put them from good harbor, &c. As touching their tunnage, I thinke it may be neere five or fixe thousand tunne. But of Portugals there are not lightly aboue 50. saile, and they make all wet in like sorte, whose tunnage may amount to three thousand tunns, and not bywarde. Of the French nation and Britons, are about one hundred and fiftie sailles, the most of their shipping is very small, not past fortie tunnes, among which some are great and reasonably well appointed, better then the Portugals, and not so well as the Spaniards, and the burden of them may be some 7000. tunne. Their shipping is from all parts of France and Britaine, and the Spaniards from most parts of Spaine, the Portugals from Auiero and Viana, and from 2. or 3. ports more. The trade that our nation hath to Island maketh, that the English are not there in such numbers as other nations.

The fertility of Newfoundland.

Now to certifie you of the fertilitie and goodnesse of the countrey, you shal vnderstand that I haue in sundry places sown Wheate, Barlie, Rie, Dates, Beanes, Pease and seedes of herbes, kernels, Plumstones, nuts, all which haue prospered as in England. The countrey yeeldeth many good trees of fruit, as Filberds in some places, but in all places Cherie trees, and a kind of Peare-tree meet to graffe on. As for Roses, they are as common as brambles here: Strawberies, Dewberies, and Raspis, as common as grasse. The timber is most Firre, yet plentie of Wincapple trees: fewe of these two kinds meete to masse a ship of theelcore and ten: but neere Cape Briton, and to the Southward, big and sufficient for any ship. There be also Okes & thornes, there is in all

all the countrey plentie of Birch and Alder, which be the meetest wood for cole, and also Willow, which will serue for many other purposes. As touching the kindes of Fish beside Cod, there are Herrings, Salmones, Thornebacke, Plase, or rather wee should call them Flounders, Dog fish, and another most excellent of taste called of vs a Cat, Disters, and Huskies, in which I haue found pearles aboue 40. in one Huskie, and generally all haue some, great or small. I heard of a Portugall that found one woorth 300. duckets: There are also other kinds of Shel-fish, as limpets, cockles, wilkes, lobsters, and crabs: also a fish like a *Smelt which commeth on shore, and another that hath the like propertie, called a Squid: these be the fishes, which (when I please to bee merie with my old companions) I say, doe come on shore when I commaund them in the name of the 5. ports, and coniuere them by such like words: These also bee the fishes which I may sweepe with broomes on a heape, and neuer wet my foot, onely pronouncing two or three wordes whatsoever they be appoynted by any man, so they heare my voyce: the vertue of the wordes be small, but the nature of the fish great and strange. For the Squid, whose nature is to come by night as well as by day, I tell them, I set him a candle to see his way, with which he is much delighted, or els commeth to wonder at it as doe our fresh water fish, the other commeth also in the night, but chiefly in the day, being forced by the Cod that would deuoure him, and therefore for feare comming so neere the shore, is driuen drie by the surge of the Sea on the pibble and sands. Of these being as good as a Smelt you may take vp with a shoue-net as plentifully as you do Wheate in a shouell, sufficient in thre or foure houres for a whole Citie. There be also other fishes which I tell those that are destrours of strange netwes, that I take as fast as one would gather vp stones, and them I take with a long pole and hooke. Yea marrie say they, wee beleue so, and that you catch all the rest you bring home in that sort, from Portugals and Frenchmen. No surely, but thus I doe: with thre hookes stretched forth in the ende of a pole, I make as it were an Ele speare, with which I picke those Flounders as fast as you would take up fritters with a sharpe pointed sticke, and with that toole I may take vp in lesse then halfe a day Lobsters sufficient to finde three hundred men for a dayes meate. This pastime ended, I shewe them that for my pleasure I take a great Hastie I haue, and say no more then thus: Goe fetch me this rebellious fish that obeyeth not this Gentleman that commeth from Kent and Christendome, bringing them to the high water marke, and when hee doubteth that any of those great Cods by reason of sheluing ground bee like to tumble into the Sea againe, hee will warily take heede and carrie him vp backe to the heape of his fellowes. This doeth cause my friendes to wonder, and at the first hearing to iudge them notorious lies, but they laugh and are merrie when they heare the meanes howe each tale is true.

General sortes
of fish.

Called by the
Spaniards
Anchouas,
and by the
Portugals
Capelinas.

I tolde you once I doe remember how in my trauaile into Africa and America, I found trees that bare Disters, which was strange to you, till I tolde you that their boughes hung in the water, on which both Disters and Huskies did sticke fast, as their propertie is, to stakes and timber.

Nowe to let these merrie tales passe, and to come to earnest matters againe, you shall vnderstand, that Newfoundland is in a temperate Climate, and not so colde as foolish Farmers doe say, who finde it colde sometimes when plentie of Isles of yce lie neere the shore: but vp in the land they shall finde it hotter then in England in many parts of the countrey toward the South. This colde commeth by an accidentall meanes, as by the yce that commeth fleeting from the North partes of the worlde, and not by the situation of the countrey, or nature of the Climate. The countrey is full of little small riuers all the yere long proceeding from the mountaines, ingendred both of snow and raine: few springs that euer I could finde or heare of, except it bee towards the South: in some places or rather in most places, great lakes with plentie of fish, the countrey most couered with woods of firre, yet in many places indifferent good grasse, and plentie of Beares euery where, so that you may kill of them as oft as you list: their flesh is as good as yong beefe, and hardly you may know the one from the other if it be powdered but two dayes. Of Disters we may take like store. There are Sea Gulls, Murres, Duckes, wild Geese, and many other kind of birdes store, too long to write, especially at one Island named Penguin, where wee may driue them on a planke into our ship as many as shall lade her. These birdes are also called Penguins, and cannot flie, there is more meate in one of these then in a goose: the Frenchmen that fish neere the grand baie, doe bring small store of flesh with them, but victuall themselves alwayes with these birdes. Nowe againe, for Venison plentie, especially to the North about the grand baie, and in the South neere Cape Race, and Plesance: there are many other kinds of beasts, as Luzarnes and other mighty beastes like to Camels in greatnesse, and their feete clouen, I did see them farre off not able to discerne them perfectly, but their steps shewed that their feete were clouen, and bigger then the feete of Camels, I suppose them to bee a kind of Buffes which

I

I read to bee in the countreyes adiacent, and very many in the firme land. There bee also to the Northwards, Hares and Foxes in all parts so plentifully, that at noone dayes they take away our flesh before our faces within lesse then halfe a paire of butts length, where foure and twentie persons were turning of drie fish, and two dogs in sight, yet stood they not in feare till wee gaue shot and let the dogs vpon them: the Beares also be as bold, which will not spare at midday to take your fish before your face, and I beleue assuredly would not hurt any bodie vntill they be forced.

Nowe to shew you my fancie what places I suppose meetest to inhabite in those parts discovered of late by our nation: There is neere about the mouth of the grand Bay, an excellent harbour called of the Frenchmen Chasteaux, and one Island in the very entrie of the streight called Bell Isle, which places if they be peopled and well fortified (as there are stones and things meete for it throughout all Newfound land) wee shall bee lordes of the whole fishing in small time, if it doe please the Queenes Maiestie, and from thence send wood and cole with all necessaries to Labrador lately discovered: but I am of opinion, and doe most stedfastly beleue that we shall finde as rich Mines in more temperate places and Climates, and more profitable for fishing then any yet we haue vled, where wee shall haue not farre from thence plentie of salt made by fire vndoubtedly, and very likely by the heate of the Sunne, by reason I finde salt kernalled on the rockes in nine and fortie and better: these places may bee found for salte in three and fortie. I know more touching these two commodities last remembred then any man of our nation doeth; for that I haue some knowledge in such matters, and haue most desired the finding of them by painefull trauaile, and most diligent inquirie. Now to be short, for I haue bene ouer long by Master Butlers means, who cryed on mee to write at large, and of as many things as I call to minde woorthy of remembrance: wherefore this one thing more. I could wish the Island in the mouth of the riuer of Canada should bee inhabited, and the riuer searched, for that there are many things which may rise thereof, as I will shew you hereafter. I could find in my heart to make prooffe whether it be true or no that I haue read and heard of Frenchmen and Portugals to bee in that riuer, and about Cape Briton, I had almost forgot to speake of the plentie of wolues, and to shew you that there be foxes, blacke white & gray: other beasts I know none saue those before remembred. I found also certain Mines of yron and copper in S. Johns, and in the Island of Yron, which things might turne to our great benefite, if our men had desire to plant thereabout, for prooffe whereof I haue brought home some of the oare of both sortes. And thus I ende, assuring you on my faith, that if I had not beene deceiued by the vile Portugals descending of the Jewes and Iudas kinde, I had not failed to haue searched this riuer, and all the coast of Cape Briton, what might haue bene found to haue benefited our countrey: but they breaking their hands, and falsifying their faith and promise, disappointed me of the salte they should haue brought me in part of recompense of my good seruice in defending them two yeres against French Routers, that had spoyled them, if I had not defended them.

By meanes whereof they made me lose not onely the searching of the countrey, but also forced mee to come home with great losse about 600. li. For recompence whereof I haue sent my man into Portugall to demand iustice at the Kings hand, if not, I must put by my supplication to the Queenes Maiestie & her honourable counsell, to grant me leaue to stay here so much of their goods as they haue dammified mee, or else that I may take of them in Newfound land, as much fish as shall be woorth 600. li. or as much as the salte might haue made. I pray you aduertise mee what way I were best to take, and what hope there will bee of a recompence if I follow the suite: many there are that doe comfort me, and doe bid me proceede, for that her Maiestie and the counsell doe tender poore fisher men, who with me haue sustained three hundred pound losse in that voyage. And to conclude, if you and your friend shall thinke me a man sufficient and of credite, to seeke the Isle of S. Iohn, or the riuer of Canada, with any part of the firme land of Cape Briton, I shall giue my diligence for the true and perfect discoverie, and leaue some part of mine owne businesse to further the same: and thus I end, committing you to God. From Bristow the 13. of Nouember, 1578.

Yours to vse and command

ANTHONY PARCKHURST.

The

The Letters Patents graunted by her Maiestie to Sir Humfrey Gilbert knight, for the inhabiting and planting of our people in *America*.

LIZABETH by the grace of God Queene of England, &c. To all people to whom these presents shall come, greeting. Know ye that of our especial grace, certaine science and meere motion, we haue giuen and granted, and by these presents for vs, our heires and successours, doe giue and graunt to our trustie and welbeloued seruauit Sir Humfrey Gilbert of Compton, in our Countie of Deuonshire knight, and to his heires and assignes for euer, free libertie and licence from time to time and at all times for euer hereafter, to discouer, finde, search out, and viewe such remote, heathen and barbarous lands, countreys and territories not actually possessed of any Christian prince or people, as to him, his heires & assignes, and to euery or any of them, shall seeme good: and the same to haue, hold, occupie and enioy to him, his heires and assignes for euer, with all commodities, iurisdiccions and royalties both by sea and land: and the sayd Sir Humfrey and all such as from time to time by licence of vs, our heires and successours, shall goe and trauell thither, to inhabite or remaine there, to build and fortifie at the discretion of the sayde Sir Humfrey, and of his heires and assignes, the statutes or actes of Parliament made against fugitiues, or against such as shall depart, remaine, or continue out of our Realme of England without licence, or any other acte, statute, lawe, or matter whatsoever to the contrary in any wise notwithstanding. And wee doe likewise by these presents, for vs, our heires and successours, giue full authoritie and power to the sayde Sir Humfrey, his heires and assignes, and euery of them, that hee and they, and euery, or any of them, shall and may at all and euery time and times hereafter, haue, take, and lead in the same voyages, to trauell thitherward, and to inhabite there with him, and euery or any of them, such and so many of our subiects as shall willingly accompanie him and them, and euery or any of them, with sufficient shipping, and furniture for their transportations, so that none of the same persons, nor any of them be such as hereafter shall be specially restrained by vs, our heires and successours. And further, that he the said Humfrey, his heires and assignes, and euery or any of them shall haue, hold, occupie & enioy to him, his heires or assignes, and euery of them for euer, all the soyle of all such lands, countries, & territories so to be discouered or possessed as aforesaid, and of all Cities, Castles, Townes and Villages, and places in the same, with the rites, royalties and iurisdiccions, as well marine as oher, within the sayd lands or countreys of the seas therunto adioyning, to be had or vsed with full power to dispose thereof & of euery part thereof in fee simple or otherwise, according to the order of the laws of England, as nere as the same conueniently may be, at his, and their will & pleasure, to any person then being, or that shall remaine within the allegiance of vs, our heires and successours paying vnto vs for all seruices, duties and demands, the fift part of all the oare of gold and siluer, that from time to time, and at all times after such discouerie, subduing and possessing shall be there gotten: all which lands, countreys and territories, shall for euer bee holden by the sayd Sir Humfrey, his heires and assignes of vs, our heires and successours by homage, and by the sayd payment of the sayd fift part before reserved onely for all seruices.

And moreover, we doe by these presents for vs, our heires and successours, giue and graunt licence to the sayde Sir Humfrey Gilbert, his heires or assignes, and to euery of them, that hee and they, and euery or any of them shall, and may from time to time, and all times for euer hereafter, for his and their defence, encounter, expulse, repell, and resist, as well by Sea as by land, and by all other wayes whatsoever, all, and euery such person and persons whatsoever, as without the speciall licence and liking of the sayd Sir Humfrey, and of his heires and assignes, shall attempt to inhabite within the sayd countreys, or any of them, or within the space of two hundred leagues neere to the place or places within such countreys as aforesaid, if they shall not bee before planted or inhabited within the limites aforesaid, with the subiects of any Christian prince, being in amitie with her Maiesty, where the said Sir Humfrey, his heires or assignes, or any of them, or his or their, or any of their associates or companies, shall within five yeeres next ensuing, make their dwellings and abidings, or that shall enterpryse or attempt at any time hereafter unlawfully to annoy either by Sea or land, the said Sir Humfrey, his heires or assignes, or any of them, or his or their, or any of their companies: giuing and graunting by these presents, further power and authoritie to the sayd Sir Humfrey, his heires and assignes, and euery of them from time to time, and at all times for euer hereafter to take and surpise by all maner of meanes whatsoever, all and euery person and persons, with their shippes, vessels, and other goods and furniture, which without the licence of the sayd

sayd sir Humfrey, or his heires or assignes as aforesayd, shall bee found traffiquing into any harborough or harboroughs, creeke or creekes within the limites aforesayde, (the subiects of our Realmes and dominions, and all other persons in amitie with vs, beinge driuen by force of tempest or shipwracke onely excepted) and those persons and euery of them with their ships, vessels, goods, and furniture, to detaine and possesse, as of good and lawfull prize, according to the discretion of him the sayd sir Humfrey, his heires and assignes, and of euery or any of them. And for uniting in more perfect league and amitie of such countreys, landes and territories so to bee possessed and inhabited as aforesayde, with our Realmes of England and Ireland, and for the better encouragement of men to this enterpryse: wee doe by these presents graunt, and declare, that all such countreys so hereafter to bee possessed and inhabited as aforesayd, from thencefoorth shall bee of the allegiance of vs, our heires, and successours. And wee doe graunt to the sayd sir Humfrey, his heires and assignes, and to all and euery of them, and to all and euery other person and persons, beinge of our allegiance, whose names shall be noted or entred in some of our courts of Record, within this our Realme of England, and that with the assent of the sayd sir Humfrey, his heires or assignes, shall nowe in this iourney for discouerie, or in the second iourney for conquest hereafter, trauele to such lands, countreys and territories as aforesaid, and to their and euery of their heires: that they and euery or any of them beinge either boine within our sayd Realmes of England or Ireland, or within any other place within our allegiance, and which hereafter shall be inhabiting within any the lands, countreys and territories, with such licence as aforesayd, shall, and may haue, and enioy all the priuileges of free denizens and persons native of England, and within our allegiance: any law, custome, or vsage to the contrary notwithstanding.

And forasmuch, as vpon the finding out, discouering and inhabiting of such remote lands, countreys and territories, as aforesayd, it shall be necessarie for the safetie of all men that shall aduenture themselves in those iourneys or voiajes, to determine to liue together in Christian peace and ciuill quietnesse each with other, wherby euery one may with more pleasure and profit enioy that wherunto they shall attaine with great paine and perill: wee for vs, our heires and successours are likewise pleased and contented, and by these presents doe giue and graunt to the sayd sir Humfrey and his heires and assignes for euer, that he and they, and euery or any of them, shall and may from time to time for euer hereafter within the sayd mentioned remote lands and countreys, and in the way by the Seas thither, and from thence, haue full and meere power and authoritie to correct, punish, pardon, gouerne and rule by their, and euery or any of their good discretions and policies, as well in causes capitall or criminall, as ciuill, both marine and other, all such our subiects and others, as shall from time to time hereafter aduenture themselves in the sayd iourneys or voyages habitative or possessiue, or that shall at any time hereafter inhabite any such lands, countreys or territories as aforesayd, or that shall abide within two hundred leagues of any the sayd place or places, where the sayd sir Humfrey or his heires, or assignes, or any of them, or any of his or their associates or companies, shall inhabite within fixe yeeres next ensuing the date hereof, according to such statutes, lawes and ordinances, as shall be by him the said sir Humfrey, his heires and assignes, or euery, or any of them deuised or established for the better gouernement of the said people as aforesayd: so alwayes that the sayd statutes, lawes and ordinances may be as neere as conveniently may, agreeable to the forme of the lawes & pollicy of England: and also, that they be not against the true Christian faith or religion now professed in the church of England, nor in any wise to withdraw any of the subiects or people of those lands or places from the allegiance of vs, our heires or successours, as their immediate Soueraignes vnder God. And further we doe by these presents for vs, our heires and successours, giue and graunt full power and authority to our trustie and welbeloued counsellor, sir William Cecill knight, lord Burleigh, our high treasurer of England, and to the lord treasurer of England of vs, for the time being, and to the priue counsell of vs, our heires and successours, or any foure of them for the time being, that he, they, or any foure of them, shall, and may from time to time and at all times hereafter, vnder his or their handes or seales by vertue of these presents, authorize and licence the sayd sir Humfrey Gilbert, his heires and assignes, and euery or any of them by him and themselves, or by their or any of their sufficient attornies, deputies officers, ministers, factors and seruants, to imbarke and transport out of our Realmes of England and Ireland, all, or any of his or their goods, and all or any the goods of his or their associates and companies, and euery or any of them, with such other necessaries and commodities of any our Realmes, as to the said lord treasurer or foure of the priue counsell of vs, our heires, or successours for the time being, as aforesayd, shall be from time to time by his or their wise doms or discretions thought meete and conuenient for the better reliefe and supportation of him the sayd sir Humfrey, his heires and assignes, and euery or any of them, and his and their, and euery or any of their

said

said associates and companies, any act, statute, lawe, or other thing to the contrary in any wise notwithstanding.

Provided alwayes, and our will and pleasure is, and wee doe hereby declare to all Christian Kings, princes and states, that if the said Sir Humfrey, his heires or assignes, or any of them, or any other by their licence or appointment, shall at any time or times hereafter robbe or spoile by Sea or by land, or doe any act of uniuersall and unlawfull hostilitie to any of the Subjects of vs, our heires, or successours, or any of the Subjects of any King, prince, ruler, gouernour or state being then in perfect league and amitie with vs, our heires or successours: and that vpon such iniurie, or vpon iust complaint of any such prince, ruler, gouernour or state, or their subjects, wee our heires or successours shall make open proclamation within any the portes of our Realme of England commodious, that the said Sir Humfrey, his heires or assignes, or any other to whom these our Letters patents may extend, shall within the terme to be limited by such proclamations, make full restitution and satisfaction of all such iniuries done, so as both we and the said Princes, or others so complaining, may holde vs and themselves fully contented: And that if the said Sir Humfrey, his heires and assignes, shall not make or cause to be made satisfaction accordingly, within such time so to be limited: that then it shall bee lawfull to vs, our heires and successours, to put the said Sir Humfrey, his heires and assignes, and adherents, and all the inhabitants of the said places to be discovered as is aforesaid, or any of them out of our allegiance and protection, and that from and after such time of putting out of protection the said Sir Humfrey, and his heires, assignes, adherents and others so to be put out, and the said places within their habitation, possession and rule, shall be out of our protection and allegiance, and free for all Princes and others to pursue with hostilitie as being not our Subjects, nor by vs any way to be aduowed, maintained or defended, nor to be holden as any of ours, nor to our protection, dominion or allegiance any way belonging, for that expresse mention, &c. In witnesse whereof, &c. Witnesse our selfe at Westminster the 11. day of June, the twentieth yeere of our raigne. Anno Dom. 1578.

Per ipsam Regiam, &c.

De Nauigatione Illustris & Magnanimi Equitis aurati *Humfredi Gilberti*, ad deducendam in nouum Orbem coloniam susceptâ, Carmen
STEPHANI PARMENII BUDEII.

Ad eundem illustrem equitem auctoris prefatio.

Eddenda est, quam fieri potest breuissimè, in hoc vestibulo, ratio facti mei, & cur ita homo nouus & externus, in tanta literatissimorum hominum copia, quibus Anglia beata est, versandum in hoc argumento mihi putauerim: ita enim tu, fortissime Gilberte, fortum hunc nostrum in lucem exire voluisti. In seruitute & barbarie Turcica, Christianis tamen magno immortalis Dei beneficio, parentibus natus, aliquam etiam aetatis partem educatus; postquam doctissimorum hominum opera, quibus tum Pannoniae nostrae, tum imprimis saluæ adhuc earum reliquiae florescunt, in literis adoleuissimè, more nostrorum hominum, ad inuicendas Christiani orbis Academias ablegatus fui. Qua in peregrinatione, non solum complura Musarum hospitium, sed multas etiam sapienter institutas respublicas, multarum Ecclesiarum probatissimas administrationes introspeximus, iam ferme triennio ea in te posito. Fuerat hæc nostra profectio ita à nobis comparata, ut non tantum mores & urbes gentium videndum, sed in familiaritatem, aut saltem notitiam illustriorum hominum introeundum nobis putarem. Caterum, ut hoc à nobis sine inuidia dici possit, (certè enim taceri absque malicia nullo modo potest) non locus, non natio, non respublica vlla nobis æquè ac tua Britannia complacuit, quamcunque in partem euentum consilij mei considerem. Accedit, quod præter omnem expectationem meam ab omnibus tuis ciuibus, quibuscum aliqua consuetudo mihi contigit, tanta passim humanitate acceptus essem; ut iam (sic hoc salua pietate à me dictum) suauissimæ Anglorum amicitia ferme aboluerint desiderium & Pannoniarum & Bude meæ, quibus patria nomen debeo. Quas ab causis cum sapennumero animus fuisset significationem aliquam nostræ huius voluntatis & existimationis edendi; accidit utique secundum sententiam, ut dum salutandis & cognoscendis excellentibus viris Londini operam do, ornatissimus ac doctissimus amicus meus Richardus Hakluytus ad te me deduxerit, explicato mihi præclarissimo tuo de deducenda propediem colonia in nouum orbem instituto. Qua dum aguntur, agnoscere potui ego illud corpus & animum tuum sempiterna posteritatis commemoratione dignum, & agnoui profecto, eaque tali ac tanta obseruantia prosequi cœpi; ut cum paulo post plura de tuis virtutibus, & rebus gestis passim audissem, tempus longè accommodatissimum existimarem esse, quo aliqua parte officij

M

Stuyque

studijque nostri, erga te & tuam gentem perfunderer. Hoc est primum ovum, unde nostrum *Britannica* originem ducit. Reliquum est, ut eas & redeas quam prosperrime, vir nobilissime, & benivolentia tua, auctoritate, ac nomine, tuare studium nostrum. Vale pridie Kalen. Aprilis 1583.

AD THAMESIN.

Amnis, inoffensa qui tam requiete beatus
Antipodum quæris iam tibi in orbe locum:
Nunc tibi principium merita, pro tempore, laudis
Fecimus, & rante carmina prima tube.
Tum cum reddideris, modo quam dimittimus, Argo,
Ornatu perages gaudia festa novo.

Væ nova tam subito mutati gratia cœli?
Vnde graues nimbi vitreas tenuantur in auras?
Diffugiunt nebulæ, puroque nitentior ortu
Illustrat terras, clementiaque equora TITAN?
Nimirum posuere NOTI, meliorque resurgit
EVRYVS, & in ventos soluuntur vela secundos,
Vela quibus gentis decus immortale BRITANNÆ
Tendit ad ignotum nostris maioribus orbem
Vix notis GILBERTVS aquis. Ecquando licebit
Ordiri heroas laudes, & facta nepotum
Attonitis memoranda animis? Si cœpta silendum est
Illa, quibus nostri priscis ætatibus audent
Conferri, & certare dies: quibus obuia plano
Iamdudum FORTVNA solo, quibus omne per vndas
NEREIDVM genus exultat, faustoque tridenti
Ipse pater NEREVS placabile temperat æquor.
Et passim Oceano curui Delphines ab imo
In summos saliant fluctus, quasi terga pararent
In quibus euectæ fulcent freta prospera puppes.
Et quasi diluvium, tempestatesque minatur
Follibus inflatis inimica in vela phryseter.
Et fauet ÆGÆON, & qui NEPTVNI PROTEVS
Armenta, ac turpes alit imò in gurgite phocas.
Atque idem modò ab antiqua virtute celebrat
Sceptra CHALDONIDVM: seclis modò fata futuris
Pandit, & ad feros canit euentura minores.

Vt pacis bellicque bonis notissima vasto
Insula in OCEANO, magni decus ANGLIA mundi;
Postquam opibus diues, populo numerosa frequenti,
Tot celebris factis, toto caput extulit orbe;
Non incauta sui, ne quando immensa potestas
Pondere sit ruitura suo, noua mœnia natis
Quærat, & in longum extendat sua regna recessum:
Non aliter, quàm cum ventis sublimibus aptæ
In nidis creuere grues, proficiscitur ingens
De nostra ad tepidum tellure colonia NILVM.
Euge, sacrum pectus, tibi, per tot secula, soli
Seruata est regio nullis regnata MONARCHIS.
Et triplici quondam mundi natura norata
Margine, & audacem quarto dignata COLVMBVM;
Iam quintâ lustranda plagâ tibi, iamque regenda
Imperio superest. EVROPAM ASIAMQVE relinque,
Et fortunatam nimium, nisi sole propinquo
Arderet, LIBYEN: illis sua facta viasque
Terminet ALCIDES: abs te illustranda quiescit

Parte alia tellus, quam non BABYLONIA sceptrā,
 Non MACEDVM inuictæ vires, non PERSICA virtus
 Attigit, aut vnquam LATIÆ feriere secures.
 Non illo soboles MAHOMETI mugijt orbe:
 Non vaser HISPANVS, cælo, superitque relictis,
 Sacra PAPAE humano crudelia sanguine fecit.
 Illic mortales hominumque ignota propago;
 Siue illi nostræ veniant ab origine gentis,
 Seu tandem à prisca FAVNORVM stirpe supersint
 Antiqua geniti terra, sine legibus vrbes
 Syluasque & pingues habitant ciuilibus agros:
 Et priscos referunt mores, vitamque sequuntur
 ITALIÆ antiquæ, & primi rude temporis æuū:
 Cum genitor nati fugiens SATVRNVS ob iram
 In LATIO posuit sedem, rudibusque regendos
 In tenues vicos homines collegit ab agris.
 Aurea in hoc primum populo cœpisse feruntur
 Secula, sicque homines vitam duxisse beati;
 Vt simul argenti percurrentes tempora, & æris,
 Degener in durum chalybem vilesceret ætas;
 Rursus in antiquum, de quo descenderat, aurum
 (Sic perhibent vates) æuo vertente rediret.
 Fallor an est tempus, reuolutoque orbe videntur
 Aurea pacificæ transmittere secula gentes?
 Fallor enim, si quassatas tot cladibus vrbes
 Respicio, & passim lacerantes regna tyrannos:
 Si MAHOMETIGENIS ASIAM LIBYAMQVE cruentō
 MARTE premi, domitaque iugum cervice subire:
 Iamque per EVROPÆ fines immane tribunal
 BARBARI adorari domini, DACISQVE, PELASGISQVE
 ÆMATHISQVE, omni que solo quod diuidit HEBRVS,
 Et quondam bello inuictis, nunc MARTE sinistro
 Angustos fines, paruumque tuentibus oram
 PANNONIAE populis, & prisca in gente LIBYRNIS.
 Tum verò in superos pugnas sine fine cieri
 Patribus AVSONIS: ardere in bella, neceque
 SARMATICAS gentes: & adhuc à cæde recenti
 HISPANVM sancto GALLVMQVE maderè cruore.
 Non sunt hæc auri, non sunt documenta, sed atrox
 Ingenio referunt ferrum, & si dicere ferro
 Deteriora mihi licet, intractabile saxum.

At verò ad niueos alia si parte BRITANNOS
 Verto oculos animumque, quot, ô pulcherrima tellus;
 Testibus antiquo vitam traducis in auro?
 Namque quòd hoc summum colitur tibi numen honore
 Quo superi, atque omnis geniorum casta iuuentus
 Illius ad sacra iussa vices obit, arguit aurum.
 Quòd tam chara DEO tua sceptrā gubernat AMAZON,
 Quàm DE A, cum nondum cœlis ASTRA appetitis
 Inter mortales regina erat, arguit aurum.
 Quòd colit haud vllis inclusas mœnibus vrbes
 Aurea libertas, & nescia ferre tyrannum
 Securam ætatem tellus agit, arguit aurum.
 Quòd regio nullis iniuria gentibus, arma
 Arma licet ferruginea rubicunda quiete,
 Finitimis metuenda gerit tamen, arguit aurum.
 Quòd gladij, quòd mucrones, quòd pila, quòd hastæ
 In rastròs abièrè, & bello affueta iuuentus

Pacem & amicitias dulces colit, arguit aurum.
 Denique si fas est auro connectere laudes
 Æris, & in pacis venerari tempore fortes;
 Quot natos bello heroas, quot ahænea nutris
 Pectora? Sint testes procerum tot millia, testes
 Mille duces, interque duces notissima mille
 Illa cui assurgunt Mvsæ, quam conscia **PALIAS**
 Lætior exaudit, **GILBERTI** gloria nostri.
 Illius auxilium, & socialia prælia amici
 Mirantur **BELGÆ**, & quamuis iniustus **IBERV**
 Commemorat iustas acies, domitaque per oras
 Martia victrices formidat **HIBERNIA** turmas,
 Illum oppugnatae quassatis turribus arces,
 Illum expugnatae perruptis incenibus vrbes,
 Fluminaque & portus capti, hostilique notatum
 Sanguine submersæ meminere sub æquore classes.
 Hic ubi per medios proiectus **SECVANA** **CELTAS**
 Labitur, & nomen mox amissurus, & vndas.
 Omnia si desint, quantum est ingentibus ausis
 Humani generis pro pace bonoque pacisci
 Tàm varios casus, freta tanta, pericula tanta?
 Linquere adhuc teneram prolem, & dulcissima sacri
 Oscula coniugij, numerantemque ordine longo
AVCHERIAM digitis in mollibus, æquora mille
 Formidanda modis, atque inter pauca relatos
AVCHERIOS exempla suos, fratremque patremque;
 Qui dum pro patriâ laudem & virtute sequuntur,
 Obsessi in muris soli portisque **CALETI**,
 Præposuere mori, quàm cum prodentibus urbem,
 Et decus **ÆEIONVM**, turpi superesse salute.

Quòd si parua loquor, nec adhuc fortasse fatenda est
 Aurea in hoc iterum nostro gens viuere mundo,
 Quid verat ignotis vt possit surgere terris?
 Auguror, & faueat dictis **DEVS**, auguror annos,
 In quibus haud illo secus olim principe in vrbes
 Barbara plebs coëat, quàm cum noua fax vocaret
AMPHION **THEBAS**, **TROIANA** ad moenia **PHOEVS**;
 Atque ubi sic vltro iunctas sociauerit ædes,
 Deinde dabit leges custoditurus easdem;
 In quibus ignari ciues fraudumque, dolique,
 A solida affuescant potius virtute beari;
 Quàm genio & molli liquentia corpora vita
 In Venerem ignauam, pinguemque immergere luxum:
 Quàm nummos, quam lucra sequi, quam propter honores
 Viuere ad arbitrium stolidæ mutabile plebis.
 Non illic generi virtus, opibusque premetur
 Libertas populi, non contrâ in deside vulgo
 Oppugnabit opes cluis sub nomine pauper:
 Quisque suo partem scælix in iure capeisset,
 Tum sua magna parens ingenti fœnore tellus
 Exiguo sudore dabit bona: cura iuuentam
 Nulla adiget senio, nec sic labor ocia tollet,
 Quo minus è virtute petant sua commoda ciues.
 Omnihi scælicem si fas conscendere puppim:
 Et tecum patriâ (pietas ignosce) relictâ
 Longinquum penetrare fretum, penetrare sorores
 Mecum vnâ **ÆONIAs**, illic exordia gentis
 Prima nouæ ad seros transnittere posse nepotes?

Sed me fata verant, memoraturumque canorâ
 Inclyta facta tubâ, ad clades miserabilis ISTRÏ
 Intitum retrahunt. His his me fata referunt:
 Non deerit vates, illo qui cantet in orbe
 Aut veteres populos, aut nostro incognita cœlo
 Munera naturæ; dum spreto HELICONE manebit
 Illa AGANIPPÆIS sacrata OXONIA Musis.
 Dum loquor in viridi festinant gramine Nymphæ,
 Impediuntque comas lauro, & florentis oliuæ
 Frondibus armantur, dominatricemque frequentes
 Oceani immensi longè venerantur ELISAM.
 Illa autem ad gelidum celsis de turribus amnem
 Prospicit, & iamiam TAMESINO in patre tuetur
 Paulatim obliquis GILEBERTVM albescere velis.
 Sic dea PELIACO spectasse è vertice PALLAS
 Fertur IASONIOS comites, ad PHASIDOS vndas
 Vix benè dum notis committere carbasa ventis.
 DIVA faue, nutuque tuo suscepta parari
 Vela iuua; Si sola geris dignissima totum
 Talibus auspicijs proferri sceptrâ per orbem.
 Proptereâ quia sola tuos ita pace beasti
 Tranquilla populos, ut iam te principe possint
 Augere imperij fines. Quia sola videris
 Quo niuæ CHARITES, quo corpore DELIA virgo
 Pingitur, & iusto si sit pro teste vetustas.
 Talibus audimus quondam de matribus ortos
 SEMIDEOS homines: tali est de sanguine magnus
 Siue HECTOR genitus, siue HECTORE maior ACHILLES
 Duntaxat sine fraude vlla, sine crimine possint
 Vlla tibi veterum conferri nomina matrum,
 Quæ sexum factis superas, quæ patribus audes,
 NYMPHA, dijs dignas laudes æquare LATINIS.
 Mentior infœlix, nisi sic in corpore virtus
 Lucet formoso, ceu quæ preciosior auro est
 Gemma, tamen pariter placituro clauditur auro.
 Mentior, & taceo, nisi sola audiris vbique
 Induperatorum timor aut amor, inter & omnes
 Securam requiem peragis turissima casus:
 Dum reliqui reges duro quasi carcere clausi
 Sollicitis lethi dapibus, plenoque fruuntur
 Terrificis monstris furtiuâ per ocia somno.
 Mentior & taceo, solam nisi viuere ciues
 Æternum cupiunt: quando nec verberare toruo,
 Nec cædis pœnæue thronum formidine firmas:
 Sed tibi tot meritis maiestas parta, & inermis
 Ad patulos residet custos clementia postes:
 Ut quot penè rei iustum meruere tribunal,
 Tot veniam grato narrent sermone clientes.
 Nec tamen admittis, nisi quod iustumque piumque
 Agnoscit probitas, & quæ potes omnia, solis
 Legibus vsurpas cautas sanctissima vires.
 Nec mala formidas: si quidem quasi fune ligatur
 Consilio fortuna tibi: Nullum impia terret
 In castris BELLONA tuis: Quin pronus adorat
 GRADIVVS tua iussa pater, sequiturque vocantem
 Quacunque ingrederis grato victoria plausu.
 Dumque fores alijs, vitamque & regna tuetur
 Ianitor externus, cingunt tua limina ciues:

Dumque alijs sordet sapientia regibus, almo
 PEGASIDVM tu fonte satur, tot A POLLINIS artes
 Aurea vaticina fundis quasi flumina lingua.
 Nil nostri inuenere dies, nil prisca vetustas
 Prodidit, in linguis peragunt commercia nullis
 CHRISTIADVM gentes, quas te, diuina virago,
 Iustius AONIÆ possint iactare sorores.
 Audijt hæc mundus, cunctisque in finibus ardet
 Imperio parere tuo: & quæ fortè recusat
 Miratur vires regio tamen. Hinc tua sceptrâ
 Incurua MAHOMETIGENÆ ceruice salutat:
 Hinc tua pugnaces properant ad fœdera GALLI:
 Dumque sibi metuit toties tibi victus IBERVS,
 Nescia ROMANO GERMANIA Marte domari
 Quærit amicitias BRITONVM: procul oscula mittit
 Virgineis pedibus LATIVM, longèque remoti
 PANNONES in tutos optant coalescere fines.
 Quinetiam quæ submisso diademate nuper
 Obtulit inuictis fascesque fidemque BRITANNIS,
 Nonne vides passis vt crinibus horrida dudum
 Porrigit ingentem lugubris AMERICA dextram?
 Et numquid lacrymas, inquit, soror ANGLIA, nostras
 Respicias, & dura nobiscum in sorte gemiscis?
 An verò nescisse potes, quæ tempora quantis
 Cladibus egerimus? postquam insatiabilis auri,
 Nam certè non vllus amor virtutis IBEROS
 In nostrum migrare solum, pietasue coëgit.
 Ex illo, quæ sacra prius vana litabam
 Manibus infernis, sperans meliora, tuumque
 Discere posse DEVM, iubeor mortalibus aras
 Erigere, & mutas statuas truncosque precata
 Nescio quod demens ROMANVM numen adoro.
 Cur trahor in terras? si mens est lucida, puris
 Cur DEVS in cœlis rectâ non quæritur? aut si
 A nobis cœlum petitur, cur sæpe videmus
 Igne, fame, ferro subigi, quocunque reatu
 Oenotriæ sedis maiestas lasa labascit?
 Non sic religio, non sic me iudice gaudet
 Defendi sua regna DEVS, quod si optimus ille est;
 Quod si cuncta potest, & nullis indiget armis.
 Mitto queri cades, exhaustaque mœnia bello:
 Mitto queri in viles tot libera corpora seruos
 Abiecta, immanisque iugum Busrïde dignum.
 Te tantum fortuna animet tua, te tua virtus:
 Si tibi tam plenè habitantur mœnibus vrbes,
 Vt nisi in excelsum crescant, cœloque minentur
 Edes aëriæ; quanquam latissima, desit
 Terra tamen populo: Si tot tua flumina nigrant
 Turrigeras arces imitata mole carinæ,
 Quot non illa natant eadem tua flumina cygni.
 Si tibi iam sub sole iacens penetratus vtroque est
 Mundus, vtroque iacens peragrata est terra sub axe.
 Ni frustra gelidam vectus WILLOBEVS ad arcton
 Illa in gente iacer, cui dum Sol circinat vmbas,
 Dimidio totus vix forsitan occidit anno.
 Ni frustra quæ fuit iter, duraque bipenni
 Illo FROBISERVS reditum sibi in æquore fecit;
 Horridum vbi semper pelagus, glacieque perenni

Nova Albion.

Hugo Willobei-
ius eques auratus.

Martinus Fro-
bisherus eques
auratus.

Frigora

Frigora natiuos simulant immitia montes.
 Ni frustra per CIMMERIOS, syluisque propinqua
 Flumina RIPHAËIS eoa profectus ad vsque est
 Meenia IENCISONVS, PERSASQVE & proxima PERSIÆ
 BACTRA, & BACTRORVM confines regibus INDOS.
 Ni frustra, quod mortali tot secla negarant,
 Hâc tuus immensum nuper DRACVS ambiit orbem,
 Quâ patri OCEANO clausas circumdare terras
 Concessit natura viam, mediaque meare
 Tellure, & duplici secludere littore mundos.
 Iam si fortuna, iam si virtute sequare
 Digna tua; sunt monstra mihi, sunt vasta gigantum
 Corpora, quæ magno cecidisse sub HERCVLE non sit
 Dedecus, OGIGIVS non quæ aspernetur IACCVS.
 Quæ si indigna putas, tantaque in pace beara
 Auersare meos multo vt tibi sanguine fines
 Inuidiosa petas: est nobis terra propinqua,
 Et tantum bimari capiens discrimen in ISTHMO.
 Hanc tibi iamdudum primi inuenere BRITANNI,
 Tum cum magnanimus nostra in regione CABOTVS
 Proximus à magno ostendit sua vela COLVMO.
 Hæc neque vicina nimium frigescit ab arcto,
 Sole nec immodico in steriles torretur arenas:
 Frigus & æstatem iusto moderamine seruat,
 Siue leues auras, grati spiracula cœli,
 Seu diæ telluris opes, & munera curas.
 Pone age te digno tua scepra in honore, meoque
 Iunge salutarem propius cum littore dextram.
 Sit mihi fas aliquam per te sperare quietem,
 Vicinoque bono lætum illucescere Solem.
 Quodd si consilijs superûm, fatisque negatum est
 Durare immensum magna infortunia tempus:
 Quodd si de immerita iustum est ceruice reuelli
 Ignarum imperij dominum, populique regendi;
 Quodd si nulla vnquam potuit superesse potestas,
 Ni pia flexilibus pareret clementia frenis
 Obsequium. A miti quæ sita potentia CYRO
 Amissa est sæuæ soboli. Parcendo subegit
 Tot reges MACEDVM virtus, tot postera sensim
 Abscidit a parto tandem inclementia regno.
 Et quod ROMVLEIS creuit sub patribus olim
 Imperium, dirisemper minuere NERONES.

Antonius Ien-
 cisonus.

 Cabotus.

A report of the voyage and successe thereof, attempted in the yeere
 of our Lord 1583 by sir *Humphrey Gilbert* knight, with other gentlemen assist-
 ing him in that action, intended to discouer and to plant Christian inhabitants in place
 conuenient, vpon those large and ample countreys extended Northward from the cape
 of *Florida*, lying vnder very temperate Climes, esteemed fertile and rich in Minerals, yet
 not in the actuall possession of any Christian prince, written by *M. Edward Haies* gentle-
 man, and principall actour in the same voyage, who alone continued vnto the end, and by
 Gods speciall assistance returned home with his retinue safe and entire.

Any boyages haue bene pretended, yet hitherto neuer any thorowly accomplish-
 ed by our nation of exact discouery into the bowels of those maine, ample and
 vast countreys, extended infinitely into the North from 30 degrees, or rather
 from 25 degrees of Septentrionall latitude, neither hath a right way bene ta-
 ken of planting a Christian habitation and regiment vpon the same, as well may
 appeare both by the little we yet do actually possesse therein, & by our ignorance
 of

of the riches and secrets within those lands, which vnto this day we know chiefly by the trauell and report of other nations, and most of the French, who albeit they can not challenge such right and interest vnto the sayd countreys as we, neither these many yeeres haue had of portunity nor meanes so great to discouer and to plant (being vexed with the calamities of intestine warres) as we haue had by the inestimable benefit of our long and happy peace: yet haue they both waies per-
formed moze, and had long since attained a sure possession and settled gouernment of many pro-
uinces in those Northerly parts of America, if their many attempts into those forren and remote
lands had not bene impeached by their garboils at home.

The coasts frō
Florida North-
ward first dis-
couered by the
English nation.

The first discouery of these coasts (neuer heard of before) was well begun by Iohn Cabot the
father, and Sebastian his sonne, an Englishman borne, who were the first finders out of all that
great tract of land stretching from the cape of Florida vnto those Islands which we now call the
Newfoundland: all which they brought and annexed vnto the crowne of England. Since when,
if with like diligence the search of inland countreys had bene followed, as the discouery vpon the
coast, and out-parts therof was performed by those two men: no doubt her Maiesties territories
and reuenue had bene mightily enlarged and aduanced by this day. And which is moze; the seed
of Christian religion had bene sowed amongst those pagans, which by this time might haue
brought forth a most plentiful harvest and copious congregation of Christians; which must be
the chiefe intent of such as shall make any attempt that way: or els whatsoeuer is builded vpon
other foundation shall neuer obtaine happy successe nor continuance.

And although we can not precisely iudge (which onely belongeth to God) what haue bene the
humours of men stirred vp to great attempts of discouering and planting in those remote coun-
treys, yet the euents do shew that either Gods cause hath not bene chiefly preferred by them, or
els God hath not permitted so abundant grace as the light of his word and knowledge of him to
be yet reuealed vnto those infidels before the appointed time.

But most assuredly, the only cause of religion hitherto hath kept backe, and will also bring for-
ward at the time assigned by God, an effectuall and compleat discouery & possession by Christians
both of those ample countreys and the riches within them hitherto concealed: whereof notwith-
standing God in his wisdom hath permitted to be reuealed from time to time a certaine obscure
and misty knowledge, by little and little to allure the mindes of men that way (which els will be
dull enough in the zeale of his cause) and thereby to prepare vs vnto a readinesse for the executi-
on of his will against the due time ordeined, of calling those pagans vnto Christianity.

It is con-
sideration.

In the meane while, it behooueth every man of great calling, in whom is any instinct of incli-
nation vnto this attempt, to examine his owne motions: which if the same proceed of ambition or
auarice, he may assure himselfe it cometh not of God, and therefore can not haue confidence of
Gods protection and assistance against the violence (els irresistible) both of sea, and infinite pe-
rils vpon the land; whom God yet may vse an instrument to further his cause and glory some way,
but not to build vpon so bad a foundation.

Otherwise, if his motives be deriued from a vertuous & heroicall minde, preferring chiefly the
honour of God, compassion of poore infidels captiued by the deuill, tyrannizing in most wonder-
full and dreadfull manner ouer their bodies and soules; aduancement of his honest and well dispo-
sed countrey men, willing to accompany him in such honourable actions; reliefe of sundry people
within this realme distressed: all these be honorable purposes, imitating the nature of the munifi-
cent God, wherewith he is well pleased, who will assist such an actour beyond expectation of man.

Probable con-
sideration in these
lands North-
ward of Florida, are
reserved for the
English nation
to possess.

And the same, who feeleth this inclination in himselfe, by all likelihood may hope, or rather confi-
dently repose in the preordinance of God, that in this last age of the world (or likely neuer) the
time is compleat of receiuing also these Gentiles into his mercy, and that God will raise him an
instrument to effect the same: it seeming probable by euent of precedent attempts made by the
Spaniards and French sundry times, that the countreys lying North of Florida, God hath re-
served the same to be reduced vnto Christian civility by the English nation. For not long after
that Christopher Columbus had discovered the Islands and continent of the West Indies for
Spaine, Iohn and Sebastian Cabot made discouery also of the rest from Florida Northwards to
the behoofe of England.

The Spany-
ards prospe-
rous in the
southerne
discoueries,
yet vnhappy
in these Nor-
therne.

And whensoever afterwards the Spaniards (very prosperous in all their Southerne disco-
ueries) did attempt any thing into Florida and those regions inclining towards the North, they
proued most vnhappy, and were at length discouraged utterly by the hard and lamentable successe
of many both religious and valiant in armes, endeavouring to bring those Northerly regions also
vnder the Spanish iurisdiction; as if God had prescribed limits vnto the Spanish nation which
they might not exceed: as by their owne gestes recorded may be aptly gathered.

The

The French, as they can pretend lesse title vnto these Northerne parts then the Spaniards, by how much the Spaniards made the first discouery of the same continent so far Northward as vnto Florida, and the French did but reuiew that before discovered by the English nation, vsurping vpon our right, and imposing names vpon countreys, riuers, bayes, capes, or headlands, as if they had bene the first finders of those coasts; which intury we offered not vnto the Spaniards, but left off to discouer when we approached the Spanish limits: euen so God hath not hitherto permitted them to establish a possession permanent vpon anothers right, notwithstanding their manifold attempts, in which the issue hath bene no lesse tragicall then that of the Spaniards, as by their owne reports is extant.

The French are but vsurers vpon our right.

The French are so infortunate in those North parts of America.

A good encouragement for the English nation, to proceed in the conquests of the North of America.

The due time approacheth by all likelihood of calling these heathens vnto Christianity. The word of God moueth circularly.

Then seeing the English nation onely hath right vnto these countreys of America from the cape of Florida Northward by the priuilege of first discouery, vnto which Cabot was authorized by regall authority, and set forth by the expence of our late famous king Henry the seventh: which right also seemeth strongly defended on our behalfe by the powerfull hand of almighty God, withstanding the enterprises of other nations: it may greatly encourage vs vpon so iust ground, as is our right, and vpon so sacred an intent, as to plant religion (our right and intent being meet foundations for the same) to prosecute effectually the full possession of those so ample and pleasant countreys appertaining vnto the crowne of England: the same (as is to be coniectured by infallible arguments of the worlds end approaching) being now arrived vnto the time by God prescribed of their vocation, if euer their calling vnto the knowledge of God may be expected. Which also is very probable by the reuolution and course of Gods word and religion, which from the beginning hath moued from the East, towards, & at last vnto the West, where it is like to end, vnlesse the same begin againe where it did in the East, which were to expect a like world againe. But we are assured of the contrary by the prophesie of Christ, whereby we gather, that after his word preached thorowout the world shalbe the end. And as the Gospel when it descended Westward began in the South, and afterward spread into the North of Europe: euen so, as the same hath begunne in the South countreys of America, no lesse hope may be gathered that it will also spread into the North.

These considerations may helpe to suppress all dreeds rising of hard euents in attempts made this way by other nations, as also of the heauy successe and issue in the late enterprise made by a worthy gentleman our countryman sir Humfrey Gilbert knight, who was the first of our nation that caried people to erect an habitation and gouernment in those Northerly countreys of America. About which, albeit he had consumed much substance, and lost his life at last, his people also perishing for the most part: yet the mystery thereof we must leaue vnto God, and iudge charitably both of the cause (which was iust in all pretence) and of the person, who was very zealous in prosecuting the same, deseruing honourable remembrance for his good minde, and expence of life in so vertuous an enterprise. Whereby neuerthelesse, least any man should be dismayed by example of other folks calamity, and misoeme that God doth resist all attempts intended that way: I thought good, so farre as my selfe was an eye witnesse, to deliuer the circumstance and manner of our proceedings in that action: in which the gentleman was so infortunately incumbered with wants, and woofe matched with many ill disposed people, that his rare iudgement and regiment premeditated for those affaires, was subiect to tolerate abuses, & in sundry extremities to holde on a course, more to vpholde credit, then likely in his owne conceit happily to succed.

The issue of such actions, being alwayes miserable, not guided by God, who abhorreth confusion and disorder, hath left this for admonition (being the first attempt by our nation to plant) vnto such as shall take the same cause in hand hereafter not to be discouraged from it: but to make men well aduised how they handle his so high and excellent matters, as the carriage is of his word into those very mighty and vast countreys. An action doubtlesse not to be intermedled with bale purposes; as many haue made the same but a colour to shadow actions otherwise scarce iustificable: which doth excite Gods heauy iudgements in the end, to the terrifying of weake mindes from the cause, without pondering his iust proceedings: and doth also incense forren princes against our attempts how iust soeuer, who can not but deeme the sequele very dangerous vnto their state (if in those parts we should grow to strength) seeing the very beginnings are entered with spoile.

And with this admonition denounced vpon zeale towards Gods cause, also towards those in whom appeareth disposition honourable vnto this action of planting Christian people and religion in those remote and barbarous nations of America (vnto whom I wish all happinesse) I will now proceed to make relation bylesly, yet particularly, of our voyage vnderaken with sir Humfrey Gilbert, begun, continued, and ended aduersly.

When first Sir Humfrey Gilbert vnderooke the Westerne discouery of America, and had procured

The planting of Gods word must be handled with reverence.

All actions coloured by pretence of planting vpon remote lands.

The first and
great prepara-
tion of Sir Hu-
frey Gilbert.

procured from her Maiesty a very large commission to inhabit & possesse at his choice all remote and heathen lands not in the actuall possession of any Christian prince, the same commission exem- plified with many priuileges, such as in his discretion he might demand, very many gentlemen of good estimation drew vnto him, to associate him in so commendable an enterpryse, so that the preparation was expected to grow vnto a puissant fleet, able to encounter a kings power by sea: neuertheless, amongst a multitude of voluntary men, their dispositions were diuers, which bred a iarre, and made a diuision in the end, to the confusion of that attempt euen before the same was begun. And when the shipping was in a maner prepared, & men ready vpon the coast to go aboord: at that time some brake consort, and followed courses degenerating from the voyage before pre- tended: Others failed of their promises contracted, and the greater number were dispersed, lea- uing the Generall with few of his assured friends, with whom he aduentured to sea: where ha- uing tasted of no lesse misfortune, he was shortly driuen to retire home with the losse of a tall ship, and (more to his grieve) of a valiant gentleman Miles Morgan.

A constant res-
olution of Sir
Humfrey Gilbert.

Having buried onely in a preparation a great masse of substance, wherby his estate was impai- red, his minde yet not dismayd, he continued his former designment & purpose to reuiue this enter- prise, good occasion seruing. Upon which determination standing long, without meanes to satisfy his desire, at last he granted certaine assignments out of his commission to sundry persons of meane ability, desiring the priuilege of his grant, to plant & fortifie in the North parts of America about the riuer of Canada, to whō if God gaue good successe in the North parts (where then no matter of moment was expected) the same (he thought) would greatly aduance the hope of the South, & be a furtherance vnto his determination that way. And the worst that might happen in that course might be excused without prejudice vnto him by the former supposition, that those North regions were of no regard: but chiefly a possession taken in any parcell of those heathen countreys, by ver- tue of his grant, did inuest him of territories extending euery way two hundred leagues: which induced Sir Humfrey Gilbert to make those assignments, desiring greatly their expedition, because his commission did expire after six yerres, if in that space he had not gotten actuall possession.

A second pre-
paration of Sir
Humfrey Gilbert.

Time went away without any thing done by his assignes: insomuch that at last he must resolute himselfe to take a voyage in person, for more assurance to keepe his patent in force, which then al- most was expired or within two yerres.

In furtherance of his determination, amongst others, Sir George Peckam knight shewed him- selfe very zealous to the action, greatly aiding him both by his aduice & in the charge. Other gen- tlemen to their ability ioyned vnto him, resolving to aduenture their substance & liues in the same cause. Who beginning their preparation from that time, both of shipping, munition, victual, men, and things requisite, some of them continued the charge two yerres compleat without intermission. Such were the difficulties and crosse accidents opposing these proceedings, which tooke not end in lesse then two yerres: many of which circumstances I will omit.

The last place of our assembly, before we left the coast of England, was in Causer bay neere vnto Plimmouth: then resolved to put vnto the sea with shipping and prouision, such as we had, before our store yet remaining, but chiefly the time and season of the yere, were too farre spent. Neuertheless it seemed first very doubtfull by what way to shape our course, and to begin our in- tended discovery, either from the South Northward, or from the North Southward.

Consultation
about our
course.

The first, that is, beginning South, without all controuersie was the likeliest, wherein we were assured to haue commodity of the current, which from the cape of Florida setteth North- ward, and would haue furthered greatly our nauigation, discovering from the foresayd cape along towards cape Briton, and all those lands lying to the North.

Comodities
in discovering
from South
Northward.

Also the yere being farre spent, and arriued to the moneth of Iune, we were not to spend time in Northerly courses, where we should be surprisid with timely Winter, but to couet the South, which we had space enough then to haue attained; and there might with lesse detriment haue win- tered that season, being more milde and short in the South then in the North where winter is both long and rigorous.

These and other like reasons alleged in fauour of the Southerne course first to be taken, to the contrary was inferred: that forasmuch as both our victuals, and many other needfull prouisions were diminished and left insufficient for so long a voyage, and for the wintering of so many men, we ought to shape a course most likely to minister supply; and that was to take the New found- land in our way, which was but seven hundred leagues from our English coast. Where being v- sually at that time of the yere, and vntill the fine of August, a multitude of ships repairing thither for fish, we should be relieued abundantly with many necessaries, which after the fishing ended, they might well spare, and freely impart vnto vs.

Not staying long vpon that Newland coast, we might proceed Southward, and follow still the Sunne, vntill we arrived at places moze temperate to our content.

By which reasons we were the rather induced to follow this Northerly course, obeying vnto necessity, which must be supplied. Otherwise, we doubted that sudden approach of Winter, bringing with it continuall fogge, and thicke mists, tempest and rage of weather; also contrariety of currents descending from the cape of Florida vnto cape Briton and cape Rase, would fall out to be great and irresistible impediments vnto our further proceeding for that yeere, and compell vs to Winter in those North and colde regions.

Cause why we began our discovery from the North. Incommodities in beginning North.

Wherefore suppressing all objections to the contrary, we resolved to begin our course Northward, and to follow directly as we might, the trade way vnto Newfoundland: from whence after our refreshing and reparation of wants, we intended without delay (by Gods permission) to proceed into the South, not omitting any riuer or bay which in all that large tract of land appeared to our view worthy of search. Immediately we agreed vpon the maner of our course and orders to be obserued in our voyage; which were deliuered in writing vnto the captaines and masters of euery ship a copy in maner following.

Euery shippe had deliuered two bullets or scrowles, the one sealed vp in ware, the other left open: in both which were included seuerall watch-words. That open, seruing vpon our owne coast or the coast of Ireland: the other sealed, was promised on all hands not to be broken vp vntill we should be cleere of the Irish coast; which from thenceforth did serue vntill we arrived and met altogether in such harbors of the Newfoundland as were agreed for our Rendez vous. The sayd watch-words being requisit to know our consorts whensoever by night, either by fortune of weather, our fleet dispersed should come together againe; or one should hale another; or if by ill watch and steerage one ship should chance to fall aboord of another in the darke.

The reason of the bullet sealed was to keepe secret that watch-word while we were vpon our owne coast, lest any of the company stealing from the fleet might betray the same; which knowen to an enemy, he might boord vs by night without mistrust, hauing our owne watch-word.

Orders agreed vpon by the Captaines and Masters to be obserued by the fleet of Sir Humfrey Gilbert.

First the Admirall to cary his flag by day, and his light by night.
2 Item, if the Admirall shall shorten his saile by night, then to shew two lights vntill he be answered againe by euery ship shewing one light for a short time.
3 Item, if the Admirall after his shortening of saile, as aforesayd, shall make moze saile againe: then he to shew three lights one aboue another.

4 Item, if the Admirall shall happen to hull in the night, then to make a wauering light ouer his other light, wauering the light vpon a pole.

5 Item, if the fleet should happen to be scattered by weather, or other mishap, then so soone as one shall descry another, to hoise both toppe sailes twise, if the weather will serue, and to strike them twise againe: but if the weather serue not, then to hoise the maine top saile twise, and forthwith to strike it twise againe.

6 Item, if it shall happen a great fogge to fall, then presently euery shippe to beate vp with the admirall, if there be winde: but if it be a calme, then euery ship to hull, and so to lie at hull till it be cleere. And if the fogge do continue long, then the Admirall to shoot off two pieces euery euening, and euery ship to answer it with one shot: and euery man bearing to the ship, that is to leeward so neere as he may.

7 Item, euery master to giue charge vnto the watch to looke out well, for laying aboord one of another in the night, and in fogges.

8 Item, euery euening euery ship to haile the admirall, and so to fall afterne him, sailing thorow the Ocean: and being on the coast, euery ship to haile him both morning and euening.

9 Item, if any ship be in danger any way, by leake or otherwise, then she to shoot off a piece, and presently to hang out one light, whereupon euery man to beate towards her, answering her with one light for a short time, and so to put it out againe; thereby to giue knowledge that they haue seene her token.

10 Item, whensoever the Admirall shall hang out her ensigne in the maine shrouds, then euery man to come aboord her, as a token of counsell.

11 Item, if there happen any storme or contrary winde to the fleet after the discovery, where by they are separated: then euery ship to repaire vnto their last good port, there to meet againe.

Our

Our course agreed vpon.

The course first to be taken for the discovery is to beare directly to cape Rase, the most Southerly cape of Newfound land; and there to harbour our selues either in Rog-neux or Fermous, being the first places appointed for our Rendez vous, and the next harbours vnto the Northward of cape Rase: and therefore euery ship separated from the fleet to repaire to that place so fast as God shall permit, whether you shall fall to the Southward or to the Northward of it, and there to stay for the meeting of the whole fleet the space of ten dayes; and when you shall depart, to leaue marks.

A direction of our course vnto the Newfound land.

Beginning our course from Silley, the neereſt is by Westlouthwest (if the winde serue) vntill such time as we haue brought our selues in the latitude of 43 or 44 degrees, because the Ocean is subiect much to Southerly windes in Iune and Iuly. Then to take trauerſe from 45 to 47 degrees of latitude, if we be inforced by contrary windes: and not to go to the Northward of the height of 47 degrees of Septentrionall latitude by no meanes; if God shall not inforce the contrary; but to do your endeavour to keepe in the height of 46 degrees, so nere as you can possibly, because cape Rase lieth about that height.

Notes.

If by contrary windes we be driuen backe vpon the coast of England, then to repaire vnto Silley for a place of our assembly or meeting.

If we be driuen backe by contrary winds that we can not passe the coast of Ireland, then the place of our assembly to be at Beare hauen or Baltimore hauen.

If we shall not happen to meet at cape Rase, then the place of Rendez vous to be at cape Briton, or the neereſt harbour vnto the Westward of cape Briton.

If by meanes of other shipping we may not safely stay there, then to rest at the very next safe port to the Westward; euery ship leauing their marks behinde them for the more certainty of the after commers to know where to finde them.

The marks that euery man ought to leaue in such a case, were of the Generals priuate deuice written by himſelfe, sealed also in close ware, and deliuered vnto euery shippe one ſcoule, which was not to be opened vntill occasion required, whereby euery man was certified what to leaue for instruction of after commers: that euery of vs comming into any harbour or riuer might know who had bene there, or whether any were still there by higher into the riuer, or departed, and which way.

Beginning of
the voyage.

Orders thus determined, and promises mutually giuen to be obserued, euery man withorew himſelfe vnto his charge, the ankers being already weyed, and our shippes vnder ſaile, hauing a loſt gale of winde, we began our voyage vpon Tuesday the eleuenth day of Iune, in the yere of our Lord 1583, hauing in our fleet (at our departure from Caulet bay) these shippes, whose names and burthens, with the names of the captaines and masters of them, I haue also inserted, as followeth:

- 1 The Delight *alias* The George, of burthen 120 tunnes, was Admirall: in which went the Generall, and William Winter captaine in her and part owner, and Richard Clearke master.
- 2 The Barke Raleigh set forth by M. Walter Raleigh, of the burthen of 200 tunnes, was then Vice-admirall: in which went M. Butler captaine, and Robert Dauis of Bristol master.
- 3 The Golden hinde, of burthen 40 tunnes, was then Reare-admirall: in which went Edward Hayes captaine and owner, and William Cox of Limehouse master.
- 4 The Swallow, of burthen 40 tunnes: in her was captaine Maurice Browne.
- 5 The Squirrell, of burthen 10 tunnes: in which went captaine William Andrewes, and one Cade master.

Our fleet consisted of five
sailes, in which
we had about
260 men.
Provisions fit
for such discou-
eries.

We were in number in all about 260 men: among whom we had of euery faculty good choise, as Shipwrights, Balons, Carpenters, Smithes, and such like, requisite to such an action: also Minerall men and Refiners. Besides, for solace of our people, and allurement of the Sauages, we were provided of Musike in good variety: not omitting the least toys, as Morris dancers, Hobby horse, and Maylike conceits to delight the Sauage people, whom we intended to winne by

by all faire meanes possible. And to that end we were indifferently furnished of all petty haberdasherie wares to barter with those simple people.

In this maner we set forward, departing (as hath bene said) out of Causon bay the eleuenth June 11. day of June being Tuesday, the weather and winde faire and good all day, but a great storme of thunder and winde fell the same night.

Thursday following, when we hailed one another in the euening (according to the order before June 13. specified) they signified vnto vs out of the Vizadmirall, that both the Captaine, and very many of the men were fallen sicke. And about midnigh the Vizadmirall forsooke vs, nor withstanding we had the winde East, faire and good. But it was after credibly reported, that they were infected with a contagious sicknesse, and arriued greatly distressed at Plimmoch: the reason I could neuer understand. Sure I am, no cost was spared by their owner (Master Raleigh in setting them forth: Therefore I leaue it vnto God.

By this time we were in 48 degrees of latitude, not a little grieued with the losse of the most puissant ship in our flecte: after whose departure, the Golden Hind succeeded in the place of Vizadmirall, and remooued her flagge from the mizon vnto the foretop.

From Saturday the 15 of June vntill the 28, which was vpon a Friday, we neuer had faire June 15. day without fogge or raine, and windes bad, much to the West north west, whereby we were driven Southward vnto 41 degrees scarse.

About this time of the yere the winds are commonly West towards the Newfound land, keeping ordinarily within two points of West to the South or to the North, whereby the course thither falleth out to be long and tedious after June, which in March, Aprill & May, hath bene perfoyned out of England in 22 dayes and lesse. We had winde alwayes so scant from West north west, and from West south west againe, that our trauesle was great, running South vnto 41 degrees almost, and afterward North into 51 degrees.

Also we were incombred with much fogge and mist in maner palpable, in which we could not keepe so well together, but were disseuered, losing the companie of the Swallow and the Squirrill vpon the 20 day of July, whom we met againe at seuerall places vpon the Newfound land coast the thirde of August, as shalbe declared in place conuenient.

Saturday the 27 of July, we mighte descry not farre from vs, as it were mountaines of yce driven vpon the sea, being then in 50 degrees, which were caried Southward to the weather of vs: whereby may be conjectured that some current doth set that way from the North.

Before we come to Newfound land about 50 leagues on this side, we passe the banke, which are high grounds rising within the sea and vnder water, yet deepe enough and without danger, being commonly not lesse then 25 and 30 fadome water vpon them: the same (as it were some vaine of mountaines within the sea) doe runne along, and from the Newfound land, beginning Northward about 52 or 53 degrees of latitude, & do extend into the South infinitely. The breadth of this banke is somewhere more, and somewhere lesse: but we found the same about 10 leagues ouer, hauing sounded both on this side thereof, and the other toward Newfound land, but found no ground with almost 200 fadome of line, both before & after we had passed the banke. The Portugals, and French chiefly, haue a notable trade of fishing vpon this banke, where are sometimes an hundred or more sailes of ships: who commonly beginne the fishing in Aprill, and haue ended by July. That fish is large, alwayes wet, hauing no land neere to drie, and is called Corre fish.

During the time of fishing, a man shall know without sounding when he is vpon the banke, by the incredible multitude of sea foule hovering ouer the same, to pray vpon the offalles & garbage of fish throwen out by fishermen, and floating vpon the sea.

Vpon Tuesday the 11 of June, we forsooke the coast of England. So againe Tuesday the 30 of July (leuen weekes after) we got sight of land, being immediately embayed in the Grand bay, or some other great bay: the certaintie whereof we could not iudge, so great hase and fogge did hang vpon the coast, as neither we might discerne the land well, nor take the sunnes height. But by our best computation we were then in the 51 degrees of latitude.

If taking this bay and uncomfortable coast (nothing appearing vnto vs but hideous rockes and mountaines, bare of trees, and void of any greene herbe) we followed the coast to the South, with weather faire and cleare.

We had sight of an Island named Penguin, of a foule there breeding in abundance, almost incredible, which cannot flie, their wings not able to carry their body, being very large (not much lesse then a goose) and exceeding fat: which the French men vse to take without difficultie vpon that Island, and to barreil them vp with salt. But for lingering of time we had made vs there the like prouision.

June 11.

June 13.

Obscure.

June 15.

July 20.

Great fogges vpon the sea an lea Northward.

July 27.

The banke in length unknown, stretcheth from North into South, in breadth 10 leagues, in depth of water vpon it 30 fadome.

A great fishing vpon the banke.

Abundance of foules.

July 30.

First sight of land.

Island and a foule named Penguin.

In Island cal-
led Baccalaos, of
the fish taken
there.

Trending this coast, we came to the Island called Baccalaos, being not past two leagues from the maine: to the South thereof lieth Cape S. Francis, 5. leagues distant from Baccalaos, between which goeth in a great bay, by the vulgar sort called the bay of Conception. Here we met with the Swallow againe, whom we had lost in the fogge, and all her men altered into other apparell: wherof it seemed their store was so amended, that for joy and congratulation of our meeting, they spared not to cast by into the aire and overboard, their caps & hats in good plenty. The Captaine albeit himselfe was very honest and religious, yet was he not appointed of men to his humor and desert: who for the most part were such as had bene by vs surprised vpon the narrow seas of England, being pirats and had taken at that instant certaine Frenchmen laden, one barke with wines, and another with salt. Both which we rescued, & tooke the man of warre with all her men, which was the same ship now called the Swallow, following still their kind so oft, as (being separated from the General) they found opportunitie to robbe and spoile. And because Gods iustice did follow the same company, euen to destruction, and to the ouerthrow also of the Captaine (though not consenting to their misdoings) I will not conceale any thing that maketh to the manifestation and approbation of his iudgements, for examples of others, perswaded that God more sharply tooke reuenge vpon them, and hath tolerated longer as great outrage in others: by how much these went under protection of his cause and religion, which was then pretended.

Spilde meane
of them in the
Swallow.

Therefore vpon further enquiry it was knowne, how this company met with a barke returning home after the fishing with his freight: and because the men in the Swallow were very neere scantred of victuall, and chiefly of apparell, doubtful withall where or when to find and meete with their Admiral, they besought the captaine they might go aboard this Newlander, only to borrow what might be spared, the rather because the same was bound homeward. Leauie giuen, not without charge to deale fauorably, they came aboard the fisherman, whō they rifled of tackle, sailes, cables, victuals, & the men of their apparell: not sparing by torture (winding cords about their heads) to draw out else what they thought good. This done with expedition (like men skilfull in such mischiefes) as they tooke their cocke boat to go aboard their own ship, it was ouerwhelmed in the sea, and certaine of these men there drowned: the rest were preserued euen by those silly soules whom they had before spoyled, who saued and deliuered them aboard the Swallow. What became afterward of the poore Newlander, perhaps destitute of sayles and furniture sufficient to carry them home (whither they had not lesse to runne then 700 leagues) God alone knoweth, who tooke vengeance not long after of the rest that escaped at this instant: to reuenge the fact, and iustitie to the world Gods iudgements inflicted vpon them, as shall be declared in place conuenient.

English ships
are the strong-
est and most
valiant of o-
ther fleets,
fishing vpon
the South
parts of New-
found land.

Thus after we had met with the Swallow, we held on our course Southward, vntill we came against the harbor called S. Iohn, about 5. leagues from the former Cape of S. Francis: where before the entrance into the harbor, we found also the Frigate or Squirrell lying at anker. Whom the English marchants (that were & alwaies be Admirals by turnes interchangeably ouer the fleets of fishermen within the same harbor) would not permit to enter into the harbor. Glad of so happy meeting both of the Swallow and Frigate in one day (being Saturday the 3. of August) we made readie our sights, & prepared to enter the harbor, any resistance to the contrarie notwithstanding, there being within of all nations, to the number of 36 sailes. But first the General dispatched a boat to giue them knowledge of his coming for no ill intent, hauing Commission from her Maestie for his voyage he had in hand. And immediatly we followed with a slacke gale, and in the very entrance (which is but narrow, not aboue 2 butts length) the Admirall fell vpon a rocke on the harbor side by great oversight, in that the weather was faire, the rocke much aboue water fast by the shore, where neither went any sea gate. But we found such readinesse in the English Marchants to helpe vs in that danger, that without delay there were brought a number of boates, which towed off the ship, and cleared her of danger.

Hauing taken place conuenient in the road, we let fall ankers, the Captaines and Masters repairing aboard our Admirall: whither also came immediatly the Masters and owners of the fishing fleet of Englishmen, to vnderstand the Generals intent and cause of our arriual there. They were all satisfied when the General had shewed his commission, and purpose to take possession of those lands to the behalfe of the crowne of England, and the aduancement of Christian religion in those Paganish regions, requiring but their lawfull ayde for repaying of his fleet, and supply of some necessities, so farre as conueniently might be afforded him, both out of that and other harbors adioyning. In lieu whereof, he made offer to gratifie them with any fauour and priuiledge, which vpon their better aduise they should demand, the like being not to bee obteyned hereafter for greater price. So crauing expedition of his demand, minding to proceede further South without long detention in those partes, he dismissed them, after promise giuen of their best

best indeuour to satisfie speedily his so reasonable request. The marchants with their Masters departed, they caused forthwith to be discharged all the great Ordnance of their flecte in token of our welcome.

It was further determined that euery ship of our flecte should deliuer vnto the marchants and Masters of that harbour a note of all their wants: which done, the ships as well English as strangers, were taxed at an easie rate to make supply. And besides, Commissioners were appointed, part of our owne companie and part of theirs, to go into other harbours adioyning (for our English marchants command all there) to leaue our prouision: whereunto the Portugals (aboute other nations) did most willingly and liberally contribute. Insomuch as we were presented (aboute our allowance) with wines, marmalads, most fine ruske or bisket, sweet oyles and sundry delicacies. Also we wanted not of fresh salmons, troutes, lobsters and other fresh fish brought daily vnto vs. Moreover as the maner is in their fishing, euery weeke to choose their Admirall a new, or rather they succede in orderly course, and haue weekely their Admirals feast solemnized: euen so the General, Captaines and masters of our flecte were continually inuited and feasted. To grow short, in our abundance at home, the intertainment had bene delightfull, but after our wants and tedious passage through the Ocean, it seemed more acceptable and of greater contentation, by how much the same was vnexpected in that desolate corner of the world: where at other times of the yeare, wilde beasts and birds haue only the fruition of all those countries, which now seemed a place very populous and much frequented.

Good order taken by English marchants for our supply in Newfound land.

Good entertainment in Newfound land. No Sauiages in the South part of Newfound land.

The next morning being Sunday and the 4 of August, the Generall and his company were brought on land by English marchants, who shewed vnto vs their accustomed walks vnto a place they call the Garden. But nothing appeared more then Nature it selfe without art: who confusedly hath brought forth roses abundantly, wilde, but odoriferous, and to sense very comfortable. Also the like plentie of raspis berries, which doe grow in euery place.

August 4.

Sunday following, the General had his tent set vp, who being accompanied with his own followers, summoned the marchants and masters, both English and strangers to be present at his taking possession of those Countries. Before whom openly was read & interpreted vnto the strangers his Commission: by vertue whereof he tooke possession in the same harbour of S. Iohn, and 200 leagues euery way, inuested the Queenes Maiestie with the title and dignitie thereof, had deliuered vnto him (after the custome of England) a rod & a turffe of the same soile, entering possession also for him, his heires and assignes for euer: And signified vnto al men, that from that time forthward, they should take the same land as a territorie appertaining to the Queene of England, and himselfe authorized vnder her Maiestie to possesse and enioy it, And to ordaine lawes for the gouernement thereof, agreeable (so neere as conueniently might be) vnto the lawes of England: vnder which all people coming thither hereafter, either to inhabite, or by way of traffique, should be subiected and gouerned. And especially at the same time for a beginning, he proposed & deliuered three lawes to be in force immediatly. That is to say: the first for Religion, which in publique exercise should be according to the Church of England. The 2. for maintenance of her Maiesties right and possession of those territories, against which if any thing were attempted preiudiciall, the partie or parties offending should be adiudged and executed as in case of high treason, according to the lawes of England. The 3. if any person should utter words sounding to the dishonour of her Maiestie, he should loose his eares, and haue his ship and goods confiscate.

August 5.

Possession taken.

Three lawes.

These contents published, obedience was promised by generall voyce and consent of the multitude as well of Englishmen as strangers, praying for continuance of this possession and gouernement begun. After this, the assembly was dismissed. And afterward were erected not farre from that place the Armes of England ingrauen in lead, and insired vpon a pillar of wood. Yet further and actually to establish this possession taken in the right of her Maiestie, and to the behoofe of Sir Humfrey Gilbert knight, his heires and assignes for euer: the Generall granted in fee farme diuers parcels of land lying by the water side, both in this harbor of S. Iohn, and elsewhere, which was to the owners a great commoditie, being thereby assured (by their proper inheritance) of grounds conuenient to dresse and to drie their fish, whereof many times before they did faile, being preuented by them that came first into the harbor. For which grounds they did couenant to pay a certaine rent and seruice vnto Sir Humfrey Gilbert, his heires or assignes for euer, and yeerely to maintaine possession of the same, by themselves or their assignes.

Actual possession maintained in Newfound land.

Now remained only to take in prouision granted, according as euery shippe was taxed, which did fish vpon the coast adioyning. In the meane while, the Generall appointed men vnto their charge: some to repaire and trim the ships, others to attend in gathering together our supply and prouisions: others to search the commodities and singularities of the countrey, to be found by sea

Men appointed to make search.

of land, and to make relation vnto the Generall what eyther themselves could knowe by their owne trauaile and experience, or by good intelligence of English men or strangers, who had longest frequented the same coast. Also some obserued the eleuation of the pole, and drew platys of the countrey exactly graded. And by that I could gather by each mans severall relation, I haue drawn a brieve description of the Newfound land, with the commodities by sea or lande already made, and such also as are in possibilitie and great likelihood to be made: Neuerthelesse the Cardes and platys that were drawing, with the due gradation of the harbours, bays, and capes, did perishe with the Admirall: wherefore in the description following, I must omit the particulars of such things.

A brieve relation of the Newfound lande, and the commodities thereof.

New found land
is at Islands
or broke lands

That which we doe call the Newfound land, and the Frenchmen Bacalaos, is an Island, or rather (after the opinion of some) it consisteth of sundry Islands and broken lands, situate in the North regions of America, vpon the gulfie and entrance of the great riuer called S. Laurence in Canada. Into the which, nauigation may be made both on the South and North side of this Island. The land lyeth South and North, containing in length betweene three & 400 miles, accounting from cape Race (which is in 46 degrees 25 minuts) vnto the Grand bay in 52 degrees of Septentrionall latitude. The Island round about hath very many goodly bays and harbours, safe roads for ships, the like not to be found in any part of the known world.

Goodly roads
and harbours.

New found land
is habitable.

The common opinion that is had of intemperature & extreme cold that should be in this countrey, as of some part it may be verified, namely the North, where I grant it is more colde then in countries of Europe, which are vnder the same eleuation: euen so it cannot stand with reason and nature of the climate, that the South parts should be so intemperate as the hute hath gone. For as the same doe lie vnder the climates of Briton, Aniou, Poictou in France, betweene 46 and 49 degrees, so can they not so much differ from the temperature of those countries: vnlesse vpon the outcoast lying open vnto the Ocean and sharpe windes, it must in deede be subiect to more colde, then further within the land, where the mountaines are interposed, as walles and bulwarkes, to defend and to resist the asperitie and rigor of the sea and weather. Some hold opinion, that the Newfound land might be the more subiect to cold, by how much it lyeth high and neere vnto the middle region. I grant that not in Newfound land alone, but in Germany, Italy and Afrike, euen vnder the Equinoctiall line, the mountaines are extreme cold, and feel some vncouered of snow, in their culme and highest tops, which cometh to passe by the same reason that they are extended towards the middle region: yet in the countries lying beneath them, it is found quite contrary. Euen so all hills hauing their descents, the valleys also and low grounds must be likewise hot or temperate, as the climate doeth giue in Newfound land: though I am of opinion that the Sunnes reflection is much cooled, and cannot be so forcible in the Newfound land, nor generally throughout America, as in Europe or Afrike: by how much the Sunne in his diurnall course from East to West, passeth ouer (for the most part) oyer land and sandy countries, before he arriueth at the West of Europe or Afrike (for the most part) oyer land and sandy countries, with little or no qualification by moyst vapours. Where, on the contrarie he passeth from Europe and Afrike vnto America ouer the Ocean, from whence it draweth and carieth with him abundance of moyst vapours, which doe qualifie and infeeble greatly the Sunnes reuerberation vpon this countrey chiefly of Newfound land, being so much to the Northward. Neuerthelesse (as I sayd before) the cold cannot be so intollerable vnder the latitude of 46 47 and 48 (especially within land) that it should be uninhabitable, as some doe suppose, seeing also there are very many people more to the North by a great deale. And in these South parts there be certaine beastes, Dunces or Leopards, and birdes in like maner which in the Sommer we haue seene, not heard of in countries of extreme and vehement coldnesse. Besides, as in the monethes of June, July, August and September, the heate is somewhat more then in England at those seasons: so men remaining vpon the South parts neere vnto Cape Race, vntill after Hollandtide, haue not found the cold so extreme, nor much differing from the temperature of England. Those which haue arriued there after Nouember and December, haue found the snow exceeding deepe, whereat no maruaile, considering the ground vpon the coast, is rough and breuen, and the snow is driuen into the places most declining, as the like is to be seene with vs. The like depth of snow happily shall not be found within land vpon the playner countries, which also are defended by

Cold by acci-
dental means

by the mountaines, breaking off the violence of winds and weather. But admitting extraordinary cold in those South parts, above that with vs here: it can not be so great as in Swedland, much lesse in Moscouia or Russia: yet are the same countries very populous, and the rigor of cold is dispensed with by the commoditie of Stoues, warme clothing, meats and drinckes: all which neede not to be wanting in the Newfound land, if we had intent there to inhabite.

In the South parts we found no inhabitants, which by all likelihood haue abandoned those coastes, the same being so much frequented by Christians: But in the North are sauages altogether harmlesse. Touching the commodities of this countrie, seruing either for sustentation of inhabitants, or for maintenance of traffique, there are & may be made diuers: so y^t it seemeth Nature hath recompensed that only defect and incommoditie of some sharpe cold, by many benefits: viz. With incredible quantitie, and no lesse varietie of kindes of fish in the sea and fresh waters, as Trouts, Salmones and other fish to vs vnknownen: Also Cod, which alone dratweth many nations thither, and is become the most famous fishing of the world. Abundance of Whales, for which also is a very great trade in the bays of Placentia & the Grand bay, where is made Crane oiles of the Whale: Herring the largest that haue bene heard of, and exceeding the Hualstrond herring of Norway: but hitherto was neuer benefit taken of the herring fishing. There are sundry other fish very delicate, namely the Bonito, Lobsters, Turbut, with others infinite not sought after: Dyffers hauing pearle but not orient in colour: I tooke it by reason they were not gathered in season.

Commodities.

Fish of sea and fresh water.

Concerning the inland commodities, aswel to be drawn from this land, as from the exceeding large countries adioyning: there is nothing which our East and Northerly countries of Europe doe yeelde, but the like also may be made in them as plentifully by time and industrie: Namely, rosen, pitch, tarre, sopeashes, dealboord, mastes for ships, hides, furs, flaxe, hampe, coyne, cables, cordage, linnen-cloth, mettals and many more. All which the countries will asford, and the soyle is apt to yeelde.

The trees for the most in those South parts, are Firretrees, Pine and Cypresse, all yeelding Gumme and Turpentine.

Cherrie trees bearing fruit no bigger then a small pearle. Also pearle trees, but fruitlesse. Other trees of some sorts to vs vnknownen.

The soyle along the coast is not deepe of earth, bringing forth abundantly peason small, yet good feeding for cattel. Roses passing sweet, like vnto our muske roses in forme, raspases, a berry which we call Purres, good and wholesome to eat. The grasse and herbe doth fat sheepe in very short space, proued by English marchants which haue caried sheepe thither for fresh victuall and had them raised exceeding fat in lesse then thre weekes. Peason which our countrey men haue sowed in the time of May, haue come vp faire, and bene gathered in the beginning of August, of which our Generall had a present acceptable for the rarenesse, being the first fruits comming by by art and industrie in that desolate and dishabited land.

Lakes or pooles of fresh water, both on the tops of mountaines and in the vallies. In which are said to be muskles not vnlike to haue pearle, which I had put in triall, if by mischance falling vnto me, I had not bene letted from that and other good experiments I was minded to make.

Foule both of water and land in great plentie and diuersitie. All kind of greene foule: Others as bigge as Bustards, yet not the same. A great white foule called of some a Gaint.

Upon the land diuers sorts of haukes, as faulcons, and others by report: Partridges most plentifull larger then ours, gray and white of colour, and rough footed like doves, which our men after one flight did kill with cudgels, they were so fat and vnable to flie. Birds some like blackbirds, linnets, canary birds, and other very small. Beasts of sundry kindes, red deare, buffles or a beast, as it seemeth by the tract & foote very large in maner of an ore. Beares, ounces or leopards, some greater & some lesser, wolues, fores, which to the Northward a litle further are black, whose furre is esteemed in some Countries of Europe very rich. Otters, beuers, marternes: And in the opinion of most men that saw it, the Generall had brought vnto him a Sable aloue, which he sent vnto his brother sir Iohn Gilbert knight of Deuonshire: but it was neuer deliuered, as after I vnderstood. We could not obserue the hundredth part of creatures in those vnhabited lands: but these mentioned may induce vs to glorifie the magnificent God, who hath superabundantly replenished the earth with creatures seruing for the vse of man, though man hath not vsed the fift part of the same, which the more doth aggrauate the fault and foolish slouth in many of our nation, chusing rather to liue indirectly, and very miserably to liue & die within this realme pestered with inhabitants, then to aduenture as becommeth men, to obtaine an habitation in those remote lands, in which Nature very prodigally doth minister vnto mens endeuours, and for art to worke vpon.

Newfound land doth minister commodities abundantly for art & industrie.

For besides these already recounted and infinite more, the mountaines generally make shew of minerall

minerrall substance: Iron very common, lead, and somewhere copper. I will not auerre of richer mettals: albeit by the circumstances following, more then hope may be conceiued thereof.

Siluer Ore
brought vnto
the Generall.

For amongst other charges giuen to inquire out the singularities of this countrey, the Generall was most curious in the search of mettals, commanding the minerrall man and refiner, especially to be diligent. The same was a Saxon borne, honest, and religious, named Daniel. Who after search brought at first some sort of Ore, seeming rather to be pyon then other mettall. The next time he found Ore, which with no smal shew of contentment he deliuered vnto the General, vsing protestation, that if siluer were the thing which might satisfie the Generall & his followers, there it was, aduising him to seeke no further: the perill whereof he vnderooke vpon his life (as deare vnto him as the Crowne of England vnto her Maestie, that I may vse his owne words) if it fell not out accordingly.

Reasons why
no further
search was
made for the
siluer mine.

My selfe at this instant liker to die then to liue, by a mischance, could not follow this confident opinion of our refiner to my owne satisfaction: but afterward demanding our Generals opinion therein, and to haue some part of the Ore, he replied: Content your selfe, I haue seene ynough, and were it but to satisfie my priuate humoz, I would proceede no further. The promise vnto my friends, and necessitie to bring also the South countreies within compasse of my Patent neere expired, as we haue already done these North parts, do only perswade me further. And touching the Ore, I haue sent it aboard, whereof I would haue no speech to be made so long as we remaine within harbor: here being both Portugals, Viscains and Frenchmen not farre off, from whom must be kept any bzuit or muttering of such matter. When we are at sea prooue shalbe made: if it be to our desire, we may returne the sooner hither againe. Whose answere I iudged reasonable, and contenting me well: wherewith I will conclude this narration and description of the Newfoundland, and proceede to the rest of our voyage, which ended tragically.

Misdemeanor
in our compa-
nie.

While the better sort of vs were seriously occupied in repairing our wants, and contriuing of matters for the commoditie of our voyage: others of another sort & disposition were plotting of mischief. Some casting to steale away our shipping by night, watching oportunitie by the Generals and Captaines lying on the shore: whose conspiracies discovered, they were prevented. Others drew together in company, and caried away out of the harbors adioyning, a ship laden with fish, setting the poore men on shore. A great many more of our people stole into the woods to hide themselves, attending time and meanes to returne home by such shipping as daily departed from the coast. Some were sicke of fluxes, and many dead: and in briebe, by one meanes or other our company was diminished, and many by the Generall licensed to returne home. Inasmuch as after we had reuiued our people, resolved to see an end of our voyage, we grewe scant of men to furnish all our shipping: it seemed good therefore vnto the Generall to leaue the Swallowe with such prouision as might be spared for transporting home the sicke people.

God brought
together these
men into the
ship ordained
to perill, who
before had com-
mitted such
outrage.

The Captaine of the Delight or Admirall returned into England, in whose stead was appointed Captaine Maurice Browne, before Captaine of the Swallow: who also brought with him into the Delight all his men of the Swallow, which before haue bene noted of outrage perpetrated and committed vpon fishermen there met at sea.

Why Sir Humf.
Gilbert went in
the Frigate.

The Generall made choise to goe in his frigate the Squirrell (whereof the Captaine also was amongst them that returned into England) the same frigate being most conuenient to discouer vpon the coast, and to search into euery harbor or creeke, which a great ship could not doe. Therefore the Frigate was prepared with her nettings & fighes, and ouercharged with bales and such small Ordnance, more to giue a shew, then with iudgement to foresee vnto the safetie of her and the men, which afterward was an occasion also of their ouerthrow.

Liberalitie of
the Portugals.

Now hauing made readie our shipping, that is to say, the Delight, the golden Hinde, and the Squirrell, and put aboard our prouision, which was wines, bread or ruske, fish wette and drie, sweete oiles: besides many other, as marmalades, figs, lymmons barrellled, and such like: Also we had other necessary prouisions for trimming our ships, nets and lines to fish withall, boates or pinnesles fit for discouery. In briebe, we were supplied of our wants commodiously, as if we had bene in a Countrey or some Citie populous and plentifull of all things.

August 20
S. Johns in 47
deg. 40 min.

We departed from this harbour of S. Johns vpon Tuesday the twentieth of August, which we found by exact obseruation to be in 47 degrees 40 minutes. And the next day by night we were at Cape Race, 25 leagues from the same harborough.

Cape Race in
46 degrees
25 minutes.

This Cape lyeth South South-west from S. Johns: it is a low land, being off from the Cape about halfe a league: within the sea riseth by a rocke against the point of the Cape, which thereby is easily knowen: It is in latitude 46 degrees 25 minutes.

Under

Under this Cape we were becalmed a small time, during which we layd out hookes and lines to take Codde, and drew in lesse then two houres, fish so large and in such abundance, that many dayes after we fed vpon no other prouision. Fith large and plentifull.

From hence we shaped our course vnto the Island of Sablon, if conueniently it would so fall out, also directly to Cape Briton.

Sablon lieth to the sea-ward of Cape Briton about 25 leagues, whither we were determined to goe vpon intelligence we had of a Portugall, (during our abode in S. Johns) who was himselfe present, when the Portugals (about thirty yeeres past) did put into the same Island both Beate and Swine to breede, which were since exceedingly multiplied. This seemed vnto vs very happy tidings, to haue in an Island lying so neere vnto the maine, which we intended to plant vpon, such store of cattell, whereby we might at all times conueniently be relieved of victuall, and serued of store for breede. Cattell in the Ile of Sablon,

In this course we trended along the coast, which from Cape Race stretcheth into the North-west, making a bay which some called Trepassa. Then it goeth out againe toward the West, and maketh a point, which with Cape Race lieth in maner East and West. But this point inclineth to the North: to the West of which goeth in the bay of Placentia. We sent men on land to take view of the soyle along this coast, whereof they made good report, and some of them had wil to be planted there. They saw Pease growing in great abundance euery where. Good soile.

The distance betweene Cape Race and Cape Briton is 87 leagues. In which Nauigation we spent 8 dayes, hauing many times the wind indifferent good: yet could we neuer attaine sight of any land all that time, seeing we were hindzed by the current. At last we fell into such flats and dangers, that hardly any of vs escaped: where neuertheless we lost our Admirall with al the men and prouision, not knowing certainly the place. Yet for inducing men of skill to make coniecture, by our course and way we held from Cape Race thither (that thereby the flats and dangers may be inserted in sea Cards, for warning to others that may follow the same course hereafter) I haue set downe the best reckonings that were kept by expert men, William Cox Master of the Hind, and Iohn Paul his mate, both of Limehouse,

Reckonings kept in our course from Cape Race towards Cape Briton, and the Island of Sablon, to the time and place where we lost our Admirall.

August 22.	West,	14. leagues.
	West and by South,	25.
	Westnorthwest,	25.
	Westnorthwest,	9.
	Southsouthwest,	10.
	Southwest,	12.
	Southsouthwest,	10.
August 29.	Westnorthwest.	12. Here we lost our Admirall.
Summe of these leagues, 117.		

The reckoning of Iohn Paul Masters mate from Cape Race.

August 22.	West,	14. leagues.
23	Northwest and by West,	9.
24	Southwest and by South,	5.
25	West and by South,	40.
26	West and by North,	7.
27	Southwest,	3.
28	Southwest,	9.
	Southwest,	7.
	Westsouthwest,	7.
29	Northwest and by West,	20. Here we lost our Admirall.
Summe of all these leagues, 121		

Our course we held in clearing vs of these flats was Eastsoutheast, and Southeast, and South
14 leagues with a marueilous scant winde.

The maner how our Admirall was lost.

August 27.

Vpon Tuesday the 27 of August, toward the euening, our Generall caused them in his frigat to sound, who found white sande at 35 fadome, being then in latitude about 44 degrees.

Wednesday toward night the wind came South, and wee bare with the land all that night, Westnothwest, contrary to the mind of master Cox: neuerthelesse wee followed the Admirall, deppriued of power to preuent a mischiese, which by no contradiction could be brought to hold o-
ther course, alleaging they could not make the ship to worke better, nor to lie otherwaies.

Predictions
before the
wacke.

The euening was faire and pleasant, yet not without token of storme to ensue, and most part of this Wednesday night, like the Swanne that singeth before her death, they in the Admirall, or Delight, continued in sounding of Trumpets, with Drummes, and Fifes: also winding the Cornets, Haughtboyes: and in the end of their iolitie, left with the battell and ringing of dole-
full knels.

Towards the euening also we caught in the Golden Hinde a very mighty Porpoise, with a harping ppon, hauing first stricken diuers of them, and brought away part of their flesh, sticking vpon the ppon, but could recouer onely that one. These also passing through the Ocean, in heardes, did portend storme. I omit to recite friuolous reportes by them in the Frigat, of strange voyces, the same night, which scarred some from the helme.

Losse of our
Admirall.

Thursday the 29 of August, the wind rose, and blew vehemently at South and by East, bringing withal raine, and thicke mist, so that we could not see a cable length before vs. And betimes in the morning we were altogether runne and folded in amongst flats and sands, amongst which we found shoale and deepe in euery three or foure shippes length, after wee began to sound: but first we were vpon them vnawares, untill master Cox looking out, discerned (in his iudgement) white cliffes, crying (land) withall, though we could not afterward deserie any land, it being very likely the breaking of the sea white, which seemed to be white cliffes, through the haze and and thicke weather.

Immediatly tokens were giuen vnto the Delight, to cast about to seaward, which, being the greater ship, and of burden 120 tunnes, was yet foremost vpon the breach, keeping so ill watch, that they knew not the danger, before they felt the same, too late to recouer it: for presently the Admirall strooke a ground, and had soone after her sterne and hinder partes beaten in pieces: whereupon the rest (that is to say, the Frigat, in which was the Generall and the Golden Hinde) cast about Eastsoutheast, bearing to the South, euen for our liues into the windes eye, because that way carried vs to the seaward. Making out from this danger, wee sounded one while seven fadome, then five fadome, then foure fadome and lesse, againe deeper, immediatly foure fadome, then but three fadome, the sea going mightily and high. At last we recovered (God be thanked) in some despaire, to sea roome enough.

In this distresse, wee had vigilant eye vnto the Admirall, whom wee sawe cast away, without power to giue the men succour, neither could we espie any of the men that leaped ouerboord to saue themselves, either in the same Whimelle or Cocks, or vpon rafters, and such like meanes, presenting themselves to men in those extremities: for we desired to saue the men by euery possible meanes. But all in vaine, sith God had determined their ruine: yet all that day, and part of the next, we beat vp and downe as neere vnto the wacke as was possible for vs, looking out, if by good hap we might espie any of them.

Stephanus Par-
menius a lear-
ned Hunga-
rian.

This was a heauy and grieuous euent, to lose at one blow our chiefe shippe freighted with great prouision, gathered together with much trauell, care, long time, and difficultie. But more was the losse of our men, which perished to the number almost of a hundred soules. Amongst whom was drowned a learned man, an Hungarian, borne in the citie of Buda, called thereof Budæus, who of pietie and zeale to good attempts, aduentured in this action, minding to record in the Latine tongue, the gests and things worthy of remembrance, happening in this discouerie, to the honour of our nation, the same being adorned with the eloquent stile of this Orator, and rare Poet of our time.

Daniel a refiner
of mettals.

Here also perished our Saron Refiner and Discouerer of inestimable riches, as it was left amongst some of vs in vndoubted hope.

No lesse heauy was the losse of the Captaine Maurice Browne, a vertuous, honest, and discreet

create Gentleman, ouerleene onely in libertie giuen late befoze to men, that ought to haue bene restrained, who shewed himselfe a man resolu'd, and neuer vnprepared for death, as by his last act of this tragedie appeared, by report of them that escaped this wracke miraculously, as shall bee hereafter declared. For when all hope was past of recouering the ship, and that men began to giue ouer, and to saue themselves, the Captaine was aduised befoze to shift also for his life, by the Pinnesse at the sterne of the ship: but refusing that counsell, he would not giue example with the first to leaue the shippe, but vsed all meanes to exhort his people not to despair, nor so to leaue off their labour, choosing rather to die, then to incurre infamie, by forsaking his charge, which then might be thought to haue perished through his default, shewing an ill president vnto his men, by leauiing the ship first himselfe. With this mind bee mounted vpon the highest decke, where bee attended imminent death, and vnauidable: how long, I leaue it to God, who withowt weeth not his comfort from his seruants at such times.

In the meane season, certaine, to the number of foureteene persons, leaped into a small Pinnesse (the bignes of a Thames barge, which was made in the New found land) cut off the rope wherewith it was towed, and committed themselves to Gods mercy, amidst the storme, and rage of sea and windes, destitute of foode, not so much as a droppe of fresh water. The boate seeming ouercharged in foule weather with company, Edward Headly a valiant souldier, and well reputed of his companie, preferring the greater to the lesser, thought better that some of them perished then all, made this motion to cast lots, and them to bee throwen ouerboord vpon whom the lots fell, thereby to lighten the boate, which other wayes seemed impossible to liue, offered himselfe with the first, content to take his aduenture gladly: which neuertheles Richard Clarke, that was Master of the Admirall, and one of this number, refused, aduising to abide Gods pleasure, who was able to saue all, as well as a few.

A wonderfull
scape and de-
liuerance.
A great bi-
stresse.
A desperate re-
solution.

The boate was caried befoze the wind, continuing fire dayes and nights in the Ocean, and arrived at last with themen (alike, but wake) vpon the New found land, sauing that the for- sayd Headly, (who had bene late sicke) and another called of vs Brasile, of his trauell into those Countreys, died by the way, famished, and lesse able to holde out, then those of better health. For such was these poore mens extremitie, in cold and wet, to haue no better sustenance then their owne vyne, for fire dayes together.

Two men sa-
mished.

Thus whom God deliuered from drowning, hee appointed to be famished, who doth giue li- mits to mans times, and ordaineth the manner and circumstance of dying: whom againe he will preferue, neither Sea, nor famine can confound. For those that arrived vpon the Newe found land, were brought into France by certaine French men, then being vpon that coast.

After this heauie chance, wee continued in beating the sea vp and downe, expecting when the weather would cleere vp, that we might yet beare in with the land, which we iudged not farre off, eicher the continent or some Island. For we many times, and in sundry places found ground at 50, 45, 40 fadomes, and lesse. The ground comming vpon our lead, being sometimes oazie sand, and otherwhile a broad shell, with a little sand about it.

Our people lost courage dayly after this ill successe, the weather continuing thicke and blust- ring, with increase of cold, Winter drawing on, which tooke from them all hope of amendement, feeling an assurance of worse weather to grow vpon vs euery day. The Leaside of vs lay full of flats and dangers ineuitable, if the wind blew hard at South. Some againe doubted we were ingulfed in the Bay of S. Laurence, the coast full of dangers, and vnto vs vnknown. But aboue all, prouision wared scant, and hope of supply was gone, with losse of our Admirall.

Canties infor-
ming vs to re-
turne home a-
gaine.

Those in the Frigate were already pinched with spare allowance, and want of clothes chiefly: Whereupon they besought the Generall to returne for England, befoze they all perished. And to them of the Golden Hinde, they made signes of their distresse, pointing to their mouthes, and to their clothes thinne and ragged: then immediately they also of the Golden Hinde, grew to be of the same opinion and desire to returne home.

The former reasons hauing also moued the Generall to haue compassion of his poore men, in whom he saw no want of good will, but of meanes fit to perfoyme the action they came for, resol- ued vpon retire: and calling the Captaine and Master of the Hinde, he peelded them many rea- sons, inforcing this vnexpected returne, withall procelling himselfe greatly satisfied with that hee had seene, and knew already.

Reiterating these words, Be content, we haue seene enough, and take no care of expence past: I will set you forth royally the next Spring, if God send vs safe home. Therefore I pray you let vs no longer strue here, where we fight against the elements.

Omitting circumstance, how vnwillingly the Captaine & Master of the Hinde condescended to this

this

this motion, his owne company can testifie: yet comforted with the Generals promises of a speedie returne at Spring, and induced by other apparant reasons, prouing an impossibilitie, to accomplish the action at that time, it was concluded on all hands to retire.

August 31.

A monster of the sea.

So vpon Saturday in the afternoone the 31 of August, we changed our course, and returned backe for England, at which very instant, euen in winding about, there passed along betweene vs and towards the land which we now forooke a very lion to our seeming, in shape, hair and colour, not swimming after the maner of a beast by moouing of his feete, but rather sliding vpon the water with his whole body (excepting the legs) in sight, neither yet diuing vnder, and againe rising aboue the water, as the maner is, of Whales, Dolphins, Tunise, Porpoises, and all other fish: but confidently shewing himselfe aboue water without hiding: notwithstanding, we presented our selues in open view and gesture to amaze him, as all creatures will be commonly at a sudden gaze and sight of men. Thus he passed along turning his head to and fro, yawning and gaping wide, with ougly demonstration of long teeth, and glaring eyes, and to bidde vs a farewell (comming right against the Hind) he sent forth a horrible voyce, roaring or bellowing as doeth a lion, which spectacle wee all beheld so farre as we were able to discern the same, as men prone to wonder at every strange thing, as this doubtlesse was, to see a lion in the Ocean sea, or fish in shape of a lion. What opinion others had thereof, and chiefly the Generall himselfe, I forbear to deliuer: But he tooke it for Bonum Omen, reioycing that he was to warre against such an enemy, if it were the deuill.

The wind was large for England at our returne, but very high, and the sea rough, insomuch as the Frigate wherein the Generall went was almost swallowed vp.

September 2.

Monday in the afternoone we passed in the sight of Cape Race, hauing made as much way in little more then two dayes and nights backe againe, as before wee had done in eight dayes from Cape Race, vnto the place where our ship perished. Which hindrance thitherward, and speed back againe, is to be imputed vnto the swift current, as well as to the winds, which we had more large in our returne.

This munday the Generall came aboard the Hind, to haue the Surgeon of the Hind to dress his foote, which he hurt by treading vpon a nail: At what time we comforted ech other with hope of hard successe to be all past, and of the good to come. So agreeing to cary out lights alwayes by night, that we might keepe together, he departed into his Frigate, being by no meanes to be intreated to tarie in the Hind, which had bene more for his security. Immediately after followed a sharpe storme, which we ouerpassed for that time. Praise be God.

Our last conference with our Generall.

The weather faire, the Generall came aboard the Hind againe, to make merrie together with the Captaine, Master, and company, which was the last meeting, and continued there from morning vntill night. During which time there passed sundry discourses, touching affaires past, and to come, lamenting greatly the losse of his great ship, more of the men, but most of all of his bookes and notes, and what els I know not, for which hee was out of measure grieved, the same doubtlesse being some matter of more importance then his bookes, which I could not draw from him: yet by circumstance I gathered, the same to be y^e Dy which Daniel the Saxon had brought vnto him in the Mew found land. Whatsoeuer it was, the remembrance touched him so deepe, as not able to containe himselfe, he beat his boy in great rage, euen at the same time, so long after the miscarriage of the great ship, because vpon a faire day, when wee were becalmed vpon the coast of the New found land, neere vnto Cape Race, he sent his boy aboard the Admirall, to fetch certaine things: amongst which, this being chiefe, was yet forgotten and left behind. After which time he could neuer conveniently send againe aboard the great ship, much lesse hee doubted her ruine so neere at hand.

Circumstances to be well observed in our Generall, importing the Dy to be of a Mew spine.

Herein my opinion was better confirmed diuersly, and by sundry coniectures, which maketh me haue the greater hope of this rich Dyne. For where as the Generall had neuer before good conceit of these North parts of the world: now his mind was wholly fixed vpon the Mew found land. And as before he refused not to grant assignements liberally to them that required the same into these North parts, now he became contrarily affected, refusing to make any so large grants, especially of S. Johns, which certaine English merchants made suite for, offering to imploy their money and traueill vpon the same: yet neither by their owne suite, nor of others of his owne company, whom he seemed willing to pleasure, it could be obtained.

Also laying downe his determination in the Spring following, for disposing of his voyage then to be reattempted: he assigned the Captaine & Master of the Golden Hind, vnto the South discovery, and reserued vnto himselfe the North, affirming that this voyage had wonne his heart from the South, and that he was now become a Northerne man altogether.

Last

Last, being demanded what means he had at his arriuall in England, to compasse the charges of so great preparation as he intended to make the next Spring: hauing determined vpon two flectes, one for the South, another for the North: Leaueth that to mee (hee replied) I will aske a pennie of no man. I will bring good tidings vnto her Maiesty, who will be so gracious, to lend me 10000 pounds, willing vs therfore to be of good cheere: for he did thanke God (he sayd) with all his heart, for that he had scene, the same being enough for vs all, and that we needed not to seeke any further. And these last wordes he would often repeate, with demonstration of great seruencie of mind, being himselfe very confident, and settled in heliefe of inestimable good by this voyage: which the greater number of his followers neuertheles mistrusted altogether, not being made partakers of those secrets, which the Generall kept vnto himselfe. Yet all of them that are liuing, may be witnesses of his wordes and protestations, which sparingly I haue deliuered.

Leauing the issue of this good hope vnto God, who knoweth the trueth only, & can at his good pleasure bring the same to light: I will hasten to the end of this tragedie, which must be knit vp in the person of our Generall. And as it was Gods ordinance vpon him, euen so the vehement perswasion and intreatie of his friends could nothing auail, to diuert him from a wilfull resolution of going through in his Frigat, which was overcharged vpon their deckes, with sights, nettings, and small artillerie, too cumbersome for so small a boate, that was to passe through the Ocean sea at that season of the yere, when by course we might expect much storme of foule weather, whereof indeed we had enough.

But when he was intreated by the Captaine, Master, and other his well willers of the Hinde, not to venture in the Frigat, this was his answer: I will not forsake my little company going homeward, with whom I haue passed so many stormes, and perils. And in very trueth, hee was vrged to be so ouer hard, by hard reports giuen of him, that he was afraid of the sea, albeit this was rather rashnes, then aduised resolution, to preferre the wind of a vaine report to the weight of his owne life.

Seeing he would not bend to reason, he had prouision out of the Hinde, such as was wanting aboard his Frigat. And so we committed him to Gods protection, & set him aboard his Pinnesse, we being more then 300 leagues onward of our way home.

By that time we had brought the Islands of Açores South of vs, yet wee then keeping much to the North, vntil we had got into the height and eleuation of England: we met with very foule weather, and terrible seas, breaking short and high Pyramid wise. The reason whereof seemed to proceede either of hilly grounds high and low within the sea, (as we see hilles and dales vpon the land) vpon which the seas doe mount and fall: or else the cause proceedeth of diuersitie of winds, shifting often in sundry points: al which hauing power to moue the great Ocean, which againe is not presently settled, so many seas do encounter together, as there had bene diuersitie of windes. Howsoeuer it cometh to passe, men which all their life time had occupied the Sea, neuer saw more outrageous Seas. We had also vpon our maine yard, an apparition of a little fire by night, which seamen doe call Castor and Pollux. But we had onely one, which they take an euill signe of more tempest: the same is vsuall in stormes.

Sunday the ninth of September, in the afternoone, the Frigat was neere cast away, oppressed by waues, yet at that time recovered: and giuing forth signes of ioy, the Generall sitting abast with a booke in his hand, cried out vnto vs in the Hind (so oft as we did approach within hearing) We are as neere to heauen by sea as by land. Reiterating the same speech, well beseeeming a souldier, resolute in Iesus Christ, as I can testifie he was.

The same Monday night, about twelue of the clocke, or not long after, the Frigat being ahead of vs in the Golden Hinde, suddenly her lights were out, whereof as it were in a moment, we lost the sight, and withall our watch cryed, the Generall was cast away, which was too true. For in that moment, the Frigat was deuoured and swallowed vp of the Sea. Yet still we looked out all that night, and euer after, vntill wee arriued vpon the coast of England: Dmitting no small saile at sea, vnto which we gaue net the tokens betweene vs, agreed vpon, to haue perfect knowledge of each other, if we should at any time be separated.

In great torment of weather, and perill of drowning, it pleased God to send safe home the Golden Hinde, which arriued in Falmouth, the 22 day of September, being Sunday, not without as great danger escaped in a flaw, comming from the Southeast, with such thicke mist, that we could not discern land, to put in right with the Hauen.

From Falmouth we went to Dartmouth, & lay there at anker before the Range, while the captaine went aland, to enquire if there had bene any newes of the Frigat, which sayling well, might happily haue bene before vs. Also to certifie Sir Iohn Gilbert, brother vnto the Generall of our

Wilfulness in the Generall.

A token of a good mind.

A resolute and Christianlike saying in a distress.

Sir Humfrey Gilbert dying.

Arriual in England of the Golden Hinde.

hard

In the motion
of the Captaine
vnto Sir Hum-
frey Gilbert.

hard successe, whom the Captaine desired (while his men were yet aboard him, and were witnes-
ses of all occurrents in that voyage,) It might please him to take the examination of euery per-
son particularly, in discharge of his and their faithfull endeavour. Sir John Gilbert refused so to
doe, holding himselfe satisfied with report made by the Captaine: and not altogether despairing
of his brothers safetie, offered friendship and curtesie to the Captaine and his company, requiring
to haue his Barke brought into the harbour: in furtherance whereof, a boate was sent to helpe to
tow her in.

Neuerthelesse, when the Captaine returned aboard his ship, he found his men bent to depart,
euery man to his home: and then the winde seruing to proceede higher vpon the coast: they de-
manded money to carie them home, some to London, others to Harwich, and else where, (if the
barke should be caried into Dartmouth, and they discharged, so farre from home) or else to take
benefite of the wind, then seruing to draw neerer home, which should be a lesse charge vnto the
Captaine, and great ease vnto the men, hauing els farre to goe.

Will recom-
pense.

Reason accompanied with necessitie perswaded the Captaine, who sent his lawfull excuse and
cause of his sudden departure vnto Sir John Gilbert, by the boate of Dartmouth, and from thence
the Golden Hind departed, and tooke harbour at Waimouth. Al the men tired with the tedious-
nes of so vnprofitable a voyage to their seeming: in which their long expence of time, much toyle
and labour, hard diet and continuall hazard of life was unrecompensed: their Captaine neuerthe-
lesse by his great charges, impaired greatly thereby, yet comforted in the goodnes of God, and his
vndoubted prouidence following him in all that voyage, as it doth alwaies those at other times,
whosoever haue confidence in him alone. Yet haue we more neere feeling and perseuerance of his
powerfull hand and protection, when God doth bring vs together with others into one same pe-
ril, in which he leaueth them, and deliuereth vs, making vs thereby the beholders, but not parta-
kers of their ruine.

Euen so, amongst very many difficulties, discontentments, mutinies, conspiracies, sickneses
mortalitie, spoylings, and wracks by sea, which were afflictions, more then in so small a flecte,
or so short a time may be supposed, albeit true in euery particularitie, as partly by the former rela-
tion may be collected, and some I suppressed with silence for their sakes liuing, it pleased God to
support this company, (of which onely one man died of a maladie inueterate, and long infested:
the rest kept together in reasonable contentment and conoord, beginning, continuing, and ending
the voyage, which none els did accomplish, either not pleased with the action, or impatient of
wants, or preuented by death.

Constancie in
Sir Humfrey
Gilbert.

Thus haue I deliuered the contents of the enterprise and last action of Sir Humfrey Gilbert
knight, faithfully, for so much as I thought meete to be published: wherein may alwaies appeare,
(though he be extinguished) some sparkes of his vertues, he remaining firme and resolute in a pur-
pose by all pretence honest and goodly, as was this, to discouer, possesse, and to reduce vnto the ser-
uice of God, and Christian pietie, those remote and heathen Countreys of America, not actually
possessed by Christians, and most rightly appertaining vnto the Crowne of England: vnto the
which, as his zeale deserueth high commendation: euen so, he may iustly be taxed of temeritie and
presumption (rather) in two respects.

His temeritie
and presump-
tion.

First, when yet there was onely probabilitie, not a certaine & determinate place of habitation
selected, neither any demonstration of commoditie there in esse, to induce his followers: neuer-
theles, he both was too prodigall of his owne patrimony, and too careles of other mens expences,
to imploy both his and their substance vpon a ground imagined good. The which falling, very
like his associates were promised, and made it their best reckoning to bee salued some other way,
which pleased not God to prosper in his first and great preparation.

Secondly, when by his former preparation he was enfeebled of abilitie and credit, to performe
his designements, as it were impatient to abide in expectation better opportunitie and meanes,
which God might raise, he thrust himselfe againe into the action, for which he was not fit, presu-
ming the cause pretended on Gods behalfe, would carie him to the desired ende. Into which, ha-
uing thus made recurtie, he could not peebe againe to withdraw, though hee sawe no encourage-
ment to proceed, lest his credite soyled in his first attempt, in a second should vterly be disgraced.
Betweene extremities, hee made a right aduenture, putting all to God and good fortune, and
which was worst, refused not to entertaine euery person and meanes whatsoever, to furnishout
this expedition, the successe whereof hath bene declared.

Afflictions
needfull in the
children of
God.

But such is the infinite bountie of God, who from euery euill deriueth good. For besides that
fruite may growe in time of our trauelling into those North-west lands, the crosses, turmoiles, and
afflictions, both in the preparation and execution of this voyage, did correct the intemperate hu-
mors,

moys, which befoze we noted to bee in this Gentleman, and made vs sauoze, and lesse delightfull his other manifold vertues.

Then as he was refined, and made neerer drawing vnto the image of God: so it pleased the diuine will to resume him vnto himselfe, whither both his, and euery other high and noble minde, haue alwayes aspired.

Ornatissimo viro, Magistro *Richardo Hakluyto Oxonij in Collegio ædis Christi, Artium & Philosophiæ Magistro, amico, & fratri suo.*

Non statueram ad te scribere, cum in mentem veniret promissum literarum tuarum. Putabas te superiore iam Iunio nos subsecuturum. Iraque de meo statu ex doctore Humfredo certiore te fieri iusseram. Verum sic tibi non esset satisfactum. Iraque scribam ad te iisdem ferè verbis, quia noua meditari & ^{conuolueris} mihi hoc tempore non vacat. mer.

quinque nauibus constabat: maxima, quam * frater Amiralij accommodauerat, ignotum quo cõsilio, statim tertio die à nobis se subduxit. Reliqui perpetuò coniunctim nauigauius ad 23. Iulij, quo tempore magnis nebulis intercepto aspectu alij aliam viam tenuimus: nobis seorsim prima terra apparuit ad Calendas Augusti, ad gradum circiter 50. cum vltra 41. paucis ante diebus descendissemus spe Australium ventorum, qui tamen nobis suo tempore nunquam spirauère. Insula est ea, quam vestri Penguin vocant, ab auium eiusdem nominis multitudine. Nos tamen nec aues vidimus, nec insulam accessimus, ventis aliò vocantibus, Ceteri uero conuenimus omnes in eundem locum paulò ante portum in quem communi consilio omnibus veniendum erat, idque intra duas horas, magna Dei benignitate & nostro gaudio. Locus situs est in Newfoundlandia, inter 47. & 48. gradum, Diuum Ioannem vocant. Ipse Admiralius propter multitudinem hominum & angustiam nauis paulò afflictiores comitatus habuit, & iam duos dysentericis doloribus amisit: de cæteris bona spes est. Ex nostris (nam ego me Mauricio Browno verè generoso iuueni me coniunxeram) duo etiam casu quodam submersi sunt. Cæteri salui & longè firmiores. Ego nunquam sanior. In hunc locum tertio Augusti appulimus: quinto autem ipse Admiralius has regiones in suam & regni Angliæ possessionem potestatemque vendicauit, latis quibusdam legibus de religione & obsequio Regiæ Angliæ. Resicimus hoc tempore paulò hilarius & lautius, Certè enim & qualibus ventis vsi simus, & quàm fessi esse potuerimus tam longi temporis ratio docuerit, proinde nihil nobis deerit. Nam extra Anglos, 20 circiter naues Lusitanicas & Hispanicas nacti in hoc loco sumus: ex nobis impares non patientur nos esurire. Angli etsi satis firmi, & à nobis tuti, autoritate regij diplomatis omni obsequio & humanitate prosequuntur. Nunc narrandi erant mores, regiones, & populi. Cæterum quid narrem mi Hakluyte, quando præter solitudinem nihil video? Piscium inexhausta copia: inde huc comineantibus magnus quæstus. Vix hamus fundum attingit, illicò insigni aliquo onustus est. Terra vniuersa * montana & syluestris: arbores vt plurimum pinus: ex partim consenuère, partim nunc adulescunt: magna pars vetustate collapsa, & aspectum terræ, & iter euntium ita impedit, vt nusquam progredi liceat. Herbarum omnes proceræ; sed rarè à nostris diuersæ. Natura videtur velle niti etiam ad generandum frumentum. Inueni enim gramina, & spicas in similitudinem secales: & facillè cultura & satione in vsum humanum assuescieri posse videntur. Rubi in syluis vel potiùs fraga arborecentia magna suauitate. Vrsi circa tuguria nunquam apparent, & conficiuntur: sed albi sunt, vt mihi ex pellibus conicere licuit, & minores quàm nostri. Populus an vllus sit in hac regione incertum est: Nec vllum vidi qui testari posset. Et quis quæso posset, cum ad longum progredi non liceat? Nec minus ignotum est an aliquid metalli subsit montibus. Causa eadem est, etsi aspectus eorū mineras latentes præ se ferat. Nos Admiralio authores fuimus syluas incendere, quo ad inspiciendam regionē spaciū pateret: nec displicebat illi consiliū, si non magnū incommodum allatorum videretur. Confirmatum est enim ab idoneis hominibus, cum casu quopiam in alia nescio qua statione id accidisset, septenium totū pisces non comparuisse, ex acerbata maris vnda ex terebynthina, quæ cõflagrantibus arboribus per riuulos defluebat. Cælum hoc anni tempore ita feruidum est, vt nisi pisces, qui arescunt ad solem, assidui inuertantur, ab adustione defendi non possint. Hyeme quàm frigidum sit, magnæ moles glaciæ in medio mari nos docuere. Relatum est à comitibus mense Maio sexdecim totos dies interdum se inter tantam glaciem hæsisse, vt 60. orgyas altæ essent insulæ: quarum latera soli apposita cum liquecerent, libratione quadam vniuersam molem ita inuersam, vt quòd ante prouum erat, supinum euaderet, magno præsentium discrimine,

vt consentaneum est. Aer in terra mediocriter clarus est : ad orientem supra mare perpetuæ nebulæ : Et in ipso mari circa Bancum (sic vocant locum vbi quadraginta leucis à terra fundus attingitur, & pisces capi incipiunt) nullus ferme dies absque pluuia. Expeditis nostris necessitatibus in hoc loco, in Austrum (Deo iuuante) progrediemur, tantò indies maiori spe, quòd plura de iis quas petimus regionibus commemorantur. Hæc de nostris. Cupio de vobis scire: sed metuo ne incassum. Imprimis autem quomodo Vntonus meus absentiam meam ferat, præter modum intelligere velim: Habebit nostrum obsequium & officium paratum, quandiu vixerimus. Reuera autem spero, hanc nostram peregrinationem ipsius instituto vsui futuram. Nunc restat, vt me tuum putes, & quidem ita tuum, vt neminem magis. Iuuet dei filius labores nostros eatenus, vt tu quoque participare possis. Vale amicissime, suauissime, ornatissime Hakluyte, & nos ama. In Newfoundlandia apud portum Sancti Iohannis 6. Augusti 1583.

STEPHANVS PARMENIUS
Budeius, tuus;

The same in English.

To the worshipfull, Master *Richard Hakluyt* at *Oxford* in *Christchurch* Master of Arts, and Philosophie, his friend and brother.

I Had not purposed to write vnto you, when the promise of your letters came to my mind: But I thought in June last to haue followed vs your selfe, and therefore I had left order that you should be aduertised of my state, by Master Doctor Humfrey: but so you would not be satisfied: I will write therefore to you almost in the same words, because I haue no leasure at this time, to meditate new matters, and to vary or multiply words.

The 11. of June we set saile at length from England in good earnest, and departed, leaving the haue and land behind vs at Plimmouth: our flecte consisted of five shippes: the greatest, which the Admirals brother had lent vs, withdrew her selfe from vs the third day, wee know not vpon what occasion: with the rest we sailed still together till the 23. of July: at which time our view of one another being intercepted by the the great mists, some of vs sailed one way, and some another: to vs alone the first land appeared, the first of August, about the latitude of 50. degrees, when as before we had descended beyond 41. degrees in hope of some Southerly windes, which notwithstanding neuer blew to vs at any fit time.

It is an Island which your men call Penguin, because of the multitude of birdes of the same name. Yet wee neither sawe any birdes, nor drew neere to the land, the winds seruing for our course directed to another place, but wee mette altogether at that place a little before the Haue, whereunto by common Councell we had determined to come, and that within the space of two houres by the great goodnesse of God, and to our great ioy. The place is situate in Newfoundland, betweene 47. and 48. degrees, called by the name of Saint Iohns: the Admirall himselfe by reason of the multitude of the men, and the smallnesse of his ship, had his company somewhat sickly, and had already lost two of the same company, which died of the flixe: of the rest we conceiue good hope. Of our company (for I ioyned my selfe with Maurice Browne, a very proper Gentleman) two persons by a mischance were drowned, the rest are in safetie, and strong, and for mine owne part I was neuer more healthy. Wee arrived at this place the thirde of August: and the first the Admirall tooke possession of the Countrey, for himselfe and the kingdome of England: hauing made and published certaine Lawes, concerning religion, and obedience to the Queene of England: at this time our fare is somewhat better, and daintier, then it was before: for in good loock, the experience of so long time hath taught vs what contrary winds wee haue found, and what great trauell wee may endure hereafter: and therefore wee will take such order, that wee will want nothing: for we found in this place about twenty Portugall and Spanish shippes, besides the shippes of the English: which being not able to match vs, suffer vs not to bee hunger starued: the English although they were of themselves strong ynough, and safe from our force, yet seeing our authoritie, by the Queenes letters patents, they shewed vs all maner of due ty and humanitie.

The maner of this Countrey and people remaine now to be spoken of. But what shall I say, my good Hakluyt, when I see nothing but a very wilderness? Of fish here is incredible abundance, whereby great gaine growes to them, that trauell to these parts: the hooke is no sooner shewne out, but it is eiesoones drawne by with some goodly fish: the whole land is full of hills and

and woods. The trees for the most part are *Pynes* and of them some are very olde, and some pong: a great part of them being fallen by reason of their age, doth so hinder the sight of the land, and stoppe the way of those that seeke to trauell, that they can goe no whither: all the grasse here is long, and tall, and little differeth from ours. It seemeth also that the nature of this soyle is fit for cozne: for I found certaine blades and eares in a manner bearded, so that it appeareth that by manuring and sowing, they may easily be framed for the vse of man: here are in the woodes bush berries, or rather straw berries growing by like trees, of great sweetnesse. Beares also appeare about the fishers stages of the Countrey, and are sometimes killed, but they seeme to bee white, as I coniectured by their skinnies, and somewhat lesse then ours. Whether there bee any people in the Countrey I knowe not, neither haue I seene any to witnesse it. And to say trueth, who can, when as it is not possible to passe any whither: In like sort it is vnknowne, whether any mettals lye vnder the hilles: the cause is all one, although the very colour and hue of the hilles seeme to haue some *Pynes* in them: we moued the Admirall to set the woods a fire, that so wee might haue space, and entrance to take view of the Countrey, which motion did nothing displease him, were it not for feare of great inconuenience that might thereof insue: for it was reported and confirmed by very credible persons, that when the like happened by chance in another Port, the fish neuer came to the place about it, for the space of 7. whole yeeres after, by reason of the waters made bitter by the Turpentine, and Rosen of the trees, which ranne into the riuers vpon the firing of them. The weather is so hote this time of the yeere, that except the very fish, which is layd out to be dzyed by the sunne, be euery day turned, it cannot possibly bee preserved from burning: but how cold it is in the winter, the great heapes, and mountaines of yce, in the midst of the Sea haue taught vs: some of our company report, that in May, they were sometimes kept in, with such huge yce, for 16. whole dayes together, as that the Islands thereof were threescore fathoms thicke, the sides wherof which were toward the Sunne, when they were melted, the whole masse of heape was so inuerted and turned in maner of balancing, that that part which was before down ward rose vppward, to the great perill of those that are neere them, as by reason wee may gather. The ayre vpon land is indifferent cleare, but at Sea towards the East there is nothing els but perpetuall mists, and in the Sea it selfe, about the Vanke (for so they call the place where they find ground forty leagues distant from the shore, and where they beginne to fish) there is no day without raine, when we haue serued, and supplied our necessitie in this place, we purpose by the helpe of God to passe towards the South, with so much the more hope euery day, by how much the greater the things are, that are reported of those Countreys, which we go to discover. Thus much touching our estate.

Now I desire to know somewhat concerning you, but I feare in vaine, but specially I desire out of measure to know how my Patrone master Henry Vmpton doth take my absence: my obedience, and ductie shall alwayes bee ready toward him as long as I liue: but in deede I hope, that this journey of ours shall be profitable to his intentions. It remaineth that you thinke me to be still yours, and so yours as no mans more. The sonne of God blesse all our labors, so farre, as that you your selfe may be partaker of our blessing. Adieu, my most friendly, most sweete, most vertuous Hakluyt: In Newfound land, at Saint Iohns Port, the 6. of August, 1583.

STEVEN PARMENIUS of
Buda, yours.

A relation of Richard Clarke of Weymouth, master of the ship called the *Delight*, going for the discovery of *Noremberga*, with Sir Humfrey Gilbert 1583. Written in excuse of that fault of casting away the ship and men, imputed to his oversight,

DEparting out of Saint Iohns Harbrough in the Newfound land the 20. of August vnto Cape Raz, from thence we directed our course vnto the Ile of Sablon or the Ile of Sand, which the Generall Sir Humfrey Gilbert would willingly haue seene. But when we came within twentie leagues of the Ile of Sablon, we fell to controuersie of our course. The Generall came by in his Frigot and demanded of mee Richard Clarke master of the Admirall what course was best to keepe: I said that Westsouthwest was best: because the wind was at South and night at hand and vnknewen lands lay off a great way from the land. The Generall commanded me to go Westnorthwest. I told him againe that the Ile of Sablon was Westnorthwest

and but 15. leagues off, and that he should be upon the Island before day, if hee went that course. The Generall sayd, my reckoning was untrue, and charged me in her Maesties name, and as I would shewe my selfe in her Countrey, to follow him that night. I fearing his threarnings, because he presented her Maesties person, did follow his commaundement, and about seuen of the clocke in the morning the ship strooke on ground, where shee was cast away. Then the Generall went off to Sea, the course that I would haue had them gone before, and saw the ship cast away men and all, and was not able to saue a man, for there was not water vpon the land for either of them much lesse for the Admirall that dyed foureteene foote. Now as God would the day before it was very caline, and a Souldier of the ship had killed some foule with his piece, and some of the company desired me that they might hoyle out the boat to recover the foule, which I granted them: and when they came aboard they did not hoyle it in againe that night. And whē the ship was cast away the boate was a sterne being in burthen one tunne and an halfe: there was left in the boate one oare and nothing els. Some of the company could swimme, and recovered the boate and did hale in out of the water as many men as they coulde: among the rest they had a care to watch for the Captaine or the Master: They happened on my selfe being the master, but could neuer see the Captaine: Then they halled into the boate as many men as they could in number 16, whose names hereafter I will rehearse. And when the 16. were in the boate, some had small remembrance, and some had none: for they did not make account to liue, but to prolong their liues as long as it pleased God, and looked euery incient of an houre when the Sea would eate them vp, the boate being so little and so many men in her, and so foule weather, that it was not possible for a shippe to brooke halfe a course of sayle. Thus while wee remayned two dayes and two nights, and that wee saw it pleased God our boate liued in the Sea (although we had nothing to helpe vs withall but one oare, which we kept vpon the boate withall vpon the Sea, and so went euen as the Sea would driue vs) there was in our company one master Hedly that put forth this question to me the Master. I doe see that it doth please God, that our boate lyueth in the Sea, and it may please God that some of vs may come to the land if our boate were not ouerladen. Let vs make sixtene lots, and those foure that haue the foure shorrest lots we will cast ouerboard preferring the Master among vs all. I replied vnto him, saying, no, we will liue and die together. Master Hedly asked me if my remembrance were good: I answered I gaue God prayse it was good, and knewe how farre I was off the land, and was in hope to come to the lande within two or thre dayes, and layde they were but threescore leagues from the lande, (when they were seuentie) all to put them in comfort. Thus we continued the third and fourth day without any sustenance, saue onely the weedes that swamme in the Sea, and salt water to drinke. The fifth day Hedly dyed and another moreouer: then wee desired all to die: for in all these five dayes and five nights we saw the Sunne but once and the Starre but one night, it was so foule weather. Thus we did remaine the first day: then we were very weake and wished all to die sauing onely my selfe which did comfort them and promised they should come soone to land by the helpe of God: but the company were very importunate, and were in doubt they should neuer come to land, but that I promised them the seuenth day they should come to shore, or els they should cast me ouerboard: which did happen true the seuenth day, for at eleuen of the clocke wee had sight of the land, and at 3. of the clocke at afternoone we came on land. All these seuen dayes and seuen nights the wind kept continually South. If the wind had in the meane time shifted vpon any other point, wee had neuer come to land: we were no sooner come to the land, but the wind came cleane contrary at North within halfe an houre after our arriual. But we were so weake that one could scarcely helpe another of vs out of the boate, yet with much adoe being come all on shore we kneeled downe vpon our knees and gaue God praise that he had dealt so mercifully with vs. Afterwards those which were strongest holpe their fellows vnto a fresh brooke, where we satisfied our selues with water and berries very well. There were of all sorts of berries plentie, & as goodly a Countrey as euer I saw: we found a very faire plaine Champion ground that a man might see very farre euery way: by the Sea side was here and there a little wood with goodly trees as good as euer I saw any in Norway, able to mast any shippe, of pyne trees, spruce trees, firre, and very great birch trees. Where we came on land we made a little house with boughes, where we rested all that night. In the morning I deuised the company thre and thre to goe euery way to see what foode they could find to sustaine themselves, and appointed them to meete there all againe at noone with such foode as they could get. As we went aboard we found great store of peason as good as any wee haue in England: a man would thinke they had bene sowed there. We rested there thre dayes and thre nights and liued very well with pease and berries, wee named the place Saint Laurence, because it was a very goodly riuer like the
riuer

riuer of S. Laurence in Canada, and we found it very full of Salmones. When wee had well rested our selues wee rowed our boate along the shore, thinking to haue gone to the Grande Bay to haue come home with some Spanyards which are peerey there to kill the Whale: And when we were hungry or a thirst we put our boate on land and gathered pease and berries. Thus wee rowed our boate along the shore fūe dayes: about which time we came to a very goodly riuer that ranne farre vp into the Countrey and saw very goodly growen trees of all sortes. There we happened vpon a ship of Saint Iohn de Luz, which ship brought vs into Biskay to an Harbourogh called The Passage. The Master of the shippe was our great friend, or else we had bene put to death if he had not kept our counsaile. For when the visitors came aboard, as it is the order in Spaine, they demanding what we were, he sayd we were poore fishermen that had cast away our ship in Newfound land, and so the visitors inquired no moze of the matter at that time. All done as night was come he put vs on land and had vs shift for our selues. Then had wee but tenne or twelue miles into France, which we went that night, and then cared not for the Spanyard. And so shortly after we came into England toward the end of the yeere 1583.

Fourteene of our men brought out of Newfound land in a ship of S. Iohn de Luz.

A true Report of the late discoueries, and possession taken in the right of the Crowne of England of the *Newfound Lands*, By that valiant and worthy Gentleman, Sir *Humfrey Gilbert* Knight.

Wherein is also briefly set downe, her highnesse lawfull Title thereunto, and the great and manifold commodities, that are likely to grow therby, to the whole Realme in generall, and to the Aduenturers in particular: Together with the easinesse and shortnesse of the Voyage.

Written by Sir *George Peckham* Knight, the chiefe aduenturer, and furtherer of Sir *Humfrey Gilberts* voyage to *Newfound Land*.

The first Chapter, wherein the Argument of the Booke is contained.

It was my fortune (good Reader) not many dayes past, to meete with a right honest and discreete Gentleman, who accompanied that valiant and worthy Knight Sir *Humfrey Gilbert*, in this last iourney for the Westerne discoueries, and is owner and Captaine of the onely vessell which is as yet returned from thence.

Master Edward Hays.

By him I vnderstand that Sir *Humfrey* departed the coast of England the eleuenth of Iune last past, with fūe sayle of Shippes, from Causen bay neere Plimmouth, whereof one of the best forooke his company, the thirteenth day of the same moneth, and returned into England.

The other foure (through the assistance of Almighty God) did arrive at Saint Iohns Hauen, in Newfound land, the 3. of August last. Upon whole arrivall all the Masters and chiefe Parteners of the English Fleet, which were in the said Hauen before, endeavoring to fraight themselves with fish, repaired vnto Sir *Humfrey*, whom he made acquainted with the effect of his Commission: which being done, he promised to intreat them and their goods well and honourably as did become her Maiesties Lieutenant. They did all welcome him in the best sort that they could, and shewed him and his all such courtesies as the place could afford or yeelde.

Sir *Humfrey Gilbert* did arrive at Saint Iohns Hauen in Newfound land, the 3. of August, Anno 1583.

Then he went to view the Countrey, being well accompanied with most of his Captaines and souldiers. They found the same very temperate, but somewhat warmer then England at that season of the yeere, replenished with Beasts and great store of foule of diuers kinds: And fish of sundry sortes, both in the salt water, and in the fresh, in so great plentie as might suffice to victuall an Armie, and they are very easily taken. What sundry other commodities for this Realme right necessarie, the same doeth yeelde, you shall vnderstand in this treatise hereafter, in place moze conuenient.

Among these there was found the tract of a beast of 7. piches and a halfe ouer.

On Monday being the fift of August, the Generall caused his tent to be set vpon the side of an hill, in the viewe of all the Fleete of English men and strangers, which were in number betweene thirtie and fourtie sayle: then being accompanied with all his Captaines, Masters, Gentlemen and other souldiers, he caused all the Masters, and principall Officers of the ships, aswell Englishmen as Spanyards, Portugales, and of other nations, to repaire vnto his tent: And then and there, in the presence of them all, he did cause his Commission vnder the great Seale of England to bee openly and solemnely read vnto them, whereby were granted vnto him, his

Plutarch,

heires, and assignes, by the Queenes most excellent Maiestie, many great and large royalties, liberties, and priuiledges. The effect whereof being signified vnto the strangers by an Interpreter, hee tooke possession of the sayde land in the right of the Crowne of England by digging of a Turffe and receiuing the same with an Wassell wand, deliuered vnto him, after the maner of the law and custome of England.

Then he signified vnto the company both strangers and others, that from thenceforth, they were to liue in that land, as the Territories appertayning to the Crowne of England, and to be gouerned by such Lawes as by good aduise should be set downe, which in all points (so neere as might be) should be agreeable to the Lawes of England: And for to put the same in execution, presently he ordained and established three Lawes.

First, that Religion publicly exercised, should be such, and none other, then is vsed in the Church of England.

The second, that if any person should bee lawfully convicted of any practise against her Maiestie, her Crowne and dignitie, to be adiudged as traitors according to the Lawes of England.

The third, if any should speake dishonourably of her Maiestie, the partie so offending, to loose his carres, his ship and goods, to be confiscate to the vse of the Generall.

All men did very willingly submit themselves to these Lawes. Then he caused the Queenes Maiesties Armes to be ingraued, set vp, and erected with great solemnitie. After this, diuers Englishmen made sute vnto Sir Humfrey to haue of him by inheritance, their accustomed stagers, standings & dypping places, in sundry places of that land for their fish, as a thing that they doe make great account of, which he granted vnto them in fee farme. And by this meane he hath possession maintained for him, in many parts of that Countrey. To be brieue, he did let, set, giue and dispose of many things, as absolute Gouvernoze there, by vertue of her Maiesties letters patents.

And after their ships were repaired, whereof one he was to leaue behind, both for want of men sufficient to furnish her, as also to carrie home such sicke persons as were not able to proceede any further: He departed from thence the 20. of August, with the other three, namely, the *Delight*, wherein was appointed Captaine in *M.* William Winters place, (that thence returned immediatly for England) *M.* Maurice Browne: the *Golden hinde*, in which was Captaine and owner, *M.* Edward Hays: and the little *Frigat* where the Generall himselfe did goe, seeming to him most fit to discouer and appoach the shore.

The 21. day they came to Cape Race, toward the South partes whereof, lying a while becalmed, they tooke Cod in largenes and quantitie, exceeding the other parts of Newfound land, where any of them had bene. And from thence, trending the coast West, toward the Bay of Placentia, the Generall sent certaine men ashore, to view the Countrey, which to them as they sayled along, seemed pleasant. Whereof his men at their returne gaue great commendation, liking so well of the place, as they would willingly haue stayed and wintred there. But hauing the wind faire and good, they proceeded on their course towards the firme of America, which by reason of continuall fogs, at that time of the yeere especially, they could neuer see, till Cox Master of the *Golden Hinde* did discerne land, and presently lost sight thereof againe, at what time they were all vpon a breach in a great and outrageous storme, hauing vnder 3. fathome water. But God deliuered the *Frigat* and the *Golden Hinde*, from this great danger. And the *Delight* in the presence of them all was lost, to their unspeakable griefe, with all their chiefe victuall, munition, and other necessary provisions, and other things of value not fit here to be named. Whereupon, by reason also that Winter was come vpon them, and foule weather increased with fogs and mists that so couered the land, as without danger of perishing they could not appoach it: Sir Humfrey Gilbert and *M.* Hays were compelled much against their willes to retyre homewards: And being 300. leagues on their way, were after by tempestuous weather separated the one from the other, the ninth of September last, since which time *M.* Hays with his Barke is safely arrived, but of Sir Humfrey as yet they heare no certaine newes.

Upon this report (together with my former intent, to write some brieue discourse in the commendation of this so noble and worthy an enterprize) I did call to my remembrance, the Historie of Themistocles the Grecian, who (being a right noble and valiant Captaine) signified vnto his Countreymen the Citizens of Athens, that he had inuented a deuise for their common wealth very profitable: but it was of such importance and secrecie, that it ought not to be reuealed, before priuate conference had with some particular prudent person of their choyle.

The Athenians knowing Aristides the Philosopher, to be a man indued with singular wisdom and vertue, made choyle of him to haue conference with Themistocles, and thereupon to peeble his opinion to the Citizens concerning the sayd deuise: which was, that they might set on fire

fire the Hauie of their enemies, with great facilitie, as he had layde the plot: Aristides made relation to the Citizens, that the stratageme deuised by Themystocles was a profitable practise for the common wealth but it was dishonest. The Athenians (without further demaund what the same was) did by common consent reiect and condemne it, preferring honest and vpright dealing before profite.

By occasion of this Historie, I drewe my selfe into a more deepe consideration of this late vnder taken Voyage, whether it were as well pleasing to almighty God, as profitable to men: as lawfull, as it seemed honourable: as well gratefull to the Sauages, as gainefull to the Christians. And vpon mature deliberation I found the action to be honest and profitable, and therefore allowable by the opinion of Aristides if he were now aliue: which being by me herein sufficiently prooued, (as by Gods grace I purpose to doe) I doubt not but that all good mindes will endeouour themselves to be assistants to this so commendable an enterpryse, by the valiant and worthy Gentlemen our Countrey men already attempted and vnder taken.

Now whereas I doe vnderstand that Sir Humfrey Gilbert his adherents, associates and friends doe meane with a conuenient supply (with as much speede as may be) to maintaine, pursue and follow this intended voyage already in part performed, and (by the assistance of almighty God) to plant themselves and their people in the continent of the higher part of America, betwene the degrees of 30. and 60. of septentrionall latitude: Within which degrees by computation Astronomicall and Cosmographicall are doublelesse to bee found all things that be necessarie, profitable, or delectable for mans life: The climate milde and temperate, neyther too hotte nor too colde, so that vnder the cope of heauen there is not any where to be found a more conuenient place to plant and inhabite in: which many notable Gentlemen, both of our owne nation and strangers, (who haue bene traualers) can testifie: and that those Countreies are at this day inhabited with Sauages (who haue no knowledge of God:) As it not therefore (I say) to be lamented, that these poore Pagans, so long liuing in ignorance and idolatry, and in fort this King after Christianitie, (as may appeare by the relation of such as haue trauailed in those partes) that our hearts are so hardened, that fewe or none can be found which will put to their helping hands, and apply themselves to the relieving of the miserable and wretched estate of these sille soules:

Whose Countrey doeth (as it were with armes aduanced) aboute the climates both of Spaine and France, stretch out it selfe towards England only: In maner praying our ayde and helpe, as it is not onely set forth in Mercators generall Mappe, but it is also found to be true by the discouerie of our nation, and other strangers, who haue oftentimes trauailed vpon the same coasts.

Christopher Columbus of famous memorie, the first instrument to manifest the great glory and mercy of Almighty God in planting the Christian faith, in those so long unknownen regions, hauing in purpose to acquaint (as he did) that renowned Prince, the Queenes Maiesties grand father King Henry the seuenth, with his intended voyage for the Westerne discoveries, was not onely derided and mocked generally euen here in England, but afterward became a laughing stocke to the Spaniards themselves, who at this day (of all other people) are most bounden to laude and prayse God, who first stirred by the man to that enterpryse.

And while he was attending there to acquaint the King of Castile (that then was) with his intended purpose, by how many wayes and meanes was he derided: Some scorned the pildnesse of his garments, some tooke occasion to iest at his simple and silly lookes, others asked if this were he that lotwts so lowe, which did take vpon him to bring men into a Countrey that aboundeth with Golde, Pearle, and Precious stones: If hee were any such man (sayd they) he wou'd carry another maner of countenance with him, and looke somewhat loftier. Thus some iudged him by his garments, and others by his looke and countenance, but none entered into the consideration of the inward man.

In the ende, what successe his Voyage had, who list to reade the Decades, the Historie of the West Indies, the conquest of Hernando Cortes about Mexico, and those of Francisco Pizarro in Peru about Casamalcha and Cusco, may know more particularly. All which their discoveries, traualles and conquests are extant to be had in the English tongue. This deuise was then accounted a fantasticall imagination, and a vaine dreame.

Hernando
Cortes.
Francisco
Pizarro.

But the sequelle thereof hath since awaked out of dreames thousands of soules to knowe their Creator, being thereof before that time altogether ignorant: And hath since made sufficient prooffe, neither to be fantastick, nor vaine imagined.

Which, how mightily it hath enlarged the dominions of the Crowne of Spaine, and greatly enriched the subjects of the same, let all men consider. Besides, it is well knownen, that since the

the

the time of Columbus his first discouerie, through the planting, possessing, and inhabiting those partes, there hath bene transported and brought home into Europe greater store of Golde, Siluer, Pearle, and Precious Stones, then heretofore hath bene in all ages since the creation of the worlde.

I doe therefore heartily wish, that seeing it hath pleased almighty God of his infinite mercy, at the length to awake some of our worthy Countrey men out of that drowlie dreame, wherein we haue so long slumbered:

A reasonable request.

That wee may now not suffer that to quaille for want of maintenance, which by these valiant Gentlemen our Countreymen is so nobly begun & enterprised. For which purpose, I haue taken vpon me to write this simple short Treatise, hoping that it shall be able to perswade such as haue bene, and yet doe continue detractors and hinderers of this iourney, (by reason perhaps that they haue not deliberately and aduisedly entred into the iudgement of the matter) that yet now vpon better consideration they will become fauourable furtherers of the same. And that such as are already well affected thereunto, will continue their good disposition: And withall, I most humbly pray all such as are no nigards of their purses in buying of costly and rich apparel, and liberall Contributors in setting forth of games, pastimes, feasting and banquets, (whereof the charge being past, there is no hope of publike profite or commoditie) that henceforth they will bestowe and employ their liberality (heretofore that way expended) to the furtherance of these so commendable purposed proceedings.

The argument of the booke.

And to this ende haue I taken pen in hand, as in conscience thereunto moued, desiring much rather, that of the great multitude which this Realme doeth nourish, farre better able to handle this matter then I my selfe am, it would haue pleased some one of them to haue undertaken the same. But seeing they are silent, and that it falleth to my lotte to put pen to the paper, I will endeavour my selfe, and doe stand in good hope (though my skill and knowledge bee simple, yet through the assistance of almighty God) to prooue that the Voyage, lately enterprised for trade, traffique, and planting in America, is an action tending to the lawfull enlargement of her Majesties Dominions, commodious to the whole Realme in generall, profitable to the aduenturers in particular, beneficiall to the Sauages, and a matter to be attained without any great danger or difficultie.

And lastly, (which is most of all) A thing likewise tending to the honour and glory of Almighty God. And for that the lawfulness to plant in those Countreies in some mens iudgements seemeth very doubtfull; I will beginne the prooue of the lawfulness of trade, traffique, and planting.

The second Chapter sheweth, that it is lawfull and necessarie to trade and traffique with the Sauages: And to plant in their Countries: And diuideth planting into two sorts.

And first for traffique, I say that the Christians may lawfully trauell into those Countries and abide there: whom the Sauages may not iustly impugne and forbidde in respect of the mutuall societie and fellowshippe betweene man and man prescribed by the Law of Nations.

For from the first beginning of the creation of the worlde, and from the renewing of the same after Noes flood, all men haue agreed, that no violence should be offered to Ambassadors: That the Sea with his Hauens should be common: That such as should fortune to be taken in warre, should be seruants or slaues: And that strangers should not bee driuen away from the place or Countrey whereto they doe come.

If it were so then, I demaund in what age, and by what Law is the same forbidden or denied since? For who doubteth but that it is lawfull for Christians to vse trade and traffique with Infidels or Sauages, carrying thither such commodities as they want, and bringing from thence some part of their plentie?

A thing so commonly and generally practised, both in these our dayes, and in times past, beyond the memorie of man, both by Christians and Infidels, that it needeth no further prooue.

And forasmuch as the vse of trade and traffique (be it neuer so profitable) ought not to be preferred before the planting of Christian faith: I will therefore somewhat increate of planting, (without which, Christian Religion can take no roote, be the Preachers neuer so carefull and diligent) which I meane to diuide into two sortes.

The principall causes why this voyage is undertaken.

The first, when Christians by the good liking and willing assent of the Sauages, are admitted by them to quiet possession.

The

The second, when Christians being vnusually repulſed, doe ſeeke to attaine and mainteine the right for which they doe come.

And though in regard of the eſtabliſhment of Chriſtian Religion, eyther of both may be lawfully and iuſtly exerciſed: (Whereof many examples may be found, as well in the time of Moyses and Iosua, and other Rulers before the birth of Chriſt, as of many vertuous Emperours and Kings ſithence his incarnation:) yet doe I wiſh, that before the ſecond be put in practice, a prooſe may be made of the firſt, ſauing that for their ſafety as well againſt the Sauages, as all other foreigne enemies, they ſhould firſt well and ſtrongly fortifie themſelues: which being done, then by all fayre ſpeeches, and euery other good meanes of perſwaſion to ſeeke to take away all occaſions of offence.

As letting them to vnderſtand, how they came not to their hurt, but for their good, and to no other ende, but to dwell peaceably amongſt them, and to trade and traffique with them for their owne commoditie, without moleſting or grieuing them any way: which muſt not be done by wordes onely but alſo by deedes.

For albeit, to maintaine right and repell iniury, be a juſt cauſe of warre: yet muſt there hereof be heedfull care had, that whereas the Sauages be fearefull by nature, and ſond otherwiſe, the Chriſtians ſhould doe their beſt endeour to take away ſuch feare as may growe vnto them by reaſon of their ſtrange apparell, Armour, and weapon, or ſuch like, by quiet and peaceable conuerſation, and letting them liue in ſecuritie, and keeping a meaſure of blameleſſe defence, with as little diſcommoditie to the Sauages as may bee: for this kinde of warre would be onely deſenſiue and not offenſiue.

And queſtionleſſe there is great hope and likelyhoode, that by this kinde of meanes we ſhould bring to paſſe all effects to our deſired purpoſes: Conſidering that all creatures, by conſtitution of nature, are rendred more tractable and eaſier wonne for all aſſayes, by courteſie and mildneſſe, then by crueltie or roughneſſe: and therefore being a principle taught vs by naturall reaſon, it is firſt to be put in vſe.

For albeit as yet the Chriſtians are not ſo thoroughly furniſhed with the perfectneſſe of their language, eyther to expreſſe their mindes to them, or againe to conceiue the Sauages intent: Yet for the preſent opportunitie, ſuch policie may be vſed by friendly ſignes, and courteous tokens towards them, as the Sauages may eaſily perceiue (were their ſences neuer ſo groſſe) an aſſured frienſhip to be offered them, and that they are encountered with ſuch a nation, as brings them benefite, commoditie, peace, tranquillitie and ſafety. To further this, and to accompliſh it in deedes, there muſt bee preſented vnto them gratis, ſome kindes of our pettie marchandizes and trifles: As looking glaſſes, Belles, Beades, Bracelets, Chaines, or collers of Bewgle, Chryſtall, Amber, Iet, or Glaſſe &c. For ſuch be the things, though to vs of ſmall value, yet accounted by them of high price and eſtimation: and ſoonest will induce their Barbarous natures to a liking and a mutuall ſocietie with vs.

Moreouer, it ſhall be requiſite eyther by ſpeeche, if it be poſſible, either by ſome other certaine meanes, to ſignifie vnto them, that once league of frienſhip with all louing conuerſation being admitted betweene the Chriſtians and them: that then the Chriſtians from thenceforth will alwayes be ready with force of Armes to aſſiſt and defend them in their juſt quarrels, from all inuasions, ſpoiles and oppreſſions offered them by any Tyrants, Aduerſaries, or their next boyders: and a benefite is ſo much the more to be eſteemed, by how much the perſon vpon whom it is beſtowed ſtandeth in neede thereof.

For it appeareth by the relation of a Countryman of ours, namely David Ingram, (who travelled in thoſe countries vt. Doneyhs and more). That the Sauages generally for the moſt part, are at continuall warres with their next adioyning neighbours, and eſpecially the Cannibals, being a cruell kinde of people, whole foode is mans fleſh, and haue teeth like dogges, and doe purſue them with rauenous mindes to eate their fleſh, and deuoure them.

And it is not to be doubted, but that the Chriſtians may in this caſe iuſtly and lawfully ayde the Sauages againſt the Cannibals. So that it is very likely, that by this meanes we ſhall not only mightily ſtirre and inflame their rude mindes gladly to embrace the louing company of the Chriſtians, proffering vnto them both commodities, ſuccour, and kindneſſe: But alſo by their franke conſents ſhall eaſily enioy ſuch competent quantity of Land, as euery way ſhall be correſpondent to the Chriſtians expectation and contentation, conſidering the great abundance that they haue of Land, and how ſmall account they make thereof, taking no other fruites thereby then ſuch as the ground of it ſelfe doeth naturally yeelde. And thus much concerning the firſt ſort of planting, which as I aſſuredly hope, ſo I moſt heartily pray may take effect and place.

But

The seconde
kinde of plan-
ting.

But if after these good and fayre meanes vled, the Sauages neuertheless will not bee here-
withall satisfied, but barbarously will goe about to practise violence eyther in repelling the Chri-
stians from their Ports & safe landings, or in withstanding them afterwards to enioy the rightes
for which both painfully and lawfully they haue aduentured themselves thither :

Then in such a case I holde it no breach of equitie for the Christians to defend themselves, to
pursue reuenge with force, and to doe whatsoever is necessarie for the attaining of their safetie :
For it is allowable by all Lawes in such distresses, to resist violence with violence : And for their
more securitie to increase their strength by building of Forts for auoyding the extremitie of in-
surious dealing.

Wherein if also they shal not be suffered in reasonable quietnesse to continue, there is no barre
(as I iudge) but that in stout assemblies the Christians may issue out, and by strong hand pursue
their enemies, subdue them, take possession of their Townes, Cities, or Villages, and (in auoy-
ding murderous tyrannie) to vse the Law of Armes, as in like case among all Nations at this
day is vled : and most especially to the ende they may with securitie holde their lawfull possession,
lest happily after the departure of the Christians, such Sauages as haue bene conuerted, should
afterwards through compulsion and enforcement of their wicked Rulers, returne to their horri-
ble idolatrie (as did the children of Israel, after the decease of Ioshua) and continue their wicked
custome of most vnnaturall sacrificing of humane creatures.

And in so doing, doubtlesse the Christians shall no whit at all transgresse the bonds of equitie
or ciuilitie, forasmuch as in former ages, (yea, before the incarnation of Christ) the like hath bene
done by sundry Kings and Princes, Gouernours of the children of Israel: chiefly in respect to
begin their planting, for the establishment of Gods worde : as also since the Natiuitie of Christ,
mightie and puissant Emperours and Kings haue performed the like, I say to plant, possesse, and
subdue. For prooofe whereof, I will alledge you examples of both kindes.

Wee reade in the olde Testament, how that after Noes flood was ceased, restauration of man-
kinde began onely of those fewe of Noes children and familie as were by God preselected to bee
saued in the Arke with him, whose seede in procelle of time, was multiplied to infinite numbers
of Nations, which in diuers sortes diuided themselves to sundry quarters of the earth. And for-
asmuch as all their posteritie being mightily encreased, followed not the perfect life of Noe their
predecessour, God chose out of the multitude a peculiar people to himselfe, to whom after-
wardes being vnder the gouernment of Moyses in Mount Sinay, hee made a graunt to inherite
the Land of Canaan, called the Land of promise, with all the other rich and fertile Countries
next adioynning thereunto. Neuertheless, before they came to possession thereof, hauing bene af-
flicted with many grievous punishments and plagues for their sinnes, they fell in despayre to
enioy the same.

But being encouraged and comforted by their Rulers, (men of God) they proceeded, ar-
ming themselves with all patience, to suffer whatsoever it should please God to send : and at last
attaining to the Land, they were encountered with great numbers of strong people, and mighty
Kings.

Iosua 4.

Notwithstanding, Iosua their Leader replenished with the Spirit of God, being assured of
the iustnesse of his quarell, gathered the chiefe strength of the children of Israel together, to the
number of 40000. with whom he safely passed the huge riuer Iordan, and hauing before sent pri-
uate spies for the discouerie of the famous citie Ierico, to vnderstand the certaintie of the Citizens
estate, he forthwith came thither, and enuironed it round about with his whole power the space of
seuen dayes.

Iosua 6.

In which respite, perceiuing none of the Gentiles disposed to yeeld or call for mercie, he then
commanded (as God before had appointed) that both the citie Ierico should be burned, yea, and
all the inhabitants, as well olde as young, with all their cattell should be destroyed, onely excepted
Rahab, her kindred and familie, because shee before had hid secretly the messengers of Iosua, that
were sent thither as spies. As for all their golde, siluer, precious stones, or vessels of brasse, they
were reserued and consecrated to the Lords treasure.

Iosua 8.

In like maner he burned the citie Hay, slew the inhabitants thereof, and hanged by their King.
But for so much as the Gebionites (fearing the like euent) sent Ambassadors vnto Iosua to in-
treate for grace, fauour, and peace : hee commaunded that all their liues should bee saued, and
that they should be admitted to the company of the children of Israel. Yet vnderstanding after-
wardes they wrought this by a policie, he vled them as drudges to hewe wood and to carie water,
and other necessities for his people. Thus beganne this valiant Captaine his conquest, which
he pursued and neuer left till hee had subdued all the Hechites, Amorites, Cananites, Peresites,

Iosua 9.

Judg. 11. 13.

Heuities,

Heuities, and Iebusites, with all their princes and Kings, being thirte and one in number, & diuers other strange nations, besides whose lands & dominions he wholly diuided among Gods people.

After that Iosua was deceased, Iuda was constituted Lord ouer the armie, who receiuing like charge from God, pursued the proceedings of the holy captaine Iosua, and vicerly banquished many Gentiles, Idolaters, and aduersaries to the childzen of Israel, with all such Rulers of Kings as withstood him, and namely Adonibezek the most cruell tyrant: whose thumbe and great toes he caused to be cut off, for so much as hee had done the like before vnto seuentie Kings, whom being his prisoners, he forced to gather by their victuals vnderneath his table. In this God shewed his iustice to reuenge tyrannie. We reade likewise, that Gedeon a most puissant and noble warriour so behaued himselfe in following the worthy acts of Iosua and Iuda, that in short time he not only deliuered the childzen of Israel from the hands of the multitude of the fierce Madianites, but also subdued them and their Tyrants, whose landes he caused Gods people to possesse and inherite.

Judg. 1.

A good note for al Conquerors to be meritorious.

Judg. 6. 7.

I could reuerie diuers other places out of the Scripture, which aptly may be applyed herunto, were it not I doe indetour my selfe by all meanes to be briefe. Now in like maner will I alledge some fewe Inductions out of the autenticall writings of the Ecclesiasticall Historiographers, all tending to the like argument. And first to begin withall, we doe reade: That after our Saviour Iesus Christ had suffered his passion, the Apostles being inspired with the holy Ghost, and the knowledge of all strange languages, did immediately disperse themselves to sundry parts of the world, to the preaching of the Gospel. Yet not in so generall a maner, but that there remayned some farre remote Countries vnvisited by them, among the which it is reported that India the great, called the uttermost India, as yet had receiued no light of the word. But it came to passe, that one Metrodorus a very learned and wise Philosopher in that age, being desirous to search out unknowen lands, did first discover the same, finding it wonderfull populous and rich, which vpon his retorne being published, and for certaine vnderstood, there was another graue Philosopher of Tyrus called Meropius, being a Christian, who did resolute himselfe (following the example of Metrodorus) to trauaile thither, and in a short time assisted but with a few, in a small Vessel arrived there, hauing in his company two yong youths, Edecius and Frumentius, whom (being his schollers) he had thouroughly instructed both in liberall Sciences, and christian Religion. Now after that Meropius some while staying there, had (as hee thought) sufficient vnderstanding of the Indians whole estate: He determined to depart, and to bring notice thereof vnto the Emperour, whom he meant to exhorte to the conquest of the same.

Rufinus lib. 1. cap. 2.

But by misfortune he was prevented, for being in the middelt of his course on the Sea homeward, a sore tempest arose, and perforce droue him backe againe, to an unknowen Port of the sayd land: where he by the most cruell barbarous Indians on the sudden was slaine with all his company, except the two yong schollers aforesayde, whom the barbarous Indians, by reason they were of comely stature and beautifull personages, tooke, and forthwith presented them to their King and Queene: which both being very well liked of, the King courteously entreated, and ordeined Edecius to be his Butler, and Frumentius his Secretarie, and in few yeeres by reason of their learning and ciuill gouernment, they were had in great fauour, honour, and estimation with the Princes. But the King departing this life, left the Queene his wife with her yong sonne to gouerne, and gaue free scope and libertie to the two Christians, at their best pleasure to passe to their native soulds, allowing them all necessaries for the same. Yet the Queene who highly fauoured them was very sorrowfull they should depart, and therefore most earnestly intreated them to tarry and assist her in the gouernment of her people, till such time as her yong sonne grew to ripe yeeres, which request they fulfilled.

Meropius slaine.

Edecius and Frumentius presented by the Indians.

And Frumentius excellling Edecius farre in all wisdom, ruled both the Queene and her subjects at his discretion, whereby he tooke occasion to put in practice priuily, that the foundation of Christian religion might be planted in the hearts of such as with whom he thought his perswasion might best preuaile, and that soonest would giue eare vnto him: which being brought to passe accordingly, hee then with his fellow Edecius tooke leaue of the Queene to retorne to his native countrey. And so soone as he was arrived there, he reuealed to the Emperour Constantine, the effect of all those euents: who both commending his deedes and wholly allowing thereof, by the aduise and good liking of Athanasius then Bishop of Alexandria, did araine and see forth a conuenient power for the ayde of Frumentius, in this his so godly a purpose. And by this meanes came the Emperour afterwards by faire promises, and by force of armes together, vnto the possession of all the Indians countrey. The author of this storie Rufinus receiued the truth hereof from the very mouth of Edecius companion to Frumentius.

Frumentius in great fauour with the Queene of the Indians.

An other great worke of God begunne by a man of meane birth.

Rufinus the author of this storie.

Moreouer

Euseb. in his ecclesiasticall history maketh mention how that Constantine the great did enlarge his dominions by subduing of Infidels and Idolatrous nations.
Eusebius lib. 1. de vita Constant. cap. 4. et cap. 9.
Euseb. eod. lib. cap. 39.

Moreover Eusebius in his Historie Ecclesiasticall in precise termes, and in diuers places maketh mention how Constantine the great not onely enlarged his Empire by the subduing of his next neighbours, but also endeouored by all meanes to subiect all such remote Barbarous and Heathen nations, as then inhabited the foure quarters of the worlde. For (as it is written) the Emperour thoroughly appoynted with a puissant armie of valiant souldiers whom he had before perswaded to Christian religion, in proper person himselfe came euen vnto this our country of England, then called the Island of Brittaines, bending from him full West, which he wholly conquered, made tributarie, and settled therein Christian faith, and left behinde him such Rulers thereof, as to his wisdom seemed best. From thence hee turned his force towardes the North coast of the worlde, and there utterly subdued the rude and cruell Nation of the Scythians, whereof part by friendly perswasions, part by maine strength, hee reduced the whole to Christian faith. Afterwards he determined with himselfe to search out what strange people inhabited in the uttermost parts of the South. And with great hazard and labour, making his iourney thither, at last became victour ouer them all, euen to the countrey of the Blemmyans, and the remote Ethiopians, that now are the people of Presbyter Iohn, who yet till this day continue and beare the name of Christians.

In the East likewise, what Nation soeuer at that time he could haue notice of, he easily wonne and brought in subiection to the Empire. So that to conclude, there was no region in any part of the worlde, the inhabitants whereof being Gentiles, though vnknown vnto him, but in time he ouercame and vanquished.

This worthy beginning of Constantine, both his sonnes succeeding his roome, and also diuers other Emperours after ward to their uttermost endeavour followed and continued, which all the booke of Eusebius more at large set forth. Theodoretus likewise in his Ecclesiasticall historie maketh mention how Theodosius the vertuous Emperour employed earnestly all his time, as well in conquering the Gentiles to the knowledge of the holy Gospel, utterly subuerting their prophane Temples and abominable Idolatry, as also in extinguishing of such vsurping tyrants as with Paganisme withstood the planting of Christian religion. After whose decease his sonnes Honorius and Arcadius were created Emperours, the one of the East, the other of the West, who with all stout godlinesse most carefully imitated the footsteps of their Father, eithers in enlarging their territories, or increasing the christian flocke.

Moreover, it is reported by the sayd authoꝝ, that Theodosius Iunior the Emperour, no whit inferiour in vertuous life to any of the aboue named Princes, with great studie and zeale pursued and prosecuted the Gentiles, subdued their tyrants and countries, and utterly destroyed all their idolatry, conuerting their soules to acknowledge their onely Messias and Creator, and their Countries to the enlargement of the Empire. To be brieft, who so listeth to read Eusebius Pamphilus, Socrates Scholasticus, Theodorus, Hermia, Sozomen, and Euagrius Scholasticus, which all were most sage Ecclesiasticall writers, shall finde great store of examples of the worthy liues of sundry Emperours, tending all to the confirmation of my former speeches.

And for like examples of later time, (yea euen in the memorie of man) I shall not neede to recite any other then the conquest made of the West and East Indies by the Kings of Spaine and Portugall, whereof there is particular mention made in the last Chapter of this booke. Wherein haue I vsed more copy of examples then otherwise I would haue done, sauing that I haue bene in place, where this manner of planting the Christian faith hath bene thought of some to be scarce lawfull, yea, such as doe take vpon them to be more then meanely learned. To these examples could I toyne many moe, but whosoever is not satisfied with these fewe, may satisfie himselfe in reading at large the Authoꝝ last aboue recited. Thus haue I (as I trust) proued that we may iustly trade and traffique with the Sauages, and lawfully plant and inhabite their Countries.

The third Chapter doeth shew the lawfull title which the Queenes most excellent Maiestie hath vnto those Countries, which through the ayde of Almighty God are meant to be inhabited.

1170.
Owen Gwyneth was then Prince of Northwales. Nullum tempus occurrit Regi.

And it is very euident that the planting there shal in time right amply enlarge her Maiesties Territories and Dominions, or (I might rather say) restore her to her Highnesse ancient right and interest in those Countries, into the which a noble and worthy personage, lineally descended from the blood royall, borne in Wales, named Madock ap Owen Gwyneth, departing from the coast of England, about the yeere of our Lord God 1170. arriued and there planted himselfe and his Colonies, and afterward returned himselfe into England, leauing certaine of his people

people there, as appeareth in an ancient Welsh Chronicle, where he then gaue to certaine Ilands, beastes, and foules sundry Welsh names, as the Iland of Pengwin, which yet to this day beareth the same.

There is likewise a foule in the saide countreys called by the same name at this day, and is as much to say in English, as Whitehead, and in trueth the said foules haue white heads. There is also in those countreys a fruit called Gwynethes which is likewise a Welsh word. Moreover, there are diuers other Welsh wordes at this day in vse, as David Ingram aforesaid reporteth in his relations. All which most strongly argueth, the sayd prince with his people to haue inhabited there. And the same in effect is confirmed by Mutezuma that mightie Emperour of Mexico, who in an Oration vnto his subiects for the better pacifying of them, made in the presence of Hernando Cortes vsed these speeches following.

MY kinsmen, friends, and seruants, you doe well know that eightene yeres I haue bene your King, as my fathers and grandfathers were, and alwayes I haue bene vnto you a louing Prince, and you vnto me good and obedient subiects, and so I hope you will remaine vnto mee all the dayes of my life. You ought to haue in remembrance, that either you haue heard of your fathers, or else our diuines haue instructed you, that wee are not naturally of this countrey, nor yet our kingdome is durable, because our forefathers came from a faire countrey, and their King and Captaine, who brought them hither, returned againe to his naturall Countrey, saying that he would send such as should rule and gouerne vs, if by chance he himselfe returned not, &c.

These be the very wordes of Mutezuma set downe in the Spanish Chronicles, the which being thoroughly considered, because they haue relation to some strange noble person, who long before had possessed those countreys, doe all sufficiently argue the vndoubted title of her Maiestie: forasmuch as no other Nation can cruely by any Chronicles they can finde, make prescription of time for themselves, before the time of this Prince Madoc. Besides all this, for further prooffe of her highnesse title thence the arriual of this noble Briton into those parts (that is to say) in the time of the Queenes grandfather of worthy memory, King Henry the seventh, Letters patents were by his Maiestie granted to Iohn Cabota an Italian, to Lewis, Sebastian and Sancius, his three sonnes, to discover remote, barbarous and heathen Countreys, which discovery was afterwarde executed to the vse of the Crowne of England, in the sayde Kings time, by Sebastian and Sancius his sonnes, who were borne here in England: in true testimony whereof there is a faire haven in Newfoundland, knowne, and called vntill this day by the name of Sancius haven, which proueth that they first discovered vpon that coast from the height of 63 vnto the cape of Florida, as appeareth in the Decades.

And this may stand for another title to her Maiestie: but any of the foresayd titles is as much or more then any other Christian Prince can pretend to the Indies, before such time as they had actuall possession thereof, obtained by the discovery of Christopher Columbus, and the conquest of Vafques Nunnes de Balboa, Hernando Cortes, Francisco Pizarro, and others. And therefore I thinke it needlesse to write any more touching the lawfulnessse of her Maiesties title.

The fourth chapter sheweth how that the trade, traffike, and planting in those countreys, is likely to proue very profitable to the whole realme in generall.

NOW to shew how the same is likely to proue very profitable and beneficiall generally to the whole realme: it is very certaine, that the greatest iewell of this realme, and the chiefeest strength and force of the same, for defence or offence in marshall matter and maner, is the multitude of ships, masters and mariners, ready to assist the most stateli and royall navy of her Maiestie, which by reason of this voyage shall haue both increafe and maintenance. And it is well knownen that in sundry places of this realme ships haue bene built and set forth of late dayes, for the trade of fishing onely: yet notwithstanding the fish which is taken and brought into England by the English navy of fishermen, will not suffice for the expense of this realme foure moneths, if there were none els brought of strangers. And the chiefeest cause why our English men doe not goe so farre Westerly as the especiall fishing places doe lie, both for plenty and greatnesse of fish, is for that they haue no succour and knowne safe harbour in those parts. But if our nation were once planted there, or neere thereabouts; whereas they now fish but for two moneths in the yere, they might then fish so long as pleased themselves, or rather at their comming finde such plenty of fish ready taken, salted, and dried, as might be sufficient to fraught them home without long delay (God granting that salt may be found there) whereof David Ingram (who trauelled in those

This Iland was discovered by Sir Humfrey and his company in this his last iourney.

Mutezuma his Oration to his subiects in presence of Hernando Cortes, which Oration was made about the yere 1520.

M. Oliver Dabony.
M. Edward Reow.
M. R. H.
M. I. A.

Cox the master.

countreys as aforesayd) sayth that there is great plenty: and withall the climate doth giue great hope, that though there were none naturally growing, yet it might as well be made there by art, as it is both at Rochel and Bayon, or elsewhere. Which being brought to passe, shall increase the number of our shippes and mariners, were it but in respect of fishing onely: but much more in regard of the sundry merchandizes and commodities which are there found, and had in great abundance.

Moreouer, it is well knowen that all Sauages, as well those that dwell in the South, as those that dwell in the North, so soone as they shall begin but a little to taste of ciuility, will take maruelous delight in any garment, be it neuer so simple; as a shirt, a blew, yellow, red, or greene cot-ten cassocke, a cap, or such like, and will take incredible paines for such a trifle.

For I my selfe haue heard this report made sundry times by diuers of our countrey men, who haue dwelt in the Southerly parts of the West Indies, some twelue yeeres together, and some of lesse time; that the people in those parts are easily reduced to ciuility both in maners and garments. Which being so, what vent for our English clothes will thereby ensue, and how great benefit to all such persons and artificers, whose names are quoted in the margin, I do leaue to the iudgment of such as are discreet.

Clothiers.
Woolmen,
Carders,
Spinners,
Weauers,
Fullers,
Shesmen,
Dyers,
Drapers,
Cappers,
Hatters, &c.
and many de-
cayed townes
repaired.

And questionlesse, heereby it will also come to passe, that all such townes and villages as both haue bene, and now are verily decayed and ruined (the poore people thereof being not set on worke, by reason of the transportation of raw wooll of late dayes more excessively then in times past) shal by this meanes be restored to their pristinate wealth and estate: all which doe likewise tend to the enlargement of our navy, and maintenance of our nauigation.

To what end need I endeavour my selfe by arguments to proue that by this voyage our nauie and nauigation shalbe enlarged, when as there needeth none other reason then the manifest & late example of the neere neighbours to this realme, the kings of Spaine and Portugall, who since the first discovery of the Indies, haue not onely mightily enlarged their dominions, greatly enriched themselves and their subjects: but haue also by iust account trebled the number of their shippes, masters and mariners, a matter of no small moment and importance.

The idle per-
sons of this
realme shall
by occasion of
this tourney
bee well im-
ployed & set
on worke.

Besides this, it will proue a generall benefit vnto our countrey, that through this occasion, not onely a great number of men which do now liue idely at home, and are burthenous, chargeable, & vnprofitable to this realme, shall hereby be set on worke, but also children of twelue or fourteene yeeres of age, or vnder, may bee kept from idleness, in making of a thousand kindes of trifling things, which wil be good merchandize for that countrey. And moreouer, our idle women (which the Realme may well spare) shall also be employed on plucking, drying, and sorting of feathers, in pulling, beating, and working of hempe, and in gathering of cotton, and diuers things right necessary for dyng. All which things are to be found in those countreys most plentifully. And the men may imploy themselves in dragging for pearle, working for mines, and in matters of husbandry, and likewise in hunting the Whale for Crane, and making caskes to put the same in: besides in fishing for cod, salmon, and herring, drying salting and barreling the same, and felling of trees, hewing and sawing of them, and such like worke, meete for those persons that are no men of Art or science.

Wenpe doeth
grow neere S.
Laurence river
naturallp.

Many other things may bee found to the great reliefe and good employments of no small number of the naturall Subjects of this Realme, which doe now liue here idely to the common annoy of the whole state. Neither may I here omit the great hope and likelyhood of a passage beyond the Grand Bay into the South Seas, confirmed by sundry authours to be found leading to Cataia, the Moluccas and Spiceries, whereby may ensue as generall a benefite to the Realme, or greater then yet hath bene spoken of, without either such charges, or other inconueniences, as by the tedious tract of time and perill, which the ordinarie passage to those parts at this day doeth minister.

Read the be-
ginning of the
booke intit-
led, Diuers voy-
ages touching
the discovery of
America.

And to conclude this argument withall, it is well knowen to all men of sound iudgement, that this voyage is of greater importance, and will be found more beneficiall to our countrey, then all other voyages at this day in vse and trade amongst vs.

The fift chapter sheweth, that the trading and planting in those countreys is likely to proue to the particular profit of all aduenturers.

I Must now according to my promise shew forth some probable reasons that the aduenturers in this tourney are to take particular profit by the same. It is therefore conuenient that I doe diuide the aduenturers into two sorts: the noblemen and gentlemen by

by themselves, and the Merchants by themselves. For, as I doe heare, it is meant that there shall be one societie of the Noblemen and Gentlemen, and another societie of the merchants. And yet not so diuided, but that eche societie may freely and frankely trade and traffique one with the other.

And first to bend my speech to the noblemen and gentlemen, who doe chiefly seeke a temperate climate, wholesome ayre, fertile soile, and a strong place by nature whereupon they may fortifie, and there either plant themselves, or such other persons as they shall thinke good to send to bee lords of that place and countrey: to them I say, that all these things are very easie to be found within the degrees of 30 and 60 aforesaid, either by South or North, both in the Continent, and in Islands thereunto adioyning at their choise: but the degree certaine of the eleuation of the pole, and the very climate where these places of force and fertility are to be found, I omit to make publicke, for such regard as the wiser sort can easily coniecture: the rather because I doe certainly vnderstand, that some of those which haue the managing of this matter, knowe it as well or better then I my selfe, and do meane to reueale the same, when cause shall require, to such persons whom it shall concerne, and to no other: so that they may seat & settle themselves in such climate as shall best agree with their owne nature, disposition, and good liking: and in the whole tract of that land, by the description of as many as haue bene there, great plentie of minerall matter of all sorts, and in very many places, both stones of price, pearle and chrystall, and great store of beasts, birds, and fowles both for pleasure and necessary vse of man are to be found.

And for such as take delight in hunting, there are Stagges, Wilde bores, Foxes, Hares, Cunnies, Badgers, Otters, and diuers other such like for pleasure. Also for such as haue delight in hauking, there are haukes of sundry kinds, and great store of game, both for land and riuer, as Fezants, Partridges, Cranes, Heronshawes, Ducks, Mallards, and such like. There is also a kinde of beast much bigger then an Ore, whose hide is more then eigheteene foote long, of which sort a countreyman of ours, one Walker a sea man, who was vpon that coast, did for a trueth report in the presence of diuers honourable and worshipfull persons, that he and his company did finde in one cottage about two hundred and fortie hides, which they brought away and solde in France for fortie shillings an hide: and with this agreeth David Ingram, and describeth that beast at large, supposing it to be a certaine kinde of Basse; there are likewise beasts and fowles of diuers kinds, which I omit for breuities sake, great store of fish both in the salt water and in the fresh, plentie of grapes as bigge as a mans thumbe, and the most delicate wine of the Palme tree, of which wine there be diuers of good credit in this realme that haue tasted: and there is also a kind of graine called Maiz, Potato rootes, and sundry other fruits naturally growing there: so that after such time as they are once settled, they shall neede to take no great care for victuall.

And now for the better contentation and satisfaction of such worshipfull, honest minded, and well disposed Merchants, as haue a desire to the furtherance of euery good and commendable action, I will first say vnto them, as I haue done before to the Noblemen and Gentlemen, that within the degrees abouesayde, is doubtlesse to bee found the most wholesome and best temperature of ayre, fertilitye of soyle, and euery other commoditie or merchandize, for the which, with no small perill we doe trauell into Barbary, Spaine, Portugall, France, Italie, Moscouie and Eastland. All which may be either presently had, or at the least wise in very short time procured from thence with lesse danger then now we haue them. And yet to the ende my argument shall not altogether stand vpon likelihoods and presumptions, I say that such persons as haue discovered and trauelled those partes, doe testifie that they haue found in those countreyes all these things following, namely:

<i>Of beasts for furs.</i>		
Martens.	Hérons.	Salmon.
Beauers.	Partridges.	Seales.
Foxes, blacke and white.	Cranes.	Herrings.
Leopards.	Mallards.	<i>Of Trees.</i>
	Wilde geese.	Palme trees yeelding sweet
	Stocke dooues.	wines.
<i>Of wormes.</i>	Margaus.	Cedars.
Silke wormes great & large	Blacke birds.	Firres.
<i>Of Birds.</i>	Parrots.	Safasfras.
Hawkes.	Pengwins.	Oake.
Bitters.	<i>Of Fishes.</i>	Elme.
Curlewes.	Codde.	Popler.

And sundry other strange Trees, to vs vnknown.

<i>Of fruites.</i>	<i>Of Mettals.</i>	<i>Christall.</i>	<i>Traine oyle.</i>
Grapes very large.	Golde.	<i>Sundry other commodities of all sorts.</i>	Muske codde.
Muskemellons.	Siluer.		Salt.
Limons.	Copper.	Rosen.	Tallow.
Dates great.	Lead.	Pitch.	Hides.
Orrenges.	Tinne.	Tarre.	Hempe.
Figges.	<i>Of Stones.</i>	Turpentine.	Flaxe.
Prunes.	Turkeis.	Frankincense.	Cochenello & dies
Raisins great and small.	Rubies.	Honny.	of diuers sorts.
Pepper.	Pearls great & faire.	Waxe.	Feathers of sundrie
Almonds.	Marble, of diuers kindes.	Rubarbe.	sorts, as for pleasure and filling of
Citrons.	Iasper.	Oyle Oliue.	Featherbeds.

And seeing that for small costs, the truth of these things may be understood (whereof this intended supply will giue vs more certaine assurance) I doe finde no cause to the contrary, but that all well minded persons should be willing to aduenture some competent portion for the furtherance of so good an enterprise.

Commodities
found in
New
foundland.

Now for the triall hereof, considering that in the articles of the Societie of the aduenturers in this voyage, there is prouision made, that no aduenturer shall be bound to any further charge then his first aduenture: and yet notwithstanding keepe still to himselfe his children, his apprentices and seruants, his and their freedome for trade and traffique, which is a priuiledge that aduenturers in other voyages haue not: and in the said articles it is likewise prouided, that none other then such as haue aduentured in the first voyage, or shall become aduenturers in this supply, at any time hereafter are to be admitted in the said Societie, but as redemptionaries, which will be very chargeable: therefore generally I say vnto all such according to the old prouerbe, Nothing venture, nothing haue. For if it do so fall out, according to the great hope and expectation had, (as by Gods grace it will) the gaine which now they reape by traffique into other farre countries, shall by this trade returne with lesse charge, greater gaine, and more safety: Lesse charge, I say, by reason of the ample and large deepe riuers at the very banke, whereof there are many, whereby both easily and quietly they may transport from the innermost parts of the main land, all kind of merchandize, yea in vessels of great burden, and that three times, or twice in the yere at the least. But let vs omit all presumptions how vehement soeuer, and dwell vpon the certainty of such commodities as were discovered by S. Humfrey Gilbert, & his assistants in Newfoundland in August last. For there may be very easily made Pitch, Tarre, Rosen, Sope ashes, in great plenty, yea, as it is thought, inough to serue the whole realme of euery of these kindes: And of Traine oyle such quantity, as if I should set downe the value that they doe esteeme it at, which haue bene there, it would seeme incredible.

It is hereby intended, that these commodities in this abundant maner, are not to be gathered from thence, without planting and setting there. And as for other things of more value, and that of more sorts and kindes then one or two (which were likewise discovered there) I doe holde them for some respects, more meete for a time to be concealed then uttered.

Of the fishing I doe speake nothing, because it is generally known: and it is not to be forgotten, what trifles they be that the Sauages doe require in exchange of these commodities: yea, for pearle, golde, siluer, and precious stones. All which are matters in trade and traffique of great moment. But admit that it should so fall out, that the aboue specified commodities shall not happily be found out within this first yere: Yet it is very cleere that such and so many may be found out as shall minister iust occasion to thinke all cost and labour well bestowed. For it is very certaine, that there is one seat fit for fortification, of great safety, wherein these commodities following, especially are to be had, that is to say, Grapes for wine, Whales for oyle, Hempe for cordage, and other necessary things, and fish of farre greater size and plenty, then that of Newfoundland, and of all these so great store, as may suffice to serue our whole realme.

Besides all this, if credit may be giuen to the inhabitants of the same soile, a certaine riuer doth therunto adioyne, which leadeth to a place abounding with rich substance: I doe not hereby meane the passage to the Moluccaes, whereof before I made mention.

And it is not to be omitted, how that about two yeeres past, certaine merchants of S. Malo in France, did hyre a ship out of the Island of Iersey, to the ende that they would keepe that trade secret from their Countrey men, and they would admit no mariner, other then the ship boy belonging to the sayd ship, to goe with them, which shippe was about 70. tunne. I doe know the shippe and

and the boy very well, and am familiarly acquainted with the owner, which voyage prooued very beneficiall.

To conclude, this which is already sayd, may suffice any man of reasonable disposition to serue for a taste, vntill such time as it shall please almighty God through our owne industrie, to send vs better tydings. In the meane season, if any man well affected to this iourney, shall stand in doubt of any matter of importance touching the same, he may satisfie himselfe with the iudgement and liking of such of good calling and credite, as are principall dealers herein. For it is not necessary in this treatise, publickly to set forth the whole secrets of the voyage.

The sixt Chapter sheweth that the traffique and planting in those countries, shall be vnto the Sauages themselves very beneficiall and gainefull.

NOW to the end it may appeare that this voyage is not vnderaken altogether for the peculiar commodity of our selues and our country (as generally other trades and iourneys be) it shall fall out in prooofe, that the Sauages shall hereby haue iust cause to blesse the houre when this enterprize was vnderaken.

First and chiefly, in respect of the most happy and glad some tidings of the most glorious Gospel of our Sauour Iesus Christ, whereby they may be brought from falshood to truely, from darknesse to light, from the hie way of death to the path of life, from superstitious idolatrie to sincere Christianity, from the deuill to Christ, from hell to heauen. And if in respect of all the commodities they can yeelde vs (were they many moe) that they should but receiue this onely benefit of Christianity, they were more then fully recompenced.

But heereunto it may bee objected, that the Gospel must bee freely preached, for such was the example of the Apostles: vnto whom although the authorities and examples before alledged of Emperors, Kings and Princes, as well before Christs time as since, might sufficiently satisfie: yet for further answer, we may say with S. Paul, If wee haue sown vnto you heauenly things, 2. Corinth. 9. doe you thinke it much that we should reape your carnall things? And withall, The workman is worthy of his hire. These heauenly tidings which those labourers our countrey men (as messengers of Gods great goodnesse and mercy) will voluntarily present vnto them, doe farre exceed their earthly riches. Moreover, if the other inferiour worldly and temporall things which they shall receiue from vs, be weighed in equall ballance, I assure my selfe, that by equal iudgement of any indifferent person, the benefits which they then receiue, shall farre surmount those which they shall depart withall vnto vs. And admit that they had (as they haue not) the knowledge to put their land to some vse: yet being brought from brutish ignorance to ciuilitie and knowledge, and made then to vnderstand how the tenth part of their Land may be so manured and employed, as it may yeeld more commodities to the necessary vse of mans life, then the whole now doeth: What iust cause of complaint may they haue? And in my priuate opinion, I do verily thinke that God did create land, to the end that it should by culture and husbandry yeeld things necessary for mans life.

But this is not all the benefit which they shall receiue by the Christians: for, ouer and beside the knowledge how to till and dress their grounds, they shall be reduced from vnseemely customes to honest manners, from disordered riotous routs and companyes to a well gouerned common wealth, and withall, shall be taught mechanicall occupations, arts, and liberall sciences: and which standeth them most vpon, they shall be defended from the cruelty of their tyrannicall and blood sucking neighbors the Canibals, whereby infinite number of their liues shall be preserved. And lastly, by this meanes many of their poore innocent childzen shall be preserved from the bloody knife of the sacrificer, a most horrible and detestable custome in the sight of God and man, now and euer heretofore vsed amongst them. Many other things could I heere alledge to this purpose, were it not that I doe feare lest I haue already more then halfe tired the reader.

This bargaen cannot be vniust, where both parties are gainers.

The seuenth Chapter sheweth that the planting there, is not a matter of such charge or difficultie, as many would make it seeme to be.

NOW therefore for prooofe, that the planting in these parts is a thing that may be done without the ayde of the Princes power and purse, contrary to the allegation of many malicious persons, who wil neither be actors in any good action themselves, nor so much as asoord a good word to the setting forward thereof: and that worse is, they will take vpon them to make molehilles seeme mountains, and flies elephants, to the end they may discourage others, that be very well or indifferently affected to the matter, being like vnto Esops dogge, which neither would eate Hay himselfe, nor suffer the poore hungry asse to feede thereon:

I say and affirme that God hath provided such meanes for the furtherance of this enterprize, as doe stand vs in stead of great treasure: for first by reason that it hath pleased God of his great goodnesse, of long time to hold his merciful hand ouer this realme, in preserving the people of the same, both from slaughter by the sword, and great death by plague, pestilence, or otherwise, there are at this day great numbers (God he knoweth) which liue in such penurie & want, as they could be contented to hazard their liues, and to serue one yeere for meat, by luke and appaile only, without wages, in hope thereby to amend their estates: which is a matter in such like iournyes, of no small charge to the prince. Moreover, things in the like iournyes of greatest price and cost, as victuall (whereof there is great plentie to be had in that countrey without money) and powder, great artillery, or coislets are not needefull in so plentifull and chargeable maner, as the shew of such a iourney may present: for a small quantitie of all these, to furnish the Foze only, will suffice vntill such time as diuers commodities may be found out in those parts, which may be thought well worthy a greater charge. Also the peculiar benefit of archers which God hath blessed this land withall before all other nations, will stand vs in great stead amongst those naked people.

Another helpe we haue also, which in such like cases is a matter of marvellous cost, and will be in this iourney procured very easily (that is to say) To transport yeerely aswell our people, as all other necessities needfull for them into those parts by the fleet of merchants, that yeerely venture for fish in Newfoundland, being not farre distant from the countrey meant to be inhabited, who commonly goe with emptie vessels in effect, sauing some litle freight with salt. And thus it appeareth that the souldiers wages, and the transportation may be defrayed for farre lesse summes of money then the detractors of this enterprize haue giuen out. Again, this intended voyage for conquest, hath in like maner many other singular priuiledges wherewith God hath, as it were, with his holy hand blessed the same before all others. For after once we are departed the coast of England, wee may passe straightway thither, without danger of being driuen into any the countries of our enemies, or doubtfull friends: for commonly one winde serueth to bring vs thither, which seldom faileth from the middle of Januarie to the middle of May, a benefite which the mariners make great account of, for it is a pleasure that they haue in few or none of other iournyes. Also the passage is short, for we may goe thither in thirtie or fortie dayes at the most, hauing but an indifferent winde, and returne continually in twenty or foure and twentie dayes at the most. And in the same our iourney, by reason it is in the Ocean, and quite out of the way from the intercourse of other countreys, we may safely trade and traffique without peril of piracy: neither shall our ships, people, or goods there, be subiect to arrest or molestation of any Pagan potentate, Turkish tyrant, yea, or Chyistian prince, which heretofore sometimes vpon slender occasion in other parts haue stayed our ships and merchandizes, whereby great numbers of our countrey men haue bene utterly vndone, diuers put to ransome, yea, and some lost their liues: a thing so fresh in memorie as it needeth no prooue, and is well worthy of consideration.

Besides, in this voyage we doe not crosse the burnt line, whereby commonly both beuerage and victuall are corrupted, and mens health very much impayred, neither doe we passe the frozen seas, which yelde sundry extreme dangers: but haue a temperate climate at all times of the yeere, to serue our turnes. And lastly, there neede no delays by the way for taking in of fresh water and fiewell, (a thing vsually done in long iournies) because, as I sayd aboue, the voyage is not long, and the fresh waters taken in there, our men here in England at their returne home haue found so wholesome and sweete, that they haue made choise to drinke it before our beere and ale.

Behold heere, good countrey men, the manifold benefites, commodities and pleasures heretofore vnknewen, by Gods especiall blessing not onely reueiled vnto vs, but also as it were infused into our bosomes, who though hitherto like doxime haue slumbered in ignorance thereof, being like the cats that are loth for their prey to wet their feet: yet if now theretofore at the last we would awake, and with willing mindes (setting friuolous imaginations aside) become industrious instruments to our selues, questionlesse we should not only hereby set forth the glozy of our heavenly father, but also easily attaine to the end of all good purposes that may be wished or desired.

And may it not much encourage vs to hope for good successe in the countrey of these Sauages, being a naked kinde of people, void of the knowledge of the discipline of warre, seeing that a noble man, being but a subiect in this realme (in the time of our king Henry the second) by name Strangbow, then earle of Chepstow in South Wales, by himselfe and his allies and assistants, at their owne proper charges passed ouer into Ireland, and there made conquest of the now countrey, and then kingdome of Lyncester, at which time it was very populous and strong, which history our owne chronicles do witnesse: And why should we be dismayed more then were the Spaniards, who haue bene able within these few yeeres to conquer, possesse and enjoy so large a trace

of the earth, in the West Indies, as is betweene the two tropikes of Cancer and Capricorne, not onely in the maine firme land of America, which is 47. degrees in latitude from South to North, and both containe 2820. English miles at the least, that the king of Spaine hath there in actuall possession, besides many goodly and rich Islands, as Hispaniola, now called S. Domingo, Cuba, Iamaica, and diuers other, which are both beautifull and full of treasure, not speaking any whit at all, how large the said land is from East to West, which in some places is accounted to be 1500. English miles at the least from East to West, betweene the one Sea and the other.

Why should our noble nation be dismaide, more then was Vasques Nunnes de Valboa, a private gentleman of Spaine, who with the number of 70. Spaniards at Tichiri, gaue an overthrow vnto that mighty king Chemacchus, hauing an armie of an hundred Canoas and 5000. men, and the said Vasques Nunnes not long after, with his small number, did put to flight king Chiapes his whole armie.

Likewise Hernando Cortes, being also but a private gentleman of Spaine, after his departure from the Islands of Cuba and Acuzamil, and entering into the firme of America, had many most victorious & triumphant conquests, as that at Cynela, where being accompanied with lesse then 500. Spanish footmen, thirteene horsemen, and five pieces of Ordnance only, he overthrew 40000. Indians. The same Cortes with his sayd number of Spaniards, tooke prisoner that mighty Emperour Muezuma in his most chiefe and famous citie of Mexico, which at that instant had in it about the number of 50000. Indians at the least, and in short time after obtained not onely the quiet possession of the said citie, but also of his whole Empire.

And in like maner in the Countrey of Peru, which the king of Spaine hath now in actuall possession, Francisco Pysarro, with the onely ayd of Diego de Almagro, and Hernando Luche, being all three but private gentlemen, was the principall person that first attempted discouerie and conquest of the large and rich countrey of Peru, which through the ayd of the almighty, he brought to passe and atchieued in the Tambo of Caxamalca, (which is a large place of ground, enclosed with walles) in which place he tooke the great and mightie prince Acabalipa prisoner, amidst the number of 60000. Indians his subiects, which were euer before that day accounted to bee a warlike kind of people, which his great victorie it pleased God to grant vnto him in the yere of our Lord God 1533. he not hauing in his company about the number of 210. Spaniards, wherof there were not past threescore horsemen in all: after the taking of which prince Acabalipa, he offered vnto Pysarro for his rancome, to fill a great large hall full of gold and siluer, and such golde and siluer vessels as they then vfed, euen as high as a man might reach with his arme. And the sayd prince caused the same hall to be marked round about at the sayd height, which rancome Pysarro granted to accept. And after, when as this mighty prince had sent to his vassals & subiects to bring in gold and siluer for the filling of the hall, as aforesaid, as namely to the cities or townes of Quito, Paciacama and Cusco, as also to the Calao of Lima, in which towne, as their owne writers doe affirme, they found a large and faire house, all slated and couered with gold: and when as the said hall was not yet a quarter full, a mutinie arose amongst the Spaniards, in which it was commonly giuen out, that the said prince had politickely offered this gre at rancome vnder pretence to raise a much more mightie power, whereby the Spaniards should be taken, slaine and overthrowen: whereupon they grew to this resolution, to put the sayd prince to death, and to make partition of the golde and siluer already brought in, which they presently put in execution. And committing to make perfect Inuentorie of the same, as wel for the Emperour then king of Spaine, his sife part, as otherwise, there was found to be already brought in into the sayd hall, the number of 132425. pound weight of siluer, and in golde the number of 1828125. pezos, which was a riches neuer before that no, since scene of any man together, of which there did appertaine to the Emperour for his sife part of golde 365625. pezos, and for his sife part of siluer 26485. pound waight, and to euery horseman eight thousand pezos of gold, and 67. pound waight of siluer. Euery souldiour had 4550. pezos of gold, and 280. pound waight of siluer. Euery Captaine had some 30000. some 20000. pezos of gold and siluer, proportionally answerable to their degrees and calling, according to the rate agreed vpon amongst them.

Francis Pizarro as their generall, according to his detree and calling proportionally, had more then any of the rest, ouer and besides the massie table of gold which Acabalipa had in his Litter, which waighd 25000. pezos of gold: neuer were there before that day souldiours so rich in so small a time, and with so little danger. And in this iourney for want of yron, they did chooe their horses, some with gold, and some with siluer. This is to bee scene in the generall historie of the West Indies, where as the doings of Pizarro, and the conquest of Peru is more at large set forth.

To this may I adde the great discoueries and conquests which the princes of Portugall haue made

A marueilous
victorie.

made round about the West, the South, and the East parts of Africa, and also at Calicut, and in the East Indies, and in America, at Brasile and elsewhere in sundry Islands, in fortifying, peopling and planting all along the sayd coastes and Islands, euer as they discovered: which being rightly weped and considered, doth minister iust cause of incouragement to our Countreymen, not to account it so hard and difficult a thing for the subiects of this noble realme of England, to discover, people, plant and possesse the like goodly lands and rich countreys not farre from vs, but neere adioyning & offring themselves vnto vs (as is aforesayd) which haue neuer yet heretofore bene in the actuall possession of any other Christian prince, then the princes of this Realme. All which (as I thinke) should not a little animate and encourage vs to looke out and aduenture abroad, vnderstanding what large Countreys and Islands the Portugals with their small number haue within these few yeeres discovered, peopled and planted, some part whereof I haue thought it not amisse, briefly in particular to name both the Townes, Countreys & Islands, so neere as I could vpon the sudden call them to remembrance: for the rest I doe referre the Reader to the histories, where more at large the same is to be seene. First, they did winne and conquire from the princes of Barbary the Island of Geisera & towne of Arzila, not past an 140. mile distant from their Metropolitane & chiefe city of Fesse: and after that they wonne also from the said princes the townes of Tanger, Ceuta, Mazigam, Azamor, and Azaffi, all alongst the Sea coasts. And in the yeere of our Lord, 1455. Alouis de Cadomosta a Gentleman Venetian, was hee that first discovered for their vse Cape Verd, with the Islands adioyning, of which he then peopled and planted those of Bonauista and Sant Iago discovering also the riuer Senega, other wise called Niger, and Cape Roxo & Sierra Leone, and in a few yeeres after they did discover the coast of Guinea, and there peopled and built the castle of Mina: then discovered they further to the countreys of Melegettes, Benin, and Congo, with the Islands of Principe, da Nobon, S. Mattheue, and S. Thomas vnder the Equinoctiall line, which they peopled, and built in the said Island of S. Thomas the ha- uen towne or port of Pauosan. After that, about the yeere of our Lord, 1494. one Bartholomeu Dias was sent forth, who was the first man that discovered and doubled that great and large Cape called de Bon Esperanze, & passing the currents that run vpon the said coast, on the South- east part of Africa, between the said maine land & the Island of S. Laurence, other wise called of the ancients, Madagascar, he discovered to y^e harbor named the Riuer of y^e Infant. After that since the yeere of our Lord God, 1497. and before the full accomplishment of the yeere of Christ, 1510. through the traualles and discoveries of Vascos de Gama, Peter Aluares, Thomas Lopes, Andrew Corfale, John de Empoli, Peter Sintra, Sancho de Toar, and that noble and worthy gentle- man Alonso de Albuquerque, they did discover, people, and plant at Ceffala, being vpon the East side of Africa, in the twenty degrees of latitude of the South Pole, and direct West from the Island of S. Laurence (at which port of Ceffala, diuers doe affirme that king Salomon did fetch his gold) as also vpon the said East side of Africa, they did afterward discover, people, and plant at Mozambique, Quiola, Monbaza and Melinde, two degrees of Southerly latitude, and so vnto the streight of Babel-Mandell at the entring of the red sea, all vpon the East coast of Africa, from whence they put off at the Cape of Guarda Fu, and past the great gulf of Arabia, and the Indian Sea East to Sinus Persicus, and the Island of Ormus, and so passing the large and great riuer Indus, where he hath his fall into the maine Ocean, in 23. degrees and an halfe, vnder the tropike of Cancer, of Septentrional latitude, they made their course againe directly towards the South, and began to discover, people, and plant vpon the West side of the hither India at Goa, Manga- lor, Cananor, Calecut and Cochin, and the Island of Zeilam.

Ceffala accom-
ted to be the
place where
the noble and
wise king Salo-
mon did fetch
his gold.

And here I thinke good to remember to you, that after their planting vpon this coast, their forces grew so great that they were able to compell all the Moores, the subiectes of the mightie Emperour of the Turkes to pay tribute vnto them, euer as they passed the gulf of Arabia, from the port of Mecca in Arabia Foelix, where Mahomet lieth buried, or any of the other portes of the sayd land, euer as they passed to and from the hauens of Cochin, Calecut and Cananor, and by their martiall maner of discipline practised in those partes, the great and mightie prince the So- phie Emperour of the Persians, and professed enemy to the Turke, came to the knowledge and vse of the Caliuier shot, and to enterlace and ioyne footemen with his horsemen, sicence which time the Persians haue growen to that strength and force, that they haue giuen many mightie and great ouerthrowes to the Turke, to the great quiet of all Christendome.

And from the Island of Zeilam aforesayd, they also discovered more East in passing the gulf of Bengala, and so passed the notable and famous riuer of Ganges, where hee hath his fall into the maine Ocean, vnder the tropike of Cancer, and to the Cape of Malaca, and vnto the great and large Islands of Sumatra, Iaua maior, Iaua minor, Mindanao, Palobane, Celebes, Gilolo, Tidore,

Tidore, Mathin, Borneo, Machian, Terenate, and all other the Islands of Molucques and Spices, and so East alongst the coasts of Cathaia, to the portes of China, Zaiton and Quinsay, and to the Island of Zipango and Iapan, situate in the East, in 37. degrees of Septentrionall latitude and in 195. of longitude. These are their noble and worthy discoueries. Here also is not to be forgotten, that in the yere of our Lord, 1501. that famous and worthy gentleman Americus Vespucius did discover, people, and plant to their use the holdes and forts which they haue in Brazil, of whom (he but being a private gentleman) the whole countrey of firme land of the West Indies, is commonly called and known by the name of America.

These are the furthest parts of the world from England. At these Islands hath Sir Francis Drake bene, where the same of the Queenes most excellent Majesty was resorted.

I doe greatly doubt least I seeme ouer tedious in the recitall of the particular discoueries and conquests of the East and West Indies, wherein I was the more bold to vrge the patience of the Reader, to the end it might most manifestly and at large appeare, to all such as are not acquainted with the histories, how the king of Portugall, whose Countrey for popularity and number of people, is scarce comparable to some three shires of England, and the king of Spaine likewise, whose natural Countrey doth not greatly abound with people, both which princes by means of their discoueries within lesse then 90. yeres past, haue as it appeareth both mightily and matuellously enlarged their territories and dominions through their owne industrie by the assistance of the omnipotent, whose aid we shall not need to doubt, seeing the cause and quarrell which we take in hand tendeth to his honour and glory, by the enlargement of the Christian faith.

To conclude, since by Christian dutie we stand bound chiefly to further all such acts as do tend to the encreasing the true flock of Christ by reducing into the right way those lost sheepe which are yet astray: And that we shall therein follow the example of our right vertuous predecessors of renowned memorie, and leaue vnto our posteritie a diuine memoriall of so godly an enterprize: Let vs I say for the considerations alledged, enter into iudgement with our selues, whether this action may belong to vs or no, the rather for that this voyage through the mighty assistance of the omnipotent God, shall take our desired effect (whereof there is no iust cause of doubt.) Then shall her Maiesties dominions be enlarged, her highnesse ancient titles iustly confirmed, all odious idleness from this our Realme utterly banished, diuers decayed townes repaired, and many poore and needy persons relieved, and estates of such as now liue in want shall be embettered, the ignorant and barbarous idolaters taught to know Christ, the innocent defended from their bloodie tyrannicall neighbours, the diabolicall custome of sacrificing humane creatures abolished.

All which (no man doubteth) are things gratefull in the sight of our Saviour Christ, and tending to the honour and glory of the Trinitie. Bee of good cheere therefore, for hee that cannot erre hath sayd: That before the ende of the world, his word shall be preached to all nations. Which good worke I trust is reserved for our nation to accomplish in these parts: Therefore my deere countrey men, be not dismayed: for the power of God is nothing diminished, nor the loue that he hath to the preaching and planting of the Gospell any whit abated. Shall wee then doubt he will be lesse ready most mightily and miraculously to assist our nation in this quarrell, which is chiefly and principally undertaken for the enlargement of the Christian faith abroad, and the banishment of idleness at home, then he was to Columbus, Vasques Nunnes, Hernando Cortes, and Francis Pizarro in the West: and Vasques de Gama, Peter Aluares, & Alonso de Albuquerque in the East: Let vs therefore with cheerefull minds and couragious hearts, giue the attempt, and leaue the sequell to almighty God: for if he be on our part, what forceth it who bee against vs: Thus leauing the correction and reformation vnto the gentle Reader, whatsoeuer is in this treatise too much or too little, otherwise vnperfect, I take leave, and so end.

A letter of Sir Francis VValsingham to M. Richard Hakluyt then of Christchurch in Oxford, encouraging him in the study of Cosmographie, and of furthering new discoueries, &c.

Understand aswel by a letter I long since receiued from the Maior of Bristol, as by conference with sir George Pekham, that you haue endeouored, & giuen much light for the discouery of the Westerne partes yet vnknown: as your studie in these things is very comendable, so I thanke you much for the same; wishing you do continue your trauell in these and like matters, which are like to turne not only to your owne good in private, but to the publike benefite of this Realme. And so I bid you farewell. From the Court the 11. of March, 1582.

Your louing Friend,
FRANCIS WALSINGHAM.

A let

A letter of Sir *Francis Walsingham* to Master *Thomas Aldworth* merchant, and at that time Maior of the Citie of *Bristol*, concerning their adventure in the *Westerne* discoverie.

After my heartie commendations, I haue for certaine causes deferred the answer of your letter of November last till now, which I hope cometh all in good time. Your good inclination to the *Westerne* discoverie I cannot but much commend. And for that Sir *Humphrey Gilbert*, as you haue heard long since, hath bene preparing into those parts being readie to imbarke within these 10. dayes, who needeth some further supply of shipping then yet he hath, I am of opinion that you shall do well if the ship or 2. barks you write of, be put in a readinesse to goe along with him, or so soone after as you may. I hope this trauell wil proue profitable to the *Adventurers* and generally beneficiall to the whole realme: herein I pray you conferre with the searers, *M. Richard Hakluyt*, and *M. Thomas Steuenton*, to whome I referre you: And so bid you heartily farewell. Richmond the 11. of March. 1582.

Your louing Friend.

FRANCIS WALSINGHAM.

A letter written from *M. Thomas Aldworth* merchant and Maior of the Citie of *Bristol*, to the right honourable Sir *Francis Walsingham* principall Secretary to her Maiestie, concerning a *Westerne* voyage intended for the discovery of the coast of *America*, lying to the Southwest of Cape *Briton*.

Right honourable, vpon the receit of your letters directed vnto me and deliuered by the bearers hereof *M. Richard Hakluyt* and *M. Steuenton*, bearing date the 11. of March, I presently conferred with my friends in priuate, whom I know most affectionate to this godly enterprize, especially with *M. William Salterne* deputie of our company of merchants: whereupon my selfe being as then sicke, with as conuenient speede as he could, hee caused an assembly of the merchants to be gathered: where after dutifull mention of your honourable disposition for the benefite of this citie, he by my appointment caused your letters being directed vnto me priuately, to be read in publike, and after some good light giuen by *M. Hakluyt* vnto them that were ignorant of the Countrey and enterprize, and were desirous to be resolved, the motion grew generally so well to be liked, that there was estioones set downe by mens owne hands then present, & apparently knowne by their own speech, and very willing offer, the summe of 1000. markes and upward: which summe if it should not suffice, we doubt not but etherwise to furnish out for this *Westerne* discovery, a ship of threescore, and a barke of 40. tunne, to bee left in the countrey vnder the direction and gouernment of your sonne in law *M. Carlile*, of whom we haue heard much good, if it shall stand with your honours good liking and his acceptation. In one of which barks we are also willing to haue *M. Steuenton* your honours messenger, and one well knowne to vs, as captains. And here in humble maner, desiring your honour to vouchsafe vs of your further direction by a generall letter to my selfe, my brethren, and the rest of the merchants of this citie, at your honours best and most conuenient leisure, because we meane not to deferre the finall proceeding in this voyage, any further then to the end of April next comming, I cease, beseeching God long to blesse and prosper your honourable estate. Bristol. March 27. 1583.

A briefe and summary discourse vpon the intended voyage to the hithermost parts of *America*: written by Captaine *Carlile* in April, 1583, for the better inducement to satisfie such Merchants of the *Moscovian* companie and others, as in disbursing their money towards the furniture of the present charge, doe demand forthwith a present returne of gaine, albeit their said particular disbursements are required but in very slender summes, the highest being 25. li. the second at 12. li. 10. s. and the lowest at 6. pound five shillings.

When the Goldsmith desireth to finde the certaine goodnesse of a piece of golde, which is newly offered vnto him, he presently bringeth the same to the Touchstone, where, by comparing the shewe or touch of this new piece with the touch or shewe of that which he knoweth of old, he forthwith is able to iudge what the value is of that, which is newly offered vnto him. After the example whereof I haue thought it good to make some brieue repetition of the particular estate of many

many other forren voyages and trades already frequented and known unto vs, whereby we may be the better able to conceiue and iudge what certaine likelihood of good there is to be expected in the voyage, which is presently recommended vnto your knowledge and resolution.

And first to lay downe that of Moscouia, whose beginning is yet in the remembrance of many: Moscouie.
It is well known, that what by the charges of the first discouery, and by the great gifts bestowed on the Emperour and his Nobilitie, together with the lewd dealing of some of their seruants, who thought themselves safe enough from orderly punishment, it cost the company aboue fourescore thousand pounds, before it could be brought to any profitable reckoning. And now that after so long a patience and so great a burthen of expences, the same began to frame to some good course and commoditie: It falleth to very ticklish termes, and to as slender likelihood of any further goodnesse, as any other trade that may be named.

For first the estate of those Countreys and the Emperours dealings, are things more tickle then are by euery body understood.

Next, the Dutchmen are there to crepe in, as they daily augment their trade thither, which may Dutchmen.
well confirme that vncertainty of the Emperours disposition to keepe promise with our nation.

Thirdly, the qualitie of the voyage, such as may not be performed but once the yeere.

Fourthly, the charges of all Ambassadors betweene that Prince and her Maiesty, are alwayes borne by the merchants stocke.

And lastly, the danger of the king of Denmarke, who besides that presently he is like to enforce Denmarke.
a tribute on vs, hath likewise an aduantage vpon the ships in their voyage, either homewards or outwards whensoever he listeth to take the opportunitie.

The badde dealings of the Easterlings are sufficiently known to be such towards our mer- Easterlings.
chants of that trade, as they doe not onely offer them many iniuries ouerlong to bee written, but doe seeke all the meanes they can, to deprive them wholly of their occupying that way: and to the same purpose haue of late cleane debaired them their accustomed and ancient priuiledges in all their great towncs.

The traffique into Turkie, besides that by some it is thought a hard point to haue so much fa- Turkie.
miliaritie with the professed and obstinate chemic of Christ: It is likewise a voyage which can not be made but at the deuotion, and as it were in the danger of many states, who for sundry respects are apt to quarrell with vs vpon sudden occasions, and the presents to be giuen away in Turkie this yeere, cost little lesse then two thousand pounds.

As for the trades into all the partes of Italie, it may easily be considered by euery one of iudge- Leuant.
ment, that the same stand in the like termes touching the passages, as that of Turkie, and that many times our shippes being taken in the way by the Gallies of Alger, our poore Mariners after the losse of their goods and trauell, are set at such excessive ransoms before they can bee freed of their slauierie, as for the most part they are no way able to discharge. As for example, at this instant there are some prisoners, poore ordinarie Mariners, for whose releasing there must be payed two hundred Duckets the man, for some three hundred, yea, foure or five hundred Duckets the man for some of them. And how enuiously the Venetians doe already oppose themselves against our frequenting into their partes, may appeare by the late customs which they haue imposed as well vpon our English merchandize which we bring them, as also vpon such their merchandize which we fetch from them.

The trade into Barbarie groweth likewise to worse termes then before times, and when it Barbarie.
was at the best, our merchants haue bene in danger of all their goods they had there, whensoever it happened the king to die. For vntill a new were chosen, the libertie of all disordered persons is such, as they spoile and wrong whom they list, without any remorse at all.

Touching Spaine and Portugall, with whom wee haue very great trade, and much the great- Spaine.
ter, by meanes of their venting a good part of our wares in their Indies, as also of the provision Portugall.
they haue from the same, where with are made many of our returns from them againe: It falleth out that twice the yeere ordinarily we send our flectes into those partes: So that whensoever the king of Spaine listeth to take the opportunitie, hee may at these seasons deprive vs not onely of a great number of our very good ships, but also of our honestest and ablest sort of Mariners that are to bee found in our whole Realme againe, which is a matter of no small consequence: for it is to be noted, that when hee shall take a quarrell in hand, though it be but his owne particularly, yet hath he the meanes to put in hazard as well those our shippes which are in his owne Countreys of Spaine and Portugall, as also all others which shall bee bound to any the partes of all Italie or of Turkie either. And further whosoever hee bee that is but meanely affected in Religion, as of necessitie becommeth euery ordinarie man and good Christian to be, cannot but be grieued in
his

Remember the
great arrest of
the Hollan-
ders, An. 1598

his heart to consider, that his children and servants whom hee desireth to haue well brought vp, are in these trades of Spaine and Portugall, and all Italic, forced to denie their owne profession, and made to acquaint themselves with that which the Parents and Masters doe utterly deny and refuse, yea which many of them doe in their owne hearts abhorre as a detestable and most wicked doctrine.

But who shall looke into the qualitie of this voyage, being directed to the latitude of fortie degrees or thereabouces, of that hithermost part of America, shall find it hath as many points of good moment belonging vnto it, as may almost be wished for.

*Commodities
of this voyage
in shortness.*

1 As first it is to be understood, that it is not any long course, for it may be perfourmed too and fro in foure moneths after the first discouerie thereof.

2 Secondly, that one wind sufficeth to make the passage, whereas most of your other voyages of like length, are subiect to 3. or 4. winds.

3 Thirdly, that it is to be perfourmed at all times of the yeere.

4 Fourthly, that the passage is vpon the high sea, wherby you are not bound to the knowledge of dangers, on any other coast, more then of that Countrey, and of ours here at home.

5 Fifthly, that those parts of England and Ireland, which lie aptest for the proceeding outward or home ward vpon this voyage, are very well storied of goodly harbours.

6 Sixtly, that it is to be accounted of no danger at all as touching the power of any forreine prince or state, when it is compared with any the best of all other voyages before recited.

7 And to the godly minded, it hath this comfortable commoditie, that in this trade their Factours, bee they their servants or children, shall haue no instruction or confessions of Idolatrous Religion enforced vpon them, but contrarily shall be at their free libertie of conscience, and shall find the same Religion exercised, which is most agreeable vnto their Parents and Masters.

*Commodities
of the countrey
more then
those of Mos-
couie.*

As for the merchandising, which is the matter especially looked for, albeit that for the present we are not certainly able to promise any such like quantitie, as is now at the best time of the Moscouian trade brought from thence: So likewise is there not demanded any such proportion of day expenses, as was at the first, and as yet is continued in that of Moscouia and other.

But when this of America shall haue bene haunted and practised thirtie yeeres to an ende, as the other hath bene, I doubt not by Gods grace, that for the tenne shippes that are now commonly employed once the yeere into Moscouia, there shall in this voyage twise tenne be employed well, twise the yeere at the least. And if for the present time there doe fall out nothing els to be found then the bare fishing, yet doubt I not after the first yeeres planting, but by that matter only to serue halfe a dozen of your best sort of shippes, although my supply of people doe not follow me so substantially, as in all reason may be well looked for.

*The feriall
merchandise.*

But when it is asked what may be hoped from thence after some yeeres, it is first to be considered, that this situation in fourtie degrees, shall be very apt to gather the commodities either of those parts which stand to the Southward of it, as also of those which are to the Northward.

In the Northward may be expected not onely an especiall good fishing for Salmon, Codde, and Whales, but also any other such commodities, as the Easterne Countreys doe yeeld vs now: as Pitch, Tarre, Hemppe, and thereof cordage, Walles, Losse hives, rich Furies, and other such like, without being in any sort beholding to a king of Denmarke, or other prince or state that shall be in such sort able to command our shippes at their pleasure, as those doe at this day, by meanes of their strait passages and strong shipping.

As for those partes which lie West and to the Southwardes, it may well be hoped they will yeeld Vines with a small helpe, since the grapes doe growe there of themselves already very faire and in great abundance. Oliues being once planted, will yeelde the like Oyle as Spaine, Prouince and Italic. The Countrey people being made to know, that for Ware and home, we will giue them such trifling things as they desire of vs, and shewing them once the means how to provide the same, the labour thereof being so light, no doubt but in short time they will earnestly care to haue the same in good quantitie for vs. Besides, what great likelihood there is of good meanes to make Salt, which may serue for the fishing of those partes, may well enough appeare vnto them, who can iudge the qualitie of such places as are required to make the same in.

*At lake of salt
in Viques
his voyage.*

Thus much for the beginning, because they may be had with an easie kinde of trauell: but when it may haue pleased God to establish our people there any such time as they may haue planted amongst them in sundry partes of the Countrey, and that by gentle and familiar entreating them, they be made to see what is better for them then they doe as yet vnderstand of, and that in so many sorts of occasions as were infinite to be set downe: It is to be assuredly hoped, that

that they will daily by little and little forsake their barbarous and sauage liuing, and growe to such order and ciuilitie with vs, as there may be well expected from thence no lesse quantitie and diuersitie of merchandize then is now had out of Duchland, Italie, France or Spaine. And as the bordering neighbours are commonly the aptest to fall out with vs, so these parts being somewhat remote, are the liker to take, or giue lesse occasion of disquiet. But when it is considered that they are our own kindred, and esteemed our own countrey nation which haue the gouernment, meaning by those who shall be there planted, who can looke for any other then the dealing of most louing and most assured friends?

There are further to be considered these two poynts of good importance, concerning the matter of trade. The one is, that by the good prospering of this action, there must of necessitie fall out a very liberall utterance of our English Clothes into a maine Countrey, described to bee bigger then all Europe, the larger part whereof bending to the Northward, shall haue wonderfull great vse of our sayde English Clothes, after they shall come once to knowe the commoditie thereof. The like will bee also of many other things, ouer many to bee reckoned, which are made here by our Artificers and labouring people, and of necessitie must bee provided from hence.

The other is, if there be any possible meanes to finde a sea passage or other fresh water course, which may serue in some reasonable and conuenient sort, to transport our merchandize into the East Indian Sea, through any of these Northerly partes of America, it shall be soonest and most assuredly performed by these who shall inhabite and first grow into familiaritie with the Inland people.

What Minerall matter may fall out to bee found, is a thing left in suspence, vntill some better knowledge, because there be many men, who hauing long since expected some profits herein, vpon the great promises that haue bene made them, and being as yet in no point satisfied, doe thereupon conceiue that they be but wordes purposely cast out for the inducing of men to bee the more ready and willing to furrish their money towards the charge of the first discouerie.

But nowe to answere some others who begin with an other obiection, saying: That it is not for the Marchants purse to continue the charges of transporting and planting: and that since these hundred men which are nowe to bee planted, will cost foure thousand pound: It is then to bee thought, that the charge of a farre greater number, will bee also a farre greater summe of money.

Whereunto I answere, that in all attemptes vnknown, especially such a one as this is, wherewith wee are presently in hand, the first charges are commonly aduentured in more desperate kinde, then those that followe vpon some better knowledge: and therewith it falleth out, that whereas one aduentureth in the first enterprise, an hundred for that one will of themselves bee willing and desirous to aduenture in the next, if there bee neuer so little more appearance, that the intended matter is by some knowledge of our owne, found true in some poynts of our first presumption.

The examples are many, and may easily bee remembered by those who be Marchants, euen in their ordinarie and dayly trades, as well as in extraordinarie attemptes, which of late yeeres haue fallen into those termes of some likelihood, as is aforesayde. So then no doubt, but when certaine reports shall bee brought by them who directly come from thence, that such a Countrey and people they haue themselves seene, as is by vs spoken of, but that then there will come forwarde a greater number of those, who nowe neither haue heard any thing of the matter, as also of others, who presently make such fruitlesse scruple, and will not otherwise be satisfied, then by the report of Saint Thomas. I speake not this by the Marchants whom for their freedoms of trade I would not haue pressed to any further charge then this first preparation, but rather by such as haue great affection to hazard the changing of their estates, and would be well content to goe in the voyage if they might onely be assured that there is such a Countrey, & that their money should not be wasted to nothing in the preparations.

The right examination of this point must bee the contrary sequell of the common Proverbe that is vsed, Nothing venture, nothing haue: so on the other side by venturing, many great good profits are found out, to the wonderfull benefite of the Common weale, and to those especially in private, who take on them the hazard of their life and traucell, or substance in the first attemptes: and therefore I would wish that they, who (God be thanked) are well able to spare that which is required of each one towards the vndertaking of this aduenture, be well content and willing to imploy the same, since the sequell in good and substantiall reason doth promise, not onely a great commoditie in particular to the Marchant, who shall here at home exercise the trade of Marchant:

The ether of metal brought by M. Frobi-her, caused two severall supplies, the two yeeres next following, whereof the latter was of thirteene tall ships.

dise: but also to an infinite number of other, who presently live in poore estate, and may by taking the opportunitie of this discoverie, alter the same to a far better degree. Wherefore to make some conclusion vpon this point of the Merchants misdoubt, who suspecteth lest this first disbursement without returne of present gaine, should not be all his charge, but that afterwards he might yet further be urged to continue the like again, as hath happened in the discoverie of the Moscovian trade: It may suffice to consider, that this is not an action which concerneth onely the Merchants particularly, but a great deale more the generall sort of people throughout all England: And that when such relation shall be returned, as that it may bee found a matter worthy the following, the whole generalitie wil not refuse to contribute towards the furtherance thereof, rather then it should sinke for want of any reasonable supply.

But as it is a very little time, since I haue beene thoroughly resolved to trie my fortune in the matter, so it is more then time the preparation were in hand already, and therefore no fit time now to make any number of ignorant men to vnderstand with reason the circumstance that belongeth to a matter of so great consideration and importance.

To those who haue any forward mindes in well doing to the generalitie of mankind, I say thus much more, that Christian charitie doth as greatly perswade the furtherance of this action, as any other that may be layed before vs, in as much as thereby wee shall not onely doe a most excellent worke, in respect of reducing the sauage people to Christianitie and ciuilitie, but also in respect of our poore sorte of people, which are very many amongst vs, liuing altogether vnprofitable, and often times to the great disquiet of the better sort. For who knoweth not, how by the long peace, happie health, and blessed plentifulnesse, wherewith God hath endued this Realme, that the people is so mightily encreased, as a great number being brought vp, during their youth in their parents houses, without any instruction how to get their liuings after their parents decease, are driuen to some necessitie, whereby very often for want of better education they fall into sundry disorders, and so the good sort of people, as I sayde before, are by them ordinarily troubled, and themselves led on to one shamefull ende or other, whereas if there might bee found some such kinde of employment as this would be, no doubt but a greater part of them would be withheld from falling into such vile deedes: and in steade thereof, prooue greatly seruiceable in those affaires, where they might be so employed.

Master Carleile
owns experi-
ence.

This I speake of mine owne experience, hauing seene diuers come ouer to the warres of the lowe Countreys during my residence in the same, who here had beene very euill and idle liuers, and by some little continuance with vs, haue growen to be very industrious in their facultie, which I can assure you, was a more painefull maner of liuing then in this action is like to fall out, and withall to a purpose of farre lesse value, in respect of their particular recompence, then with an assured kind of good hope is looked for in this.

Thus you see in euery point that may bee wished for in a good action and voyage, there is matter and reason enough to satisfie the well disposed. But now to growe somewhat neerer the quicke, and to shewe you some greater appearance, then hath beene yet spoken of touching the trade which is the onely subiect wherewith I doe meane to intermeddle at this time, because my aduise hereby is chiefly to men of such like facultie: you may vnderstande by that which followeth, the circumstance of a little discourse, which doeth concerne these matters very directly.

In the yeere 1534. James Carthier of S. Malo made his first discoverie of those partes of America, which lie to the Westwardes, and as it were on the backside of Newfoundland. In which voyage his principall intention was to seeke out the passage, which hee presumed might haue beene found out into the East Indian Sea, otherwise called the passage to Cathaya, but this pere he went no higher then the Island of the Assumption in the great bay of S. Laurence, and so returned backe into France.

The next yeere following hee went with greater prouision into the Grand bay againe, where he keeping the Northerly shoare, ran vp the great Riuer that comes downe from Canada and other places, untill at last with his small pinnelles, (hauing left his great shipping by the way) he arrived at Hochelaga towne, being three hundred leagues within the entrance of the Grand bay. In which traualle hee had spent so much of the yeere, that it was now the moneth of October, and therefore thought it conuenient, for the better enforming himselfe at large in this discoverie, to winter it out in those partes, which he did at a place called by himselfe Holy Crosse. This winter fell out to bee a very long and hard winter, as many times the like happeneth with vs in these partes, and the sauage people, who for the most part make but a slender kinde of prouision, euen as it were from hande to mouth, fell into some scarcitie of victuals: yet did they not refuse

to serue the Frenchmen, with any thing they had all the winter long, albeit at somewhat higher prices towards the ende when the neede was most, as with our selues the like happeneth at such times.

But when the French had their wants serued all the yeere, and that as yet they sawe not any appearance of their intended matter, which was the discouerie of the passage, and yet imagining by the signes wherewith the willing people endeoured to declare their knowledge in that poynt, that some good matter might bee had from them, if they might haue beene well understoode, they resoulued with themselves to take some of the sufficicent men of that countrey home into France, and there to keepe them so long, as that hauing once atchieued the French tongue, they might declare more substantially their minde, and knowledge in the sayde passage, concluding this to be the meane of least charge, of least trauaile, and of least hazard.

And when they came to bechinke themselves, who might bee meetest for it, they determined to take the King, as the person who might bee best informed of such partes as were somewhat remote from his owne Countrey, as also that for the respect of him, the people would bee alwayes readie, and content to doe them any further seruice, when it should happen them to returne thither againe about the discouerie.

Thus the poore king of the Countrey, with two or three others of his chiefe companions coming aboarde the French shippes, being required thither to a banquet, was traiterously carped away into France, where hee liued foure yeeres, and then dyed a Christian there, as Theuet the French Kings Coliographer doeth make mention. This outrage and iniurious dealing did put the whole Countrey people into such dislike with the French, as neuer since they would admit any conuersation or familiaritie with them, untill of late yeeres, the olde matter beginning to grow out of minde, and being the rather drawn on by gifts of many trifling things, which were of great value with them, they are as (I sayde) within these two or three yeeres content againe to admit a traffique, which two yeeres since was begunne with a small barke of thirtie tunnes, whose returne was found so profitable, as the next yeere following, being the last yeere, by those Merchants, who meant to haue kept the trade secret vnto themselves, from any others of their owne Countrey men, there was hired a shippe of fourescore tunnes out of the Isle of Iersey, but not any one Hariner of that place, sauing a shipboy. This shippe made her returne in such sorte, as that this yeere they haue multiplied three shippes, to wit, one of nine score tunnes, another of an hundred tunnes, and a third of foure score tunnes: which report is giuen by very substantiall and honest men of Plimmouth, who sawe the sayd shippes in readinesse to depart on their voyage, and were aboard of some of them.

The French mens trade renewed in Canada, in the yeere 1581.

Here is at this instant in the towne a man of Gernesey, Lewis de Vike, who reporteth to haue credibly heard, that by this last yeeres voyage the Frenchmen got foureteene or fiftene hundred for euery one hundred: But how soeuer it be, it carrieth good likelihood of some notable profite, in as much as they doe so greatly, and thus suddenly encrease the burthen and number of their ships this present yeere.

Nowe, if in so little as two yeeres time this voyage of the Northerne partes bee growen to such good passe as hath beene declared vnto you: it is worth the thinking on to consider what may be hoped for from the Southerne part, which in all reason may promise a great deale more. And so, as one who was neuer touched with any indirect meaning, I presume to wish and perswade you to some better taking of this matter to heart, as a thing which I do verely thinke will turne to your greater and more assured commodity, then you receiue by any other voyage, as yet frequented of so short and safe a course as this hath: dealing herein no other wise with you for your seuerall small summes, then I doe with my selfe, both for more of mine owne, then is required of any one of you: besides the hazard and trauaile of my person, and the totall imployment of my poore credit, which (I thanke God) hath hitherto passed cleare and vnsported in matters of greater importance and difficultie, then is like to fall out in this matter betweene you and me.

The South part best for inhabiting and traffique.

Articles set downe by the Committies appointed in the behalfe of the Companie of Moscouian Marchants, to conferre with *M. Carlile*, vpon his intended discouerie and attempt into the hithermost parts of *America*.

The names of the Committies.

Master Alderman Hart,
Master Alderman Spencer.
Master Hoddesden.
Master William Burrough,
Master Slany.

Master Towerson,
Master Staper.
Master Iohn Castelin.
Master Leake.

First the Committies are well perswaded, that the Countrey whereunto this action is intended, is very fruitfull, inhabited with sauage people of a milde and tractable disposition. And that of all other places which are vnfrequented at this day, it is the onely most fit and most commodious for vs to intermeddle withall.

The conuenientest maner of attempting this enterprise is thought to bee thus: That there should be one hundred men conueyed thither to remaine there one whole yeere: who with friendly intreatie of the people, may enter into better knowledge of the particular estate of the Countrey, and thereby gather what commoditie may be hereafter, or presently looked for.

The furni-
shing forth
of 100. men for
one yeere will
cost 4000. li.

The charge to transport these hundred men, to victuall them, and to furnish them of munition and other needefull things, will not be lesse then foure thousand poundes: whereof hath bene very readily offered by the Citie of Bristol one thousand poundes, the residue being three thousand poundes, remaineth to bee furnished by this Citie of London, or any others who will aduenture their money in this first preparation.

The Committies thinke it conuenient that a Priuilege should be procured by Master Carlile from her Maiesty, by vertue whereof these conditions and Articles following may be effectually provided for.

First, that they who shall disburse their money for the first preparation, shall be named Aduenturers, and shall haue the one halfe of all such landes, territories, townes, mines of gold and silver, and other metalls whatsoever, as shall bee found, gotten, obtained, as conquered by this discouery: yeelding to her Maiesty the fift part of all such gold and silver, as shall happen to be had out of any mines that so shall be found.

That those parties which doe employ themselves personally in the present discouerie, shall be named Enterprisers, and shall haue the other halfe of all the Landes, Territories, Townes, Mines of Gold and Silver, and other metalls, yeelding to her Maiesty the fift part of the Gold and Silver as the Aduenturers do: The same to bee distributed by the Generall, with the consent of the greatest part of twelue discrete persons to bee chosen out of the whole number of the Enterprisers.

Also, that all trade of Marchandise which shall bee used to and from those partes, which by this discouerie shall bee found out, shall appertaine onely to the Aduenturers which first shall disburse their money for this discouery, with prohibition to all other her Maiesties subiects, and other Marchants to deale in the sayd parts, without the consent of the first Aduenturers, vpon losse of shippe and goods, and punishment of their persons, that so shall aduenture in trade of marchandise: or otherwise by imprisonment at the Companies pleasure.

That no person shall hereafter aduenture in this discouerie as Aduenturers for the profits mentioned in the first Articles, but such onely as doe disburse their money in this first preparation: and they shall not aduenture hereafter any greater summe, then ratably according to their proportion of this their first aduenture.

Also, the profite which by this discouerie shall be attained vnto, either by lande which may bee conquered, or otherwise gotten: as also such profite which by this discouerie shall bee obtained by mines, or otherwise gotten, that eche one shall haue his part rate and rate like, according to the proportion of their first aduenture, and not otherwise.

The Aduenturers in this first preparation shall, at their owne free will and libertie, choose whether they will supply hereafter any further charge or not: if there doe fall out any such occasion to requyre the same. And yet withall shall for ever holde to them the freedome of the trade which

which shall growe in any of these partes : notwithstanding their sayd refusall to beare any further charge.

That in the Patent which is to bee obtained, be graunted, that all her Maiesties subiects may transport themselues thither that shall be contented to goe. And that the Patentee or his assignes may shippe thither from time to time, so many and such persons, men, women, and children, as they shall thinke meete. And the same persons to inhabite or remaine there at their pleasure, any lawe to the contrary notwithstanding, with expresse prohibition, as is mentioned in the third article, against all others, which shall go thither without the licence of the patentee or his assignes first obtained.

That it shall not be lawfull for any of her Maiesties subiects, or any other to inhabite or traffique within one hundred leagues any way of the place, where the Generall shall haue settled his chiefest being or residence.

A relation of the first voyage and discouerie of the Isle Ramea, made by for Monsieur de La court Pre Rauillon, and Grand Pre, with the ship called the *Bonaventure*, to kill and make Traine oyle of the beasts called the Morfes with great teeth, which we haue performed by Gods helpe this yeere 1591. 1591.

The performance of our said voyage, we departed from S. Malo with the flete that went for Canada, and kept companie with the ships called The Soudil and the Charles halfe the way, and then lost them; a violent wind arising at North-west, which separated vs.

The flete of Canada.

After which we had faire wether, and came to the coast of Cape Rase, & had no further knowledge thereof, because the winde was at the Southwest but a scarce gale: and we came to the sounding Southwest of the Isles of S. Peter about 10. leagues, where we found 20. fathoms water, and we sayled Northwest one quarter of the North, and came within 12. leagues of Cape de Rey.

Cape Rase.

The Isles of S. Peter.

The next day being the 6. of May 1591. we were come to Cape de Rey, & saw a ship South-west off vs, and stayed there that night.

Cape de Rey.

The next day being the seuenth of the sayd moneth, we came to the Isles of Aponas, where we put forth our boat, because we had not past 8. leagues to our haven, which we kenne very clearly, although the coasts lay very low: and because the night approached, and the wind grew very high, we sought not to seeke our port, because it is very hard to find it when the wind is losty, because of the shoals that are about it. And we thought to keepe our course untill the next morning between the Isle of Brion & the Isle of Aponas. But there arose so great a tempest at the Southwest, that without the helpe of God we had bene in great danger among these Isles. And we trauesed by and downe eleuen dayes, making our prayers vnto God to ende the tempest and to send vs faire weather, that we might obtaine our haven: which of his goodnesse he gaue vs. The last of May we ranged the Isle Ramea on the Northnorthwest side, vnto the contrary part of the land, where it trendeth to the Southsoutheast: and seeing no land on the West side, wee ranged the sayd land to the East one quarter to the North at the least 15. leagues, and being from the shore some eight leagues, we found 15. fathoms water, and passed betweene the Isle of Duoron and the Isle of Ramea, where goeth a chanell of 3. leagues bredth; in the midst whereof you shall haue 7. 8. and 9. fathoms water. And the lowe poynt of the Isle Ramea, and the Isle Duoron lie Northnortheast, and Southsouthwest. And take heede you come not neere the low point of the Isle Ramea by a great league, for I haue sounded it at 3. fathoms water. The Isle is marked. And the harbour of the Isle Ramea lyeth Northeast and Southwest, one quarter to the East and West. And if you would enter the sayd harbour, keepe you a league off the shoare: for often times there is great danger.

The Isles of Aponas.

The Isle of Brion.

The Isle Ramea.

The Isle of Duoron.

And that you may know the sayd haven, to the Eastnortheast of the sayde Isle there are high lands appearing to them that are without on all sides like a number of Islands, but in very deepe they are all firme land: and if you come on the South and Southwest side, you shall see a hill diuided into 3. parts, which I called The three hillockes, which is right within the haven. And for another better marke of the sayd harbour, you shall see an Isle like vnto a Flour de lice, distant from the sayd haven 6. leagues at the least: and this Isle and the sayd haven lie Northeast and Southwest, a quarter to the North and South. And on the sayd Isle there is good pebble stone to drie fish vpon: But to the West thereof there is a very faire countrey: and there is a banke of land, which runneth the length of a cable, hauing not past one fathom water vpon it. From the

sayde Isle along the firme land the coast lyeth East and West, and you shall see as it were a great forrest running Eastward: and the Easterne Cape is called Cape du Chapt, and is great and red toward the Sea. And betweene the sayd lands you shall see as it were a small Island, but it ioyneth to the firme land on the Southwest part: and there is good shingle to drie fish on. And you must coast the shore with boates and not with ships, by reason of the shallowes of the sayd coast. For I haue seene without Cape du Chapt in faire weather the ground in two fathoms water, neere a league and an halfe from shore, and I iudged by reason of the highnesse of the land, that there had bene aboue thirtie fathoms water, which was nothing so: and I haue sounded comming neere the shore, in more or lesse depth. The coast stretcheth three leagues to the West from Lille Blanch or the white Isle, vnto the entrance of a riuer, where we slewe and killed to the number of fifteene hundred Hoxles or Sea oxen, accounting small and great, where at full sea you may come on shoare with boates, and within are two or three fathoms water. From thence the coast trendeth foure leagues to the West: to the North-west vnto the Isle Hupp, which is twentie leagues in circuit, and is like the edge of a knife: vpon it there is neither wood nor grasse: there are Hoxles vpon it, but they bee hard to be taken. From thence the coast trendeth to the North-west and North-north-west: which is all that I haue seene, to wit, the two sides and one ende of the Isle. And if I had had as good lucke as my Masters, when I was on the North-west side with my shippe, I would haue aduentured to haue sayled South-southeast, to haue discovered the Easterne shoare of the sayd Isle.

In your returne to the East, as you come from the hauen of Cape du Chapt vnto the sayde hauen, are sandes and holds. And three good leagues from Cape du Chapt there is a small Island containing about a league of ground: where there is an hauen toward the Southeast: and as you enter into the sayd hauen on the starreboord side, a dented Cape all of redde land. And you cannot enter into the said hauen but with the flood, because of a barre which lieth halfe a league without the poynts of the sayd hauen. The tydes are there at Southeast and North-west: but when the wind is very great, it bloweth much into the hauen at halfe flood. But ordinarily it floweth fife foote and an halfe. The markes to enter into the sayd hauen are to leaue the Isle Blanche or White Island at your comming in on the starreboord; and the poynt of the hauen toward the West hath a thicke Island, which you shall see on the other side, and it hath a little round Buttesse, which lyeth on the East side of the Island. There are also two other butresses more easie to bee seene then hidden: these are not to the East but to the West, and they haue markes on them. Here you shall not haue aboue two fathom and an halfe at a full sea vpon this barre. And the sounding is stone and rough ground. At your entring in, when you shall finde white sand which lyeth next the Southeast of the Cape, then you are vpon the barre: and bee not afrayd to passe vp the chanell. And for markes toward the West athwart the barre, when you haue brought an Island euen, which lyeth to the westward without, with the chicke part of the high land which lyeth most to the West, you shall bee past the barre: and the chanell runneth due North. And for your anchoring in the sayd hauen, see that you carefully seeke the middest of the sayd Thicke land, which lyeth in the bottome of the sayd hauen: for you must anchor betweene two bankes of sand, where the passage is but narrow. And you must anker surely: for there goeth a great tyde: for the Sea runneth there as swiftly and more then in.

There is good ground and ankorage here: and you shall ride in three fathom water. And within the sayde hauen there is nothing to hurt you, for you are free from all winds. And if by chance you should be driuen Westward of the sayd hauen, you may seeke an entrance, which is right ouer against the small Island named before, which is called The Isle of Cormorants; and you may enter in there as at the other hauen at a full sea: And you must passe vp on the West side, and you shall finde on the Barre at a full sea fourteene foote water, and great depth when you are entred in: for the Sea runneth very swiftly in that place: and the entrie thereof lyeth Southeast and North-west.

Right ouer against you on the other side, you may passe with boates at a full sea. And all these entrances make all but one hauen, which is good within. I say this, because I haue passed into the maine Sea by the one and the other passage. And the said Isle is not past two leagues ouer in the middest. It is but two bankes of sande, whereof one is like to that of S. Malo, which let the Sea from passing through the middest of all the Isle: But the two endes are high mountaines with Islands altogether cut and separated with streames and riuers.

To anker in the sayd harbour, you must not ride farther then fife or sixe cables length from the sayd hauen.

A letter

A letter sent to the right Honorable Sir William Cecill Lord Burghley, Lord high Treasurer of England &c. From M. Thomas James of Bristol, concerning the discoverie of the Isle of Ramea, dated the 14 of September. 1591.

Right Honourable, my humble duetie to your good Lordship done, I thought good humbly to aduertise your honour of the discovery of an Island made by two smal shippes of Saint Malo; the one 8 dates past being pilled neare Silley, by a ship of which I am part owner, called the Pleasure, sent by this citie to my Lord Thomas Howard, for her Maiesties seruice. Which prise is sent backe to this Port by those of the sayd shippes, with upwards of fortie tunnes of Traine. The Island lyeth in 47 degrees, some fiftie leagues from the grand Bay, neere Newfoundland: and is about twentie leagues about, and some part of the Island is flat Sands and shoulder: and the fish commeth on banke (to do their kinde) in April May & June, by numbers of thousands, which fish is very big; and hath two great teeth: and the skinne of them is like Buffes leather: and they will not away from their yong ones. The yong ones are as good meat as Ueale. And with the bellies of stue of the saide fishes they make a hogthead of Traine, which Traine is very sweet, which if it will make sope, the king of Spaine may burne some of his Oliue trees. Humbly praying your Lordship to pardon herein my boldnes, betaking your Honour to the keeping of the Almighty. From Bristol, this 14 of September. 1591.

Your Honours most humbly at commandement.
THOMAS JAMES.

A briefe note of the Morisse and the vse thereof.

In the first voyage of Iaques Carthier, wherein he discovered the Gulfe of S. Laurence and the said Isle of Ramea, in the yeere 1534, as you may reade in pag. 205 of this present volume, he met with these beasts, as he witnesseth in these words. About the said Island are very great beasts as great as oxen, which haue two great teeth in their mouthes like vnto Elephants teeth, and liue also in the sea. Wee saw one of them sleeping vpon the banke of the water, and thinking to take it, we went to it with our boates, but so soone as he heard vs, he cast himselfe into the sea. Touching these beasts which Iaques Carthier saith to be as big as Oxen and to haue teeth in their mouthes like Elephants teeth: True it is that they are called in latine Boues Marini, or Vaccæ Marinae, & in the Russia tongue Bozses, the hides whereof I haue seene as big as any Ox hide, and being dyessed I haue yet a piece of one thicker then any two Ox or Bulls hides in England. The Leatherdyesters take them to be excellent good to make light targets against the arrowes of the Sauages; and I hold them farre better then the light leather targets which the Moores vse in Barbarie against arrowes and lances, whereof I haue seene diuers in her Maiesties statly Armoie in the towne of London. The teeth of the sayd fishes, whereof I haue seene a dyfat full at once, are a foote and some times more in length: & haue bene sold in England to the combe & knife-makers, at 8 groats and 3 shillings the pound weight, whereas the best Iuorie is sold for halfe the money: the graine of the bone is somewhat more yelow then the Iuorie. One M. Alexander Woodson of Bristol my old friend, an excellent Mathematician and skilful Iohistion, shewed me one of these beasts teeth which were brought from the Isle of Ramea in the first prise, which was half a yard long or very litle lesse: and assured mee that he had made tryall of it in ministring medicine to his patients, and had found it as soueraigne against poyson as any Unicorne horn.

The voyage of the ship called the *Marigold* of M. Hill of Redriffe vnto Cape Briton and beyond to the latitude of 44 degrees and an half, 1593 Written by Richard Fisher Master Hilles man of Redriffe.

The ship called the Marigold of 70 tunnes in burthen furnished with 20 men, whereof 10 were Bariners, the Masters name being Richard Strong of Apsam, the Masters mate Peter Langworth of Apsam, with 3 coopers, 2 butchers to flea the Bozses or sea Oxen (whereof diuers haue teeth aboue a cubit long, & skinnes farre thicker then any bulls hide) with other necessary people, departed out of Fal-mouth the 1 of June 1593 in consort of another ship of M. Drakes of Apsam, which vpon some occasion was not ready so soone as thee should haue bene by two moneths. The place for which these two shippes were bound was an Island within the streightes of Saint Peter on the backe side of Newfoundland to the Southwest in the latitude of fortie seuen degrees, called by the Britons

The voyage of

Apsam to
Ramea.

The Isle of
Ramea, or
Menquit.

Britons of Saint Malo the Isle of Ramea, but by the Sauages and naturals of the Continent next adoyning, Menquit: On which Isle are so great abundance of the huge and mightie Sea Dren with great teeth in the moneths of April, May and June, that there haue bene fifteene hundred killed there by one small barke, in the yeere 1591. The two English shippes aforesayde, lost companie before they came to Newfounland: and neuer came after together in all their voyage.

The ship of M. George Drake fell first with New-foundland, and afterward very directly came to the Isle Ramea, though too late in the yeere to make her voyage: where shee found a shippe of Saint Malo three parts freighted with these fishes: the men whereof enquiring whence our shippe was and who was the Master thereof, being answered that shee was belonging to Master George Drake of Apsam, fearing to bee taken as good prize being of a Leaguer towne, and at that time out of league with England, fled so hastily that present night that they left three and twentie men and three Shallops behinde them, all which our men seized vpon and brought away as good prizes home.

Here our men tooke certaine Sea-open, but nothing such numbers as they might haue had, if they had come in due season, which they had neglected. The shippe called the Marigolde fell with Cape Saint Francis in Newfounland the eleuenth of Iulie, and from thence wee went into the Bay Rogneuse, and afterward doubled Cape Razo, and sayling toward the straight of Saint Peter (which is the entrance betweene Newfounland and Cape Briton,) being vnacquainted with the place, beate vp and downe a very long time, and yet missed it, and at length ouer shot it, and fell with Cape Briton.

ward of Cape
Briton.

Here diuerse of our men went on land vpon the very Cape, where, at their arriual they found the spittes of Dke of the Sauages which had roasted meate a litle before. And as they viewed the countrey they sawe diuers beastes and fowles, as blacke Foxes, Deere, Otters, great Fowles with redde legges, Pengwyns, and certaine others. But hauing found no people here at this our first landing wee went againe on shipboorde, and sayled farther foure leagues to the West of Cape Briton, where wee sawe many Seales. And here hauing neede of fresh water we went againe on shore. And passing somewhat more into the land, wee founde certaine round poudes artificially made by the Sauages to keepe fish in, with certaine weares in them made to take fish. To these poudes wee repayed to fill our calke with water. Wee had not bene long here, but there came one Sauage with blacke long hayre hanging about his shoulders, who called vnto vs, weauing his handes downewarde towardes his bellie, vsing these wordes, Calitogh Calitogh: as wee drewe towardes him one of our mens mulket vnawares shot off: whereupon hee fell downe, and rising vp suddenly againe hee cryed thirle with a loude voyce Chiogh, Chiogh, Chiogh. Thereupon nine or tenne of his fellowes running right vp ouer the bushes with great agilite and swiftnesse came towardes vs with white stauers in their handes like halfe pikes, and their dogges of colour blacke not so bigge as a grehounde followed them at the heeles; but wee retired vnto our boate without any hurt at all receiued. Howbeit one of them brake an hogthead which wee had filled with fresh water, with a great branche of a tree which lay on the ground. Upon which occasion we bestowed halfe a dosen muskets shotte vpon them, which they auoyded by falling flatte to the earth, and afterwarde retired themselues to the woodes. One of the Sauages, which seemed to bee their Captaine, ware a long mantle of beastes skimes hanging on one of his shoulders. The rest were all naked except their priuities, which were couered with a skinne tyed behinde. After they had escaped our shotte they made a great fire on the shore, belike to giue their fellowes warning of vs.

The kindes of trees that wee noted to bee here, were goodly Dkes, Firre trees of a great height, a kinde of tree called of vs Quickbeame, and Cherie trees, and diuerse other kindes to vs unknowne, because wee stayed not long with diligence to obserue them: and there is great shewe of rosen, pitch, and tarre. Wee found in both the places where wee went on land abundance of Raspeles, Strawberies, Hurtes, and herbes of good smell, and diuers good for the skurue, and grasse very ranke and of great length. Wee sawe fise or sixe boates sayling to the Southwestwardes of Cape Briton, which wee iudged to bee Christians, which had some trade that way. Wee sawe also, while wee were on shore, the manner of their hanging vp of their fish and flesh with witches to dry in the ayre: they also lay them vpon raftes and hurdles and make a smoake vnder them, or a softe fire, and so drie them as the Sauages vse to doe in Virginia.

While wee lay foure leagues South of Cape Briton wee sounden and had sixtie fathomes blacke ozie ground. And sayling thence Westwarde nine or ten leagues off the shore, we had twenty foure fathomes redde sande, and small whitish stones. Wee continued our course so farre

farre to the Southwest, that wee brought our selues into the latitude of fourtie foure degrees and an half, hauing sayled fiftie or sixtie leagues to the Southwest of Cape Briton. We found the current betwene this Cape Briton and Cape Rey to set out toward the Eastsoutheast. In our course to the West of Cape Briton we saw exceeding great store of seales, and abundance of Whorpoles, whereof we killed eleuen. We sawe Whales also of all sortes aswell small as great: and here our men tooke many berber Coddes with one teate underneath, which are like to the North-east Codds and better then those of Newfoundland,

From our arrivall at the haven of Saint Francis in Newfoundland, (which was as is aforesayde the eleuenth of July) we continued beating vp and downe on the coast of Arambec to the West and Southwest of Cape Briton untill the twentie eight of September, fully by the space of eleuen weekes: and then by the perswasion of our Master and certaine others wee shaped our course homeward by the Isles of the Azores, and came first to Coruo and Flores, where beating vp and downe, and missing of expected pray, we sayled by Tercera, and from thence to Saint Michael, where we sought to boorde a Portugall shippe, which we found too well appointed for vs to lying along with vs, and so being forced to leaue them behinde and hauing wasted all our victuals, wee were constrained against our willes to hasten home vnto our narrowe Seas: but it was the two and twentieth of December before wee could get into the Downes: where for lacke of winde wee kept our Christmas with dry breade onely for dropping of our clothes. One thing very strange hapened in this voyage: to witte, that a mightie great Whale followed our shippe by the space of many dayes as we passed by Cape Razo, which by no meanes wee coulde chase from our ship, untill one of our men fell ouerboord and was drowned, after which time hee immediatly forsooke vs, and neuer afterward appeared vnto vs.

They sayle 50 or 60 leagues to the South: West of Cape Briton. Great store of seales Whorpoles, Whales and Codds.

They continue on the coast from Cape Briton Westwards full eleuen weekes.

An huge Whale pursued their ship by the space of many dayes, till one of their men fell ouerboord.

A briefe note concerning the voyage of M. George Drake of Apsham to Isle of Ramea in the aforesayd yere 1593.

In the beginning of the former relation written by Richard Fisher seruante to the worshipfull Master Hill of Redriffe is, as you reade, a briefe reporte of their loosing of their consort the shippe of Master George Drake of Apsham: which though shee came directly to the Isle of Ramea, yet because shee was not ready so soone by two moneths as she ought to haue bene, she was not onely the hinderance of her consort the Marigolde, & lost the season of the yere for the making of her voyage of killing the Whorles or Sea Oren, which are to be taken in Aprill, May, and Iune: but also suffered the fit places and harboroughs in the Isle which are but two, as farre as I can learne, to be forestalled and taken by by the Britons of Saint Malo and the Baskes of Saint Iohn de Luz, by comming a day after the fayne, as wee say. Which lingering improuidence of our men hath bene the overthrowe of many a worthy enterprize and of the undertakers of the same.

The relation of this voyage at large I was promised by the Authour himselfe: but the same not comming to my handes in tyme I am constrained to leaue it out. The want whereof, for the better vnderstanding of the state of the sayde Island, the frequenting of that gainefull trade by the aforesayd nations of the of Britons and Baskes, may in part be supplied by the voyage of Master Charles Leigh to the sayde Island of Ramea: which also comming much too late thither, as Master George Drake had done, was wholly preuented and shutte out to his and his friends no small detriment and mischief, and to the discouraging of others hereafter in the sayd gainefull and profitable trade.

Neuerther thelesse albeit hitherto the successe hath not answered our expectation through our owne default, as is abovesaid, yet I was very willing to set downe in briefe and homely stile some mention of these three voyages of our owne men. The first of M. George Drake, the second of M. Siluester Wyet, the third of M. Charles Leigh, because they are the first, for ought that hitherto is come to my knowledge, of our owne Nation, that haue conducted English ships so farre within this gulf of S. Laurence, and haue brought vs true relation of the manifold gaine which the French, Britaynes, Baskes, and Biskaines do perely retaine from the sayd partes; while wee this long time haue stood still and haue bene idle lookers on, making courtisie who should giue the first aduenture, or once being giuen, who should continue or prosecute the same.

The

The voyage of the *Grace of Bristol* of M. Rice Iones, a Barke of thirty five Tunnes, vp into the Bay of Saint Laurence to the Northwest of *Newfoundland*, as farre as the Isle of *Assumption* or *Natiscotec*, for the barbes or tynnes of Whales and traine Oyle, made by Siluester Wyet, Shipmaster of *Bristol*.

He departed with the aforesaid Barke manned with twelue men for the place aforesaid from *Bristol* the 4 of Aprill 1594. and fell with Cape d'Esper on the coast of *Newfoundland* the nineteenth of May in the height of 47. We went thence for Cape Raz, being distant from thence 18 or 19 leagues, the very same day.

The 20. day we were thwart of Cape Raz.

Cape Raz.

Cape S. Marie.

The Islands of the Martyers.
The Isles of S. Peter.

Cape de Rey.
Cape de Angullie.
The bay of Saint George.

Then we set our course North-west for Cape S. Marie, which is distant from Cape Raz 19 leagues, and is on the Eastside of the great bay of *Placentia* almost at the entrie thereof.

From thence we shaped our course for the Islands of S. Pedro passing by the broken Islands of the Martyers; and when we were thwart of the said Isles of the Martyers our course to the Isles of S. Pedro was West and by North. In these Isles of S. Pedro there is a faire harbour, which we went into with our barke, and found there 2 ships of *Sibiburo* fishing for Cod: where we stayed 2 dayes, and tooke in balest for our ship. There are as faire and tall firre trees growing therein, as in any other part of *Newfoundland*. Then wee departed thence, and as we came out of the harbour's mouth we laid the ship vpon the lee, and in 2 houres space we tooke with our hookes 3 or 4 hundred great Cods for our prouision of our ship. Then we departed from the Isle of S. Pedro to enter into the gulfte of S. Laurence betwene Cape Briton and the said Isle, and set our course West North West, and fel with Cape de Rey which wee found to be distant from the Isles of S. Pedro 42 leagues. From Cape de Rey to Cape de Angullie we set our course North-north-west being distant thence 12 or 13 leagues. From the Cape de Angullie into the Bay of S. George we ran North-east and by East some 18 or 19 leagues.

In this bay of Saint George, we found the wrackes of 2 great *Biskaine* ships, which had bene cast away three yeres before: where we had some seuen or eight hundred Whale finnes, and some yron bolts and chaines of their mayne shrouds & fore shroudes: al their traine was beaten out with the weather but the caske remained still. Some part of the commodities were spoiled by tumbling downe of the cliffs of the hills, which couered part of the caske, and the greater part of those Whale finnes, which we vnderstood to be there by foure Spaniards which escaped, & were brought to S. Iohn de Luz. Here we found the houses of the Sauages, made of firre trees bound together in the top and set round like a Doue-house, and couered with the barks of firre trees, wee found also some part of their victuals, which were Deeres flesh roasted vpon wooden spits at the fire, & a dish made of a ryme of a tree, sowed together with the sinowes of the Deere, wherein was oile of the Deere. There were also foules called *Cormozants*, which they had pulckt and made ready to haue dressed, and there we found a wooden spoone of their making. And we discerned the tracks of the feete of some forty or fiftie men, women and children.

They land on the Isle of Natiscotec.

When we had dispatched our businesse in this bay of S. George and stayed there ten dayes, wee departed for the Northren point of the said bay, which is nine or ten leagues broade. Then being enformed, that the Whales which are deadly wounded in the grand Bay, and yet escape the fisher for a time, are wont usually to shoot themselves on shore on the Isle of *Assumption*, or *Natiscotec*, which lieth in the very mouth of the great riuer that runneth vp to *Canada*, we shaped our course ouer to that long Isle of *Natiscotec*, and wee found the distance of the way to the Eastermost ende thereof to be about forty foure leagues: and it standeth in the latitude of 49. Here we arrived about the middelt of June at the East end, and rode in eightene fadome water in faire white sand and very good ankerage, and for tryall heaued a lyne ouerboorde and found wonderfull faire and great Cod fish: we went also seuen of vs on shore and found there exceeding fayre great woods of tall firre trees, and heard and sawe store of land and sea foules, and sawe the footing of diuers beastes in the land when we were on shore. From the Easter end we went to the Northren side of the Island, which we perceiued to be but narrow in respect of the length thereof. And after wee had searched two dayes and a night for the Whales which were wounded which we hoped to haue found there, and missed of our purpose, we returned backe to the Southwarde, and were within one league of the Island of *Penguin*, which lyeth South from the Eastermost part of *Natiscotec* some twelue leagues. From the Isle of *Penguin* wee shaped our course for Cape de Rey and had sight of the Island of Cape Briton: then returned wee by the Isles of Saint Pedro, and so came into the Bay of *Placentia*, and arrived in the Easter side thereof some ten leagues vp with-

in the Bay among the fishermen of Saint Iohn de Luz and of Sibiburo and of Biskay, which were to the number of threescore and odde sayles, whereof eight shippes onely were Spaniardes, of whom we were very well vsed and they wished heartily for peace betweene them and vs. There the men of Saint Iohn and Sibiburo men bestowed two pinnesses on vs to make vp our voyage with fish. Then wee departed ouer to the other side of the Bay, where we arriued in an harbour which is called Pesmarck, and there made our stage and fished so long, that in the ende the Sauages came, and in the night, when our men were at rest, cut both our pinnesse and our shippes boate away to our great hinderance of our voyage, yet it was our good fortune to finde out our pinnesses and get them againe. Then for feare of a shrewder turne of the Sauages, we departed for Cape Saint Marie, and hauing passed Cape Raz, we passed Northwarde fourteen leagues and arriued in Farrillon, and finding there two and twentie sayles of Englishmen, wee made vp our fishing voyage to the full in that harborough the twentieth foure of August to our good content: and departing thence we arriued first in Combe and staid there a seuen night, and after ward in Hungrod in the riuer of Bristol by the grace of God the 24 of September. 1594.

The voyage of M. Charles Leigh, and diuers others to Cape Briton and the Isle of Ramea.

THe Hopewell of London of the burthen of 120 tunnes, whereof was M. William Craffon, and the Chancewel of London of the burthen of 70 tunnes, whereof was M. Steuen Benner, bound vnto the riuer of Canada, set to sea at the sole and proper charge of Charles Leigh and Abraham Van Herwick of London merchants (the said Charles Leigh himselfe, and Steuen Van Herwick brother to the sayd Abraham, going themselves in the said ships as chiefe commanders of the voyage) departed from Graues-end on Fryday morning the 8 of April 1597. And after some hindrances, arriuing at Falmouth in Cornewal the 28 of the said moneth put to sea againe. And with prosperous windes the 18 of May we were vpon the banke of Newfoundland. The 19 we lost the Chancewel. The 20 we had sight of land and entred within the bay of Assumption, where our men contrary to my knowledge fought with a French ship: and after ward in the same bay wee met with our consort. Whereupon we presently put to sea againe: and the next day we arriued at Caplen bay, where we remained by extremitie of foule weather, and to mend a pinnies of 7 or 8 tunnes (which was giuen vs at Farrillon by M. Wil. Sayer of Dartmouth the Admiral of that place) vntill the last of May. On which day departing from thence in the afternoone we put in to Rognecuse to seeke Shallops but could find none. The first of June we set saile from Rognecuse, and the second we put roome to a bay vnder the Northside of Cape Raz being enforced in by an extreme storme. The 4 we set saile, and this day we saw a great Island of yce. The 5 at night we lost the Chancewell in a fog at the mouth of the bay of Placentia. The 11 at Sunne setting we had sight of Cape Briton. And the 12 by reason of contrary windes we cast anker vnder the Northeast ende of the Isle of Menego to the North of Cape Briton in 16 fathome reasonable ground. In that place we caught great store of Codds, which were larger and better fish then any in Newfoundland. The 13 wee weyed anker againe, and being becalmed about a league from the shore we fell to fishing where the Codds did bite at least 20 fathomes aboue ground, and almost as fast as we could hale them into the ship. The 14 we came to the 2 Islands of Birds, some 23 leagues frō Menego: where there were such abundance of Birds, as is almost incredible to report. And vpon the lesse of these Islands of Birds, we saw great store of Hoyses or sea Oren, which were a sleepe vpon the rockes: but when we approached nere vnto them with our boate they cast themselves into the sea and pursued vs with such furie as that we were glad to flee from them. The 16 we arriued at Brians Island, which lyeth 5 leagues West from the Island of Birds. About this Island ther is as great abundance of codds as in any place can be found. In litle more then an houre we caught with 4 hookes 250 of them. Here we caught also a great Turbut which was an elle long and a yard broad: which was so great that the hooke could not hold her into the ship: but when she was aboue water she bent the hooke & escaped. In this Island we found exceeding good ground both for corne and meadow, & great store of wood, but of final groweth. Springes of fresh water we found none in all the Island, but some standing pooles of raine water. The same day at night we weyed anker againe. The 17 we had stormy weather. The 18 we came to the Isle of Ramea, where we appointed to meet with our consort. And approaching nere vnto the harborough of Halabolina we cast anker in 3 fadomes water and sent our great boate into the harborough, with the masters mate and some dozen more of the company: who when they came in, found 4 ships. Namely 2 of Saint Malo in Britaigne, and two

two of Sibiburo adioyning to Saint Iohn de luz being the French Kings subiects, whom they supposed to haue bene of Spaine, and so affirmed vnto vs. Whereupon wee went presently into harborough, finding but eleuen foote and an halfe of water vpon the barre and a mightie great current in, when wee had cast anker we sent presently to speake with the masters of all the ships: but those onely of Saint Malo came aboard, whom wee entertained very friendly, and demanded of whence the other two shippes were. They sayde as they thought of Saint Iohn de Luz or Sibiburo. Then we presently sent our boate for the Masters of both the sayd shippes, to request them to come aboard, and to bring with them their Charters parties and other euidences, to the ende we might knowe of whence they were. At which messlage one of the sayde Masters came aboard, with the Pilote and Masters mate of the other shippe: whom when we had examined, they sayd that they were of Sibiburo, and the French Kings subiects. We requested them for our better securitie in the harborough peaceably to deliuer vp their powder and munition: promising them that if we found them to be the French Kings subiects it shoulde be kept in safetie for them without diminishing. But they woulde not consent therunto: whereunto we replied, that welle they would consent therunto we would hold them to be our enemies. They not consenting, we sent the boate well manned to fetch their powder and munition from aboarde their ship: but straightly commanded our men not to touch any thing else in the ship vpon their further perill: which they promised to perforce. When they came aboarde the sayde ships which were moied together, they were resisted by force of armes, but quickly they got the victorie: which done, they fell presently to pillaging of the Balkes, contrary to their promise: whereupon we sent another to forbidde them; but when he came to them, none was more ready of pillage then he. Whereupon I went my selfe, and tooke away from our men whatsoeuer they had pillaged, and gaue it againe to the owners: onely I sent aboard our owne ship their powder and munition to be kept in safetie until we knew farther what they were. When I had done, I gaue the Balkes possession of their shippe againe and tolde them they shoulde not loole the balewe of one peny if they were the French Kings subiects. Then I caried away all our men, and also tooke with me two or three of the chiefest of them, and when I came aboard went to examining of them, and by circumstances found one of the ships to belong to France: whereupon I tolde the master of the said ship, that I was thoroughly satisfied that he was of France and so dismissed him in peace. Of the other ship we had great presumption that she was of Spaine, but had no certaine prooofe thereof, wherefore wee dismissed them likewise in peace. After I had thus dismissed them, our ships company fell into a mutiny, and more then half of them resolved to cary one of those ships away. But they were prevented of their euill purpose by ayde: which the sayde ships receiued from their countrey men in the other harborough: For the next morning, which was the twentieth of Iune, very early there were gathered together out of all the ships in both harboroughs, at the least 200 Frenchmen and Britons, who had planted vpon the shore three pieces of Ordnance against vs, and had prepared themselves in al readinesse to fight with vs, which so soone as we had descried them gaue the onset vpon vs with at least an hundred small shot out of the woods. There were also in a readinesse to assault vs about three hundred Sauages. But after we had skirmished a while with them, we procured a parley by one of the men of Saint Malo, whose ship rowed hard by vs: In which parley they required some of our men to come on shore vnto them: whereupon wee requested M. Ralph Hill and the Boatswaines mate to go on shore to them: whom when they had they detain'd as prisoners; and then required the powder and munition, which we had of the Balkes in possession: which we surrendered vnto them in safetie as our intent alwayes was, which done, there came aboard vnto vs one Captaine Charles, who was captaine of the great ship of Saint Malo, which rode in the other harborough: who challenged our great boate which we had at Farrillon to be his. And while we were in talke with him about the two Balkes which at first we thought to be Spaniards, wee had almost bene betray'd. For the said Captaine Charles with halfe a dozen more of his company kept themselves aboard of our ship and held vs in a talke, while thirtie or fortie others shoulde haue entered our ship vnawares from one of the ships of S. Malo, which professed to be our friend, & vnto whom we shewed all courtesie. But we perceiuing their treacherous intent, threatened to set fire on the said ship, which was then thwart our hawse, from which they would haue entered. By which resolution of ours God did discourage the from effecting their mischeiuous purposes. Now the said captaine Charles when he saw himself prevented of his wicked intents, took his boat presently to go on shore, and promised that all things shoulde be ended in peace betweene vs, and that he would send vs our two men againe. But when he was on shore he presently sent for our great boat which he claimed to be his, & withall commanded vs out of the harborough: but he sent not our men as he promised, we being now the weaker side did not only deliuer his boat but also determined to be gon

A new treason of the Britons.

and then requested them to help vs with our anker which was on shoze; but they would not. Then we desired them to cut the bent of the cable vpon the anker on shoze (for we durst not send our boat lest they should haue kept from vs both our boat and men) which they promised to do for vs, as also to send our men; but when they were on shoze, they would do neither. We therefore seeing their fallhood in euery thing, durst no longer tary for feare of farther treachery; wherefore we concluded to cut our cable in the halfe; which we did, & so departed the harborow about 9 of the clock, leauing two of our men with our cable & anker, and 20 fadoms of a new hawser behind vs. And as we were going away, they made great shewes of friendship, and thanke vnto vs from the shoze; but more for feare then loue, and requested vs to come on shoze for our men, whom then they deliuered. The same morning in passing ouer the barre before the harborowes mouth, and by that time that we had all our men aboard, our ship came on ground vpon the sands; where we lay some 8 houres: during which time, at low water we trimmed our ship without boord, and by the great prouidence of God found our leake which then we stopped. About six of the clocke at night we got our ship on float againe, and that night ankered within part of the barre, which then because of the wind we could not passe. But it pleased God to send vs faire weather all that night, and the next day by noone we had gotten our ship cleane ouer the bar. The 21 day after we got ouer the barre the wind arose at east & eastsoutheast, we blew right into the bay: which if it had come before we were cleere of the bar, we had both ship and men perished in the sands. The same day, because the wind kept vs within the bay, we went to the Isle Blanch, where the ships of the other harborow had their stages: but it was at least two leagues from their ships; where we hoped by friendship to procure a shallope & assurance of our cable and anker againe. But when we had approached nere the shoze with our ship, & weaued them with a white flag, they instead of coming vnto vs, sent the message by a bullet out of a piece of great ordnance, which they had placed on shoze of purpose against vs; so that they would neither speake with vs, nor permit vs to come nere them. Thus we departed, and would haue put to sea that night; but there was much wind at East, which kept vs within the bay, & enforced vs to come to an anker vnder Isle Blanch. The next morning being the 22, we put to sea, and about 12 of the clocke the same day, the wind being at North-east and foule weather, the master sayd he could not p'p' to Grande Coste, because of the leetheze, & the wind against vs, and therefore asked what we should do. I asked then how farre we had to the riuer of cape Briton: he sayd a little way. Then sayd I, If it be not farre, we were best to go thither to trade with the Sauages while the wind is contrary, and to take in water & halst, which we wanted. To which the master sayd, that if I would he would cary vs thither. I thinking it to be the best course, sayd I was content, so faire forth as that from thence we tooke the first faire wind for Grande Coste. Whereupon the master willed him at the helme to keepe his course southeast and southeast and by south. Presently after I asked him how many leagues we had to the sayd riuer, and from the sayd riuer to Grande Coste. He then sayd that we had 40 leagues to the riuer, and from the riuer to Grande Coste 120 leagues. Whereupon I said I would not consent to go so far out of our way, but willed him to keep his directest course for Grande Coste; which he did. Within one halfe houre afterwards the 23 day the gunner and company of the ship presented me & the master with a request in writing to returne for England or to goe for the Islands of Agores for a man of war, for they would not proceed on their voyage to Grande Coste; and therefore do what I could they turned the helme homewards. The 14 of June we sent our boat on shoze in a great bay vpon the Isle of Cape Briton for water. The 25 we arrived on the West side of the Isle of Menego, where we left some calke on shoze in a sandy bay, but could not tary for foule weather. The 26 we cast anker in another bay vpon the maine of Cape Briton. The 27 about tenne of the clocke in the morning we met with eight men of the Chancewell our consort in a shallope; who told vs that their ship was cast away vpon the maine of Cape Briton, within a great bay eightene leagues within the Cape, and vpon a rocke within a mile of the shoze, vpon the 23 of this moneth about one of the clocke in the afternoone: and that they had cleered their ship from the rocke: but being bilged and full of water, they presently did run her vp into a sandy bay, where she was no sooner come on ground, but presently after there came aboard many shallops with store of French men, who robbed and spoiled all they could lay hands on, pillaging the porze men euen to their very shirts, and vling them in sauage maner: whereas they should rather as Christians haue aided them in that distresse. Which newes when we heard, we blessed God, who by his diuine p'ouidence and vnspeakeable mercy had not onely p'serued all the men, but brought vs thither so miraculously to ayd and comfort them. So presently we put into the road where the Chancewell lay; where was also one ship of Sibiburo, whose men that holpe to pillage the Chancewell were runne away into the woods. But the master thereof which had dealt very honestly with our men

stayed in his ship, and came aboard of vs : whom we used well, not taking any thing from him that was his, but onely such things as we could finde of our owne. And when we had dispatched our businesse, we gaue him one good cable, one olde cable and an anker, one shallop with mast, sailes, and other furniture, and other things which belonged to the ship. In recompense whereof he gaue vs two hogheads of slder, one barrell of peaze, and 25 scoze of fish. The 29 betimes in the morning we departed from that road toward a great Biskaine some 7 leagues off of 300 tun, whole men dealt most doggedly with the Chancewells company. The same night we ankered at the mouth of the harborow, where the Biskaine was. The 30 betimes in the morning we put into the harborow; and approaching nere their stage, we saw it vncouered, and so suspected the ship to be gone : whereupon we sent our pinnesse on hoze with a dozen men, who when they came, found great scoze of fish on hoze, but all the men were fled : neither could they perceiue whether the ship should be gone, but as they thought to sea. This day about twelue of the clocke we tooke a Sauages boat which our men pursued : but all the Sauages ran away into the woods, and our men brought their boat on boord. The same day in the afternoone we brought our ship to an anker in the harborow : and the same day we tooke three hogheads and an halfe of traine, and some 300 of greene fish. Also in the euening three of the Sauages, whole boat we had, came vnto vs for their boat; to whom we gaue coats and kniues, and restored them their boat againe. The next day being the first of July, the rest of the Sauages came vnto vs, among whom was their king, whose name was Itarey, and their queene, to whom also we gaue coats and kniues, and other trifles. These Sauages called the harborow Cibo. In this place are the greatest multitude of lobsters that euer we heard of: for we caught at one hawle with a little draw net about 140. The fourth of July in the morning we departed from Cibo. And the fift we cast anker in a reasonable good harborow called New Port vnder an Island some eight leagues from Cibo, and within three leagues from the English port. At this place in pursuing certaine shallops of a ship of Rochel, one of them came aboard, who told vs, that the Biskainer whom we sought, was in the English port with two Biskainers more, and two ships of Rochel. Thereupon we sent one of our men in the Rochellers shallop to parle with the admiral & others our friends in the English port, requesting them ayd for the recouery of our things, which the other ship called the Santa Maria of S. Vincent (whereof was Master Iohannes de Harte, and Pilot Adame de Lauandore) had robbed from the Chancewell. To which they answered, that if we would come in vnto them in peace, they would assist vs what they might. This answer we had the first day: and the seuenth in the forenoone we arriued in the English port, and cast anker aloofe from the other ships: which done, I went aboard the Admirall, to desire the performance of his promise: who sent for Iohannes de Harte, who was contented to restore most of our things againe: whereupon I went aboard his ship to haue them restored. This day and the eighth I spent in procuring such things as they had robbed; but yet in the end we wanted a great part thereof. Then we were brieft with them, and willed them either to restore vs the rest of our things which they had, or els we would both inforce them to doe it, and also haue satisfaction for our victuals and merchandises which by their meanes were lost in the Chancewell. The ninth in the morning wee prepared our ship to goe neere vnto them. Whereupon their Admirall sent his boat aboard, and desired to speake with mee: then I went aboard vnto him, and desired to haue our things with peace and quietnesse, proffering to make him and the Masters of the two ships of Rochel our vmpires, and what they should aduise I would stand vnto. Whereupon he went aboard the other ship to make peace; but they would heare no reason, neither yet condescend to restore any thing els which they had of ours. Then I desired that as I came in peace vnto them, they would so let me aboard my ship againe: which they denied to doe, but most vniustly detained me and Stephen van Herwicke who was with me. A while after our shallop came with foure men to know how I did, and to fetch me aboard: but so soone as she came to the Admiralls ships side, his men entred, and tooke her away, detaining our men also as prisoners with vs. Then presently all the three Biskainers made toward our ship, which was not carelesse to get the winde of them all: and hauing by the mercy of God obtained the same, shee then stayed for them: but when they saw they had lost their aduantage, they presently turned their course, making as great haste in againe as they did out before. Afterwards I attempted twise to goe aboard, but was still enforced backe by the two other Biskainers, who sought our liues: so that in the end the Master of the Admirall was enforced to man his great boat to waite vs: and yet notwithstanding they bent a piece of great ordinance at vs: for we were to passe by them vnto our ship: but we rescued our shallop vnder our Masters great boat; and by that meanes passed in safety. The next morning being the tenth of the moneth, we purposed if the winde had serued our turne, to haue made them to repent their euill

euill dealing, and to restore vs our owne againe, or els to haue suncke their ships if we could. But the winde serued not our turne for that purpose; but caried vs to sea: so that the same morning wee tooke our course toward the bay of S. Laurence in Newfoundland: where wee hoped to finde a Spanish ship, which as we had intelligence, did lye at that place. The thirteenth day we had sight of S. Peters Islands. And the foureteenth day being foggy and misty weather, while we made towards the land, we sent our shallop before the shippe to discouer dangers: but in the fogge, through the mens negligence which were in her, she lost vs: yet we kept on our course, thinking that although we could not see them, yet they might see our ship: and comming into sixteene fathoms water we cast anker, supposing our selues to be neere the shore: and in the evening it pleased God to giue vs for the space of one quarter of an houre cleere weather, by which we found our selues to be imbayed, and also had sight of our shallop, which was at the point of a land about one league from vs. The same night we went further into the same bay, where we had very good riding. The fifteenth we went on shore, and in that place found footing of deere, and before we returned we killed one. The eighteenth we departed toward S. Laurence: the same evening we had sight of S. Laurence, and sent off our boat in the night with our Master and sixteene men to surpriſe the Spanyard, which lay in Little S. Laurence: who presently vpon the entrance of our men surrendered by their ship and goods. The nineteenth in the morning before day, the Master of our ship with two more, and three Spanyards, tooke a boat and came forth to meet our shippe, but being foggy, he cast anker by the mouth of the harborow (thinking in faire weather to put out to our ship, which through the current and foggy weather was put five or six leagues to leeward: & while they were at anker in the boat they were surpris'd again by certaine Barks of S. Iohn de Luz who were in Great S. Laurence hard by. These Barks with their forces (hauing receiued intelligence by one of the Spanyards, who sleeping on shore, escaped vnto them ouerland) on the sudden surpris'd the sayd boat with our Master and others: and then presently made vnto the ship; but our men aboord defended them off. In the end they threatned that vntill they would yeeld, they would kill M. Craſton and our other men before their eyes. So at last vpon M. Craſtons intreaty and our mens, to saue their liues, they yeelded by the ship againe, vpon condition, that they should not inury any of our men, but should let them all with their weapons peaceably depart: yet when our men had yeelded, they brake their couenant, profering them great violence, threatening to kill them, disarming them, stripping their clothes from their backs, and bling them more like dogs then men. After they had thus robbed our men of their prize and weapons, they presently towed the shippe with their boats out of that harborow into Great S. Laurence, where their owne shippes did ride, and within lesse then an houre after they had caried our prize away, our shippe arrived in the bay: where after we had bene a while at anker, our shallop came aboord vnto vs, with most part of our sixteene men, who tolde vs the whole story before recited, as also that captaine Laurence had caried away our Master, and Stephen van Herwicke prisoners, and turned the rest of our men on shore in the woods, without either meat, drinke, or almost any apparell. The 20 all our men came aboord, except the two prisoners: and the same day we tooke with our boats three of the Spanyards shallops, with five hogheads of traine oile in each of them, & in one boat foure Spanyards; but the men of the other two shallops fled on shore. The same day also we tooke the Master of one of the ships which was in the harborow with three other of his men, whom we detained prisoners to ranſome M. Craſton & Stephen van Herwick. The 22 captaine Laurence sent them aboord, and we also released all our prisoners, except one Spanyard, who was boatſwaine of the Spanish ship, whom we kept with vs: and the same day we set saile fro thence. The 24 we had aduice of our Spanyard of certain Leagers which were in the harborow of cape S. Mary. Whereupon the same night, being within five or six leagues of the harborow, I sent off our two shallops with thirty men to discouer the harborow, and to surpris the enemy. The 25 in the morning we approached the harborow with our ship, and in the mouth thereof we espied three shallops, two whereof were ours, and the third of a ship of Rochel, which they had surpris'd with foure men in her: who tolde them that there were but two ships in the harborow, whereof one was of Rochel, and the other of Bell isle. And as we were discoursing with the Rochellers, we had sight of the ships: whereupon we sent our boat aboord the the Rocheller to certifie him that we were his friends, and to request him not to hinder our fight with the enemy. This message being sent, we made all the haste we could vnto the ship of Bell isle, which first began with vs with three great shot, one whereof hit our maintopſaile, but both the other missed vs. And we also sent one vnto them: then being approached nere vnto them ten or twelue of vs went in a shallop to enter them, and we caried also a warpe with vs to make fast vnto their ship, where by our ship might the better come vp to ayd vs. And when we boorded them in our boat, they be-

cooke themselves to their close fights, playing chiefly vpon vs with shot & pikes out at two portes, between which we entred very dangerously, escaping neere dangers both by shot & pike. Some of our men were wounded, but no great harme was done. And mine owne piece in entring, was shot out of my hand into the sea; which shot also burst one side of the ladder, by which I entred. We had not long bene aboord, but through the helpe of God we caused them to yeeld vnto our mercy. There were of them in the ship about forty men, most whereof we sent aboord of our shippe, there to be kept in holde, with order to our chyrurgion to dresse the wounded men, one of which was wounded vnto death. That done, we had then time to view our prize, which we found of great defence, and a notable strong ship, almost two hundred tun in burden, very well appointed, and in all things fitted for a man of warre. They had also foureteene or fiftene men more, which were then absent from the ship; otherwise we shoulde haue had the hotter fight. The same day we got our sailes to the yard, and our top masts on end, and rigged the shippe what we could. The 26 day we got some oile aboord, and there we taried vntill the second of August, sitting our selues for the sea, and getting fish aboord as weather serued vs. During our abode there we diuided our men, and appointed to each ship their company, my selfe and my friends being resolved to take our passage in the prize; wherein when we were shipped, and the company, there arose great enmity against vs by the other shippe, which afterward was quieted. The second day of August, hauing taken in water and wood, we put to sea from that harborow in company of the Hopewell, with purpose to go directly to Parlican, which is an harborow in the North part of Newfoundland, where we expected another prize. But when we came to sea we found our sailes so olde, our ropes so rotten, and our prouision of bread and drinke so short, as that we were constrained to make our resolution directly for England; whereupon we dyed out our reasons the fourth day of August, and sent them aboord the Hopewell, to certifie them the cause of our resolution for England: wherat they were generally offended, thinking and saying, that we in the prize went about to coulin and deceiue them. To conclude, they sent vs word that they would keepe vs company for England. But I had giuen William Crafston commission befoze to go for the Islands of the Agores, and there to spend his victuals for a man of warre. The next day being the fift of August, hauing a faire winde, we put off from the coast of Newfoundland, and kept our course directly for England, the Hopewell keeping vs company vntill midday, when as hauing lost vs in a fogge, she shot off two pieces of ordinance, and we answered her with thre: afterwards we spake not with her, supposing that she went for the Islands. The 27 of August, drawing neere the coast of England, we sounded and found ground at seuenty fadoms. Some of the mariners thinking we were in Bristow channell, and other in Silly channell: so that through variety of iudgements, and euill mariner ship we were faine to dance the hay foure dayes together, sometimes running to the Northeast, sometimes to the Southeast, then againe to the East, and Eastnortheast. Thus did we spend faire winds, and lose our time vntill the last of August. And then it pleased God that we fell with the Island of Lundy within the channell of Bristol; from whence we shaped our course: and after diuers dangers, the thirde of September we met with the Tramontane of the Queene off of Dartmouth; to the captaine whereof we gaue certaine things that he had need of. The fift of September I landed on the outside of the Isle of Wight, and within few dayes after it pleased God to bring the ship in safety to London, where she was made prize as belonging to the enemies of this land.

Certaine obseruations touching the countreys and places where we travelled.

The Newfoundland we found very subiect to fogs and mists. The ground of it is very rocky: and vpon it there is great store of fire trees, and in some places red: and about the shore it hath great abundance of cod-fish. We were on land in it in foure severall places: 1 At Caplin bay and Farrillon: 2 At Cape Rase: 3 At the harborow of Lano which lieth foure leagues to the West beyond Cape Laurence: 4 At S. Marie port.

The Island of Menego for the soile is much like Newfoundland, but the fish about it, as also thorowout the Grande Bay within Cape Briton, is much larger and better then that of the Newfoundland. This Island is scant two leagues long, and very narrow. In the midd of it, a great way within the wood is a great poole. Here we were thise on shore: once at the East side, and twise at the West.

The three Islands of birds are sandy red, but with the multitude of birds vpon them they looke white. The birds sit there as thicke as stones lie in a paved street. The greatest of the Islands is about

about a mile in compasse. The second is little lesse. The third is a very little one, like a small rocke. At the second of these three lay on the shoze in the Sunshine about thirty or forty sea-oren or mozles; which when our boat came nere them, presently made into the sea, and swam after the boat.

Brions Island wee found to be very good, and sandy ground. It hath in it store of firre trees. It is somewhat moze then a league long, and about three leagues in compasse. Here we were on land once, and went from the one side of it to the other.

The Island of Ramea we tooke to be like ground as Brions Island, hauing also abundance of firre trees. It seemeth to be in length about twelue or thirteene leagues at least. We were there in harborow, but not on shoze, which we much desired, and hoped to haue bene: but the conflict which we had there with the Barks and Britons, mentioned before, prevented vs.

The Isle Blanche likewise seemeth in quality of the ground and bignesse of it to be much like Brions Island aforesayd, but somewhat lesse. We were not on shoze vpon it, but rode before it at anker.

The land of Cape Briton we found to be somewhat like the Newfoundland, but rather better. Here toward the West end of it we saw the clouds lie lower then the hills: as we did also at Cape Laurence in Newfoundland. The Easterly end of the land of Cape Briton is nothing so high land, as the West. We went on shoze vpon it in five places: 1 At the bay where the Chancewell was cast away: 2 At Cibo: 3 At a little Island betweene Cibo and the New port: 4 At the New port: And 5 at Port Ingles, or the English port.

Concerning the nature and fruitfulness of Brions Island, Isle Blanche, and of Ramea, they do by nature yeeld exceeding plenty of wood, great store of wild cozne like barley, strawberries, gooseberries, mulberries, white roses, and store of wilde peason. Also about the sayd Islands the sea yeeldeth great abundance of fish of diuers sorts. And the sayd Islands also seeme to proffer, thzough the labour of man, plenty of all kinde of our graine, of roots, of hempe, and other necessary commodities.

Charles Leigh.

CERTAIN VOYAGES CONTAINING THE

Discouerie of the Gulfe of Saint Laurence to the West of New-

foundland, and from thence vp the riuer of Canada, to Hochelaga, Sa-

guenay, and other places: with a description of the temperature of the

climate, the disposition of the people, the nature, com-

modities, and riches of the soile, and other

matters of speciall moment.

The first relation of Iaques Carthier of S. Malo, of the new land cal-

led New France, newly discovered in the yere of our Lord 1534.

How M. Iaques Carthier departed from the Port of S. Malo, with two ships, and came to Newfoundland, and how he entred into the Port of Buona Vista.

After that Sir Charles of Mouy knight lord of Meylleraye, & Admirall of France had caused the Capitaines, Masters, and Mariners of the shippes to be sworn to behaue themselves truly and faithfully in the seruice of the most Christian King of France, vnder the charge of the sayd Carthier, vpon the twentieth day of April 1534. we departed from the Port of S. Malo with two ships of threescore tun apiece burden, and 61 well appointed men in ech one: and with such prosperous weather we sailed onwarde, that vpon the tenth day of May we came to Newfoundland, where we entred into the Cape of Buona Vista, which is in latitude 48 degrees and a halfe, and in longitude 7. But because of the great store of the ice that was alongst the sayd land, we were constrained to enter into an haven called S. Katherins haven, distant from the other Port about five leagues toward Southsouth-east: there did we stay tenne dayes looking for faire weather; and in the meane while we mended and dressed our boats,

How we came to the Island of Birds, and of the great quantity of birds that there be.

The Isle of
Birds.

Vpon the 21 of May the winde being in the West, we hoised saile, and sailed toward North and by East from the cape of Buona Vista until we came to the Island of Birds, which was environed about with a banke of ice, but broken and crackt: notwithstanding the sayd banke, our two boats went thither to take in some birds, whereof there is such plenty, that vntlesse a man did see them, he would thinke it an incredible thing: for albeit the Island (which containeth about a league in circuit) be so full of them, that they seeme to haue bene brought thither, and sowed for the nonce, yet are there an hundred folde as many hovering about it as within; some of the which are as big as tapes, blacke and white, with beaks like unto crows: they lie alwayes vpon the sea; they cannot flie very high, because their wings are so little, and no bigger then halfe ones hand, yee do they flie as swiftly as any birds of the aire leuell to the water; they are also exceeding fat; we named them Aporath. In lesse then halfe an houre we filled two boats full of them, as if they had bene with stones: so that besides them which we did eat fresh, euery ship did powder and salt, five or sixe barrells full of them.

Of two sorts of birds, the one called *Godetz*, the other *Margaulx*; and how we came to *Carpunt*.

A great white
beare.

Besides these, there is another kinde of birds which houer in the aire, and ouer the sea, lesser then the others; and these doe all gather themselves together in the Island, and put themselves under the wings of other birds that are greater: these we named *Godetz*. There are also of another sort, but bigger, and white, which bite euen as dogs: those we named *Margaulx*. And albeit the sayd Island be 14 leagues from the maine land, notwithstanding beares come swimming thither to eat of the sayd birds: and our men found one there as great as any cow, and as white as any swan, who in their presence leapt into the sea; and vpon Whitsunnunday (following our voyage toward the land) we met her by the way, swimming toward land as swiftly as we could saile. So soone as we saw her, we pursued her with our boats, and by maine strength tooke her, whose flesh was as good to be eaten as the flesh of a calfe of two yeres olde. The Wednesday following, being the 27 of the moneth, we came to the entrance of the bay of the Castles; but because the weather was ill, and the great store of ice we found, we were constrained to enter into an harborow about the sayd entrance called *Carpunt*, where, because we could not come out of it, we stayed till the ninth of June, what time we departed, hoping with the helpe of God to saile further then the sayd *Carpunt*, which is in latitude 51 degrees.

Le Chasseur.

Carpunt.

The description of *Newfoundland*, from *Cape Razo* to *Cape Degrad*.

The land from *Cape Razo* to *Cape Degrad*, which is the point of the entrance of the bay that trendeth from head to head toward Northnortheast, and Southsouthwest. All this part of land is parced into Islands one so nere the other, that there are but small riuers betweene them; thow the which you may passe with little boats, and therefore there are certaine good harborows, among which are those of *Carpunt* and *Degrad*. In one of these Islands that is the highest of them all, being the top of it you may plainly see the two low Islands that are nere to *Cape Razo*, from whence to the port of *Carpunt* they count it five and twenty leagues; and there are two entrances thereat, one on the East, the other on the South side of the Island. But you must take heed of the side & point of the East, because that euery where there is nothing els but shelues, and the water is very shallow: you must go about the Island toward the West the length of halfe a cable or thereabout, and then to goe toward the South to the sayd *Carpunt*. Also you are to take heed of three shelues that are in the channell vnder the water: and toward the Island on the East side in the channell, the water is of three or foure fademe deepe, and cleere ground. The other trendeth toward Eastnortheast, and on the West you may go on shore.

P204

Of the Island which now is called *S. Katherins Island*.

Coming from the point *Degrad*, and entring into the sayd bay toward the West & by North: there is some doubt of two Islands, that are on the right side, one of the which is distant from the sayd point three leagues, and the other seuen, either more or lesse then the first, being a low and plaine land, and it seemeth to be part of the maine land. I named it *Saint Katherins Island*; in which, toward the Northeast there is very dry soile; but about a quarter of a league from it, very ill ground, so that you must go a little about. The sayd Island & the Port of Castles

trend

trend toward North northeast, and South southwest, and they are about 15 leagues asunder. From the said port of Castles to the port of Gutter, which is in the northerne part of the said Bay, that trendeth toward East northeast, and West southwest, there are 12 leagues and an halfe: and about two leagues from the port of Balances, that is to say, the third part athwart the saide Bay the depth being sounded it is about 38 fadomes: and from the said port of Balances to the white Sands toward West southwest there is 15 leagues, but you must take heed of a helke that lyeth about 3 leagues outward fro the said white Sands on the Southwest side about water like a boat.

Blanc Sablon, or
white Sands.

Of the place called *Blanc Sablon*, or the white Sand: of the Iland of *Brest*, and of the Iland of *Birds*, of the sorts and quantitie of birds that there are found: and of the Port called the *Islettes*.

White Sand is a Road in the which there is no place guarded from the South, nor south-east. But toward South southwest from the saide road there are two Ilands, one of the which is called *Brest* Iland, and the other the Iland of *Birds*, in which there is great store of Gooetz, and crows with red beakes and red feete: they make their nestes in holes under the ground euen as *Carnies*. A point of land being passed about a league from white Sand, there is a Port and passage found called the *Islettes*, a better place then white Sand: and there is great fishing. From the said Port of the *Islettes* unto another called *Brest*, the circuit is about ten leagues. This Port is in latitude 51 degrees and 55 minutes, and in longitude*. From the *Islettes* to that place there are many other Ilands: and the saide Port of *Brest* is also amongst those Ilands. Howeuer the Ilands do compasse more then 3 leagues from the said *Brest*, being low, and ouer them are the other lands aboue mentioned scene.

Brest a place to
the North in
Newfound land.

How we with our ships entred into the Port of *Brest*, and sayling onward toward the West we passed amidst the *Islettes*, which were so many in number, that it was not possible to tell them: and how we named them the *Islettes*.

Vpon the 10. of June wee with our ships entred into the Port of *Brest*, to furnish our selues with water and wood, and to make vs ready to passe the saide Bay. Upon S. Barnabas day Seruice being heard, we with our boats went beyond the said Port toward the west, to see what harboroughes were there: wee passed through the midst of the *Islettes*, which were so many in number that it was not possible they might be tolde, for they continued about 10 leagues beyond the said Port. We to rest our selues staped in one of them a night, and there we found great store of ducke egges, and other birds that there do make their nests, we named them all The *Islettes*.

Of the Port called *S. Antonies Port*, *S. Seruans Port*, *James Cartiers Port*: of the riuer called *S. James*: of the customes and apparell of the inhabitants in the Iland of *White Sand*.

The next day we passed the said Ilands, and beyond them all we found a good haueu, which we named *S. Antonies Haueu*, and one or two leagues beyond we found a little riuer toward the Southwest coast, that is betweene two other Ilands, and is a good harborough. There we set up a Crosse, and named it *S. Seruans Port*: and on the Southwest side of the said Port and riuer, about one league there is a small Iland as round as an *Ouen*, enuironed about with many other litle Ilands that giue notice to the said Ports. Further about two leagues there is another greater riuer, in which we tooke good store of salmon, that we named *S. James his Riuer*. Being in the said riuer, we saw a ship of *Rochel* that the night before had passed the Port of *Brest*, where they thought to haue gone a fishing: but the Mariners knew not where they were. We with our boats approached neere vnto it, and did direct it to another Port one league more toward the West then the said riuer of *S. James*, which I take to be one of the best in all the world, and therefore wee named it *James Cartiers Sound*. If the soile were as good as the harboroughes are, it were a great commoditie: but it is not to be called The new Land, but rather stones and wilde craggies, and a place fit for wilde beastes, for in all the North Iland I did not see a Cart-load of good earth: yet went I on shoare in many places, and in the Iland of *White Sand*, there is nothing else but mosse and small thornes scattered here and there, withered and dry. To be short, I beleeue that this was the land that God allotted to *Caine*. There are men of an indifferent good stature and bignes, but wilde and burly: they weare their haire tied on the top like a wreath of hay, and put a wooden pinne within it, or any other such thing in stead of a naile, and with them they binde certaine birdes feathers. They are clothed with beastes skimes as well the men as women, but that the women go somewhat straiter and closer in their garments then the men do, with their waistes girded: they paint themselves with certaine Roan colours: their boates are made of

The riuer of S.
laques.

Boats made
of the barkes of
Birch trees.

of the barkes of birch trees, with the which they fish and take great store of Seales, and as farre as we could vnderstand since our comming thither, that is not their habitation, but they come from the maine land out of hotter countreys, to catch the saide Seales and other necessities for their liuing.

Of certaine Capes, that is to say, *The double Cape*, *The pointed Cape*, *Cape Royal*, and *The Cape of Milke*: of the mountaines of *Granges*: of the Ilands of *Doue houses*: and of the great fishing of Cods.

Vpon the 13. of that moneth we came to our ships againe with our boats on purpose to saile forwarde because the weather was faire, and vpon Sunday we caused Seruice to be saide: then on munday being the 15. of the moneth we departed from Brest and sailed toward the South to take a view of the lands that there wee had seene, that seemed vnto vs to bee two Ilands: but when we were amidst the Bay, we knew it to be firme land, where was a great double Cape one aboue the other, and therefore wee named it *The double Cape*. In the entrance of the Bay wee sounded, and found it to be an hundred fadome round about vs. From Brest to *The double Cape* there is about 20. leagues, and about five or six leagues beyond we sounded againe and found 40 fadome water. The said land lieth North-east and South-west. The next day being the 16. of the moneth we sailed along the said coast toward the South-west, and by South about 35 leagues from the double Cape, where we found very steepe and wilde hilles, among the which were seene certaine smal cabbans, which we in the countrey call *Granges*, and therefore we named them *The hilles of the Granges*. The other lands and mountaines are all craggie, cleft and cut, and betwixt them and the Sea, there are other Ilands, but low. The day before through the darke mists and fogges of the weather, we could not haue sight of any land, but in the euening we spied an entrance into the land, by a riuer among the said Hilles of *Granges*, and a Cape lying toward the South-west about 3 leagues from from vs. The said Cape is on the top of it blunt-pointed, and also toward the Sea it endeth in a point, wherefore wee named it *The pointed Cape*, on the North side of which there is a plaine Iland. And because we would haue notice of the said entrance, to see if there were any good hauens, we strooke saile for that night. The next day being the 17. of the moneth we had stormie weather from North-east, wherefore we tooke our way toward the South-west vntill thursdai morning, and we went about 37 leagues, till wee came athwart a Bay full of round Ilands like doue houses, and therefore wee named them *The doue houses*. And from the Bay of *S. Julian*, from the which to a Cape that lieth South and by West, which wee called *Cape Roial*, there are 7. leagues, and toward the West south-west side of the saide Cape, there is another that beneath is all craggie, and aboue round. On the North side of which about halfe a league there lieth a low Iland: that Cape we named *The Cape of milke*. Betweene these two Capes there are certaine low Ilands, aboue which there are also certaine others that shew that there be some riuers. About two leagues from *Cape royall* wee sounded and found 20 fadome water, and there is the greatest fishing of Cods that possible may be: for staying for our company, in lesse then an houre we tooke aboue an hundred of them.

Of certaine Ilands that lie betweene *Cape Royal*, and *The Cape of milke*.

The next day being the 18. of the moneth, the winde with such rage turned against vs, that we were constrained to go backe toward *Cape Royal*, thinking there to finde some harborough, and with our boates went to discover betweene the *Cape Royal*, and the *Cape of Milke*, and found that aboue the low Ilands there is a great and very deepe gulfe, within which are certaine Ilands. The said gulfe on the South side is shut vp. The foresaid low grounds are on one of the sides of the entrance, and *Cape Royal* is on the other. The saide low grounds doe stretch themselves more then halfe a league within the Sea. It is a plaine countrey, but an ill soile: and in the midst of the entrance thereof, there is an Iland. The saide gulfe in latitude is fourtie eight degrees and an halfe, and in longitude *. That night we found no harborough, and therefore wee lancht out into the Sea, leauing the Cape toward the West.

Of the Iland called *S. Iohn*.

From the said day vntill the 24. of the moneth being *S. Iohns day* we had both stormie weather and winde against vs, with such barkenelle and mists, that vntill *S. Iohns day*, we could haue no sight of any land, and then had we sight of a Cape of land, that from *Cape Royal* lieth South-west about 35 leagues, but that day was so foggie and mistie, that we could not come neere land, and because it was *S. Iohns day*, we named it *Cape S. Iohn*.

Of

Of certaine Ilands called the Ilands of *Margaulx*, and of the kinds of beasts and birds that there are found. Of the Iland of *Brion*, and *Cape Dolphin*.

The next day being the 25. of the moneth, the weather was also stormie, darke, and windy, but yet we sailed a part of the day toward West North west, and in the euening wee put our selues athwart vntill the second quarter; when as we departed, then did we by our compasse know that we were North west & by West about seuen leagues and an halfe from the Cape of S. Iohn, and as wee were about to hoist saile, the winde turned into the North west, wherefore wee went Southeast, about 15. leagues, and came to three Ilands, two of which are as steepe and vpright as any wall, so that it was not possible to climbe them: and betweene them there is a little rocke. These Ilands were as full of birds, as any field or medow is of grasse, which there do make their nestes: and in the greatest of them, there was a great and infinite number of those that wee call *Margaulx*, that are white, and bigger then any geese, which were leuered in one part. In the other were onely *Goderz*, but toward the shoare there were of those *Goderz*, and great *Apponatz*, like to those of that Iland that we aboue haue mentioned: we went downe to the lowest part of the least Iland, where we killed about a thousand of those *Goderz*, and *Apponatz*. We put into our boates so many of them as we pleased, for in lesse then one houre we might haue filled thirtie such boats of them: we named them The Ilands of *Margaulx*. About five leagues fro the said Ilands on the West, there is another Iland that is about two leagues in length, and so much in breadth: there did we stay all night to take in water and wood. That Iland is enuironed round about with sand, and hath a very good road about it three or foure fadome deepe. Those Ilands haue the best soile that euer we saw, for that one of their fields is moze worth then all the New land. We found it all full of goodly trees, medowes, fields full of wild corne and peason bloomed, as thick, as ranke, and as faire as any can be seene in Britaine, so that they seemed to haue bene plowed and sowed. There was also great store of gooseberies, strawberies, damaske roses, parselley, with other very sweete and pleasant hearbes. About the said Iland are very great beastes as great as oxen, which haue two great teeth in their mouths like vnto Elephants teeth, & liue also in the Sea. We saw one of them sleeping vpon the banke of the water: wee thinking to take it, went to it with our boates, but so soone as he heard vs, he cast himselfe into the Sea. We also saw beares & wolues: we named it *Brions Iland*. About it toward Southeast, and North west, there are great lakes. As farre as I could gather and comprehend, I thinke that there be some passage betweene New found land, and *Brions Iland*. If so it were, it would be a great shortning, alwel of the time as of the way, if any perfection could be found in it. About foure leagues from that Iland toward West-Southwest is the firme land, which seemeth to be as an Iland compassed about with little Ilands of sands. There is a goodly Cape which we named *Cape Dolphin*, for there is the beginning of good grounds. On the 27. of Iune we compassed the said lands about that lie West Southwest: and a farre off they seeme to be little hilles of sand, for they are but low landes: wee could neither goe to them, nor land on them, because the winde was against vs. That day we went 15. leagues.

Three Ilands.

The Ilands of Margaulx.

Morses of Sea-oren.

Brions Iland.

Of the Iland called *Alezai*, and of the cape of *S. Peter*.

The next day we went along the said land about 10. leagues, till we came to a Cape of redde land, that is all craggie, within the which there is a bracke looking toward the North. It is a very low countrey. There is also betweene the Sea and a certaine poole, a plaine field: and from that Cape of land and the poole vnto another Cape, there are about 14 leagues. The land is fashio- ned as it were halfe a circle, all compassed about with sand like a ditch, ouer which as farre as ones eye can stretch, there is nothing but marriish grounds and standing pooles. And before you come to the first Cape, very neere the maine land there are two little Ilands. About five leagues from the second Cape toward the Southwest, there is another Iland very high and pointed, which we named *Alezai*. The first Cape we named *S. Peters Cape*, because vpon that day we came thither.

Of the Cape called *Cape Orleans*: of the Riuer of Boates: of *Wilde mens Cape*: and of the qualitie and temperature of the countrey.

From *Brions Iland* to this place there is good anchorage of sand, and hauing sounded toward South west euen to the shoare about five leagues, wee found twentie and five fadome water, and within one league twelue fadome, and very neere the shoare sixe fadome, rather moze then lesse, and also good anchorage. But because wee would bee the better acquainted with this soule and rockie ground, wee strooke our sailes lowe and athwart. The next day being the last of the moneth saue one, the winde blew South and by East. We sailed Westward vntill Tuesday morning at Sunne rising, being the last of the moneth, without any sight or knowledge of

An exceeding
goodly land.

A varietie of
goodly trees.

of any lande, except in the euening toward Sunne set, that wee discouered a lande which seemed to be two Ilands, that were beyond vs West south west, about nine or tenne leagues. All the next day till the next morning at Sunne rising wee sailed Westward about fourtie leagues, and by the way we perceiued that the land we had seene like Ilands, was firme land, lying South southeast, and North north west, to a very good Cape of land called Cape Orleans. Al the said land is low and plaine, and the fairest that may possibly be seene, full of goodly medowes and trees. True it is that we could finde no harborough there, because it is all full of shelles and sands. Wee with our boates went on shore in many places, and among the rest wee entred into a goodly riuer, but very shallow, which we named The riuer of boats, because that there wee saw boates full of wild men that were crossing the riuer. Wee had no other notice of the said wild men: for the wind came from the sea, and so beat vs against the shore, that wee were constrained to retire our selues with our boates toward our ships. Till the next day morning at Sunne rising, being the first of July, we sailed North east, in which time there rose great mists and stormes, and therefore wee stricke our sailes till two of the clocke in the afternoone, that the weather became cleare, & there we had sight of Cape Orleans, and of another about seven leagues from vs, lying North and by East, and that we called Wilde mens Cape. On the North side of this Cape about halfe a league, there is a very dangerous shelve, and banke of stones. Whilest wee were at this Cape, we sawe a man running after our boates that were going along the coast, who made signes vnto vs that we should returne toward the said Cape againe. Wee seeing such signes, began to turne toward him, but he seeing vs come, began to flee: so soone as we were come on shoare, we set a knife before him and a woollen girdle on a litle staffe, and then came to our ships againe. That day we trended the said land about 9. or 10. leagues, hoping to finde some good harborough, but it was not possible: for as I haue said already, it is a very low land, and enuironed round about with great shelles. Nevertheless we went that day on shore in foure places to see the goodly and sweete smelling trees that were there: we found them to be Cedars, ewetrees, Pines, white elmes, albes, willowes, with many other sorts of trees to vs vnknown, but without any fruit. The grounds where no wood is, are very faire, and all full of peason, white and red gooseberies, strawberies, blackeberies, and wilde corne, euen like vnto Rie, which seemed to haue bene sowne and plowed. This countrey is of better temperature then any other that can be seene, and very hote. There are many thrushes, stockdoves, and other birds: to be short, there wanteth nothing but good harboroughs.

Of the Bay called *S. Lunario*, and other notable Bayes and Capes of land, and of the qualitie, and goodnesse of those grounds.

The next day being the second of July we discouered and had sight of land on the Northerne side toward vs, that did ioine vnto the land abouesaid, al compassed about, and we knew that it had about * in depth, and as much athwart, we named it *S. Lunarios Bay*, and with our boats we went to the Cape toward the North, and found the shore so shallow, that for the space of a league from land there was but a fadome water. On the North east side from the said Cape about 7. or 8. leagues there is another Cape of land, in the midst whereof there is a Bay fashioned trianglewise, very deepe, & as farre off as we could ken from it the same lieth North east. The said Bay is compassed about with sands and shelles about 10. leagues from land, and there is but two fadome water: from the said Cape to the bank of the other, there is about 15. leagues. Wee being a crosse the said Capes, discouered another land and Cape, and as farre as we could ken, it lay North and by East. All that night the weather was very ill, and great winds, so that wee were constrained to beare a smal saile vntil the next morning, being the thirde of July when the winde came from the West: and we sailed Northward to haue a sight of the land that we had left on the North east side, aboue the low lands, among which high and low lands there is a gulfe or breach in some places about 55. fadome deepe, and 15. leagues in bredth. By reason of the great depth and bredth of the gulfe, and change of the lands, we conceiued hope that wee should finde a passage, like vnto the passage of The Castles. The said gulfe lieth East North east, and West south west. The ground that lieth on the South side of the said gulfe, is as good and easie to be manured, and full of as goodly fields and meadowes, as any that euer wee haue seene, as plaine and smooth as any die: and that which lyeth on the North is a countrey altogether hilly, full of woods, and very high and great trees of sundry sorts: among the rest there are as goodly Ceders, and Firre trees, as possibly can be seene, able to make mastes for ships of three hundred Tonne: neither did we see any place that was not full of the saide trees, except two onely that were full of goodly medowes, with two very faire lakes. The midst of the said Bay is 47. degrees and halfe in latitude.

The passage
des Chasteaux.

Trees able to
mast ships of
300. tonnes.

Of the *Cape D'Esperance*, or the *Cape of Hope*, and of *S. Martins Creeke*, and how 7. boats full of wilde men comming to our boat, would not retire themselves, but being terrified with our Culuerins which we shot at them, and our lances, they fled with great hast.

The *Cape* of the said South land was called The *Cape of Hope*, through the hope that there we had to finde some passage. The fourth of July we went along the coast of the said land on the Northerly side to finde some harborough, where wee entred into a creeke altogether open toward the South, where there is no succour against the wind: we thought good to name it *S. Mar- rines Creeke*. There we stayed from the fourth of July until the twelfth: while we were there, on Monday being the sixth of the moneth, Seruice being done, wee with one of our boates went to discover a *Cape* and point of land that on the Westerne side was about seven or eight leagues from vs, to see which way it did bend, and being within halfe a league of it, wee sawe two compa- nies of boates of wilde men going from one land to the other: their boates were in number about fourtie or fiftie. One part of the which came to the said point, and a great number of the men went on shore making a great noise, beckening vnto vs that wee should come on land, shewing vs cer- taine skinner upon pieces of wood, but because we had but one onely boat, wee would not goe to them, but went to the other side lying in the Sea: they seeing vs flee, prepared two of their boats to follow vs, with which came also five more of them that were comming from the Sea side, all which appoched neere vnto our boate, dancing, and making many signes of ioy and mirth, as if we were desiring our friendship, saying in their tongue *Napeu tondamen asurtah*, with many other words that we vnderstood not. But because (as we haue said) we had but one boat, wee would not stand to their courtesie, but made signes vnto them that they should turne back, which they would not do, but with great furie came toward vs: and suddenly with their boates compassed vs about: and because they would not away from vs by any signes that we could make, we shot off two pie- ces among them, which did so terrifie them, that they put themselves to flight toward the sayde point, making a great noise: and hauing staid a while, they began anew, euen as at the first to come to vs againe, and being come neere our boat wee stricke at them with two lances, which thing was so great a terrour vnto them, that with great hast they beganne to flee, and would no more follow vs.

Fortie or 50
boates of
Saluages.

How the said wilde men comming to our ships, and our men going toward them, both par- ties went on land, and how the said wilde men with great ioy began to trafique with our men.

The next day part of the saide wilde men with nine of their boates came to the point and en- trance of the Creeke, where we with our ships were at roade. We being aduertised of their comming, went to the point where they were with our boates: but so soone as they saw vs, they began to flee, making signes that they came to trafique with vs, shewing vs such skinner as they cloth themselves withall, which are of small value. We likewise made signes vnto them, that we wished them no euill: and in signe thereof two of our men ventured to go on land to them, and ca- ry them knives with other Iron wares, and a red hat to giue vnto their Captaine. Which when they saw, they also came on land, and brought some of their skinner, and so began to deale with vs, seeming to be very glad to haue our iron wares and other things, stil dancing with many other ce- remonies, as with their hands to cast Sea water on their heads. They gaue vs whatsoeuer they had, not keeping any thing, so that they were constrained to goe backe againe naked, and made vs signes that the next day they would come againe, and bring more skinner with them.

How that we hauing sent two of our men on land with wares, there came about 300. wilde men with great gladnesse. Of the qualitie of the countrey, what it bringeth forth, and of the Bay called *Baia du Chaleur*, or *The Bay of heat*.

Vpon Thursday being the eight of the moneth, because the winde was not good to go out with our ships, we set our boates in a readinesse to goe to discover the said Bay, and that day wee went 25. leagues within it. The next day the wind and weather being faire, we sailed until noone, in which time we had notice of a great part of the said Bay, and how that ouer the low lands, there were other lands with high mountaines: but seeing that there was no passage at all, wee began to turne back againe, taking our way along the coast: & sayling, we sawe certaine wilde men that stood vpon the shore of a lake, that is among the low grounds, who were making fires and smokes: wee went thither, & found that there was a chanel of the sea that did enter into the lake, and setting our boats at one of the banks of the chanel, the wilde men with one of their boates came vnto vs, and brought

Three hundred gentle
Savages.

Baye du Chaleur, or the
Bay of heat.

brought up pieces of Seales ready sodden, putting them upon pieces of wood: then retiring themselves, they would make signes unto vs, that they did giue them vs. Wee sent two men vnto them with hatchets, knives, beads, & other such like ware, whereat they were very glad, and by and by in clusters they came to the shore where wee were, with their boates, bringing with them Skinnies and other such things as they had, to haue of our wares. They were more then 300. men, women and children: some of the women which came not ouer, wee might see stand by to the knees in water, singing and dancing: the other that had passed the riuer where we were, came very friendly to vs, rubbing our armes with their owne handes, then would they lift them vp toward heauen, shewing many signes of gladnesse: and in such wise were wee assured one of another, that we very familiarly began to trafique for whatsoever they had, til they had nothing but their naked bodies; for they gaue vs all whatsoever they had, and that was but of small value. We perceiued that this people might very easily be conuerted to our Religion. They goe from place to place. They liue onely with fishing. They haue an ordinarie time to fish for their prouision. The countrey is hotter then the countrey of Spaine, and the fairest that can possibly be found, altogether smooth, and leuel. There is no place be it neuer so little, but it hath some trees (yea albeit it be sandie) or else is full of wilde corne, that hath an eare like vnto Rie: the corne is like oates, and smal peason as thicke as if they had bene sown and plowed, white and red gooseberies, strawberies, blackberies, white and red Roses, with many other floures of very sweet and pleasant smell. There be also many goodly medowes full of grasse, and lakes wherein great plentie of salmons be. They call a hatchet in their tongue Cochi, and a knife Bacon: we named it The bay of heat.

¶ Of another nation of wilde men: of their maners, liuing and clothing.

BEING certified that there was no passage through the said Bay, we hoisted saile, and went from St. Martines Creeke vpon Sunday being the 12. of July, to goe and discouer further beyond the said Bay, and went along the sea coast Eastward about eightene leagues, til we came to the Cape of Prato, where we found the tide very great, but shallow ground, and the Sea stormie, so that we were constrained to draw toward shore, betweene the said Cape and an Island lying Eastward, about a league from the said Cape, where we cast anchor for that night. The next morning we hoisted saile to trend the said coast about, which lyeth North North-east. But there rose such a stormie and raging winde against vs, that we were constrained to come to the place againe, from whence we were come: there did we stay all that day til the next that we hoisted vp saile, and came to the middest of a riuer five or six leagues from the Cape of Prato Northward, and being ouerswift the said Riuer, there arose againe a contrary winde, with great fogges and stormes. So that we were constrained vpon Tuesday being the fourteenth of the moneth to enter into the riuer, and there did we stay till the sixteenth of the moneth looking for faire weather to come out of it: on which day being Thursday, the winde became so raging that one of our ships lost an anchor, and we were constrained to goe vp higher into the riuer seuen or eight leagues, into a good harborough and ground that we with our boates found out, and through the euill weather, tempest, and darkenesse that was, wee stayed in the said harborough till the five and twentieth of the moneth, not being able to put out: in the meane time wee sawe a great multitude of wilde men that were fishing for mackerels, whereof there is great store. Their boates were about 40. and the persons what with men, women & children two hundred, which after they had hunted our company a while, they came very familiarly with their boats to the sides of our ships. We gaue them knives, combs, beads of glasse, and other trifles of small value, for which they made many signes of gladnesse, lifting their hands vp to heauen dancing and singing in their boates. These men may very well and truly be called Wilde, because there is no poorer people in the world. For I thinke all that they had together, besides their boates and nets was not worth five souce. They goe altogether naked saving the r. priuities, which are couered with a little skinnie, and certaine olde skinnies that they cast vpon them. Neither in nature nor in language, doe they any whit agree with them which we found first: their heads be altogether shaven, except one bush of haire which they suffer to grow vpon the top of their crowne as long as a horse taile, & then with certaine leather strings binde it in a knot vpon their heads. They haue no other dwelling but their boates, which they turne vpside downe, and vnder them they lay themselves all along vpon the bare ground. They eate their flesh almost raw, saue onely that they beate it a little vpon timbers of coales, so doe they their fish. Vpon Magdalens day we with our boates went to the bancke of the riuer, and freely went on shore among them, whereat they made many signes, and all their men in two or three companies began to sing and dance, seeming to be very glad of our comming. They had caused all the pong women to flee into the wood, two or three excepted, that stayed with them, to ech of which we

we gaue a combe, and a little bell made of Tinne, for which they were very glad, thanking our Captaine, rubbing his armes and breasts with their hands. When the men saw vs giue something vnto those that had stayed, it caused al the rest to come out of the wood, to the end they should haue as much as the others: These women were about twenty, who altogether in a knot fell vpon our Captaine, touching and rubbing him with their hands, according to their manner of cherishing and making much of one, whogaue to each of them a little Tinne bell: then suddenly they began to dance, and sing many songs. There we found great store of Hackrels, that they had taken vpon the boie, with certaine nets that they make to fish, of a kind of Hempe that groweth in that place where ordinarily they abide, for they neuer come to the sea, but onely in fishing time. As farre as I vnderstand, there groweth likewise a kinde of Millet as big as Peason, like vnto that which groweth in Bresil, which they eate in stead of bread. They had great store of it. They call it in their tongue Kapaige. They haue also Prunes, (that is to say Damslins) which they dry for winter as we doe, they call them Honesta. They haue also Figs, Nuts, Apples, and other fruits, and Beans, that they call Sahu, their nuts Cahehya. If we shewed them any thing that they haue not, nor know not what it is, shaking their heads, they will say Nohda, which is as much to say, they haue it not, nor they know it not. Of those things they haue, they would with signes shew vs how to dreffe them, and how they grow. They eate nothing that hath any taste of salt. They are very great theues, for they will filch and steale whatsoever they can lay hold of, and all is fish that commeth to net.

Hempe.

Mais.

Damslins, figs,
nuts, apples.

¶ How our men set vp a great Crosse vpon the point of the sayd Porte, and the Captaine of those wild men, after a long Oration, was by our Captain appeased, and contented that two of his Children should goe with him.

Vpon the 24 of the moneth, wee caused a faire high Crosse to be made of the height of thirty foote, which was made in the presence of many of them, vpon the point of the entrance of the sayd hauen, in the middest whereof we hanged by a Shield with three Floure de Lucies in it, and in the top was carued in the wood with Anticke letters this posie, *Vine le Roy de France*. Then before them all we set it vpon the sayd point. They with great heed beheld both the making and setting of it vp. So soone as it was vp, we altogether kneeled downe before them, with our hands toward Heauen, peelding God thanks: and we made signes vnto them, shewing them the Heauens, and that all our saluation dependeth onely on him which in them dwelleth: whereat they shewed a great admiration, looking first one at another, and then vpon the Crosse. And after wee were returned to our ships, their Captaine clad with an old Beares skin, with three of his sonnes, and a brother of his with him, came vnto vs in one of their boates, but they came not so neere vs as they were wont to doe: there he made a long Oration vnto vs, shewing vs the crosse we had set vp, and making a crosse with two fingers, then did he shew vs all the Countrey about vs, as if he would say that all was his, and that wee should not set vp any crosse without his leaue. His talke being ended, we shewed him an Are, faining that we would giue it him for his skin, to which he listned, for by little and little hee came neere our ships. One of our fellows that was in our boate, tooke hold on theirs, and suddenly leapt into it, with two or three more, who enforced them to enter into our ships, wherat they were greatly astonished. But our Captain did straightwaies assure them, that they should haue no harne, nor any iniurie offered them at all, & entertained them very friendly, making them eate and drinke. Then did we shew them with signes, that the crosse was but onely set vp to be as a light and leader which wayes to enter into the port, and that wee would shortly come againe, and bring good store of iron wares & other things, but that we would take two of his children with vs, & after ward bring them to the sayd port againe: and so wee clothed two of them in shirts, and coloured coates, with red cappes, and put about euery ones necke a copper chaine, whereat they were greatly contented: then gaue they their old clothes to their fellows that went backe againe, and we gaue to each one of those three that went backe, a hatchet, and some kniues, which made them very glad. After these were gone, and had told the newes vnto their fellows, in the after noone there came to our ships six boates of them, with five or six men in euery one, to take their farewells of those two we had detained to take with vs, and brought them some fish, uttering many wordes which we did not vnderstand, making signes that they would not remoue the crosse we had set vp.

This hauen
seemeth to be
Gaspay.

Two sauages
taken.

¶ How after we were departed from the sayd porte, following our voyage along the sayd coast, we went to discover the land lying Southeast, and Northwest.

The next day, being the 25 of the moneth, we had faire weather, and went from the said port: and being out of the riuer, we sailed Eastnortheast, for after the entrance into the said riuer,

S

the

the land is enuironed about, and maketh a bay in maner of halfe a circle, where being in our ships, we might see all the coast sayling behind, which we came to seeke, the land lying Southeast and North-west, the course of which was distant from the riuer about twentie leagues.

Of the Cape *S. Aluise*, and Cape *Memorancie*, and certaine other lands, and how one of our Boates touched a Rocke and suddenly went ouer it.

Fifty degrees
of latitude.

On Monday being the 27 of the moneth, about sunne-set we went along the said land, as we haue said, lying Southeast & North-west, till Wednesday that we saw another Cape where the land beginneth to bend toward the East: we went along about 15 leagues, then doeth the land begin to turne Northward. About three leagues from the sayd Cape we sounded, and found 24 fadome water. The said lands are plaine, and the fairest and most without woods that we haue seene, with goodly greene fields and meowes: we named the sayd Cape *S. Aluise Cape*, because that was his day: it is 49 degrees and a halfe in latitude, and in longitude *. On Wednesday morning we were on the East side of the Cape, and being almost night we went North-westward for to appoach neere to the sayd land, which trendeth North and South. From *S. Aluise Cape* to another called Cape *Memorancie*, about fifteene leagues, the land beginneth to bend North-west. About three leagues from the sayd Cape we would needes sound, but wee could finde no ground at 150 fadome, yet went we along the said land, about tenne leagues, to the latitude of 50 degrees. The Saturday following, being the first of August, by Sunne rising, wee had certaine other landes, lying North and North-east, that were very high and craggie, and seemed to be mountaines: betweene which were other low landes with woods and riuers: wee went about the sayd landes, as well on the one side as on the other, still bending North-west, to see if it were either a gulfe, or a passage, untill the fift of the moneth. The distance from one land to the other is about fifteene leagues. The middle betweene them both is 50 degrees and a cerce in latitude. We had much adoe to goe five miles farther, the winds were so great, and the tide against vs. And at five miles end, we might plainly see and perceiue land on both sides, which there beginneth to spread it selfe, but because we rather fell, then got way against the wind, we went toward land, purposing to goe to another Cape of land, lying Southward, which was the farthermost out into the sea that we could see, about five leagues from vs, but so soone as we came thither, we found it to be naught else but Rockes, stones, & craggie cliffes, such as we had not found any where since we had sailed Southward from *S. Johns Cape*: and then was the tide with vs, which caried vs against the wind Westward, so that as we were sayling along the sayd coast, one of our boats touched a Rocke, and suddenly went ouer, but we were constrained to leape out for to direct it on according to the tide.

How after we had agreed and consulted what was best to be done, we purposed to returne: and of *S. Peters Streight*, and of Cape *Tiennot*.

The Streite of
S. Peter.

After we had sailed along the sayd coast, for the space of two houres, behold, the tide began to turne against vs, with so swift and raging a course, that it was not possible for vs with 13 oares to row or get one stone cast farther, so that we were constrained to leaue our boates with some of our men to guard them, and 10 or 12 men went ashore to the sayd Cape, where we found that the land beginneth to bend South-west, which hauing seene, we came to our boats againe, and so to our ships, which were still ready vnder saile, hoping to go forward: but for all that, they were fallen more then foure leagues to leeward from the place where we had left them, where so soone as we came, wee assembled together all our Captaines, Masters, and Mariners, to haue their aduice and opinion what was best to be done: and after that euery one had said, considering that the Easterly winds began to beare sway, and blow, & that the flood was so great, that we did but fall, and that there was nothing to be gotten, and that stormes and tempests began to reigne in Newfoundland, and that we were so farre from home, not knowing the perils and dangers that were behind, for either we must agree to returne home againe, or els to stay there all the yeere. Moreouer, we did consider, that if the Northerne winds did take vs, it were not possible for vs to depart thence. All which opinions being heard and considered, we altogether determined to adresse our selues homeward. Nowe because vpon Saint Peters day wee entred into the sayd Streite, wee named it Saint Peters Streite. Wee sounded it in many places, in some wee found 150 fadome water, in some 100, and neere the shoare firtie, and cleere ground. From that day till Wednesday following, we had a good and prosperous gale of winde, so that we trended the said North shore East, Southeast, West North-west: for such is the situation of it, except one Cape of low landes that bender more toward the Southeast, about twenty five leagues from the

the Streight. In this place we saw certaine smokes, that the people of the countrey made vpon the sayd cape: but because the wind blewe vs toward the coast, we went not to them, which when they saw, they came with two boates and twelue men vnto vs, and as freely came vnto our ships, as if they had bene French men, and gaue vs to vnderstand, that they came from the greate gulfe, and that Tiennot was their Captaine, who then was vpon that Cape, making signes vnto vs, that they were going home to their Countreys whence we were come with our ships, and that they were laden with Fish. We named the sayd Cape, Cape Tiennot. From the said Cape all the land trendeth Eastsoutheast, and Westnorthwest. All these lands lie low, very pleasant, enuironed with sand, where the sea is entermingled with marishes and shallowes, the space of twentie leagues: then doth the land begin to trend from West to Eastnortheast altogether enuironed with Islands two or thre leagues from land, in which as farre as we could see, are many dangerous shelles more then foure or fise leagues from land.

Cape Tiennot.

How that vpon the ninth of August wee entered within *White Sands*, and vpon the fift of September we came to the port of *S. Malo*.

From the sayd Wednesday vntill Saturday following, we had a great wind from the South-west, which caused vs to run Eastnortheast, on which day we came to the Easterly partes of Newfoundland, between the Granges and the Double Cape. There began a great stormie winds comming frō the East with great rage: wherefore we coasted the Cape Northnorthwest, to search the Northerne part, which is (as we haue sayd) all enuironed with Islands, and being neere the said Islands and land, the wind turned into the South, which brought vs within the sayd gulfe, so that the next day being the 9 of August, we by the grace of God entered within the *White Sands*. And this is so much as we haue discovered. After that, vpon the 15 of August, being the feast of the Assumption of our Lady, after that we had heard seruice, we altogether departed from the porte of *White Sands*, and with a happy and prosperous weather we came into the middle of the sea, that is between Newfoundland and *Bricanie*, in which place we were tost and turmoyled three dayes long with great stormes and windy tempests comming from the East, which with the ayde and assistance of God we suffered: then had we faire weather, and vpon the fift of September, in the sayd yere, we came to the port of *S. Malo* whence we departed.

The language that is spoken in the Land newly discovered, called *New France*.

A shorte and brieft narration of the Nauigation made by the commandement of the King of France, to the Islands of Canada, Hochelaga, Saguenay, and diuers others which now are called New France, with the particular customes, and maners of the inhabitants therein.

Chap. 1.

In the yeere of our Lord 1535, vpon Whitsunday, being the 16 of May, by the commandement of our Captaine Iames Cartier, and with a common accord, in the Cathedrall Church of S. Malo we deuoutly each one confessed our selues, and receiued the Sacrament: and all entring into the Quier of the sayd Church, wee presented our selues before the Reuerend Father in Christ, the Lord Bishop of S. Malo, who blessed vs all, being in his Bishops robes. The Wednesday following, being the 19 of May, there arose a good gale of wind, and therefore we hoysed sayle with three ships, that is to say, the great Hermina, being in burden about a hundred, or a hundred and twenty tunne, wherein the foresaid Captaine Iames Cartier was Generall, and master Thomas Frosmont chiefe Master, accompanied with master Claudius de Pont Briand, sonne to the Lord of Montceuell, and Cup-bearer to the Dolphin of France, Charles of Pomeraiies, Iohn Powlet, and other Gentlemen. In the second ship called the little Hermina, being of threescore tunne burden, were Captaines vnder the sayd Cartier, Mace Salobert, and master William Marie. In the third ship called the Hermerillon, being of forty tunne in burden, were Captains M. William Britton, and M. Iames Maingarc. So we sayled with a good and prosperous wind, vntill the 20 of the said moneth, at which time the weather turned into stormes and tempests, the which with contrary winds, and darkenesse, endured so long that our ships being without any rest, suffered as much as any ships that euer went on seas: so that the 25 of June, by reason of that foule and foggie weather, all our ships lost sight one of another againe till wee came to Newfound land where we had appointed to meete. After we had lost one another, wee in the Generals ship were with contrary windes tost to and fro on the sea, vntill the seuenth of July, vpon which day we arriued in Newfound land, and came to the Island called The Island of Birds, which lyeth from the maine land 14 leagues. This Island is so full of birds, that all our ships might easily haue bene freighted with them, & yet for the great number that there is, it would not seeme that any were taken away. We to victuall our selues filled two boats of them. This Island hath the Pole eleuated 49 degrees, and 40 minutes. Vpon the eight of the sayd moneth we sailed further, & with a prosperous weather came to the Port called The Port of white sands, that is in the Bay called The Bay of Castels, where we had purposed to meete & stay together the 15 of the said moneth. In this place therefore we looked for our fellows, that is to say, the other two ships, till the 26 of the moneth, on which day both came together. So soone as our fellows were come, we set our ships in a readiness, taking in both water, wood, & other necessaries. And then on the 29 of the sayd moneth, early in the morning we hoised saile to passe on further, & sayling along the Northerne coast that runneth Northeast and Southwest, til two houres after Sun-set or thereabouts, then we crossed a long two Islands, which doe stretch further forth then the others, which we called S. Williams Islands, being distant about 20 leagues or more from the Port of Brest. All the coast from the Castels to that place lieth East & West, Northeast & Southwest, hauing betweene it sundry little Islands, altogether barren and full of stones, without either earth or trees, except certain valleys only. The next day being the 30 of July, we sailed on Westward to find out other Islands which as yet we had not found 12 leagues and a halfe, among which there is a great Bay toward the North all full of Islands and great creekes where many good harboroughs seeme to be: them we named S. Marthas Islands, from which about a league and a halfe further into the sea there is a dangerous shallow, wherein are five rockes, which lie from Saint Marthas Islands about seven leagues as you passe into the sayd Islands, on the East & on the West side, to which we came the sayd day an houre after noone, & from that houre vntill midnight we sailed about fiftene leagues athwart a cape of the lower Islands, which we named S. Germans Islands Southeastward, from which place about three leagues, there is a very dangerous shallow. Likewise betweene S. Germans cape and Saint Marthas, about two leagues from the sayd Islands, there lyeth a banke

The Isle of

Chasteaux of
The Grand Bay.

of

of land, vpon which banke the water is but foure sadome deepe, and therfore seeing the danger of the coast, we stricke saile and went no further that night: The next day being the last of July, we went all along the coast that runneth East and West, and somewhat Southeasterly which is all enuironed about with Islands and dyie sands, and in trueth is very dangerous. The length from Germans Cape to the said Islands is about 17 leagues and a halfe, at the end of which there is a goodly plot of ground full of huge and high trees, albeit the rest of the coast be compalled about with sands without any signe of shew of harboroughs, till we came to Cape Thiennot, which stretcheth North west about seuen leagues from the foresaid Islands, which Cape Thiennot we noted in our former voyage, and therfore we sailed on all that night West and Westnorthwest, till it was day, and then the wind turned against vs, wherefore we went to seeke a haven wherein we might harbour our ships, and by good hap, found one fit for our purpose, about seuen leagues and a halfe beyond Cape Thiennot, & that we named S. Nicholas Haven, it lieth amidst 4 Islands that stretch into the sea: Vpon the neerest wee for a token set by a wooden crosse. But note by the way, that this crosse must be brought North east, & then bending toward it, leaue it on the left hand and you shall find sixe sadome water, and within the haven foure. Also you are to take heede of two shelues that leane outward halfe a league. All this coast is full of shoulbs and very dangerous, albeit in sight many good hauens seeme to be there, yet is there nought else but shelues and sands. We staid and rested our selues in the sayd haven, vntill the seuenth of August being Sondag: on which day we hoysed sayle, and came toward land on the South side toward Cape Rabast, distant from the sayd haven about twentie leagues Northnortheast, and Southsouthwest: but the next day there rose a stormie and a contrary winde, and because we could find no haue there toward the South, thence we went coasting along toward the North, beyond the abouesayd haven about ten leagues, where we found a goodly great gulfe, full of Islands, passages, and entrenches toward what wind soeuer you please to bend: for the knowledge of this gulfe there is a great Island that is like to a Cape of lande, stretching somewhat further forth than the others, and about two leagues within the land, there is an hill fashioned as it were an heape of corne. We named the sayd gulfe Saint Laurence his bay. The twelfth of the sayd moneth wee went from the sayd Saint Laurence his Bay, or gulfe, sayling Westward, and discouered a Cape of land toward the South, that runneth West and by South, distant from the sayd Saint Laurence his Bay, about five and twenty leagues. And of the two wilde men which wee tooke in our former voyage, it was tolde vs, that this was part of the Southerne coaste, & that there was an Island, on the Southerly parte of which is the way to goe from Honguedo (where the peere befoze we had taken them) to Canada, and that two dayes tourney from the sayd Cape, and Island began the Kingdome of Saguenay, on the North shore extending toward Canada, and about thre leagues athwart the sayd Cape, there is aboue a hundred sadome water. Moreouer I beleue that there were neuer so many Whales seen as wee saw that day about the sayd Cape. The next day after being our Ladie day of August the fifteenth of the moneth, hauing passed the Straight, we had notice of certaine lands that wee left toward the South, which landes are full of very great and high hills, and this Cape wee named The Island of the Assumption, and one Cape of the said high countreys lyeth Eastnortheast, and Westsouthwest, the distance betweene which is about five and twenty leagues. The Countreys lying North may plainly be perceiued to be higher then the Southerly, more then thirty leagues in length. We trended the sayd landes about toward the South: from the sayd day vntill Tuesday noone following, the winde came West, and therfore wee bended toward the North, purposing to goe and see the land that we befoze had spied. Being arriued there, we found the sayd landes, as it were toynd together, and low toward the Sea. And the Northerly mountaines that are vpon the sayd low lands stretch East, and West, and a quarter of the South. Our wild men told vs that there was the beginning of Saguenay, and that it was land inhabited, and that thence cometh the red Copper, of them named Caignetdaze. There is betweene the Southerly landes, and the Northerly about thirte leagues distance, and more then two hundred sadome depth. The sayd men did moreouer certifie vnto vs, that there was the way and beginning of the great riuer of Hochelaga and ready way to Canada, which riuer the further it went the narrower it came, euen vnto Canada, and that then there was fresh water, which went so farre upwards, that they had neuer heard of any man who had gone to the head of it, and that there is no other passage but with small boates. Our Captaine hearing their talke, and how they did affirme no other passage to be there, would not at that time pproceede any further, till he had seene and noted the other landes, & coast toward the North, which he had omitted to see from S. Laurence his gulfe, because he would know, if betweene the landes toward the North any passage might be discouered.

sumption, or Na-
uiscotec.

A haven on the
Southerne
coast.

A great river.

S. Johns Isles.

This is the ri-
uer of Tadaseu,
or of Saguenay.

Vpon the 18 of August being Wednesday, our Captaine caused his shippes to wind backe, and bend toward the other shore, so that we trended the said Northerly coast, which runneth Northeast and Southwest, being fashioned like vnto halfe a bowe, and is a very high land, but yet not so high as that on the South parts. The Thursday following we came to seven very high Islands, which we named The round Islands. These Islands are distant from the South shore about 40 leagues, and stretch out into the sea about 3 or 4 leagues. Against these there are goodly low grounds to be seene full of goodly trees, which we the Friday following, with our boats compassed about. Querthwart these lands there are diuers sandy shelles more then two leagues into the sea, very dangerous, which at a low water remaine almost dry. At the furthest bounds of these lowe lands, that containe about ten leagues, there is a riuer of fresh water, that with such swiftnesse runneth into the sea, that for the space of one league within it the water is as fresh as any fountaine water. We with our boates entred into the sayd riuer, at the entrance of which we found about one fadome & a halfe of water. There are in this riuer many fishes shaped like horses, which as our wild men told vs, all the day long lie in the water, and the night on land: of which we saw therein a great number. The next day being the 21 of the moneth, by breake of day we holed saile, and sailed so long along the said coast, that we had sight of the rest of the sayd Northerne coast, which as yet we had not seene, and of the Island of the Assumption which wee went to discouer, departing from the sayd land: which thing so soone as we had done, & that we were certified no other passage to be there, we came to our ships againe, which we had left at the said Islands, where is a good harborough, the water being about nine or ten fadome. In the same place by occasion of contrary winds & foggie mists, we were constrained to stay, not being either able to come out of it, or hoise saile, till the 24 of the moneth: On which day we departed & came to a haven on the Southerly coast about 80 leagues from the said Islands. This haven is ouer against three flat Islands that lie amidst the riuer, because on the midway betweene those Islands, & the sayd haven toward the North, there is a very great riuer that runneth betweene the high and lowe landes, and more then three leagues into the sea it hath many shelles, & there is not altogether two fadome water, so that the place is very dangerous: and neere vnto the said shelles, there is either fiftene or 20 fadomes from shore to shore. All the Northerly coaste runneth Northeast and by North, and Southwest & by South. The said haven wherein we stayed on the South side, is as it were but a fluce of the waters that rise by the flood, & but of final accompe: we named them S. Johns Isles, because we found them, & entred into them the day of the beheading of that Saint. And before you come to the said haven, there is an Island lying Eastward about 5 leagues distant from the same: betweene which and the land there is no passage sauing only for small boats. The haven of S. Johns Isles dyeth by all the waters that rise by flowing, although they flow two fadome at the least. The best place to harborough ships therein is on the South part of a little Island that is ouer against the said haven, whereby the hancke or shore of the Island killeth. Upon the first of September we departed out of the said haven, purposing to go toward Canada, & about 15 leagues from it toward the West, & Westsouthwest, amidst the riuer, there are three Islands, ouer against the which there is a riuer which runneth swift, and is of a great depth, & it is that which leadeth, and runneth into the countrey and kingdome of Saguenay, as by the two wild men of Canada it was told vs. This riuer passeth and runneth along very high and steepe hills of bare stone, where very little earth is, & not withstanding there is great quantity of sundry sorts of trees that grow in the said bare stones, euen as vpon good & fertile ground, in such sort that we haue seene some so great as wel would suffice to make a mast for a ship of 30 tunne burden, and as greene as possibly can be, growing in a stony rocke without any earth at all. At the entrance of the sayd riuer we met with 4 boats full of wild men, which as far as we could perceiue, very fearfully came toward vs, so that some of them went backe againe, & the other came as neere vs as easily they might heare & understand one of our wild men, who told them his name, and then tooke acquaintance of them, vpon whose word they came to vs. The next day being the 2 of September, we came out of the sayd riuer to go to Canada, and by reason of the seas flowing, the tide was very swift and dangerous, for that on the South part of it there lie two Islands, about which, more then three leagues compass, lie many rocks and great stones, & but two fadome water: and the flowing amidst those Islands is very vnconstant and doubtful, so that if it had not bene for our boats, we had been in great danger to lose our Pinnelle: & coasting along the said drie sands, there is more then 30 fadome water.

About

About five leagues beyond the river of Saguenay Southwest, there is another Island on the Northside, wherein are certaine high lands, and thereabouts we thought to have cast anchor, on purpose to stay the next tide, but we could sound no ground in a 120 fadome, within a slight shoot from shoze, so that we were constrained to winde backe to the said Island, where wee sounded againe and found 35 fadome. The next morning we hoysed saile and went thence, sayling further on, where we had notice of a certaine kind of fish neuer before of any man seene or knowen. They are about the bignesse of a Porpole, yet nothing like them, of body very well proportioned, headed like Grapounds, altogether as white as snow without any spot, within which river there is great quantitie of them: they doe liue altogether betweene the Sea and the fresh water. These people of the Countrey call them Adhothuys, they tolde vs that they be very sauoy and good to be eaten. Whereouer they affirme none to be found elsewhere but in the mouth of that river. The sixth of the month, the weather being calme and faire, we went about 15 leagues more upward into the river, and there lighted on an Island that looketh Northward, and it maketh a little haven or creeke wherein are many and innumerable great Tortoyzes, continually lying about that Island. There are likewise great quantitie of the said Adhothuys taken by the inhabitants of the countrey, and there is as great a current in that place as is at Bordeaux in France at euery tide. This Island is in length about three leagues, and in bredth two, and is a goodly and fertile plot of ground, replenished with many goodly and great trees of many soyes. Among the rest there are many Filberd-trees, which we found hanging full of them, somewhat bigger and better in sauour then ours, but somewhat harder, and therefore we called it The Island of Filberds. The seventh of the moneth being our Ladies euen, after service we went from that Island to goe vp higher into the river, and came to 14 Islands seuen or eight leagues from the Island of Filberds, where the countrey of Canada beginneth, one of which Islands is ten leagues in length, and five in bredth, greatly inhabited of such men as onely liue by fishing of such sortes of fishes as the river affordeth, according to the season of them. After we had cast anchor betweene the said great Island, & the Northerly coast, we went on land and tooke our two wild men with vs, meeting with many of those countrey people, who would not at all approach vnto vs, but rather fled from vs, untill our two men began to speake vnto them, telling them that they were Taignoagny and Domagaia, who so soone as they had taken acquaintance of them, beganne greatly to reioyce, dancing and shewing many sortes of ceremonies: and many of the chieftest of them came to our boats & brought many Eeles and other sortes of fishes, with two or three burdens of great Miller wherewith they make their bread, and many great muske millions. The same day came also many other boates full of those countrey men and women, to see and take acquaintance of our two men, all which were as courteously receiued and friendly entertained of our Captaine, as possibly could be. And to haue them the better acquainted with him, and make them his friends, hee gaue them many small gifts, but of small value: neuerthelesse they were greatly contented with them. The next day following, the Lord of Canada (whose proper name was Donnacona, but by the name of Lord they call him Agouhanna) with twelve boates came to our ships, accompanied with many people, who caulding ten of his boates to goe backe with the other two, approached vnto vs with fiftene men. Then beganne the said Agouhanna ouer against the smallest of our ships, according to their maner and fashion, to frame a long Oracion, mouing all his bodie and members after a strange fashion, which thing is a ceremonie and signe of gladnesse and securitie among them, and then comming to the Generals ship, where Taignoagny and Domagaia were, he spake with them & they with him, where they began to tell and shew vnto him what they had seene in France, and what good entertainment they had had: hearing which things the said Lord seemed to be very glad thereof, and prayed our Captaine to reach him his arme, that he might kisse it, which thing he did: their Lord taking it, laid it about his necke, for so they vse to doe when they will make much of one. Then our Captaine entred into Agouhannas boat, causing bread and wine to be brought to make the said Lord and his companie to eate and drinke, which thing they did, and were greatly thereby contented and satisfied. Our Captaine for that time gaue them nothing, because he looked for a fitter opportunity. These things being done, ech one tooke leaue of others, and the said Lord went with his boates againe to his place of abode. Our Captaine then caused our boates to be set in order, that with the next tide he might goe vp higher into the river, to find some safe harbrough for our ships: and we passed vp the river against the streame about tenne leagues, coasting the said Island, at the end whereof, we found a goodly and pleasant sound, where is a little river and haven, where by reason of the flood there is about three fadome water. This place seemed to vs very fit and commodious to harbour our ships therein, and so we did very safely, we named it the holy Crosse, for on that day we came thither. Neere vnto it, there is a village, whereof

Maix.

Saint Croix.

Stadacona.

Goodly hemp

whereof Donnacona is Lord, and there he keepeth his abode: it is called Stadacona, as goodly a plot of ground as possibly may be seene, and therewithall very fruitfull, full of goodly trees euen as in France, as Oks, Elmes, Ashes, Walnut trees, Haple trees, Cyprons, Vines, and white Thornes, that bring forth fruit as bigge as any damsons, and many other sortes of trees, vnder which groweth as faire tall hempe, as any in France, without any seede or any mans worke or labour at all. Hauing considered the place, and finding it fit for our purpose, our Captaine withdrew himselfe on purpose to returne to our ships: but behold, as we were comming out of the riuer we met comming against vs one of the Lords of the said village of Stadacona, accompanied with many others, as men, women, and children, who after the fashion of their countrey, in signe of mirth and ioy, began to make a long Oracion, the women still singing and dancing vp to the knees in water. Our Captaine knowing their good will and kindnesse toward vs, caused the boat wherein they were, to come vnto him, and gaue them certaine trifles, as kniues, and beades of glasse, whereat they were maruellous glad, for being gone about thre leagues from them, for the pleasure they conceiued of our comming, we might heare them sing, and see them dance for all they were so farre.

How our Captaine went to see and note the bignesse of the Iland, and the nature of it, and then returned to the ships, causing them to be brought to the riuer of The holy Crosse,

Chap. 3.

The Ile of Bacchus, or the Ile of Orleans.

After we were come with our boats vnto our ships againe, our Captaine caused our barks to be made readie to goe on land in the said Iland, to note the trees that in the w^{ch} seemed so faire, and to consider the nature and qualitie of it: which thing we did, and found it full of goodly trees likes to ours. Also we saw many goodly Vines, a thing not befoze of vs seene in those countreies, and therefore we named it Bacchus Iland. It is in length about twelue leagues, in sight very pleasant, but full of woods, no part of it manured, vnlesse it be in certaine places, where a few cottages be for Fishers dwellings as befoze we haue said. The next day we departed with our ships to bring them to the place of the holy Crosse, and on the 14 of that moneth we came thither, and the Lord Donnacona, Taignoagny, and Domagaia, with 25 boats full of those people, came to meete vs, comming from the place whence we were come, and going toward Stadacona, where their abiding is, and all came to our ships, shewing sundry and diuers gestures of gladnesse and mirth, except those two that we had brought, to wit, Taignoagny, and Domagaia, who seemed to haue altered and changed their mind and purpose, for by no meanes they would come vnto our ships, altho it sundry times they were earnestly desired to doe it, whereupon we began to mistrust somewhat. Our Captaine asked them if according to promise they would go with him to Hochelaga? They answered yea, for so they had purposed, and then ech one withdrew himselfe. The next day being the fiftenth of the moneth, our Captaine went on shore, to cause certaine poles and piles to be driuen into the water, and set vp, that the better and safer we might harbour our ships there: and many of those countrey people came to meete vs there, among whom was Donnacona and our twomen, with the rest of their company, who kept themselves aside vnder a point or nooke of land that is vpon the shore of a certaine riuer, and no one of them came vnto vs as the other did that were not on their side. Our Captaine vnderstanding that they were there, commanded part of our men to follow him, and he went to the saide point where he found the said Donnacona, Taignoagny, Domagaia, and diuers other: and after salutations giuen on ech side, Taignoagny settled himselfe for most to speake to our Captaine, saying that the Lord Donnacona did greatly grieue and sorrow that our Captaine and his men did weare warlike weapons, and they not. Our Captaine answered, that albeit it did grieue them, yet would not he leaue them off, and that (as he knew) it was the maner of France. But for all these words our Captaine and Donnacona left not off to speake one to another, and friendly to entertaine one another. Then did we perceiue, that whatsoever Taignoagny spake, was onely long of himselfe and of his fellow, for that befoze they departed thence our Captaine and Donnacona entred into a maruellous stedfast league of friendship, whereupon all his people at once with a loude voyce, cast out thre great cryes, (a horrible thing to heare) and each one hauing taken leaue of the other for that day, we went aboard againe. The day following we brought our two great shippes within the riuer and harborough, where the waters being at the highest, are thre fadome deepe, and at the lowest, but halfe a fadome. We left our Pinelle without the road to the end we might bring it to Hochelaga. So soone as we had safely placed our ships, behold we saw Donnacona, Taignoagny & Domagaia, with more then fife hundred persons, men, women and children, and the said Lord with ten or twelue of the chiefest of the countrey came aboard of our ships, who were all

all courteously receiued, and friendly entertained both of our Capitaine and of vs all: and diuers gifts of small value were giuen them. Then did Taignoagoy tell our Capitaine, that his Lord did greatly sorrow that he would go to Hochelaga, and that he would not by any meanes permit that any of them should goe with him, because the riuer was of no importance. Our Capitaine answered him, that for all his saying, he would not leaue off his going thither, if by any meanes it were possible, for that that he was commanded by his king to goe as farre as possibly he could: and that if he (that is to say Taignoagoy) would goe with him, as he had promised, he should be very well entertained, beside that, he should haue such a gift giuen him, as he should well content himselfe: for he should doe nothing else but goe with him to Hochelaga and come againe. To whom Taignoagoy answered, that he would not by any meanes goe, and thereupon they sodainly returned to their houses. The next day being the 17 of September, Donnacona and his company returned euen as at the first, and brought with him many Beles, with sundry sorts of other fishes, whereof they take great store in the said riuer, as more largely hereafter shall be shewed. And as soone as they were come to our ships, according to their wonted vse they beganne to sing and dance. This done, Donnacona caused all his people to be set on the one side: then making a round circle vpon the land he caused our Capitaine with all his people to enter therein, then he began to make a long Oracion, holding in one of his hands a maiden child of ten or twelue yeeres old, which he presented vnto our Capitaine: then sodainly beganne all his people to make three great shrieks or howles, in signe of ioy and league of friendship: presently vpon that he did present vnto him two other young male children one after another, but y.inger then the other, at the giuing of which, euen as before they gaue out shrieks and howles very loud, with other ceremonies: for which presents, our Capitaine gaue the saide Lord great and hearty thankses. Then Taignoagoy told our Capitaine, that one of the children was his owne brother, and that the maiden child was daughter vnto the said Lords owne sister, and the presents were only giuen him to the end he should not goe to Hochelaga at all: to whom our Capitaine answered, that if they were onely giuen him to that intent, if so he would, he should take them againe, for that by no meanes he would leaue his going off, for as much as he was so commanded of his King. But concerning this, Domagaia told our Capitaine that their Lord had giuen him those children as a signe and token of good will and security, and that he was contented to goe with him to Hochelaga, vpon which talke great wordes arose betweene Taignoagoy and Domagaia, by which we plainly perceived that Taignoagoy was but a craftie knaue, and that he intended but mischief and treason, as well by this dede as others that we by him had seene. After that our Capitaine caused the said children to be put in our ships, and caused two Swords and two copper Basons, the one wrought, the other plaine, to be brought vnto him, and then he gaue to Donnacona, who was therewith greatly contented, peeing most heartie thankses vnto our Capitaine for them, and presently vpon that he commaunded all his people to sing and dance, and desired our Capitaine to cause a peece of artillerie to be shot off, because Taignoagoy and Domagaia made great brags of it, and had told them maruellous things, and also, because they had neuer heard nor seene any before: to whom our Capitaine answered, that he was content: and by and by he commanded his men to shoot off twelue cannons charged with bullets into the wood that was hard by those people and ships, at whose noyse they were greatly astonished and amazed, for they thought that heauen had fallen vpon them, and put themselves to flight, howling, crying, and shrieking, so that it seemed hell was broken loose. But before we went thence, Taignoagoy caused other men to tell vs, that those men which we had left in our Pinelle in the road, had slaine two men of their company, with a peece of ordinance that they had shot off, whereupon the rest had put themselves all to flight, as though they should all haue bene slaine: which after ward we found vntue, because our men had not shot off any peece at all that day.

How Donnacona and Taignoagoy with others, deuised a prettie sleight or pollicie: for they caused three of their men to be attired like Diuels, sayning themselves to be sent from their God *Cudragny*, onely to hinder our voyage to *Hochelaga*.

Chap. 4.

The next day being the eighteenth of September, these men still endeououred themselves to seeke all meanes possible to hinder and let our going to Hochelaga, and deuised a prettie guile, as hereafter shalbe shewed. They went and dressed three men like Diuels, being wrapped in dogges skinner white and blacke, their faces besmeared as blacke as any coales, with hoyses on their heads more then a pard long, and caused them secretly to be put in one of their boates, but came not neere our ships as they were wont to doe, for they lay hidden within the wood for the

the space of two houres, looking for the rive, to the end the boat wherein the Diuels were, might approach and come neere vs, which when time was, came, and all the rest issued out of the wood coming to vs, but yet not so neere as they were wont to do. There began Taignoagny to salute our Captaine, who asked him if he would haue the boate to come for him; hee answered, not for that time, but after a while he would come vnto our ships: then presently came that boat rushing out, wherein the three counterfeite Diuels were with such long hornes on their heads, and the middlemost came making a long Oration and passed along our ships without turning or looking toward vs, but with the boat went toward the land. Then did Donnacona with all his people pursue them, and lay hold on the boat and Diuels, who so soone as the men were come to them, fell prostrate in the boate euen as if they had beene dead: then were they taken by and carried into the wood, being but a stones cast off, then euery one withozew himselfe into the wood, not one staying behind with vs, where being, they began to make a long discourse, so loud that we might heare them in our ships, which lasted about halfe an houre, & being ended we began to espie Taignoagny and Domagaia coming towards vs, holding their hands vppward ioyned together, carying their hats vnder their vpper garment, shewing a great admiration, and Taignoagny looking vp to heauen, cryed three times Iesus, Iesus, Iesus, and Domagaia doing as his fellow had done before, cryed, Iesus Maria, Iames Cartier. Our Captaine hearing them, and seeing their gestures and ceremonies, asked of them what they ayled, and what was happened or chanced anew; they answered, that there were very ill tydings befallen, saying in French, *Nenni est il bon*, that is to say, it was not good: our Captaine asked them againe what it was, then answered they, that their God Cudruaigny had spoken in Hochelaga: and that he had sent those three men to shewe vnto them that there was so much yce and snow in that countrey, that whosoever went thither should die, which wordes when we heard, we laughed and mocked them saying, that their God Cudruaigny was but a foole and a noddie, for he knew not what he did or said: then bade we them shew his messengers from vs, that Christ would defend them all from colde, if they would beleue in him. Then did they aske of our Captaine if he had spoken with Iesus: he answered no, but that his Priests had, and that he had tolde them they should haue faire weather: which wordes when they had heard, they thanked our Captaine, and departed toward the wood to tell those newes vnto their felowes, who sodainly came all rushing out of the wood, seeming to be very glad for those wordes that our Captaine had spoken, and to shew that thereby they had had, and felt great ioy, so soone as they were before our ships, they altogether gaue out three great shriekes, and thereupon beganne to sing and dance, as they were wont to doe. But for a resolution of the matter Taignoagny and Domagaia tolde our Captaine, that their Lord Donnacona would by no meanes permit that any of them should goe with him to Hochelaga, vnlesse he would leaue him some hostage to stay with him: our Captaine answered them, that if they would not goe with him with a good will, they should stay, and that for all them he would not leaue off his iourney thither.

How our Captaine with all his Gentlemen and fiftie Mariners departed with our Pinnesse, and the two boates from Canada to goe to Hochelaga: and also there is described, what was seene by the way vpon the said riuier.

Chap. 5.

The next day being the 19 of September we hoysed saile, and with our Pinnesse and two boates departed to goe by the riuier with the flood, where on both shores of it we beganne to see as goodly a countrey as possibly can with eye be seene, all replenished with very goodly trees, and vines laden as full of grapes as could be all along the riuier, which rather seemed to haue bin planted by mans hand than otherwise. True it is, that because they are not dressed and wrought as they should be, their bunches of grapes are not so great nor sweete as ours: also we sawe all along the riuier many houses inhabited of fishers, which take all kindes of fishes, and they came with as great familiaritie and kindnesse vnto vs, as if we had beene their Countrey men, and brought vs great store of fish, with other such things as they had, which we exchanged with them for other wares, who lifting vp their hands toward heauen, gaue many signes of ioy: we stayed at a place called Hochelai, about fife and twentie leagues from Canada, where the riuier waxeth very narrow, and runneth very swift, wherefore it is very dangerous, not onely for that, but also for certaine great stones that are therein: Many boates and barkes came vnto vs, in one of which came one of the chiefe Lords of the countrey, making a long discourse, who being come neere vs, did by euident signes and gestures shew vs, that the higher the riuier went, the more dangerous it was, and bade vs take heede of our selues. The said Lord presented and gaue vnto our Captaine two of his owne children, of which our Captaine tooke one being a wench 7 or 8 eight yeres

Vines laden
with grapes.

Hochelay.

peres old, the man child he gaue him againe, because it was too young, for it was but two or three peeres old. Our Captaine as friendly and as courteously as he could did entertaine and receiue the said Lord and his company, giuing them certaine small trifles, and so they departed toward the shore againe. Afterwards the sayd Lord and his wife came vnto Canada to visite his daughter, bringing vnto our Captaine certaine small presents. From the nineteenth vntill the eight and twentieth of September, we sailed vp along the saide riuer, neuer losing one houre of time, all which time we saw as goodly and pleasant a countrey as possible can be wished for, full (as we haue said before) of all sortes of goodly trees, that is to say, Oakes, Elmes, Walnut-trees, Cedars, Firres, Ashes, Beye, Willowes, and great store of Vines, all as full of grapes as could be, so that if any of our fellowes went on shore, they came home laden with them: there are likewise many Cranes, Swannes, Geese, Duckes, Feasants, Partridges, Chyulhes, Blackbirds, Turcles, Finches, Redbreasts, Nightingales, Sparrowes of diuerse kindes, with many other sortes of Birds, euen as in France, and great plentie and store. Upon the 28 of September, we came to a great wide lake in the middle of the riuer five or six leagues broad, and twelue long, all that day we went against the tide, hauing but two fadome water, still keeping the sayd scantling: being come to one of the heads of the lake, we could espie no passage or going out, nay, rather it seemed to haue bene closed and shut vp round about, and there was but a fadome and an halfe of water, little more or lesse. And therefore we were constrained to cast anker, and to stay with our Pinnesse, and went with our two boates to seeke some going out, and in one place we found foure or five branches, which out of the riuer come into the lake, and they came from Hochelaga. But in the said branches, because of the great fiercenesse and swiftnesse wherewith they breake out, and the course of the water, they make certaine barres and shoulds, and at that time there was but a fadome water. Those Shouldes being passed, we found foure or five fadome, and as farre as we could perceiue by the flood, it was that time of the yeere that the waters are lowest, for at other times they flowe higher by three fadomes. All these foure or five branches do compasse about five or six Islands very pleasant, which make the head of the lake: about fiftene leagues beyond, they doe all come into one. That day we landed in one of the saide Islands, and met with five men that were hunting of wilde beastes, who as freely and familiarly came to our boates without any feare, as if we had euer bene brought vp together. Our boates being somewhat neere the shore, one of them tooke our Captaine in his armes, and caried him on shore, as lightly and as easily as if he had bene a child of five peeres old: so strong and sturdie was this fellow. We found that they had a great heape of wilde Rats that liue in the water, as bigge as a Conny, and very good to eate, which they gaue vnto our Captaine, who for a recompence gaue them kniues and glasse Beades. We asked them with signes if that was the way to Hochelaga, they answered yea, and that we had yet three dayes sayling thither.

The lake of Angolme.

Wild rats as big as Conies.

How our Captaine caused our boates to be mended and dressed to goe to Hochelaga: and because the way was somewhat difficult and hard, we left our Pinnesse behinde: and how we came thither, and what entertainment we had of the people,

Chap. 6.

The next day our Captaine seeing that for that time it was not possible for our Pinnesse to goe on any further, he caused our boates to be made readie, and as much munition and victuals to be put in them, as they could well beare: he departed with them, accompanied with many Gentlemen, that is to say, Claudius of Ponte Briand, Cup-beater to the Lord Dolphin of France, Charles of Pommeraye, John Gouion, John Powler, with twentie & eight Partners: and Mace Iallobert, and William Briton, who had the charge vnder the Captaine of the other two ships, to goe vp as farre as they could into that riuer: we sayled with good and prosperous weather vntill the second of October, on which day we came to the towne of Hochelaga, distant from the place where we had left our Pinnesse five and fortie leagues. In which place of Hochelaga, and all the way we went, we met with many of those countriemen, who brought vs fish and such other vicuals as they had, still dancing and greatly reioycing at our comming. Our Captaine to lure them in, and to keepe them our friends, to recompence them, gaue them kniues, beades, and such small trifles, wherewith they were greatly satisfied. So soone as we were come neere Hochelaga, there came to meete vs aboue a thousand persons, men, women and children, who afterward did as friendly and merily entertaine and receiue vs as any father would doe his child, which he had not of long time seene, the men dauncing on one side, the women on another, and likewise the children on another: after that they brought vs great store of fish, & of their bread made

They leave their Pinnesse behind.

Hochelaga distant from the lake of Angolme 45 leagues.

made

made of Millet, casting them into our boates so thicke, that you would haue thought it to fall from heauen. Which when our Captaine saw, he with many of his company went on shore: so soone as euer we were aland they came clustring about vs, making very much of vs, bringing their young children in their armes, onely to haue our Captaine and his company to touch them, making signes and shewes of great mirth and gladnesse, that lasted more than halfe an houre. Our Captaine seeing their louing kindnesse and entertainment of vs, caused all the women orderly to be set in aray, and gaue them Beades made of Tinne, and other such small trifles, and to some of the men he gaue knives: then he returned to the boates to supper, and so passed that night, all which while all those people stood on the shore as neere our boates as they might, making great fires, and dauncing very merily, still crying Aguiaze, which in their tongue signifieth Mirth and Saferie.

How our Captaine with five Gentlemen and twentie armed men all well in order, went to see the towne of *Hochelaga*, and the situation of it.

cumbers, and
other fruits.
Plentie of fish
and the preser-
uing thereof.

Our Captaine the next day very earely in the morning, hauing very gorgeously attired himselfe, caused all his company to be set in order to go to see the towne and habitation of those people, and a certaine mountaine that is somewhat neere the citie: with whom went also five Gentlemen and twentie Hariners, leauing the rest to keepe and looke to our boates: we tooke with vs three men of *Hochelaga* to bring vs to the place. All along as we went we found the way as well beaten and frequented as can be, the fairest and best countrey that possibly can be seene, full of as goodly great Dkes as are in any wood in France, vnder which the ground was all couered ouer with faire *Akozues*. After we had gone about foure or five miles, we met by the way one of the chiefest Lords of the citie, accompanied with many moe, who so soone as he sawe vs beckned and made signes vpon vs, that we must rest vs in that place where they had made a great fire and so we did. After that we had rested our selues there a while, the said Lord began to make a long discourse, euen as we haue saide aboue, they are accustomed to doe in signe of mirth and friendship, shewing our Captaine and all his company a ioyfull countenance, and good will, who gaue him two hat-bets, a paire of knives and a crosse which he made him to kisse, and then put it about his necke, for which he gaue our Captaine heartie thanks. This done, we went along, and about a mile and a halfe farther, we began to finde goodly and large fieldes, full of such corne as the countrie yeeldeth. It is euen as the Millet of *Bresil*, as great and somewhat bigger then small peason, wherewith they liue euen as we doe with ours. In the midst of those fieldes is the citie of *Hochelaga*, placed neere, and as it were ioyned to a great mountaine that is tilted round about, very fertill, on the top of which you may see very farre, we named it Mount Roiall. The citie of *Hochelaga* is round, compassed about with timber, with three courtes of Rampires, one within another framed like a sharpe Spire, but laide acrosse aboue. The middlemost of them is made and built as a direct line, but perpendicular. The Rampires are framed and fashioned with peeces of timber, layd along on the ground, very well and cunningly ioyned together after their fashion. This enclosure is in height about two rods. It hath but one gate or entrie thereat, which is shut with piles, stakes, and barres. Duer it, and also in many places of the wall, there be places to runne along, and ladders to get by, all full of stones, for the defence of it. There are in the towne about fiftie houses, about fiftie paces long, and twelue, or fiftene broad, built all of wood, couered ouer with the bark of the wood as broad as any boord, very finely and cunningly ioyned together. Within the said houses, there are many roomes, lodgings and chambers. In the midst of euery one there is a great Court, in the middle whereof they make their fire. They liue in common together: then doe the husbands, wiues and children each one retire themselves to their chambers. They haue also on the top of their houses certaine garrets, wherein they keepe their corne to make their bread withall: they call it *Carraconny*, which they make as hereafter shall follow. They haue certaine peeces of wood, made hollow like those whereon we beat our hempo, and with certaine beetles of wood they beat their corne to powder: then they make paste of it, and of the paste, cakes or wreathes, then they lay them on a broad and hote stone, and then couer it with hote stones, and so they bake their bread in stead of Ovens. They make also sundry sorts of pottage with the said corne and also of pease and of beanes, whereof they haue great store, as also with other fruits, as *Bulke-Millions*, and very great Cucumbers. They haue also in their houses certaine vessels as bigge as any But or Tun, wherein they preserve and keepe their fish, causing the same in Sommer to be dried in the sunne, and liue therewith in winter, whereof they make

make great prouision, as we by experience haue seene. All their viands and meates are without any tast or sauour of salt at all. They sleepe vpon barkes of trees laide all along vpon the ground being ouer-spread with the skinnes of certaine wilde Beastes, wherewith they also cloth and couer themselves. The thing most precious that they haue in all the world they call Esurgny: it is as white as any snow: they take it in the said riuer of Cornibotz, in the maner folowing. When any one hath deserued death, or that they take any of their enemies in Marrres, first they kill him, then with certaine kniues they giue great slashes and strokes vpon their buttocks, flanks, thighs, and shoulders: then they cast the same bodie so mangled downe to the bottoome of the riuer, in a place where the said Esurgny is, and there leaue it ten or 12 houres, then they take it vp againe, and in the cuts find the said Esurgny of Cornibotz. Of them they make beads, and weare them about their necks, euen as we doe chaines of gold and siluer, accounting it the preciouslest thing in the world. They haue this vertue and propertie in them, they will stop or stanch bleeding at the nose, for we haue proued it. These people are giuen to no other exercise, but onely to husbandrie and fishing for their sustenance: they haue no care of any other wealth or commoditie in this world, for they haue no knowledge of it, and that is, because they neuer trauell and go out of their countrey, as those of Canada and Saguenay doe, albeit the Canadians with eight or nine Villages more alongst that riuer be subiects vnto them.

Esurgny good to stanch blood.

How we came to the Towne of *Hochelaga*, and the entertainment which there we had, and of certaine gifts which our Captaine gaue them, with diuers other things.

Chap. 8.

SO soone as we were come neere the Towne, a great number of the inhabitants thereof came to present themselves before vs after their fashion, making very much of vs: we were by our guides brought into the midst of the town. They haue in the middlemost part of their houses a large square place, being from side to side a good stones cast, whither we were brought, and there with signes were commanded to stay: then suddenly all the women and maidens of the Towne gathered themselves together, part of which had their armes full of young children, and as many as could came to rubbe our faces, our armes, and what part of the bodie soeuer they could touch, weeping for very joy that they saw vs, shewing vs the best countenance that possibly they could, desiring vs with their signes, that it would please vs to touch their children. That done, the men caused the women to withdraue themselves backe, then they euery one fate downe on the ground round about vs, as if they would haue shewen and rehearsed some Comedie or other shew: then presently came the women againe, euery one bringing a fouresquare Matte in manner of Carpets, and spreading them abroad on the ground in that place, they caused vs to sit vpon them. That done, the Lord & King of the countrey was brought vpon 9 or 10 mens shoulders, (whom in their tongue they call Agouhanna) sitting vpon a great Stagges skinne, and they laide him downe vpon the foresaid mats neere to the Captaine, euery one beckning vnto vs that hee was their Lord and King. This Agouhanna was a man about fiftie yeeres old: he was no whit better apparelled then any of the rest, onely excepted, that he had a certaine thing made of the skinnes of Hedgehogs like a red wreath, and that was in stead of his Crowne. He was full of the pallie, and his members shronke togither. After he had with certaine signes saluted our Captaine and all his companie, and by manifest tokens bid all welcome, he shewed his legges and armes to our Captaine, and with signes desired him to touch them, and so he did, rubbing them with his owne hands: then did Agouhanna take the wreath or crowne he had about his head, and gaue it vnto our Captaine: that done they brought before him diuerse diseased men, some blinde, some cripple, some lame and impotent, and some so old that the haire of their eyelids came downe and couered their cheekes, and layd them all along before our Captaine, to the end they might of him be touched: for it seemed vnto them that God was descended and come downe from heauen to heale them. Our Captaine seeing the misery and deuotion of this poore people, recited the Gospel of Saint Iohn, that is to say, In the beginning was the word; touching euery one that were diseased, praying to God that it would please him to open the hearts of this poore people, and to make them know his holy word, and that they might receiue Baptisme and Christendome: that done, he tooke a Seruice-booke in his hand, and with a loud voyce read all the passion of Christ, word by word, that all the standers by might heare him: all which while this poore people kept silence, & were maruellously attentiu, looking vp to heauen, and imitating vs in gestures. Then he caused the men all orderly to be set on one side, the women on another, & likewise the children on another, & to the chiefest of them he gaue hatchets, to the other kniues, & to the women beads & such other small trifles. Then where y children were, he cast rings, counters, & bzooches made of Tin,

whereat they seemed to be very glad. That done, our Captaine commanded Trumpets and other muscicall instruments to be sounded, which when they heard, they were very merie. Then we tooke our leaue and went to our boate: the women seeing that, put themselves befoze to stay vs, and brought vs out of their meates that they had made readie for vs, as fish, portage, beanes, and such other things, thinking to make vs eate, and dine in that place: but because the meates had no sauour at all of salt, we liked them not, but thanked them, and with signes gaue them to vnderstand that we had no neede to eate. When wee were out of the Towne, diuerse of the men and women followed vs, and brought vs to the toppe of the foresaid mountaine, which wee named Mount Roial, it is about a league from the Towne. When as we were on the toppe of it, we might discern and plainely see thirtie leagues about. On the Northside of it there are many hilles to be scene running West and East, and as many more on the South, amongst and betweene the which the Countrey is as faire and as pleasant as possibly can be scene, being leuell, smooch, and very plaine, fit to be husbanded and culled: and in the midst of those fieldes we saw the riuer further vp a great way then where we had left our boates, where was the greatest and the swiftest fall of water that any where hath bene scene, and as great, wide, and large as our sight might discern, going Southwest along three faire and round mountaines that wee sawe, as we iudged about fiftene leagues from vs. Those which brought vs thither tolde and shewed vs, that in the sayd riuer there were three such falles of water more, as that was where we had left our boates: but because we could not vnderstand their language, we could not knowe how farre they were one from another. Moreover they shewed vs with signes, that the said three fals being past, a man might sayle the space of three monethes more alongst that Riuer, and that along the hilles that are on the North side there is a great riuer, which (euen as the other) commeth from the West, we thought it to be the riuer that runneth through the Countrey of Saguenay: and without any signe or question moued or asked of them, they tooke the chayne of our Captaines whistle, which was of silver, and the dagger-haft of one of our fellow Mariners, hanging on his side being of yelow copper guilt, and shewed vs that such stuffe came from the said Riuer, and that there be Agouionda, that is as much to say, as euill people, who goe all armed euen to their fingers ends. Also they shewed vs the manner and making of their armour: they are made of cordes and wood, finely and cunningly wrought together. They gaue vs also to vnderstande that those Agouionda doe continually warre one against another, but because we did not vnderstand them well, we could not perceiue how farre it was to that Countrey. Our Captaine shewed them redde Copper, which in their language they call Caignetadze, and looking towarde that Countrey, with signes asked them if any came from thence, they shaking their heads answered no: but they shewed vs that it came from Saguenay, and that lyeth cleane contrary to the other. After we had heard and scene these things of them, we dreyne to our boates accompanied with a great multitude of those people: some of them when as they sawe any of our fellows weary, would take them vp on their shoulders, and carry them as on horsebacke. So soone as we came to our boates we hoysed saile to goe toward our Pinnesse, doubting of some mischance. Our departure grieved and displeased them very much, for they followed vs along the riuer as farre as they could: we went so fast that on munday being the fift of the moneth, we hoysed saile, and with our Pinnesse and boates departed from thence toward the Province of Canada, to the port of the Holy Crosse, where we had left our ships. The seuenth day we came against a riuer that commeth from the North, and entered into that riuer, at the entrance whereof are foure little Ilands full of faire and goodly trees: we named that riuer The riuer of Fouertz: But because one of those Ilandes stretcheth it selfe a great way into the riuer, our Captaine at the point of it caused a goodly great Crosse to be set vp, and commanded the boates to be made readie, that with the next tide he might goe vp the saide riuer, and consider the qualitie of it, which wee did, and that day went vp as farre as we could: but because we found it to be of no importance, and very shal- low, we returned and sayled downe the riuer.

How we came to the Port of the *Holy Crosse*, and in what state we found our ships: and how the Lord of the Countrey came to visite our Captaine, and our Captaine him: and of certaine particular customes of the people.

Chap. 9.

Vpon Monday being the 11 of October we came to the Port of the Holy Crosse, where our ships were, and found that the Masters and Mariners we had left there, had made and

reared

reared a trench before the ships, altogether closed with great peeces of timber set by right and very well fastened together: then had they beset the said trench about with peeces of Artillerie and other necessarie things to shield and defend themselves from the power of all the countrey. So soone as the Lord of the countrey heard of our comming, the next day being the twelfth of October, he came to visite vs, accompanied with Taignoagny, Domagaia and many others, saying to be very glad of our comming, making much of our Captaine, who as friendly as he could, entertained them, albeit they had not deserved it. Donnacona their Lord desired our Captaine the next day to come and see Canada, which he promised to doe: for the next day being the 13 of the moneth, he with all his Gentlemen and sistré Mariners very well appointed, went to visite Donnacona and his people, about a league from our ships. The place where they make their abode is called Stadacona. When we were about a stones cast from their houses, many of the inhabitants came to meete vs, being all set in a ranke, and (as their custome is) the men all on one side, & the women on the other, still dancing and singing without any ceasing: and after we had saluted and receiued one another, our Captaine gaue them knives and such other sleight things: then he caused all the women and childzen to passe along before him, giuing ech one a ring of Tin, for which they gaue him hearty thanks: that done, our Captaine was by Donnacona and Taignoagny, brought to see their houses, which (the qualitie considered) were very well provided, and stored with such victuals as the countrey yeeldeth, to passe away the winter withall. Then they shewed vs the skins of five mens heads spread upon boords as we doe vse parchment: Donnacona told vs that they were skins of Toudamani, a people dwelling toward the South, who continually doe warre against them. Moreover they told vs, that it was two yeeres past that those Toudamans came to assault them, yea euen into the said riuer, in an Island that lyeth ouer against Saguenay, where they had bin the night before, as they were going a warfaring in Hognedo, with 200 persons, men, women, and childzen, who being all asleepe in a Fort that they had made, they were assaulted by the said Toudamans, who put fire round about the Fort, and as they would haue come out of it to saue themselves, they were all slaine, only five excepted, who escaped, for which losse they yet sorrowed, shewing with signes, that one day they would be reuenged: that done, we came to our ships againe.

Stadacona.

Toudamani
dwelling
Southward
of Canada.

The manner how the people of that Countrey liue: and of certaine conditions: of their faith, maners, and customes.

Chap. 10.

This people beleue no whit in God, but in one whom they call Cudruaigni: they say that often he speaketh with them and telleth them what weather shal follow, whether good or bad. Moreover they say, that when he is angry with them he casteth dust into their eyes: they beleue that when they die they go into the stars, & thence by litle & litle descend downe into the Horizon, euen as the stars doe, & that then they go into certaine greene fields full of goodly faire & precious trees, flowers, & fruits. After that they had giuen vs these things to vnderstand, we shewed them their error, and told that their Cudruaigni did but deceiue them, for he is but a Diuell & an euill spirit: affirming vnto them, that there is but one onely God, who is in heauen, and who giueth vs all necessities, being the Creatour of all himselfe, and that onely we must beleue in him: moreover, that it is necessarie for vs to be baptised, other wise wee are damned into hell. These and many other things concerning our faith and religion we shewed them, all which they did easily beleue, calling their Cudruaigni, Agouiada, that is to say, naught, so that very earnestly they desired and prayed our Captaine that he would cause them to be baptised, and their Loyre, and Taignoagny, Domagaia, and all the people of the towne came vnto vs, hoping to be baptised: but because we did not thoroughly know their minde, and that there was no bodie could teach them our beliefe & religion, we excused our selues, desiring Taignoagny & Domagaia to tell the rest of their countrey men, that he would come againe another time, & bring Priests & ch: some with vs, for without them they could not be baptised: which they did easily beleue, for Domagaia & Taignoagny had seene many children baptised in Brittain whiles they were there. Which promise when they heard they seemed to be very glad. They liue in common together, and of such commodities as their countrey yeeldeth they are indifferently well stored, the inhabitants of the countrey cloth themselves with the skins of certaine wilde beasts, but very miserably. In winter they weare hosen and shoes made of wilde beasts skins, and in Sommer they goe barefooted. They keepe and obserue the rites of matrimonie, sauing that euery one weddeth 2 or 3 wives, which (their husbands being dead) do neuer marrie againe, but for the death of their husbands weare a certaine blacke weede all the daies of their life, besmearing al their faces with cole-dust & grease mingled together as thicke as the backe of a knife, and by that they are knowne to be widowes.

They desire to
be baptized.

Their Dais.

Tabacco described.

They haue a filthy and detestable vse in marryng of their maidens, and that is this, they put them all (after they are of lawfull age to marry) in a common place, as harlots free for euery man that wil haue to doe with them, vntill such time as they find a match. This I say, because I haue seene by experience many houses full of those Damoises, euen as our schooles are full of children in France to learne to reade. Moreouer, the misrule and riot that they keepe in those houses is very great, for very wantonly they sport and dally together, shewing whatsoeuer God hath sent them. They are no men of great labour. They digge their grounds with certaine peeces of wood, as bigge as halfe a sword, on which ground groweth their corne, which they call *Offici*: it is as bigge as our small peason: there is great quantitie of it growing in Breill. They haue also great store of *Muske-millions*, *Pompiens*, *Courds*, *Cucumbers*, *Peason* and *Beanes* of euery colour, yet differing from ours. There groweth also a certaine kind of herbe, whereof in Sommer they make great prouision for all the peere, making great account of it, and euery men vse of it, and first they cause it to be dried in the sunne, then weare it about their neckes wrapped in a little beasts skinne made like a little bagge, with a hollow peece of stone or wood like a pipe: then when they please they make powder of it, and then put it in one of the ends of the said Cornet or pipe, and laying a cole of fire vpon it, at the other ende sucke so long, that they fill their bodies full of smoke, till that it cometh out of their mouth and nostrils, euen as out of the *Tonnell* of a chimney. They say that this doth keepe them warme and in health: they neuer goe without some of it about them. We our selues haue tryed the same smoke, and hauing put it in our mouthes, it seemed almost as hot as *Pepper*. The women of that countrey doe labour much more then the men, as well in fishing (where to they are greatly giuen) as in tilling and husbanding their grounds, and other things: as well the men as women and children, are very much moze able to resist cold then sauage beasts, for we with our owne eyes haue seene some of them, when it was coldest (which cold was extreme raw and bitter) come to our ships starke naked going vpon snow & yce, which thing seemeth incredible to them that haue not seene it. When as the snow and yce lyeth on the ground, they take great store of wilde beasts, as *Faunes*, *Stags*, *Beares*, *Harterus*, *Hares* & *Foxes*, with diuers other sorts whose flesh they eate raw, hauing first dried it in y^e sunne or smoke, and so they doe their fish. As farre forth as we could perceiue and vnderstand by these people, it were a very easie thing to bring them to some familiaritie & ciuility, and make them learne what one would. The Lord God for his mercies sake set therunto his helping hand when he seeth cause. Amen.

Of the greatnesse and depth of the said river, and of the sorts of beasts, birdes, fishes, and other things that we haue seene, with the situation of the place.

Chap. II.

It is now found to be but 200 leagues.

The said river beginneth beyond the Island of The Assumption, ouer against the high mountaines of *Hoguedo*, and of the seven Islands. The distance ouer from one side to the other is about 35 or 40 leagues. In the middelt it is about 200 fadome deepe. The surest way to sayle vpon it is on the South side. And toward the North, that is to say, from the said 7 Islands, from side to side, there is seven leagues distance, where are also two great rivers that come downe from the hills of *Saguenay*, and make diuers very dangerous shelles in the sea. At the entrance of those two rivers we saw many & great store of *Whales* and *Sea horses*. Quertwart the said Islands there is another little river that runneth along those marish grounds about 3 or 4 leagues, wherein there is great store of water foules. From the entrance of that river to *Hochelaga* there is about 300 leagues distance: the originall beginning of it is in the river that cometh from *Saguenay*, which riseth and springeth among high & steepe hills: it entreteth into that river before it cometh to the Province of *Canada* on the North side. That river is very deepe, high, and streight, wherefore it is very dangerous for any vessel to goe vpon it. After that river followeth the Province of *Canada*, wherein are many people dwelling in open boroughes and villages. There are also in the circuit and territorie of *Canada*, along, and within the said river, many other Islands, some great, & some small, among which there is one that containeth about ten leagues in length, full of goodly and high trees, and also many *Vines*. You may goe into it from both sides, but yet the surest passage is on the South side. On the shore or banke of that river Westward, there is a goodly, faire, and delectable bay or creeke, conuenient and fit for to harborough ships. Hard by there is in that river one place very narrow, deepe, & swift running, but it is not passing the third part of a league, ouer against the which there is a goodly high peece of land, with a towne therein: and the countrey about it is very well tilled & wrought, & as good as possibly can be seene. That is the place and abode of *Donnacona*, and of our two men we tooke in our first voyage, it is called *Stadacona*. But before we come to it, there are 4 other peopled townes, that is to say, *Ayraste*, *Starnatan*,

Starnatan, Tailla, which standeth vpon a hill, Sciradin, and then Stadagona, vnder which towne toward the North the riuer and port of the holy crosse is, where we staid from the 15 of September, vntill the 16 of May 1536, and there our ships remained dry, as we haue said before. That place being past, we found the habitation of the people called Teguenondahi, standing vpon an high mountaine, and the valley of Hochelay, which standeth in a Champaigne countrey. All the sayd countrey on both sides of the riuer as farre as Hochelay & beyond, is as faire and plaine as euer was seene. There are certaine mountaines farre distant from the said riuer, which are to be seene aboue the foresaid townes, from which mountaines diuers riuers descend, which fall into the said great riuer. All that countrey is full of sundry sorts of wood and many Vines, vnlesse it be about the places that are inhabited, where they haue pulled vp the trees to till and labour the ground, and to build their houses and lodgings. There is great store of Stags, Deere, Beares, and other such like sorts of beasts, as Conies, Hares, Martens, Foxes, Otters, Beuers, Weasels, Badgers, and Rats exceeding great, and diuers other sortes of wilde beasts. They cloth themselves with the skinnies of those beasts, because they haue nothing else to make them apparell withall. There are also many sorts of birdes, as Cranes, Swannes, Bustards, wilde Geese white and gray, Duckes, Thrushes, Black-birdes, Turtles, wilde Pigeons, Linnets, Finches, Red-breasts, Stares, Nightingales, Sparrowes, and other Birdes, euen as in France. Also, as we haue said before, the said riuer is the plentifullest of fish that euer hath of any man bene seene or heard of, because that from the mouth to the end of it, according to the it seasons, you shall finde all sorts of fresh water fish and salt. There are also many Whales, Porpoises, Seahorses, and Adhothuis, which is a kind of fish that we had neuer seene nor heard of before. They are as great as Porpoises, as white as any snow, their bodie and head fashioned as a graphound, they are wont alwaies to abide betwene the fresh & salt water, which beginneth betwene the riuer of Saguenay and Canada.

Riuers falling from mountaines.

Of certaine aduertisements and notes giuen vnto vs by those countrey men, after our returne from Hochelaga.

Chap. 12.

After our returne from Hochelaga, we dealt, traffickt, and with great familiaritie and loue were conuersant with those that dwelt neere vnto our ships, except that sometimes we had strife and contention with certaine naughtie people, full sore against the will of the others. Wee vnderstood of Donnacona and of others, that the said riuer is called the riuer of Saguenay, and goeth to Saguenay, being somewhat more then a league farther Westnorthwest, and that 8 or 9 dayes iourneys beyond, it will beare but small boats. But the right and readie way to Saguenay is vp that riuer to Hochelaga, and then into another that cometh from Saguenay, and then entereth into the foresaid riuer, & that there is yet one moneths sayling thither. Whereupon, they told vs and gaue vs to vnderstand, that there are people clad with cloth as we are, very honest, and many inhabited townes, and that they haue great store of Gold and red Copper: and that about the land beyond the said first riuer to Hochelaga and Saguenay, is an Island enuironed round about with that and other riuers, and that beyond Saguenay the said riuer entereth into two or 3 great lakes, and that there is a Sea of fresh water found, and as they haue heard say of those of Saguenay, there was neuer man heard of that found out the end thereof: for, as they told vs, they themselves were neuer there. Whereupon they told vs, that where we had left our Pinnesse when we went to Hochelaga, there is a riuer that goeth Southwest, from whence there is a whole moneths sayling to goe to a certaine land, where there is neither yce nor snow seene, where the inhabitants do continually warre one against another, where is great store of Oranges, Almonds, Nuts, and Apples, with many other sortes of fruits, and that the men and women are clad with beasts skinnies euen as they: we asked them if there were any gold or red copper, they answered no. I take this place to be toward Florida, as farre as I could perceiue and vnderstand by their signes and tokens.

The right way to Saguenay.

Store of golde & red copper.

Two or three great lakes. Mare dulcium aquarum.

The riuer of Irrouacas falling into the lake of Angoulême.

Of a strange and cruell disease that came to the people of Stadacona, wherewith because we did haunt their company, we were so infected, that there died 25 of our company.

Chap. 13.

In the moneth of December, wee vnderstood that the pestilence was come among the people of Stadacona, in such sort, that before we knew of it, according to their confession, there were dead aboue 50: whereupon we charged them neither to come neere our Fort, nor about our ships, or vs. And albeit we had giuen them from vs, the said vnknoen sickness began to spread it selfe amongst

amongst vs, after the strangest sort that euer was eyther heard of or seene, insomuch as some did lose all their strength, and could not stand on their feete, then did their legges swell, their sinnowes shrink as blacke as any cole. Others also had all their skins spotted with spots of blood of a purple colour: then did it ascend by to their ankels, knees, thighes, shoulders, armes, and necke: their mouth became stincking, their gummes so rotten, that all the flesh did fall off, euen to the rootes of the teeth, which did also almost all fall out. With such infection did this sicknesse spread it selfe in our three ships, that about the middle of February, of a hundred and tenne persons that we were, there were not ten whole, so that one could not helpe the other, a most horrible and pitifull case, considering the place we were in, forsomuch as the people of the countrey would dayly come befoze our fort, and saw but few of vs. There were already eight dead, and more then fifty sicke, and as we thought, past all hope of recovery. Our Captaine seeing this our misery, & that the sicknesse was gone so farre, ordained and commanded, that euery one should deuoutly prepare himselfe to prayer, and in remembrance of Christ, caused his Image to be set vpon a tree, about a flight shot from the fort amidst the yce and snow, giuing all men to vnderstand, that on the Sunday following, seruice should be said there, and that whosoever could goe, sicke or whole, should goe thither in Procession, singing the seuen Psalmes of Dauid, with other Letanies, praying most heartily that it would please the said our Christ to haue compassion vpon vs. Seruice being done, and as well celebrated as we could, our Captaine there made a vow, that if it would please God to giue him leaue to returne into France, he would go on Pilgrimage to our Ladie of Rocquemado. That day Philip Rougemont, bozne in Amboise, died, being 22 yeeres olde, and because the sicknesse was to vs vnknown, our Captaine caused him to be ripped to see if by any meanes possible we might know what it was, and so seeke meanes to saue and preserve the rest of the company: he was found to haue his heart white, but rotten, and more then a quart of red water about it: his liuer was indifferent faire, but his lungs blacke and mortified, his blood was altogether shrinked about the heart, so that when he was opened great quantitie of rotten blood issued out from about his heart: his milt toward the backe was somewhat perished, rough as if it had bene rubbed against a stone. Moreouer, because one of his thighes was very blacke without, it was opened, but within it was whole and sound: that done, as well as we could he was buried. In such sort did the sicknesse continue and encrease, that there were not aboue three sound men in the ships, and none was able to goe vnder hatches to draw drinke for himselfe, nor for his fellowes. Sometimes we were constrained to bury some of the dead vnder the snow, because we were not able to digge any graues for them the ground was so hard frozen, and we so weake. Besides this, we did greatly feare that the people of the countrey would perceiue our weakenesse and miserie, which to hide, our Captaine, whom it pleased God alwayes to keepe in health, would go out with two or three of the company, some sicke and some whole, whom when he saw out of the Fort, he would throw stones at them and chide them, faigning that so soone as he came againe, he would beate them, and then with signes shewe the people of the countrey that hee caused all his men to worke and labour in the ships, some in calking them, some in beating of chalke, some in one thing, and some in another, and that he would not haue them come forth till their worke was done. And to make his tale seeme true and likely, he would make all his men whole & sound to make a great noise with knocking stickes, stones, hammers, and other things together, at which time we were so oppressed and grieved with that sicknesse, that we had lost all hope euer to see France againe, if God of his infinite goodnesse and mercie had not with his pitifull eye looked vpon vs, and reuealed a singular and excellent remedie against all diseases vnto vs, the best that euer was found vpon earth, as hereafter shall follow.

How long we stayed in the Port of the holy Crosse amidst the snow and yce, and how many died of the said disease, from the beginning of it to the midst of March.

Chap. 14.

From the midst of Nouember vntill the midst of March, we were kept in amidst the yce aboue two fadomes thicke, and snow aboue foure foote high and more, higher then the sides of our ships, which lasted till that time, in such sort, that all our drinckes were frozen in the Vessels, and the yce through all the ships was aboue a hand-breadth thicke, as well aboue hatches as beneath, and so much of the riuer as was fresh, euen to Hochelaga, was frozen, in which space there died five and twentie of our best and chiefe men, and all the rest were so sicke, that wee thought they should neuer recouer againe, only three or foure excepted. Then it pleased God to cast his pitifull eye vpon vs, and sent vs the knowledge of remedie of our healthes and recovery, in such maner as in the next Chapter shall be shewed.

How

How by the grace of God we had notice of a certaine tree, whereby we all recovered our health: and the maner how to vse it.

Chap. 15.

Our Captaine considering our estate (and how that sicknesse was encreased and hot amongst vs) one day went forth of the Foze, and walking vpon the yce, hee saw a troupe of those Countrey men comming from Stadacona, among which was Domagaia, who not passing ten or twelue dayes afore, had bene very sicke with that diseale, and had his knees swolne as bigge as a child of two yeres old, all his sinews shrunke together, his teeth spoyled, his gummies rotten, and sinking. Our Captaine seeing him whole and sound, was thereat maruellous glad, hoping to vnderstand and know of him how he had healed himselfe, to the end he might ease and help his men. So soone as they were come neere him, he asked Domagaia how he had done to heale himselfe: he answered, that he had taken the iuice and sappe of the leaues of a certaine Tree, and therewith had healed himselfe: for it was a singular remedy against that diseale. Then our Captaine asked of him if any were to be had thereabout, desiring him to shew him, for to heale a seruant of his, who whilest he was in Canada with Donnacona, was stricken with that diseale: That he did because he would not shew the number of his sicke men, Domagaia straight sent two women to fetch some of it, which brought ten or twelue branches of it, and therewithall shewed the way how to vse it, and that is thus, to take the barke and leaues of the sayd tree, and boile them together, then to drinke of the sayd decoction euery other day, and to put the dregs of it vpon his legs that is sicke: moreover, they told vs, that the vertue of that tree was, to heale any other diseale: the tree is in their language called Ameda or Hanneda, this is thought to be the Sassafras tree. Our Captain presently caused some of that drinke to be made for his men to drinke of it, but there was none durst tast of it, except one or two, who ventured the drinking of it, only to tast & proue it: the other seeing that did the like, and presently recovered their health, and were deliuered of that sickenes, & what other diseale soener, in such sorte, that there were some had bene diseased and troubled with the French Pockes foure or fife yeres, and with this drinke were cleane healed. After this medicine was found and proued to be true, there was such strife about it, who should be first to take of it, that they were ready to kill one another, so that a tree as big as any Oake in France was spoiled and lopped bare, and occupied all in fife or sixe daies, and it wrought so wel, that if all the phisicians of Mountpelier and Louaine had bene there with all the drugs of Alexandria, they would not haue done so much in one yere, as that tree did in sixe dayes, for it did so preuaile, that as many as used of it, by the grace of God recovered their health.

A perfect remedy against the french Pockes.

How the lord Donnacona accompanied with Taignoagny and diuers others, faining that they would goe to hunt Stags, and Deere, taried out two moneths, and at their returne brought a great multitude of people with them, that we were not wont to see before.

Chap. 16.

While that diseale lasted in our ships, the lord Donnacona, Taignoagny, with many others went from home, faining that they would goe to catch Stags and Deere, which are in their tongue called Aiounesta, and Asquenoudo, because the yce and snow was not so broken along the riuer that they could sayle: it was told vs of Domagaia and others, that they would stay out but a fortnight, & we beleueed it, but they stayed about two moneths, which made vs mistrust that they had bene gone to raise the countrey to come against vs, and do vs some displeasure, we seeing our selues so weake & faint. Albeit we had used such diligence and policie in our Foze, that if all the power of the countrey had bene about it, they could haue done nothing but looke vpon vs: and whilest they were forth, many of the people came dayly to our ships, and brought vs fresh meat, as Stags, Deere, fishes, with diuers other things, but held them at such an excellent price, that rather then they would sell them any thing cheape, many times they would carie them backe againe, because that yere the Winter was very long, and they had some scarcity and neede of them.

A long winter

How Donnacona came to Stadacona againe with a great number of people, and because he would not come to visit our Captaine, fained himselfe to be sore sicke, which he did only to haue the Captaine come see him.

Chap. 17.

On the one and twentieth day of April Domagaia came to the shore side, accompanied with diuers lusty and strong men, such as we were not wont to see, and tolde vs that their lord Donnacona

Donnacona would the next day come and see vs, and bring great store of Deeres flesh, and other things with him. The next day he came and brought a great number of men to Stadacona, to what end, and for what cause wee knew not, but (as the proverbe sayth) he that takes heed and shields himselfe from all men, may hap to scape from some: for we had need to looke about vs, considering how in number we were diminished, and in strength greatly weakened, both by reason of our sicknesse and also of the number that were dead, so that we were constrained to leaue one of our ships in the Port of the Holy Crosse. Our Captaine was warned of their comming, and how they had brought a great number of men with them, for Domagaia came to tell it vs, and durst not passe the riuer that was betwixt Stadacona and vs, as he was wont to doe, whereupon we mistrusted some treason. Our Captaine seeing this, sent one of his seruants to them, accompanied with Iohn Poulet being best beloued of those people, to see who were there, and what they did. The sayd Poulet & the other fained themselues onely to be come to visit Donnacona, & bring him certaine presents, because they had bene together a good while in the sayd Donnaconas Towne. So soone as he heard of their comming, he got himselfe to bed, faining to bee very sicke. That done, they went to Taignoagny his house to see him, and wheresoeuer they went, they saw so many people, that in a maner one could not stirre for another, and such men as they were neuer wont to see. Taignoagny would not permit our men to enter into any other houses, but still kept them company, and brought them halfe way to their ships, and tolde them that if it would please our captaine to shew him so much fauour as to take a Lord of the Countrey, whose name was Agonna, of whom hee had receiued some displeasure, and carie him with him into France, he should therefoze for euer be bound vnto him, and would doe for him whatsoeuer hee would command him, and bade the seruant come againe the next day, and bring an answer. Our Captain being aduertised of so many people that were there, not knowing to what end, purposed to play a prettie pvancke, that is to say, to take their Lord Donnacona, Taignoagny, Domagaia, and some moze of the chiefest of them prisoners, in so much as before hee had purposed, to bring them into France, to shew vnto our King what he had seene in those Westerne parts, and maruels of the world, for that Donnacona had told vs, that he had bene in the Countrey of Saguenay, in which are infinite Rubies, Gold, and other riches, and that there are white men, who clothe themselves with woollen cloth euen as we doe in France. Howeuer he reported, that hee had bene in another countrey of a people called Picquemians, and other strange people. The sayd Lord was an olde man, and euen from his childehood had neuer left off nor ceased from traauailing into strange Countreys, as well by water and riuers, as by lande. The sayd Poulet, and the other hauing tolde our Captaine their Embassage, and shewed him what Taignoagny his will was, the next day he sent his seruant againe to bid Taignoagny come and see him, and shew what hee should, for he should be very well entertained, and also part of his will should be accomplished. Taignoagny sent him word, that the next day hee would come and bring the Lord Donnacona with him, and him that had so offended him, which hee did not, but stayed two dayes, in which time none came from Stadacona to our shippes, as they were wont to doe, but rather fled from vs, as if we would haue slaine them, so that then wee plainly perceiued their knauery.

led Picquemians

The towne of
Sidatin,

But because they vnderstood, that those of Sidatin did frequent our company, and that we had forsaken the bottome of a ship which we would leaue, to haue the olde nailes out of it, the third day following they came from Stadacona, and most of them without difficulty did passe from one side of the riuer to the other with small Skiffes: but Donnacona would not come ouer, at last they came to speake with our Captaine. There Taignoagny prayed him that hee would cause the foresayd man to be taken and caried into France. Our Captaine refused to doe it, saying, that his King had forbidden him to bring any man or woman into France, onely that he might bring two or three yong boyes to learne the language, but that he would willingly carie him to Newfoundland, and there leaue him in an Island. Our Captaine spake this, onely to assure them, that they should bring Donnacona with them, whom they had left on the other side: which wordes, when Taignoagny heard, hee was very glad, thinking hee should neuer returne into France againe, and therefore promised to come the next day, which was the day of the Holy Crosse, and to bring Donnacona and all the people with him.

How

How that vpon Holyrood day our Captaine caused a Crosse to be set vp in our Forte : and how the Lord *Donnacona*, *Taignoagny*, *Domagaia*, and others of their company came : and of the taking of the sayd Lord.

Chap. 18.

The third of May being Holyroode day, our Captaine for the solemnitie of the day, caused a goodly fayre crosse of 35 foote in height to bee set vp, vnder the crosse of which hee caused a shield to be hanged, wherein were the Armes of France, and ouer them was witten in antique letters, *Franciscus primus Dei gratia Francorum Rex regnat.* And vpon that day about noone, there came a great number of the people of *Stadacona*, men, women, and children, who told vs that their Lord *Donnacona*, *Taignoagny*, and *Domagaia* were comming, whereof we were very glad, hoping to retaine them. About two of the clocke in the afternoone they came, & being come neere our ships, our Captaine went to salute *Donnacona*, who also shewed him a mery countenance, albeit very fearefully his eyes were still bent toward the wood. Shortly after came *Taignoagny*, who bade *Donnacona* that he should not enter into our Forte, and therefore fire was brought forth by one of our men, & kindled where their Lord was. Our Captaine prayed him to come into our ships to eate & drinke as hee was wont to do, and also *Taignoagny*, who promised, that after a while he would come, and so they did, & entred into our ships : but first it was told our Captain by *Domagaia*, that *Taignoagny* had spoken ill of him, & that he had bid *Donnacona* hee should not come aboord our ships. Our Captaine perceiuing that, came out of the Forte, and saw that onely by *Taignoagny* his warning the women ran away, and none but men stayed in great number, wherefore he straight commanded his men to lay hold on *Donnacona*, *Taignoagny*, and *Domagaia*, & two more of the chiefeest whom he pointed vnto : then he commanded them to make the other to retire. Presently after, the said lord entred into the Fort with the Captaine, but by & by *Taignoagny* came to make him come out againe. Our Captaine seeing that there was no other remedy, began to call vnto them to take them, at whose crie and voice all his men came forth, and tooke the sayd Lord with the others, whom they had appointed to take. The Canadians seeing their Lord taken, began to run away, euen as sheepe before the wolfe, some crossing ouer the riuer, some through the woods, each one seeking for his owne aduantage. That done, we retired our selues, and laid by the prisoners vnder good guard and safety.

Donnacona,
Taignoagny, &
Domagaia taken.

How the said Canadians the night following came before our ships to seeke their men, crying and howling all night like Woolues : of the talke and conclusion they agreed vpon the next day : and of the gifts which they gaue our Captaine.

Chap. 19.

The night following they came before our ships, (the riuer being betwixt vs) striking their breasts, and crying and howling like woolues, still calling *Agouhanna*, thinking to speake with him, which our Captaine for that time would not permit, neither all the next day till noone, whereupon they made signes vnto vs, that we had hanged or killed him. About noone, there came as great a number in a cluster, as euer we saw, who went to hide themselves in the Forrest, except some, who with a loud voice would call and crie to *Donnacona* to speake vnto them. Our Captaine then commanded *Donnacona* to be brought vp on high to speake vnto them, and bade him be merrie, for after he had spoken, and shewed vnto the King of France what hee had seene in *Saguenay* and other countreys, after ten or twelue moneths, he should retorne againe, and that the King of France would giue him great rewards, whereat *Donnacona* was very glad, and speaking to the others, told it them, who in token of ioy, gaue out three great cries, and then *Donnacona* and his people had great talke together, which for want of interpreters, cannot be described. Our Captaine bade *Donnacona* that hee should cause them to come to the other side of the riuer, to the end they might better talke together without any feare, & that he should assure them : which *Donnacona* did, and there came a boate full of the chiefeest of them to the ships, and there anew began to talke together, giuing great praise to our captaine, and gaue him a present of foure and twenty chaines of *Esurgny*, for that is the greatest and preciouslest riches they haue in this world, for they esteeme more of that, then of any gold or silver. After they had long talked together, and that their Lord sawe that there was no remedy to auoide his going into France, hee commanded his people the next day, to bring him some victuals to serue him by the way. Our Captaine gaue *Donnacona*, as a great present, two Fryng pannes of copper, eight Hatchets, and other small trifles, as *Knives*, and *Beades*, whereof hee seemed to be very glad, who sent them

Foure and
twenty chaines
of *Esurgny*.

them to his wives and childzen. Likewise, he gaue to them that came to speake with Donacona, they thanked him greatly for them, and then went to their lodgings.

How the next day, being the fift of May, the sayd people came againe to speake vnto their Lord, and how foure women came to the shore to bring him victuals.

Chap. 20.

Vpon the fift of May, very early in the morning, a great number of the sayd people came againe to speake vnto their Lord, and sent a Boate, which in their tongue they call *Cashoni*, wherein were onely foure women, without any man, for feare their men should be retained.

These women brought great store of victuals, as great *Miller*, which is their cozne that they liue withall, flesh, fish, and other things after their fashion.

These women being come to our shippes, our Captaine did very friendly entertaine them. Then *Donnacona* prayed our Captaine to tell those women that hee should come againe after ten or twelue moneths, and bring *Donnacona* to Canada with him: this hee sayd onely to appease them, which our captaine did: wherefore the women, as well by words as signes, seemed to be very glad, giuing our Captaine thanks, and told him, if he came againe, and brought *Donnacona* with him, they would giue him many things: in signe whereof, each one gaue our Captaine a chaine of *Esurgny*, and then passed to the other side of the riuer againe, where stood all the people of *Stadacona*, who taking all leaue of their Lord, went home againe. On Saturday following, being the sixt of the moneth, we departed out of the sayd Port of *Santa Croix*, and came to harborough a little beneath the Island of *Orleans*, about twelue leagues from the Port of the Holy Crosse, and vpon Sunday we came to the Island of *Filberds*, where wee stayed vntill the sixteenth of that moneth, till the fiercenelle of the waters were past; which at that time ranne too swift a course, and were too dangerous to come downe along the riuer, and therefore we stayed till faire weather came. In the meane while many of *Donnaconas* subiects came from the riuer of *Saguenay* to him, but being by *Domagaia* aduertised, that their Lord was taken to bee carped into France, they were all amazed: yet for all that they would not leaue to come to our ships, to speake to *Donnacona*, who told them that after twelue moneths he should come againe, and that he was very well vsed by the Captaine, Gentlemen, and Partners. Which when they heard, they greatly thanked our Captaine and gaue their Lord three bundles of *Beauers*, and sea *Woolues* skinnies, with a great knife of red copper that cometh from *Saguenay*, and other things. They gaue also to our Captaine a chayne of *Esurgny*, for which our Captaine gaue them ten or twelue *Datchets*, and they gaue him hearty thanks, and were very well contented. The next day, being the sixteenth of May, we hoysed sayle, and came from the said Island of *Filberds*, to another about fiftene leagues from it, which is about fife leagues in length, and there, to the end we might take some rest the night following, we stayed that day, in hope the next day we might passe and auoide the dangers of the riuer of *Saguenay*, which are great. That euening we went aland and found great store of Hares, of which we tooke a great many, and therefore we called it The Island of Hares: in the night there arose a contrary winde, with such stormes and tempest, that wee were constrained to returne to The Island of *Filberds* againe, from whence wee were come, because there was none other passage among the sayde *Islandes*, and there we stayed till the one and twentieth of that moneth, till faire weather and good winde came againe: and then wee sayled againe, and that so prosperously, that wee passed to *Honguedo*, which passage vntill that time had not bene discourred: wee caused our ships to course athwart *Cape Prat* which is the beginning of the Port of *Chaleur*: and because the winde was good and conuenient, we sayled all day and all night without staying, and the next day we came to the middle of *Brions* Island, which we were not minded to doe, to the end wee might shorten our way. These two lands lie Northwest, and Southeast, and are about fiftie leagues one from another. The sayd Island is in latitude 47 degrees and a halfe. Upon Thursday being the twenty sixe of the moneth, and the feast of the Ascension of our Lord, we coasted ouer to a land and *Shallow* of lowe landes, which are about eight leagues Southwest from *Brions* Island, about which are large *Champaines*, full of trees and also an enclosed sea, whereas we could neither see, nor perceiue any gappe or way to enter thereinto. On Friday following, being the 27 of the moneth, because the wind did change on the coast, we came to *Brions* Island againe, where wee stayed till the beginning of June, and toward the Southeast of this Island, wee sawe a lande, seeming vnto vs as an Island, we coasted it about two leagues and a halfe, and by the way we had notice

The Ile of
Orleans.
Ile de Coudres.

copper brought
from Saguenay.

The Ile of Hares

The Ile of
Brion.

notice of three other high Islands, lying toward the Sands: after wee had knowen these things we returned to the Cape of the sayd land, which doeth deuide it selfe into two or three very high Capes: the waters there are very deepe, and the flood of the sea runneth so swift, that it cannot possibly be swifter. That day we came to Cape Loreine, which is in forty seven degrees and a halfe toward the South: on which cape there is a low land, and it seemeth that there is some entrance of a riuer, but there is no hauen of any worth. Aboue these lands we saw another cape toward the South, we named it Saint Paules Cape, it is at 47 degrees and a quarter.

The Sunday following, being the fourth of June, and Whitsunday, wee had notice of the coaste lying Eastsoutheast, distant from the Newfoundland about two and twenty leagues: and because the wind was against vs, wee went to a Hauen, which wee named S. Spiritus Porte, where we stayed till Tuesday that we departed thence, sayling along that coast vntill wee came to Saint Peters Islands. Wee found along the sayd coast many very dangerous Islands and Helues, which lye all in the way Eastsoutheast and Westnorthwest, about three and twenty leagues into the sea. Whilist we were in the sayd Saint Peters Islands we met with many ships of France and of Britaine, wee stayed there from Saint Barnabas day, being the eleuenth of the moneth, vntil the sixteenth that we departed thence & came to Cape Rasc, and entred into a Port called Rognos, where weooke in fresh water, and wood to passe the sea: there wee left one of our boates. Then vpon Monday, being the nineteenth of June, we went from that Port, and with such good and prosperous weather we sailed along the sea, in such sozte, that vpon the sixt of July 1536 we came to the Port of S. Malo, by the grace of God, to whom we pray, here ending our Navigation, that of his infinite mercy he will grant vs his grace and fauour, and in the end bring vs to the place of euerlasting felicitie. Amen.

Here followeth the language of the countrey, and kingdomes of *Hochelaga* and *Canada*, of vs called *New France*: But first the names of their numbers.

They of Canada fay, that it is a moneths faying to goe to a lande where Cinnamom and Cloues are gathered.

Here endeth the Relation of Iames Cartiers difcouery and Nauigation to the Newfoundland, by him named New France.

The third voyage of difcouery made by Captaine *Iaques Cartier*, 1540. vnto the Countreys of *Canada*, *Hochelaga*, and *Saguenay*.

King Francis the first hauing heard the report of Captaine Cartier his Pilot generall in his two former Voyages of difcouery, as well by writing as by word of mouth, touching that which hee had found and feene in the Westernne partes difcouered by him in the parts of *Canada* and *Hochelaga*, and hauing alfo feene and talked with the people, which the sayd Cartier had brought out of thofe Countreys, whereof one was king of *Canada*, whose name was *Donnacona*, and others: which after that they had bene a long time in France and Britaine, were baptized at their owne defire and request, and died in the sayd countrey of Britaine. And albeit his Maieftie was aduertized by the sayd Cartier of the death and deceafe of all the people which were brought ouer by him (which were tenne in number) faving one little girle about tenne yeeres old, yet he refolved to fend the sayd Cartier his Pilot thither againe, with *Iohn Francis de la Roche*, Knight, Lord of *Roberual*, whome hee appointed his Lieutenant and Gouernour in the Countreys of *Canada* and *Hochelaga*, and the sayd Cartier Captaine generall and leader of the fhippes, that they might difcouer moze then was done befoze in the former voyages, and attaine (if it were poffible) vnto the knowledge of the Countrey of *Saguenay*, whereof the people brought by Cartier, as is declared, made mention vnto the King, that there were great riches, and very good countreys. And the King caufed a certaine fumme of money to be deliuered to furnifh out the sayd voyage with five fhippes: which thing was perfourmed by the sayd Monsieur *Roberual* and Cartier. After that they had agreed together to rigge the sayd five fhips at *Saint Malo* in Britaine, where the two former voyages had bene prepared

Ten Saunages brought into France.

Iohn Francis de la Roche, lord of *Roberual*.

Great riches & very good foile in *Saguenay*, which is bespond p faultes.

prepared and set forth. And the said Monsieur Roberual sent Cartier thither for the same purpose. And after that Cartier had caused the said five ships to be built and furnished and set in good order, Monsieur Roberual came downe to S. Malo and found the ships fallen downe to the roade, with their yards acrosse full ready to depart and set saile, staying for nothing else but the coming of the Generall, and the payment of the furniture. And because Monsieur Roberual the kings lieutenant had not as yet his artillery, powder and munitions, and other things necessary come downe, which he had provided for the voyage, in the Countreys of Champaigne and Normandie: and because the said things were very necessary, and that hee was loth to depart without them, he determined to depart from S. Malo to Roan, and to prepare a ship or two at Honfleur, whither he thought his things were come: And that the said Cartier shoulde depart with the five shippes which he had furnished, and shoulde goe before. Considering also that the said Cartier had received letters from the king, whereby hee did expresse charge him to depart and set saile immediately upon the sight and receit thereof, on payne of incurring his displeasure, and to lay all the fault on him. And after the conclusion of these things, and the said Monsieur Roberual had taken muster and view of the gentlemen, souldiers, and mariners which were retained and chosen for the performance of the sayd voyage, hee gaue unto Captaine Cartier full authoritie to depart and goe before, and to gouverne all things as if he had bene there in person: and himselfe departed to Honfleur to make his farther preparation. After these things thus dispatched, the winde coming faire, the foyersayd five ships set saile together well furnished and victualled for two yeere, the 23. of May, 1540. And we sailed so long with contrary winds and continuall torments, which fell out by reason of our late departure, that wee were on the sea with our sayd five ships full three moneths before wee could arrive at the Port and Haven of Canada, without ever hauing in all that time 30. houres of good wind to serue vs to keepe our right course: so that our five shippes through those stormes lost company one of another, all saue two that kept together, to wit that wherein the Captaine was, and the other wherein went the Viscount of Beaupre, untill at length at the ende of one moneth wee met all together at the Haven of Carpont in Newfoundland. But the length of time which we were in passing betweene Britayne and Newfoundland was the cause that we stood in great neede of water, because of the cattell, as well Goates, Hogges, as other beastes which we caried for breede in the Countrey, which wee were constrained to water with Sider and other drinke. Now therefore because we were the space of three moneths in sayling on the sea, and staying in Newfoundland, wayting for Monsieur Roberual, and taking in of fresh water and other things necessary, wee arrived not before the Haven of Sainte Croix in Canada, (where in the former voyage we had remayned eight moneths) untill the 23. day of August. In which place the people of the Countrey came to our shippes, making shew of ioy for our arrivall, and namely he came thither which had the rule and government of the Countrey of Canada, named Agona, which was appointed king there by Donacona, when in the former voyage we carried him into France: And hee came to the Captaines ship with 6. or 7. boates, and with many women and childzen. And after the sayd Agona had inquired of the Captaine where Donacona and the rest were, the Captaine answered him, That Donacona was dead in France, and that his body rested in the earth, and that the rest stayed there as great Lords, and were married, and would not returne backe into their Countrey: the said Agona made no shewe of anger at all these speeches: and I thinke he tooke it so well because he remained Lord and Gouvernour of the countrey by the death of the said Donacona. After which conference the said Agona tooke a peece of tanned leather of a yellow skin edged about with Esnoguy (which is their riches and the thing which they esteeme most precious, as wee esteeme gold) which was upon his head in stead of a crowne, and he put the same on the head of our Captaine, and tooke from his wrists two bracelets of Esnoguy, and put them upon the Captaines armes, colling him about the necke and shewing unto him great signes of ioy: which was all dissimulation, as afterward it wel appeared. The captaine tooke his said crowne of leather and put it againe upon his head, and gaue him and his wiues certaine smal presents, signifying unto him, that he had brought certaine new things, which afterward he would bestow upon him: for which the sayd Agona thanked the Captaine. And after that he had made him and his company eat and drinke, they departed and returned to the Shore with their boates. After which things the sayd Captaine went with two of his boates by the riuer, beyond Canada and the Port of Sainte Croix, to view a Haven and a small riuer, which is about 4. leagues higher: which he found better and more commodious to ride in and lay his ships, then the former. And therefore he returned and caused all his ships to be brought before the sayd riuer, and at a lowe water he caused his Ordnance to be planted to place his ships in more safte, which he meant to keepe and stay in the Countrey, which were three: which hee did the day following,

The kings letters to Cartier.

A good road 4. leagues above Sainte Croix.

and the rest remaind in the roade in the middest of the riuer (In which place the victuals and other furniture were discharged, which they had brought) from the 26. of August untill the second of September, what time they departed to returne for S. Malo, in which shipps he sent backe Mace lloberte his brother in lawe, and Steuen Noel his nephew, skilfull and excellent pilots, with letters vnto the king, and to aduertise him what had bene done and found: and how Monsieur de Roberval was not yet come, and that hee feared that by occasion of contrary winds and tempests he was driuen backe againe into France.

The description of the aforesaid Riuer and Hauent.

Trees aboue
3. fathoms a
bout.
Hanneda the
most excellent
tree of the
world.

Abundance of
Vines full of
grapes.

Fruit like
Apples.

Seed spring
out of the
ground with-
in 8. dayes.

A great plaine
of very good
arable ground.

Diamants of
Canada.
In pyron Pyne.

Leaves of fine
gold as thicke
as a mans
naile found in
Canada.

Excellent and
strong hempe.

The sayd Riuer is small, not past 50. pases broad, and shippes drawing three fathoms water may enter in at a full sea: and at a low water there is nothing but a chanell of a foote deepe or there about. On both sides of the said Riuer there are very good and faire grounds, full of as faire and mightie trees as any be in the world, and diuers sorts; which are aboue tenne fathoms higher then the rest, and there is one kind of tree aboue three fathoms about, which they in the Countrey call Hanneda, which hath the most excellent vertue of all the trees of the world, whereof I will make mention hereafter. Moreover there are great store of Oakes the most excellenc that euer I saw in my life, which were so laden with Mast that they cracked againe: besides this there are faster Arables, Cedars, Beeches, and other trees, then grow in France: and hard vnto this wood on the South side the ground is all couered with Vines, which we found laden with grapes as blacke as Mulberries, but they be not so kind as those of France because the Vines bee not rilled, and because they grow of their owne accord. Moreover there are many white Thornes, which beare leaues as bigge as oken leaues, and fruit like vnto Apples. To bee short, it is as good a Countrey to plow and manure as a man should find or desire. We sowed seedes here of our Countrey, as Cabages, Raueaus, Lettises and others, which grew and sprung vp out of the ground in eight dayes. The mouth of the riuer is toward the South, and it windeth Northward like vnto a snake: and at the mouth of it toward the East there is a high and steepe cliffe, where we made a way in manner of a payze of staires, and aloft we made a Fort to keepe the nether Fort and the ships, and all things that might passe as well by the great as by this small riuer. Moreover a man may behold a great extension of ground apt for tillage, strait and handsome and somewhat enclining toward the South, as easie to be brought to tillage as I would desire, and very well replenished with faire Oakes and other trees of great beauty, no thicker then the Forrests of France. Here wee set twenty men to worke, which in one day had laboured about an acre and an halfe of the said ground, and sowed it part with Raueaus or small Turneps, which at the ende of eigh dayes, as I said before, sprung out of the earth. And vpon that high cliffe wee found a faire fountaine very neere the sayd Fort: adioynning whereunto we found good store of stones, which we esteemed to be Diamants. On the other side of the said mountaine and at the foote thereof, which is towards the great Riuer is all along a goodly Pyne of the best pyon in the world, and it reacheth euen hard vnto our Fort, and the land which we tread on is perfect refined Pyne, ready to be put into the fornaice. And on the waters side we found certaine leaues of fine gold as thicke as a mans naile. And Westward of the said Riuer there are, as hath bene said, many faire trees: and toward the water a goodly Hedow full of as faire and goodly grasse as euer I sawe in any Hedowe in France: and betweene the sayd Hedow and the Wood are great store of Vines: and beyond the said Vines the land groweth full of Hempe which groweth of it selfe, which is as good as possibly may be seene, and as strong. And at the ende of the sayd Hedow within an hundred pases there is a rising ground, which is of a kind of slate stone blacke and thicke, wherein are veines of mynerall matter, which shewe like gold and siluer: and throughout all that stone there are great graines of the sayd Pyne. And in some places we haue found stones like Diamants, the most faire, polished and excellently cut that it is possible for a man to see, when the Sunne shineth vpon them, they glister as it were sparkles of fire.

How after the departure of the two shippes which were sent backe into Britaine, and that the Fort was begun to be builded, the Capitaine prepared two boates to goe vp the great Riuer to discover the passage of the three Saults or falles of the Riuer.

The sayd Capitaine hauing dispatched two ships to returne to carry newes, according as hee had in charge from the king, and that the Fort was begun to be builded, for preservation of their

their victuals and other things, determined with the Vicount of Beaupre, and other Gentlemen, Masters, and Pilots chosen for counsaile, to make a voyage with two boates furnished with men and victuals to goe as farre as Hochelaga, of purpose, to view and vnderstand the fashion of the Sauls of water, which are to be passed to goe to Saguenay, that hee might be the readier in the spring to passe farther, and in the Winter time to make all things needefull in a readinesse for their businesse. The foresaid boates being made ready, the Capitaine and Martine de Painpont, with other Gentlemen and the remnant of the Mariners departed from the sayd place of Charlesburg Royal the seuenth day of September in the yeere aforesayd 1540. And the Vicount of Beaupre stayed behind for the garding and gouernement of all things in the Fort. And as they went by the riuer, the Capitaine went to see the Lord of Hochelag, which dwelleth betweene Canada and Hochelaga: which in the former voyage had giuen vnto the said Capitaine a little grile, and had oftentimes enformed him of the treasons which Taighoagny and Domagaya (whom the Capitaine in his former voyage had caried into France) would haue wrought against him. In regard of which his curtesie the said Capitaine would not passe by without visiting of him, and to let him vnderstand that the Capitaine thought himselfe beholding vnto him, hee gaue vnto him two yong boyes, and left them with him to learne their language, and bestowed vpon him a cloake of Paris red, which cloake was set with yealow and white buttons of Tanne, and small belles. And withall hee gaue him two Basins of Laiton, and certaine hachets and knives: whereat the sayde Lord seemed highly to reioyce, and thanked the Capitaine. This done, the Capitaine and his company departed from that place: And wee sailed with so prosperous a wind, that we arriued the eleuenth day of the moneth at the first Saule of water, which is two leagues distant from the Towne of Tuconaguy. And after wee were arriued there, wee determined to goe and passe as farre vp as it was possible with one of the boates, and that the other should stay theretill it returned: and wee double manned her to rowe by against the course or streame of the sayde Saule. And after wee had passed some part of the way from our other boate, wee found badde ground and great rockes, and so great a current, that wee could not possibly passe any further with our Boate. And the Capitaine resolved to goe by land to see the nature and fashion of the Saule. And after that we were come on shore, wee founde hard by the water side a way and beaten path going toward the sayde Sauls, by which weeooke our way. And on the sayd way, and soone after we found an habitation of people which made vs great cheere, and entertained vs very friendly. And after that he had signified vnto them, that wee were going toward the Sauls, and that wee desired to goe to Saguenay, faire yong men went along with vs to shewe vs the way, and they brought vs so farre that wee came to another village or habitation of good people, which dwell ouer against the second Saule, which came and brought vs of their victuals, as Potage and Fish, and offered vs of the same. After that the Capitaine had enquired of them as well by signes as wordes, how many more Sauls wee had to passe to goe to Saguenay, and what distance and way it was thither, this people shewed vs and gaue vs to vnderstand, that wee were at the second Saule, and that there was but one more to passe, that the Riuer was not nauigable to goe to Saguenay, and that the sayd Saule was but a third part farther then we had trauailed, shewing vs the same with certaine little stickes, which they layd vpon the ground in a certaine distance, and afterward layde other small branches betweene both, representing the Sauls. And by the sayde marke, if their saying be true, it can be but sixe leagues by land to passe the sayd Sauls.

The Vicount of Beaupre and the rest of their counsell.

The rich countrey of Saguenay situated beyond the Sauls which are in 44. deg. They depart from Charlesburg Royal the 7. of September.

They delight in red cloath.

The 11 of September, The Towne of Tuconaguy.

Bad ground, and a great current.

A Towne of friendly people.

Another village of good people which dwell ouer against the second Saule. They were at the second Saule. The riuer not nauigable to passe to Saguenay.

Here after followeth the figure of the three Sauls.

After that we had bene aduertised by the sayde people, of the things abouementioned, both because the day was farre spent, and we had neither drunke nor eaten the same day, we concluded to returne vnto our boats, and we came thither, where we found great store of people to the number of 400. persons or thereabout, which seemed to giue vs very good entertainment and reioyce of our coming: And therefore our Capitaine gaue eche of them certaine small trifles, as combs, brooches of tynne and copper, and other small toys, and vnto the chiefe men euery one his little hatchet & hooke, whereat they made certaine cries and ceremonies of ioy. But a man must not trust them for all their faire ceremonies and signes of ioy, for if they had thought they had bene too strong for vs, then would they haue done their best to haue killed vs, as we vnderstood afterward. This being done, we returned with our boats, and passed by the dwelling of the Lord of Hochelag, with whom the Capitaine had left the two youths as hee came by the riuer, thinking to haue found him: But hee coulde find no body saue one of his sonnes, who tolde the Capitaine that hee

400. persons about their boats.

Like those of new Albion.

The Sauages are great drinkers.

Maifouna.
The Sauages

ther against
the French.

A very great
number of Sa-
uages assem-
bled together.

was gone to Maifouna, as our boyes also told vs, saying, that it was two dayes since he departed. But in truth hee was gone to Canada to conclude with Agona, what they should doe against vs. And when we were arriued at our Fort, wee vnderstoode by our people, that the Sauages of the Countrey came not any moze about our Fort as they were accustomed, to bring vs fish, and that they were in a wonderful doubt and feare of vs. Wherefore our Captaine, hauing bene aduertised by some of our men which had bene at Stadacona to visite them, that there were a wonderfull number of the Countrey people assembled together, caused all things in our fortresse to bee set in good order: &c.

The rest is wanting.

A letter written to M. Iohn Growte student in Paris, by *Iaques Noel* of S. Malo, the nephew of *Iaques Cartier*, touching the foresaid discovery.

M

After Growte, your brother in law Giles Walter shewed me this morning a Mappe printed at Paris, dedicated to one M. Hakluyt an English Gentleman: wherein all the West Indies, the kingdome of New Mexico, and the Countreys of Canada, Hochelaga and Saguenay are contained. I hold that the Riuer of Canada which is described in that Mappe is not marked as it is in my booke, which is agreeable to the booke of *Iaques Cartier*: and that the sayd Chart doth not marke or set downe The great Lake, which is about the Sauls, according as the Sauages haue aduertised vs, which dwell at the sayd Sauls. In the foresayd Chart which you sent me hither, the Great Lake is placed too much toward the North. The Sauls or falles of the Riuer stand in 44. degrees of latitude: it is not so hard a matter to passe them, as it is thought: The water falleth not downe from any high place, it is nothing else but that in the midst of the Riuer there is bad ground. It were best to build boates about the Sauls: and it is easie to march or trauell by land to the end of the three Sauls: it is not about five leagues iourney. I haue bene vpon the toppe of a mountaine, which is at the foot of the Sauls, where I haue seene the sayd Riuer beyond the sayd Sauls, which shewed vnto vs to be broader then it was where we passed it. The people of the Countrey aduertised vs, that there are ten dayes iourney from the Sauls vnto this Great Lake. We know not how many leagues they make to a dayes iourney. At this present I cannot write vnto you more at large, because the messenger can stay no longer. Here therefore for the present I will ende, saluting you with my hearty commendations, praying God to giue you your hearts desire. From S. Malo in haste this 19 day of June. 1587.

The Sauls are
in 44. deg. and
easie to passe.

But 5. leagues
iourney to
passe the 3.
Sauls.

Ten dayes
iourney from
the Sauls to
this great
Lake.

Your louing Friend, *IAQUES NOEL.*

Comin, I pray you doe me so much pleasure as to send mee a booke of the discovery of New Mexico, and one of those new Mappes of the West Indies dedicated to M. Hakluyt the English Gentleman, which you sent to your brother in law Giles Walter. I will not faile to informe my selfe, if there be any meane to find out those descriptions which Captaine Cartier made after his two last voyages into Canada.

Vnderneath the aforesaid vnperfite relation that which followeth is written in another letter sent to M. Iohn Growte student in Paris from *Iaques Noel* of S. Malo, the grand nephew of *Iaques Cartier*.

I

Can write nothing else vnto you of any thing that I can recouer of the writings of Captaine *Iaques Cartier* my vncle deceased, although I haue made search in all places that I could possibly in this Towne: sauing of a certaine looke made in maner of a Sea Chart, which was drawne by the hand of my said vncle, which is in the possession of master Cremeur: which booke is passing well marked and drawne for all the Riuer of Canada, whereof I am well assured, because I my selfe haue knowledge thereof as farre as to the Sauls, where I haue bene: The height of which Sauls is in 44. degrees. I found in the sayd Chart beyond the place where the Riuer is diuided in twaine in the midst of both the branches of the said riuer somewhat neere that arme which runneth toward the North-west, these words following written in the hand of *Iaques Cartier*.

By the people of Canada and Hochelaga it was said, That here is the land of *Saguenay*, which is rich and wealthy in precious stones.

The Sauls are
in the latitude
of 44. deg.

And

And about an hundred leagues vnder the same I found written these two lines following in the said Carde enclining to ward the South west. Here in this Countrey are Cinamon and Cloues, which they call in their language *Canodeta*.

Touching the effect of my booke whereof I spake vnto you, it is made after the maner of a sea Chart, which I haue deliuered to my two sonnes Michael and Iohn, which at this present are in Canada. If at their returne, which will be God willing about Magdalene tyde, they haue learned any new thing worthy the writing, I will not faile to aduertise you thereof.

Your louing Friend, IACQUES NOEL.

Here followeth the course from Belle Isle, Carpont, and the Grand Bay in Newfoundland vp the Riuer of Canada for the space of 230. leagues, obserued by John Alphonse of Xantloigne chiefe Pilote to Monsieur Roberual. 1542.

Belles Isles are in 51 degrees and $\frac{1}{2}$. Belles Isles and Carpont are Northnorthwest and Southsoutheast, and they are ten leagues distant. Carpont is in 52 degrees. Carpont and Bell Isle from the Grand Bay are Northeast and Southwest, and the distance from Bell Isle to the Grand Bay is 7 leagues. The midst of the Grand Bay is in 52 degrees and a halfe, and on the Northside thereof there is a rocke: halfe a league from the Isle, ouer against Carpont toward the East there is a small flat Island, and on the side toward the Northeast there is a flat rocke. And when thou comest out of the harbour of Carpont thou must leaue this rocke on the starreboord side, and also on the larboord side there are two or three small Isles: and when thou comest out on the Northeast side, ranging along the shore toward the West about two pikes length in the midway there is a shold which lieth on thy starboord side: and saile thou by the North coast, and leaue two partes of the Grand Bay toward the South: because there is a rocke which runneth 2 or 3 leagues into the sea. And when thou art come athwart the haueu of Bures, run along the North shore about one league or an halfe off, for the coast is without all danger: Bell Isle in the mouth of the Grand Bay, and the Isles of Blanc Sablon, which are within the Grand Bay, neere vnto the North shore lie Northeast, West and Southwest, & the distance is 30 leagues. The Grand Bay at the entrance is but 7 leagues broad from land to land vntill it come ouer against the Bay des Chasteaux: and from thence forward it hath not past 5 leagues in breadth. And against Blanc Sablon it is 8 leagues broad from land to land. And the land on the South shore is all low land along the sea coast. The North shore is reasonable high land. Blanc Sablon is in 51 degrees $\frac{1}{2}$. The Isles of Blanc Sablon & the Isles de la Damoiselle, are Northeast, Westsouthwest, and take a little of the Westsouthwest, and they are distant 36 leagues: these Isles are in 50. deg. $\frac{1}{2}$. And there is a good haueu: & you may enter by an high Cape which lieth along toward the Northeast, and within the distance of a pike & an half, because of a rocke which lieth on your larreboord side, & you may ancre in 10 fathome water ouer against a litle nooke: and from the great headland vnto the place where thou doest ancre there is not about the length of 2 Cables. And if thou wouldest go out by the West side, thou must saile neere the Isle by the starreboord, & giue roome vnto the Isle on the larboord at the coming forth: and when thou art not past a cables length out thou must saile hard by the Isles on the larboord side, by reason of a sunken flatte which lieth on the starreboord, and thou shalt saile so on to the Southsouthwest, vntill thou come in sight of a rocke which shineth, which is about halfe a league in the sea distant from the Isles, and thou shalt leaue it on the larreboord: (and from the Isles of Damoiselle vnto Newfoundland the sea is not in breadth about 36 leagues, because that Newfoundland euen vnto Cape Briton runneth not but Northnorthwest & Southsouthwest.) Between the Isles de la Damoiselle and the Isles of Blanck Sablon there be many Isles and good harbours: and on this coast there are faulcons & haukes, and certaine foules which seeme to be seafants. The Isles de la Damoiselle & Cape Tienot are Northeast & Westsouthwest & take a little of the Northeast and southwest, & they are distant 18 leagues, Cape Tienot is in 50. deg. and $\frac{1}{2}$. And there the sea is broadest. And it may be to the end of Newfoundland, which is at the entrance of Cape Briton 70 leagues, which is the greatest breadth of this sea. And there are 6 or 7 Isles between the Isles de la Damoiselle & Cape Tienot. Cape Tienot hath in y^e sea 5 or 6 leagues distant fro it a sunke Island dangerous for ships. The Cape Tienot and the midst of the Isle of Ascension are Northeast and Southsouthwest, & they are 22 leagues distant, the midst of the Isle of Ascension is in 49 deg. & $\frac{1}{2}$. The said Isle lieth Northwest and Southeast, the Northwest end is in 50. degrees of latitude and the Southeast end is in 48. degrees and a halfe, and it is about 25. leagues long and 4. or 5. leagues

leagues broad: and from the North-west end of the Ile unto the firme land of the North side the Sea is not above seven leagues broad, but unto the firme land on the South side are about 15 leagues. Cape Tienot and the end of the Ile of Ascension toward the Southeast are Northeast and Southwest, and are distant 30 leagues. The said Cape of Tienot and the North-west end of the Ile of Ascension are East and West, and take a little of the Northeast and Southwest, and they are distant 34 leagues. The Ile of Ascension is a goodly Ile, and a goodly champion land without any hilles, standing all upon white rocks and Alabaster, all couered with trees unto the Sea shore, and there are all sorts of trees as there be in France: and there be wild beasts, as beares, Lufers, Pokelspicks. And from the Southeast end of the Ile of Ascension unto the entrance of Cape Briton is but 50 leagues. The North-west end of the Ile & the Cape des Monts nostre Dame, which is on the maine land towards the South, are Northeast and Westsouthwest, and the distance betweene them is 15 leagues. The Cape is in 49 degrees, which is a very high land. The Cape and end of the Ile of Ascension toward the Southeast are East and West and there is 15 leagues distance betweene them. The Bay of Molues or Gaspay is in 48 degrees, and the coast lyeth North and South, and taketh a quarter of the Northeast and Southwest unto the Bay of Heate: and there are 3 Isles, one great one and two smal: from the Bay of Heate untill you passe the Monts nostre Dame al the land is high and good ground al couered with trees. Ognedoc is a good Bay and lyeth Northnorthwest and Southsoutheast, and it is a good Harbour: and you must saile along the shore on the Northside by reason of the low point at the entrance thereof: and when you are passed the point bying your selfe to an ancre in 15 or 20 fathoms of water toward the South shore, and here within this Haven are two riuers, one which goeth toward the North-west, and the other to the South-west. And on this coast there is great fishing for Coddes and other fish, where there is more store then is in Newfoundland, and better fish. And here is great store of riuer foule, as Halards, wild Geese, and others: And here are all sorts of trees, Rose trees, Raspeles, Filbird trees, Apple trees, Peare trees, and it is hotter here in Sommer then in France. The Ile of Ascension and the 7 Isles which lie on the North shore lie Southeast and Westnorthwest, and are distant 24 leagues. The Cape of Ognedoc and the 7 Isles are Northnorthwest and Southsoutheast, & are distant 35 leagues. The Cape of Monts nostre Dame and the 7 Isles are North and South, and the cut ouer from the one to the other is 25 leagues: and this is the breadth of this Sea, and from thence upward it beginneth to waxe narrower and narrower. The 7 Isles are in 50 degrees and $\frac{1}{2}$. The 7 Isles and the point of Ongear lie Northeast and Southwest and the distance betweene them is 15 leagues, and betweene them are certaine small Islands: and the point of Ongear and the mountaines Nostre Dame, which are on the South side of the entrance of the riuer, are North and South: and the cut ouer from the one to the other is ten leagues: and this is here the breadth of the Sea. The point of Ongear and the riuer of Caen lie East and West, and they are distant 12 leagues. And all the coast from the Ile of Ascension hither is very good ground, wherein growe all sortes of trees that are in France and some fruits. The point of Ongear is in 49 degrees and $\frac{1}{2}$. And the riuer of Caen and the Ile of Raquelle lie Northeast and Southwest, and they are distant 12 leagues. The Ile of Raquelle is in 48 degrees and $\frac{3}{4}$. In this riuer of Caen there is great store of fish. And here the Sea is not past 8 leagues broad. The Ile of Raquelle is a very low Ile, which is neere unto the South shore, hard by a high Cape which is called the Cape of Marble. There is no danger there at all. And betweene Raquelle and the Cape of Marble ships may passe. And there is not from the Ile to the South shore about one league, and from the Ile unto the North shore about foure leagues. The Ile of Raquelle and the entrance of Saguenay are Northeast Westsouthwest, and are distant 14 leagues, and there are betweene them two small Islands neere the North shore. The entrance of Saguenay is in 48 degrees and $\frac{1}{2}$, and the entrance hath not past a quarter of a league in breadth, and it is dangerous toward the Southwest: and two or three leagues within the entrance it beginneth to waxe wider and wider: and it seemeth to bee as it were an arme of the Sea: And I thinke that the same runneth into the Sea of Cathay, for it sendeth forth there a great current, and there doth runne in that place a terrible rase or tyde. And here the riuer from the North shore to the South shore is not past foure leagues in breadth, and it is a dangerous passage betweene both the lands, because there lie bankes of rockes in the riuer. The Ile of Raquelle and the Ile of Hares lie Northeast and Southwest, and take $\frac{1}{4}$ of the East and the West, and they are distant 18 leagues. The entrance of Saguenay and the Ile of Liepueres or Hares lie Northnorthwest & Southsouthwest, and are distant 5 leagues. The entrance of Saguenay and the Ile of Raquelle are Northnorthwest, and Southsouthwest, and are distant three leagues. The Ile of Hares is in 48, and $\frac{1}{16}$ of a degree. From the Mountaines of Nostre

Nostre Dame vnto Canada and vnto Hochelaga, all the land on the South coast is faire, a lowe land and goodly champaigne, all couered with trees vnto the brink of the riuer. And the land on the North side is higher, and in some places there are high mountaines. And from the Ile of Hares vnto the Ile of Orleans the riuer is not past 4 or 5 leagues broad. Betweene the Ile of Hares and the high land on the North side the sea is not past a league and an halfe broad, and it is very deepe, for it is about 100 fathoms deepe in the midst. To the East of the Ile of Hares there are 2 or 3 small Isles and rockes. And from hence to the Ile Des Coudres or of Filbeards, all is nothing but Isles and rockes on the South shore: and towards the North the sea is fayre and deepe. The Ile of Hares and the Ile of Filbeards lie northeast, West and Southwest, and they are distant 12 leagues. And you must alwayes run along the high land on the north shore: for on the other shore there is nothing but rocks. And you must passe by the side of the Ile of Filbeards, and the riuer there is not past a quarter of a league broad, and you must sayle in the midst of the chanel: and in the midst runneth the best passage either at an hie or a low water, because the sea runneth there strongly, and there are great dangers of rocks, and you had neede of good ancre and cable. The isle of Filbeards is a small isle, about one league long, and halfe a league broad, but they are all banks of sand. The isle of Filberds stands in 47. deg. and $\frac{1}{2}$. The isle of Filberds and the isle of Orleans lie northeast and southwest, and they are distant 10 leagues, and thou must passe by the high land on the north side about a quarter of a league, because that in the midst of the riuer there is nothing but holds and rocks. And when thou shalt bee ouer against a round Cape, thou must take ouer to the South shore southwest, and a quarter toward the South; and thou shalt sayle in 5, 6 and 7 fathoms: and there the riuer of Canada beginneth to bee fresh, and the salt water en- deth. And when thou shalt be athwart the point of the isle of Orleans, where the riuer beginneth to be fresh, thou shalt sayle in the midst of the riuer, and thou shalt leaue the isle on the starreboord, which is on the right hand: and here the riuer is not past a quarter of a league broad, and hath 20 and 30 fathoms water. And towards the South shore there is a ledge of Isles all couered with trees, and they end ouer against the point of the Ile of Orleans. And the point of the isle of Orleans toward the North is in 47 degrees and one tence of a degree. And the Ile of Orleans is a fayre Ile, all couered with trees euen vnto the riuers side: and it is about 5 leagues long, and a league and an halfe broad. And on the North shore there is another Riuer, which falleth into the mayne Riuer at the ende of the Island: and Shippes may very well passe there. From the midst of the Ile vnto Canada the Riuer runneth West; and from the place of Canada vnto France-Roy the riuer turneth West Southwest: and from the West ende of the Ile to Canada is but one league; and vnto France-Roy 4 leagues. And when thou art come to the end of the Ile, thou shalt see a great Riuer which falleth fiftene or twenty fathoms downe from a rocke, and maketh a terrible noyse. The Fort of France-roy stands in 47 degrees, and one sixt part of a degree.

The extention of all these lands, vpon iust occasion is called New France. For it is as good and as temperate as France, and in the same latitude. And the reason wherefore it is colder in the Winter is, because the fresh Riuer is naturally more colde then the Sea; and it is also broad and deepe: and in some places it is halfe a league and aboue in breadth. And also because the land is not tyled, nor full of people, and is all full of Woods, which is the cause of colde, because there is not store of fire nor cattel. And the sunne hath his Peridian as high as the Peridian at Rochel: and it is noone here when the Sunne is at South Southwest at Rochel. And here the north starre by the compasse standeth North northeast. And when at Rochel it is noone, it is but halfe an houre past nine at France-Roy. From the sayde place vnto the Ocean sea and the coast of New France, is not about 50 leagues distance. And from the entrance of Norumbega vnto Florida are 300 leagues: and from this place of France-Roy to Hochelaga, are about 80 leagues: and vnto the Ile of Rasus 30 leagues. And I doubt not but Norumbega entrench into the riuer of Canada, and vnto the Sea of Saguey. And from the Fort of France-Roy vntill a man come forth of the Grande Bay is not about 230 leagues. And the course is Northeast and West Southwest not about 5 degrees and $\frac{1}{2}$ difference: and reckon 16 leagues and an halfe to a degree. By the nature of the climate the lands toward Hochelaga are still better and better, and more fruitfull. And this land is fitte for figges and Peares. And I thinke that golde and siluer will be found here, according as the people of the countrey say. These landes lye ouer against Tartarie, and I doubt not but that they stretch toward Asia, according to the roundnesse of the world. And therefore it were good to haue a small Shippe of 70 tunnes to discouer the coast of New France on the backe side of Florida: for I haue bene at a Bay as farre as 42 degrees betweene Norumbega and Florida, and I haue not searched the ende thereof, and I knowe

Port

The isle of Filbeards in 47 degrees and 3 quarters.

The beginning of the fresh water. The riuer but a quarter of a league broad.

The Ile of Orleans in 47 degrees and one third part.

Canada 1 league to the West of the Ile of Orleans. The Fort of France-Roy stood in 47 degrees and one sixt part.

Why the countrey is colder in the Winter then France. A second reason.

The variation of a compasse.

From the fort of France Roy vnto the mouth of the Grand Bay 230 leagues.

Golde and siluer like to be found in Canada.

A Bay in 42 degrees giving some hope of a passage.

Trees.

ing in Canada.

knowe not whether it passe thzough. And in all these Countreys there are okes, and boztz, ashes, elmes, arables, trees of life, pines, yussetrees, ceders, great wall nut trees, and wilde nuts, hasel-trees, wilde peare trees, wilde grapes, and there haue bene found redde plummies. And very faire cozne groweth there, and peason grow of their owne accord, guoseberries and strawberries. And there are goodly fozrests, wherein men may hunt. And there are great floze of stagges, deere, porkepicks, and the Sauages say there bee Unicornes. Fowle there are in abundance, as bustards, wilde geese, cranes, turtle doves, rauens, crows, and many other birds. All things which are sown there, are not past 2. or 3. dayes in coming vp out of the ground. I haue tolde in one eare of cozne an hundred and twenty graines, like the cozne of France. And ye neede not to sowe your Wheate untill March, and it will be ripe in the middest of August. The waters are better and perfecter then in France. And if the Countrey were tilled and replenished with people, it would be as hotte as Rochel. And the reason why it snoweth there oftener then in France is, because it raineth there but seldome: for the raine is conuerted into snowes.

All things aboue mentioned, are true.

John Alphonse made this Voyage with Monsieur Roberual.

There is a pardon to be seene for the pardoning of Monsieur de Saine terre, Lieutenant of the sayd Monsieur de Roberual, giuen in Canada in the presence of the sayd John Alphonse.

The Voyage of John Francis de la Roche, knight, Lord of Roberual,
to the Countries of Canada, Saguenai, and Hochelaga, with three tall
Ships, and two hundred persons, both men, women, and children, begun in April,
1542. In which parts he remayned the same summer, and all the next winter.

In John Francis de la Roche knight, lord of Roberual, appoynted by the king as his Lieutenant general in the countreys of Canada, Saguenay, and Hochelaga, furnished 3. tall Ships, chiefly at the kings cost: And hauing in his fleete 200. persons, aswel men as women, accompanied with diuers gentlemen of qualitie, as namely with Monsieur Saine-terre his lieutenant, l'Espiney his Ensigne, captain Guinecourt, Monsieur Noire fontaine, Dieu lamont, Frote, la Brosse, Francis de Mire, la Salle, and Roieze, and John Alphonse of Xanctoigne an excellent pilot, set sayle from Rochel the 16. of April 1542. The same

day about noone we came athwart of Chese de boys, where we were enforced to stay the night following. On Monday the seuenteenth of the sayd Moneth wee departed from Chese de boys. The winde serued vs notably for a time: but within fewe dayes it came quite contrary, which hindered our iourney for a long space: For wee were suddenly enforced to turne backe, and to seeke Harbrough in Belle Isle, on the coast of Bretaine, where wee stayed so long, and had such contrary weather by the way, that wee could not reach Newfoundland lande, vntill the seuenth of Iune. The eight of this Moneth wee entred into the Rode of Saint Iohn, where wee founde seuentene Shippes of fishers. While wee made somewhat long abode heere, Iaquies Cartier and his company returning from Canada, whither hee was sent with fise sayles the peere before, arriued in the very same Harbour. Who, after hee had done his duetie to our Generall, tolde him that hee had brought certaine Diamonts, and a quantitie of Golde ore, which was found in the Countrey. Which ore the Sunday next ensuing was tryed in a Furnace, and found to be good.

Diamonts.
Golde found.

Furthermore, hee enformed the Generall that hee could not with his small company withstand the Sauages, which went about dayly to annoy him: and that this was the cause of his returne into France. Neuerthelesse, hee and his company commended the Countrey to bee very rich and fruitfull. But when our Generall being furnished with sufficient forces, commaunded him to goe backe againe with him, hee and his company, mooued as it seemeth with ambition, because they would haue all the glory of the discouerie of those partes themselves, stole priuily away the next night from vs, and without taking their leaues departed home for Bretaine.

Iaquies Cartier
stole away.

Wes

Wee spent the greatest part of June in this Harbour of Saint Iohn, partly in furnishing our selues with fresh water, whereof wee stood in very great neede by the way, and partly in composing and taking vp of a quarrell betweene some of our Countrey men, and certaine Portugals. At length, about the last of the aforesayde Moneth, wee departed hence, and entred into the Grand Baye, and passed by the Isle of Ascension: and finally arrived foure leagues Westward of the Isle of Orleans. In this place wee found a conuenient Harbour for our shipping, where wee cast anchor, went a shoare with our people, and chose out a conuenient place to fortifie our selues in, fitte to commaund the mayne Riuer, and of strong situation against all inuasion of enemies. Thus towarde the ende of July, wee brought our victuals and other munitions and provisions on shore, and began to trauaile in fortifying of our selues,

Of the Fort of *France-Roy*, and that which was done there.

Having described the beginning, the middell, and the ende of the Voyage made by Monsieur Roberual in the Countreyes of Canada, Hochelaga, Saguenay, and other Countreyes in the West partes: He sayed so farre, (as it is declared in other bookes) that hee arrived in the sayde Countrey, accompanied with two hundred persons, souldiers, mariners, and common people, with all furniture necessary for a Fleet. The sayde Generall at his first arrivall built a sayde Fort, neere and somewhat Westward aboute Canada, which is very beautiful to beholde, and of great force, situated vpon an high mountaine, wherein there were two courtes of buyldings, a great Towre, and another of fortie or fiftie foote long: wherein there were diuers Chambers, an Hall, a Kitchine, houses of office, Sellers high and lowe, and neere vnto it were an Ouen and Pillies, and a stooue to warme men in, and a Well before the house. And the buylding was situated vpon the great Riuer of Canada, called *France prime*, by Monsieur Roberual. There was also at the foote of the mountaine another lodging, part whereof was a great Towre of two stories high, two courtes of good buylding, where at the first all our victuals, and whatsoeuer was brought with vs was sent to be kept: and neere vnto that Towre there is another small riuer. In these two places aboute and beneath, all the meaner sort was lodged.

And in the Moneth of August, and in the beginning of September euery man was occupied in such woork as eche one was able to doe. But the fourteenth of September, our aforesayde Generall sent backe into France two Shippes which had brought his furniture, and he appointed for Admirall Monsieur de Saine-terre, and the other captaine was Monsieur Guine-coure, to carie newes vnto the King, and to come backe againe vnto him the yere next ensuing, furnished with victuals and other things, as it should please the King: and also to bring newes out of France how the King accepted certaine Diamants which were sent him, and were found in this countrey.

After these two Shippes were departed, consideration was had how they should doe, and how they might passe out the Winter in this place. First they tooke a view of the victuals, and it was found that they fell out short: and they were scantled so, that in eche melle they had but two loaves weighing a pound a piece, and halfe a pound of biese. They ate Bacon at dinner with halfe a pound of butter: and Biese at supper, and about two handfuls of Beanes without butter.

On the Wednesday, Friday, and Saturday they did eate dry Cod, and sometimes they did eate it Greene at dinner with butter, and they ate of Porpoces and beanes at supper.

About that time the Sauages brought vs great store of Alofes, which is a fish somewhat redde like a Salmon, to get knives and other small trifles for them.

In the ende many of our people fell sicke of a certaine disease in their legges, reynes, and stomacke, so that they seemed to bee depriued of all their lymmes, and there dyed thereof about fiftie.

Note that the yce began to breake vp in April.

Monsieur Roberual vsed very good iustice, and punished euery man according to his offence. One whose name was Michael Gaillon, was hanged for his theft. Iohn of Nantes was layde in yrons, and kept prisoner for his offence, and others also were put in yrons, and diuers were whipped, as well men as women: by which meanes they liued in quiet.

The length of the winter,

They had wood men with them.

The

The maners of the Sauages.

To declare vnto you the state of the Sauages, they are people of a goodly stature, and well made, they are very white, but they are all naked: and if they were apparelled as the French are, they would bee as white and as fayre: but they paynt themselves for feare of heat and sunne burning.

Their appa-
rell.
So haue they
of Ceuola, and
Quinira, and
Meta Incognita.
Their victu-
als.
They remoue

place.
Fith.
Beastes.
Fowle.

Their bread of
great Wheate
or Barz.
Drinke of
Seale oyle at
their great
feasts.
Their govern-
ment.

In stead of apparell, they weare skinnes vpon them like mantles: and they haue a small payze of breeches, wherewith they couer their priuities, as well men as women. They haue hosen and shooes of lether excellently made. And they haue no shirts: neither couer they their heads, but their hayre is trusted vp about the crowne of their heads, and paynted or boydd. Touching their victuals, they eate good meate, but all unsalted, but they dye it, and after ward they boyle it, as well fish as flesh. They haue no certaine dwelling place, and they goe from place to place, as they thinke they may best finde foode, as Aloes in one place, and other fish, Salmons, Sturgions, Bullets, Surnulletts, Barz, Carpes, Celes, Pinperneaur, and other fresh water fish, and store of Porpoises. They feede also of Stagges, wilde Bores, Bugles, Porkefpynes, and store of other wilde beastes. And there is as great store of Fowle as they can desire.

Touching their bread, they make very good: and it is of great myll: and they liue very well, for they take care for nothing else.

They drinke Seale oyle, but this is at their great feasts.

They haue a King in euery Countrey, and are wonderfull obedient vnto him: and they doe him honour accordyng vnto their maner and fashion. And when they trauaile from place to place, they cary all their goods with them in their boates.

The wedomen nurse their children with the bzeast, and they sit continually, and are wrapped about the bellies with skinnes of furre.

The voyage of Monsieur Roberval from his Fort in Canada
vnto Saguenay, the fifth of Iune, 1543.

The 5. of Iune

The 6. of Iune.

Monsieur Roberval the Kings Lieutenant generall in the Countreies of Canada, Saguenay, and Hochelaga, departed toward the said prouince of Saguenay on the Tuesday the 5. day of Iune 1543. after supper: and he with all his furniture was imbarked to make the sayd voyage. But vpon a certaine occasion they lay in the Rode ouer against the place before mentioned: but on the Wednesday about five of the clocke in the morning they set sayle, and sayled against the streame: in which voyage their whole furniture was of eight barks, as well great as small, and to the number of threescore and ten persons, with the aforesayd Generall.

The Generall left behinde him in the aforesayde place and Fort thirtie persons to remayne there untill his returne from Saguenay, which hee appoynted to bee the first of Iuly, or else they should returne into France. And hee left there behinde him but two Barkes to cary the sayde thirtie persons, and the furniture which was there, while hee stayed still in the Countrey.

Monsieur de
Royeze.

And for effectuating hereof, he left as his Lieutenant a gentleman named Monsieur de Royeze, to whom he gaue commission, and charged all men to obey him, and to be at the commandement of the sayd lieutenant.

The victuals which were left for their mayntenance untill the sayd first day of Iuly, were receiued by the sayd Lieutenant Royeze.

The 14. of
Iune.

On Thursday the 14. of Iune Monsieur de l'Espinay, la Brosse, Monsieur Frete, Monsieur Longeual, and others, returned from the Generall, from the voyage of Saguenay.

And note that eight men and one Barke were drowned and lost, among whom was Monsieur de Noirefontaine, and one named la Vasseur of Constance.

The 19. of
Iune.
Paris.
The 22. of Iuly
1543.

On Tuesday the 19. of Iune aforesayd, there came from the Generall, Monsieur de Ville-neufue, Talebot, and three others, which brought threescore pounds weight of their cozne, and letters to stay yet untill Dagdalenpde, which is the 22. day of Iuly.

The rest of this Voyage is wanting.

THE

THE VOYAGES AND NAVIGATIONS OF
the English nation to *Virginia*, and the seuerall discoueries therof
chiefly at the charges of the honourable *Sir Walter Ralegh* knight, from
33 to 40 degrees of latitude: together with the successe of the English colo-
nies there planted; as likewise a description of the Countrey, with the
Inhabitants, and the manifold commodities. Whereunto are
annexed the Patents, letters, dicourses, &c. to
this part belonging.

The letters patents, granted by the Queenes Maiestie to *M. Walter Ralegh* now Knight, for the discouering and planting of new lands and Coun-
tries, to continue the space of 6. yeeres and no more.

Lizabeth by the grace of God of England, France and Ireland Queene, de-
fender of the faith, &c. To all people to whom these presents shal come, gree-
ting. Knowye that of our especial grace, certaine science, & meere motion, we
hane giuen and granted, and by these presents for vs, our heires and successors
doe giue and grant to our trusty and welbeloued seruant *Walter Ralegh* Es-
quire, and to his heires and assignes for ever, free liberty & licence from time
to time, and at all times for ever hereafter, to discover, search, finde out, and
view such remote, heathen and barbarous lands, countreys, and territories, not actually possessed of
any Christian prince, nor inhabited by Christian people, as to him, his heires and assignes, and to e-
uery or any of them shal seeme good, and the same to haue, holde, occupy & enioy to him, his heires
and assignes for ever, with all prerogatiues, commodities, iurisdictiōs, royalties, priuiledges, fran-
chises and preeminences, thereto or thereabouts both by sea and land, whatsoever we by our let-
ters patents may grant, and as we or any of our noble progenitors haue heretofore granted to any
person or persons, bodie politique or corporate: and the said *Walter Ralegh*, his heires and as-
signes, and all such as from time to time, by licence of vs, our heires and successors, shal goe by tra-
uaile thither to inhabite or remaine, there to build and fortifie, at the discretion of the said *Walter*
Ralegh, his heires & assignes, the statutes or act of Parliament made against fugitiues, or against
such as shall depart, remaine or continue out of our Realme of England without licence, or any o-
ther statute, act, law, or any ordinance whatsoever to the contrary in any wise notwithstanding.

And we do likewise by these presents, of our especial grace, meere motion, and certaine know-
ledge, for vs, our heires and successors, giue and graunt full authoritie, libertie and power to the
said *Walter Ralegh*, his heires and assignes, and euery of them, that he and they, and euery or any
of them, shall and may at all and euery time and times hereafter, haue, take, and leade in the sayde
voyage, and trauaile thitherward, or to inhabite there with him or them, and euery or any of them,
such, and so many of our subiects as shall willingly accompany him or them, and euery or any of
them: and to whom also we doe by these presents, giue full libertie and authoritie in that behalfe,
and also to haue, take and employ, and vse sufficient shipping and furniture for the transportati-
ons, and Navigations in that behalfe, so that none of the same persons or any of them be such as
hereafter shall be restrained by vs, our heires or successors.

And further that the said *Walter Ralegh*, his heires and assignes, and euery of them, shall haue,
holde, occupie and enioy to him, his heires and assignes, and euery of them for ever, all the soyle of
all such landes, territories, and Countreys, so to be discovered and possessed as aforesayd, and of
all such Cities, Castles, Townes, Villages, and places in the same, with the right, royalties,
franchises, and iurisdictiōs, as well marine as other within the sayd landes, or Countreys, or the
seas thereunto adioyning, to be had, or vied, with full power to dispose thereof, and of euery part
in fee simple or other wise, according to the order of the lawes of England; as nere as the same
conueniently may be, at his, and their wil and pleasure, to any persons then being, or that shall re-
maine within the allegiance of vs, our heires and successors: reseruing alwayes to vs, our heires
and successors, for all seruices, duties, and demaunds, the fift part of all the oate of golde and sil-
uer, that from time to time, and at all times after such discouerie, subduing and possessing, shall be
there gotten and obtained: All which landes, Countreys, and territories shall for ever be holden of
the said *Walter Ralegh*, his heires and assignes, of vs, our heires and successors, by homage, and
by the sayd payment of the sayd fift part, reserued onely for all seruices.

And moreover, we do by these presents, for vs, our heires and successors, giue and grant licence

to the said Walter Ralegh, his heires, and assignes, and euery of them, that he, and they, and euery
 or any of them, shall and may from time to time, and at all times for euer hereafter, for his and their
 defence, encounter and expulse, repell and resist aswell by sea as by lande, and by all other wayes
 whatsoeuer, all and euery such person and persons whatsoeuer, as without the especial liking and
 licence of the sayd Walter Ralegh, and of his heires and assignes, shall attempt to inhabite with-
 in the sayd Countreys, or any of them, or within the space of two hundred leagues neere to
 the place or places within such Countreys as aforesayd (if they shall not bee before planted or
 inhabited within the limits as aforesayd with the subiects of any Christian Prince being in amitie
 with vs) where the sayd Walter Ralegh, his heires, or assignes, or any of them, or his, or their,
 or any of their associats or company, shall within sixe yeeres (next ensuing) make their dwellings
 or abidings, or that shall enterpryse or attempt at any time hereafter unlawfully to annoy, eyther
 by Sea or Lande the sayd Walter Ralegh, his heires or assignes, or any of them, or his or their,
 or any of his or their companies: giuing, and graunting by these presents further power and au-
 thoritie to the sayd Walter Ralegh, his heires and assignes, and euery of them from time to time,
 and at all times for euer hereafter, to take and surpryse by all maner of meanes whatsoeuer, all
 and euery those person or persons, with their Shippes, Vessels, and other goods and furniture,
 which without the licence of the sayd Walter Ralegh, or his heires, or assignes, as aforesayd,
 shalbe found traffiquing into any Harbour, or Harbours, Creeke, or Creekes, within the limits
 aforesayd, (the subiects of our Realmes and Dominions, and all other persons in amitie with
 vs, trading to the Newfound lands for fishing as heretofore they haue commonly vsed, or being
 driuen by force of a tempest, or shipwracke onely excepted:) and those persons, and euery of
 them, with their shippes, vessels, goods, and furniture to deteine and possesse as of good and law-
 full prize, according to the discretion of him the sayd Walter Ralegh, his heires, and assignes, and
 euery, or any of them. And for vnicing in moze perfect league and amitie, of such Countreys,
 landes, and territoryes so to be possessed and inhabited as aforesayd with our Realmes of England
 and Ireland, and the better encouragement of men to these enterprises: we doe by these presents,
 graunt and declare that all such Countreys, so hereafter to be possessed and inhabited as is aforesayd,
 from thenceforth shall be of the allegiance of vs, our heires and successours. And wee doe
 graunt to the sayd Walter Ralegh, his heires, and assignes, and to all, and euery of them, and to
 all, and euery other person and persons, being of our allegiance, whose names shall be noted or en-
 tred in some of our Courts of recorde within our Realme of England, that with the assent of the
 sayd Walter Ralegh, his heires or assignes, shall in his iourneis for discouerie, or in the iourneis
 for conquest, hereafter trauaile to such lands, countreys and territoryes, as aforesayd, and to their,
 and to euery of their heires, that they, and euery or any of them, being eyther bozne within
 our sayd Realmes of England or Irelande, or in any other place within our allegiance, and
 which hereafter shall be inhabiting within any the Lands, Countreys, and Territoryes, with
 such licence, (as aforesayd) shall and may haue all the priuiledges of free Denizens, and persons
 natieue of England, and within our allegiance in such like ample maner and forme, as if they were
 bozne and personally resident within our said Realme of England, any law, custome, or vsage to
 the contrary notwithstanding.

Note.

Free denizati-
on granted.

And forasmuch as vpon the finding out, discouering, or inhabiting of such remote lands, coun-
 tries, and territoryes as aforesayd, it shalbe necessary for the safety of all men, that shall aduenture
 themselves in those iourneies or voyages, to determine to liue together in Christian peace, and ci-
 uill quietnesse eche with other, whereby euery one may with moze pleasure and profit enioy that
 whereunto they shall attaine with great paine and perill, wee for vs, our heires and successours, are
 likewise pleased and contented, and by these presents doe giue & grant to the said Walter Ralegh,
 his heires and assignes for euer, that he and they, and euery or any of them, shall and may from time
 to time for euer hereafter, within the said mentioned remote lands and countries, in the way by the
 seas thither, and from thence, haue full and meere power and authoritie to correct, punish, pardon,
 gouerne, and rule by their and euery or any of their good discretions and policies, aswell in causes
 capitall, or criminall, as ciuill, both marine and other, all such our subiects, as shal from time to time
 aduenture themselves in the said iourneis or voyages, or that shall at any time hereafter inhabite
 any such lands, countreys, or territoryes as aforesayd, or that shall abide within 200. leagues of
 any of the sayd place or places, where the sayd Walter Ralegh, his heires or assignes, or any of
 them, or any of his or their associats or companies, shall inhabite within 6. yeeres next ensuing the
 date hereof, according to such statutes, lawes and ordinances as shall be by him the sayd Walter
 Ralegh, his heires and assignes, and euery or any of them deuised, or established, for the better go-
 uernment of the said people as aforesayd. So alwayes as the said statutes, lawes, and ordinances
 may

may be, as nere as conueniently may bee, agreeable to the forme of the lawes, statutes, gouernement, or pollicie of England, and also so as they be not against the true Christian faith, now professed in the Church of England, nor in any wise to withdrawe any of the subiectes or people of those lands or places from the alleageance of vs, our heires and successours, as their immediate Soueraigne vnder God.

And further, we doe by these presents for vs, our heires and successours, giue and grant full power and authoritie to our trustie and welbeloued Counsaillour Sir William Cecill knight, Lorde Burghley, our high Treasourer of England, and to the Lorde Treasourer of England for vs, our heires and successours for the time being, and to the priuie Counsaile of vs, our heires and successours, or any foure or more of them for the time being, that he, they, or any foure or more of them, shall and may from time to time, and at all times hereafter, vnder his or their handes or Seales by vertue of these presents, authorise and licence the saide Walter Raleigh, his heires and assignes, and euery or any of them by him, & by themselves, or by their, or any of their sufficient Attorneys, Deputies, Officers, Ministers, Factors, and seruants, to imbarke & transport out of our Realme of England and Ireland, and the Dominions thereof, all or any of his or their goods, and all or any the goods of his and their associats and companies, and euery or any of them, with such other necessaries and commodities of any our Realmes, as to the sayde Lorde Treasurer, or foure or more of the priuie Counsaile, of vs our heires and successours for the time being (as aforesaid) shall from time to time by his or their wisdomes, or discretions thought meete and conuenient, for the better reliefe and supportation of him the saide Walter Raleigh, his heires, and assignes, and euery or any of them, and of his or their or any of their associats and companies, any act, statute, law, or any thing to the contrary in any wise notwithstanding.

Provided alwayes, and our wil and pleasure is, and we do hereby declare to all Christian kings, princes, and states, that if the saide Walter Raleigh, his heires or assignes, or any of them, or any other by their licence or appointment, shall at any time or times hereafter robbe or spoile by sea or by land, or doe any acte of vniust or vnlawfull hostilitie, to any of the subiects of vs, our heires or successours, or to any of the subiects of any the kings, princes, rulers, Gouernours, or estates, being then in perfect league and amitie with vs, our heires and successours, and that vpon such iniurie, or vpon iust complaint of any such Prince, Ruler, Gouernour or estate, or their subiects, wee, our heires and successours, shall make open Proclamation within any the portes of our Realme of England, that the saide Walter Raleigh, his heires and assignes, and adherents, or any to whom these our Letters patents may extende, shall within the termes to bee limited, by such Proclamation, make full restitution, and satisfaction of all such iniuries done: so as both we and the said Princes, or other so complaining, may hold vs and themselves fully contented: And that if the said Walter Raleigh, his heires and assignes, shall not make or cause to be made satisfaction accordingly within such time so to be limited, that then it shall be lawfull to vs, our heires and successours, to put the saide Walter Raleigh, his heires and assignes, and adherents, and all the inhabitants of the saide places to be discovered (as is aforesaid) or any of them out of our alleageance and protection, and that from and after such time of putting out of protection of the saide Walter Raleigh, his heires, assignes and adherents, and others so to be put out, and the saide places within their habitation, possession and rule, shall be out of our alleageance and protection, and free for all Princes and others to pursue with hostilitie, as being not our subiects, nor by vs any way to be auouched, maintained, or defended, nor to be holden as any of ours, nor to our protection, or dominion, or alleageance any way belonging: for that expresse mention of the cleere yeerely value of the certaintie of the premisses, or any part thereof, or of any other gift, or grant by vs, or any our progenitors, or predecessors to the said Walter Raleigh, before this time made in these presents bee not expresse, or any other grant, ordinance, prouision, proclamation, or restraint to the contrary thereof, before this time, giuen, ordained, or prouided, or any other thing, cause, or matter whatsoever, in any wise notwithstanding. In witnesse whereof, wee haue caused these our letters to be made Patents. Witnesse our selues, at Westminster the five and twentic day of March, in the five and twenticth Anno 1584.
yeere of our Raigne.

The first voyage made to the coasts of *America*, with two barks, where in were Captaines M. Philip Amadas, and M. Arthur Barlowe, who discouered part of the Countrey now called *Virginia*, Anno 1584. Written by one of the said Captaines, and sent to sir *Walter Raleigh* knight, at whose charge and direction, the said voyage was set forth.

On the 27 day of Aprill, in the yeere of our redemption, 1584 we departed the West of England, with two barkes well furnished with men and victuals, hauing receiued our last and perfect directions by your letters, confirming the former instructions, and commandements deliuered by your selfe at our leauing the riuer of *Thames*. And I thinke it a matter both vnnecessary, for the manifest discouerie of the Countrey, as also for tediousnesse sake, to remember vnto you the diurnall of our course, sayling thither and returning: onely I haue presumed to present vnto you this brieue discourse, by which you may iudge how profitable this land is likely to succede, as well to your selfe, (by whose direction and charge, and by whose seruantes this our discouerie hath bene performed) as also to her Highnesse, and the Common wealch, in which we hope your wisdom wilbe satisfied, considering that as much by vs hath bene brought to light, as by those final meanes, and number of men we had, could any way haue bene expected, or hoped for.

21 Southerly
course not
greatly needful
for Virginia.

The tenth of May we arr iued at the Canaries, and the tenth of June in this present yeere, we were fallen with the Ilands of the West Indies, keeping a more Southeasterly course then was needefull, because wee doubted that the current of the Bay of Mexcio, dis bogging betweene the Cape of Florida and Hauana, had bene of greater force then after wardes we found it to bee. At which Ilands we found the ayre very vnwholsome, and our men grew for the most part ill disposed: so that hauing refreshed our selues with sweet water, & fresh victuall, we departed the twelfth day of our arriual there. These Ilands, with the rest adioyning, are so well knownen to your selfe, and to many others, as I will not trouble you with the remembrance of them.

24 Sweet smell
from the land.

The second of July, we found shole water, wher we smelt so sweet, and so strong a smel, as if we had bene in the midst of some delicate garden abounding with all kinde of odoriferous flowers, by which we were assured, that the land could not be farre distant: and keeping good watch, and bearing but slacke saile, the fourth of the same moneth we arriued vpon the coast, which we supposed to be a continent and firme lande, and we sayled along the same a hundred and twentie English miles before we could finde any entrance, or riuer issuing into the Sea.

The first river.

The first that appeared vnto vs, we entred, though not without some difficultie, & cast anchor about thre harquebus-shot within the hauens mouth, on the left hand of the same: and after thankes giuen to God for our safe arriual thither, we manned our boats, and went to view the land next adioyning, and "to take possession of the same, in the right of the Queenes most excellent Maestie, as rightfull Queene, and Princessse of the same, and after deliuered the same ouer to your vse, according to her Maesties grant, and letters patents, vnder her Highnesse great Seale. Which being per formed, according to the ceremonies vsed in such enterprises, we viewed the land about vs, being, whereas we first landed, very sandie and low towards the waters side, but so full of grapes, as the very beating and surge of the Sea ouerflowed the m, of which we found such plentie, as well there as in all places else, both on the land and on the Greene soile on the hills, as in the plaines, as well on euery little shrubbe, as also climbing towards the tops of high Cedars, that I thinke in all the world the like abundance is not to be found: and my selfe hauing seene those parts of Europe that most abound, find such difference as were incredible to be written.

" July 13 poss
session taken.

Abundance of
grapes.

We passed from the Sea side towards the toppes of those hills next adioyning, being but of meane high, and from thence wee behelde the Sea on both sides to the North, and to the South, finding no ende any of both wayes. This lande lay stretching it selfe to the West, which after wee found to bee but an Iland of twentie miles long, and not aboue sixe miles broad. Under the banke or hill whereon we stood, we behelde the vallies replenished with goodly Cedar trees, and hauing discharged our harquebus-shot, such a flocke of Cranes (the most pat white) arose vnder vs, with such a cry redoubled by many echoes, as if an armie of men had shotted all together.

The Isle of
Wokokon.

This Iland had many goodly woodes full of Deere, Conies, Hares, and Fowle, even in the midst of Summer in incredible abundance. The woodes are not such as you finde in Bohemia, Moscouia, or Hercynia, barren and fruidles, but the highest and reddest Cedars of the world, farre bettering the Ceders of the Açores, of the Indies, or Lybanus, Hyynes, Cypres, Saffaphras, the Lentisk, or the tree that beareth the Masticke, the tree that beareth the rine of blacke Sinamon, of

Goodly Ce-
dars, Pines,
Cypres, Saff-
aphras.

of which Master Winter brought from the freights of Magellan, and many other of excellent
finell and qualitie. We remained by the side of this Island two whole dayes before we saw any
people of the Countrey: the third day we espyed one small boate rowing towards vs, hauing in it
three persons: this boate came to the Island side, foure harquebus shot from our shippes, and there
two of the people remaining, the third came along the shore side towards vs, and wee being then
all within boord, he walked vp and downe vpon the point of the land next vnto vs: then the Master
and the Pilot of the Admirall, Simon Ferdinando, and the Captaine Philip Amadas, my selfe, and
others rowed to the land, whose comming this fellow attended, neuer making any shewe of feare
or doubt. And after he had spoken of many things not vnderstood by vs, we brought him with his
owne good liking, aboord the ships, and gaue him a shirt, a hat & some other things, and made him
taste of our wine, and our meat, which he liked very well: and after hauing viewed both barks, he de-
parted, and went to his owne boate againe, which hee had left in a little Coue or Creeke adioy-
ning: as soone as hee was two bow shot into the water, he fell to fishing, and in lesse then halfe an
houre, he had laden his boate as deepe, as it could swimme, with which hee came againe to the
point of the lande, and there he deuided his fish into two parts, pointing one part to the ship, and the
other to the pinnelle: which, after he had (as much as he might) requited the former benefites re-
ceaued, departed out of our sight.

danc
of fish.

The arrivall
of the king
brother.

The next day there came vnto vs diuers boates, and in one of them the Kings brother, accom-
panied with fortie or fiftie men, very handsome and goodly people, and in their behauiour as man-
nerly and ciuill as any of Europe. His name was Granganimeo, and the king is called Wingi-
na, the countrey Wingandacoa, and now by her Maistie Virginia. The manner of his comming
was in this sort: hee left his boates altogether as the first man did a little from the shippes by the
shore, and came along to the place ouer against the ships, followed with fortie men. When he came
to the place, his seruants spread a long matre vpon the ground, on which he sat downe, and at the
other ende of the matre foure others of his companie did the like, the rest of his men stood round
about him, somewhat a farre off: when we came to the shore to him with our weapons, hee neuer
moued from his place, nor any of the other foure, nor neuer mistrusted any harme to be offered from
vs, but sitting still he beckoned vs to come and sit by him, which we performed: and being set hee
made all signes of ioy and welcome, striking on his head and his breast and after wardes on ours,
to shewe wee were all one, smiling and making shewe the best he could of all loue, and familiaritie.
After hee had made a long speech vnto vs, wee presented him with diuers things, which hee
receiued very ioyfully, and thankfully. None of the company durst speake one worde all
the time: onely the foure which were at the other ende, spake one in the others eare very
softly.

The King is greatly obeyed, and his brothers and children reuerenced: the King himselfe in
person was at our being there, sore wounded in a fight which hee had with the King of the next
countrey, called Wingina, and was shot in two places through the body, and once cleane through
the thigh, but yet he recovered: by reason whereof and for that hee lay at the chiefe towne of the
country, being sixe dayes iourney off, we saw him not at all.

After we had presented this his brother with such things as we thought hee liked, wee likewise
gaue somewhat to the other that sat with him on the matre: but presently he arole and tooke all
from them and put it into his owne basket, making signes and tokens, that all things ought to bee
deliuered vnto him, and the rest were but his seruants, and followers. A day or two after this, we
fell to trading with them, exchanging some things that we had, for Chamoyes, Buffe, and Deere
skinner: when we shewed him all our packet of merchandize, of all things that he sawe, a bright
tinne dish most pleased him, which hee presently tooke vp and clapt it before his breast, and after
made a hole in the brimme thereof and hung it about his necke, making signes that it would de-
fende him against his enemies arrowes: for those people maintaine a deadly and terrible warre,
with the people and King adioyning. We exchanged our tinne dish for twentie skinner, woorth
twentie Crownes, or twentie Nobles: and a copper kettle for fiftie skins woorth fifty Crownes.
They offered vs good exchange for our hatchets, and axes, and for knives, and would haue giuen
any thing for swordes: but wee would not depart with any. After two or three dayes the Kings
brother came aboord the shippes, and dranke wine, and eat of our meat and of our bread, and liked
exceedingly thereof: and after a few dayes ouerpasted, he brought his wife with him to the ships,
his daughter and two or three children: his wife was very well fauoured, of meane stature and ve-
ry bashfull: shee had on her backe a long cloake of leather, with the furre side next to her body,
and before her a piece of the same: about her forehead shee had a bande of white Corall, and so had
her husband many times: in her eares shee had bracelets of pearles hanging downe to her middle,

Tinne much
esteemed.

White corall
Pearles.

whereof wee deliuered your worship a little bracelet and those were of the bignes of good pease. The rest of her women of the better sort had pendants of copper hanging in either eare, and some of the children of the kings brother and other noble men, haue one or tye in either eare: he himselfe had vpon his head a broad plate of golde, or copper, for being unpolished we knew not what metal it should be, neither would he by any meanes suffer vs to take it off his head, but feeling it, it would bow very easily. His apparell was as his wiues, onely the women weare their haire long on both sides, and the men but on one. They are of colour yellowish, and their haire black for the most part, and yet we saw children that had very fine aburne, and chestnut coloured haire.

Pitch trees.

*The manner
of making
their boates.*

After that these women had bene there, there came downe from all parts great store of people, bringing with them leather, corall, diuers kindes of dyes very excellent, and exchanged with vs: but when Granganimeo the kings brother was present, none durst trade but himselfe: except such as weare red pieces of copper on their heads like himselfe: for that is the difference betwene the noble men, and the gouernours of countreys, and the meaner sort. And we both noted there, and you haue understood since by these men, which we brought home, that no people in the worlde carry moze respect to their King, Nobilitie and Gouernours, then these doe. The Kings brothers wife, when she came to vs (as she did many times) was followed with forty or fifty women alwayes: and when she came into the shippe, she left them all on land, sauing her two daughters, her nurse and one or two moze. The Kings brother alwayes kept this order, as many boates as he would come withall to the shippes, so many fires would hee make on the shoare a farre off, to the end we might vnderstand with what strength and company he approached. Their boates are made of one tree, either of Pine, or of Pitch trees: a wood not commonly knowen to our people, nor found growing in England. They haue no edge-tooles to make them withall: if they haue any they are very fewe, and those it seemes they had twentie yeres since, which, as those two men declared, was out of a wrake which happened vpon their coast of some Christian ship, being beaten that way by some storme and outragious weather, whereof none of the people were saued, but only the ship, or some part of her being cast vpon the land, out of whose sides they drew the nayles and the spikes, and with those they made their best instruments. The manner of making their boates is thus: they burne downe some great tree, or take such as are winde fallen, and putting gumme and rosen vpon one side thereof, they set fire into it, and when it hath burnt it hollow, they cut out the coale with their shels, and euer where they would burne it deeper or wider they lay on gummes, which burne away the timber, and by this meanes they fashion very fine boates, and such as will transport twentie men. Their oares are like scoopes, and many times they set with long poles, as the depth serueth.

The Kings brother had great liking of our armour, a sword, and diuers other things which we had: and offered to lay a great bope of pearle in gage for them: but we refused it for this time, because we would not make them knowe, that we esteemed thereof, untill we had vnderstoode in what places of the countrey the pearle grew: which now your Worshippe doeth very well vnderstand.

He was very iust of his promise: for many times we deliuered him merchandize vpon his word, but euer he came within the day and perfozmed his promise. He sent vs euery day a brace or two of fat Bucks, Conies, Hares, Fish the best of the world. He sent vs diuers kindes of fruites, Melons, Walnuts, Cucumbers, Gourdes, Pease, and diuers rootes, and fruites very excellent good, and of their Countrey corne, which is very white, faire and well tasted, and groweth three times in five moneths: in May they sow, in July they reape: in June they sow, in August they reape: in July they sow, in September they reape: onely they cast the corne into the ground, breaking a little of the soft turfe with a with wooden mattock, or pickeaxe: our selues prooued the soile, and put some of our Pease in the ground, and in tenne dayes they were of fourtene ynches high: they haue also Beanes very faire of diuers colours and wonderfull plentie: some growing naturally, and some in their gardens, and so haue they both wheat and oates.

*Ranoak
Island.*

The soile is the most plentiful, sweete, fruitfull and wholsome of all the worlde: there are about foureteene seuerall sweete smelling timber trees, and the most part of their vnderwoods are Bayes, and such like: they haue those Okes that we haue, but farre greater and better. After they had bene diuers times aboard our shippes, my selfe, with seuen moze went twentie mile into the Riuer, that runneth towarde the Citie of Skicoak, which Riuer they call Occam: and the euening following, wee came to an Island, which they call Ranoak, distant from the harbour by which we entered, seuen leagues: and at the North end thereof was a village of nine houses, built of Cedar, and fortified round about with sharpe trees, to keepe out their enemies, and the entrance into it made like a turne pike very artificially: when wee came towarde it, standing neere

neere unto the waters side, the wife of Grauganimo, the kings brother came running out to meete vs very cheerefully and friendly, her husband was not then in the village; some of her people thee commanded to draw our boate on shore for the beating of the billoe: others she appointed to carry vs on their backs to the dry ground, and others to bring our oares into the house for feare of stealing. When we were come into the better roome, hauing fure roomes in her house, she caused vs to sit downe by a great fire, and after tooke off our clothes and washed them, and dyed them againe: some of the women plucked off our stockings and washed them, some washed our feete in warme water, and shee her selfe tooke great paines to see all things ordered in the best maner shee could, making great haste to dresse some meate for vs to eat.

The great
kindnes of the
kings bro-
thers wife.

After we had thus dyed our selues, she brought vs into the inner roome, where shee set on the hood standing along the house, some wheate like surmentie, sodden Lenten, and roasted fish sodden, boyled, and roasted, Melons rawe, and sodden, rootes of diuers kindes, and diuers fruites: their drinke is commonly water, but while the grape lasteth, they drinke wine, and for want of calkes to keepe it, all the yere after they drinke water, but it is sodden with Ginger in it, and blacke Sinnamon, and sometimes Sallaphras, and diuers other wholesome, and medicinable hearbes and trees. We were entertained with all loue and kindnesse, and with as much bountie (after their maner) as they could possibly deuise. We found the people most gentle, louing, and faithfull, void of all guile and treason, and such as liue after the maner of the golden age. The people onely care howe to defend themselves from the cold in their short winter, and to feed themselves with such meat as the soile affoordeth: there meate is very well sodden and they make broth very sweet and sauorie: their vessels are earthen pots, very large, white and sweete, their dishes are wooden platters of sweet timber: within the place where they feede was their lodging, and within that their Idoll, which they worship, of whome they speake incredible things. While we were at meate, there came in at the gates two or three men with their bowes and arrowes from hunting, whom when wee espied, we beganne to looke one towards another, and offered to reach our weapons: but as soone as shee espied our mistrust, shee was very much moued, and caused some of her men to runne out, and take away their bowes and arrowes and breake them, and withall beate the poore fellowes out of the gate againe. When we departed in the euening and would not tary all night, she was very soyy, and gaue vs into our boate our supper halfe dressed, pottes and all, and brought vs to our boate side, in which wee lay all night, remoouing the same a prettie distance from the shoare: shee perceiuing our ielousie, was much greiued, and sent diuers men and thirtie women, to sit all night on the banke side by vs, and sent vs into our boates fine mattes to couer vs from the raine, vsing very many wordes to intreate vs to rest in their houses: but because wee were fewe men, and if wee had miscaried, the voyage had bene in very great danger, wee durst not aduenture any thing, although there was no cause of doubt: for a more kinde and louing people there can not be found in the worlde, as farre as we haue hitherto had triall.

A solemne
banquet.

Their Idole.

Beyond this Island there is the maine lande, and ouer against this Island falleth into this spacious water, the great riuer called Occam by the inhabitants, on which standeth a towne called Pomeiock, & five dayes iourney from the same is situate their greatest citie, called Skicoak, which this people affirme to be very great: but the Sauages were neuer at it, only they speake of it by the report of their fathers and other men, whom they haue heard affirme it to bee aboute one houres iourney about.

Skicoak a great
towne.

In to this riuer falleth another great riuer, called Cipo, in which there is found great store of Muskles in which there are pearles: likewise there descendeth into this Occam, another riuer, called Nomopana, on the one side whereof standeth a great towne called Chawanook, and the Lord of that towne and countrey is called Pooneno: this Pooneno is not subiect to the king of Wingandacoa, but is a free Lord: beyond this country is there another king, whom they call Menatonon, and these three kings are in league with each other. Towards the Southwest, foure dayes iourney is situate a towne called Sequotan, which is the Southermost towne of Wingandacoa, neere unto which, five and twentie yeres past, there was a ship cast away, whereof some of the people were saued, and those were white people, whom the countrey people preferred.

A ship cast
away.

And after ten dayes remaining in an out Island inhabited, called Wocokon, they with the help of some of the dwellers of Sequotan, fastened two boates of the countrey together & made masts vnto them, and sailes of their shirtes, and hauing taken into them such victuals as the countrey peeled, they departed after they had remained in this out Island 3 weekes: but shortly after it seemed they were cast away, for the boates were found vpon the coast, cast a land in another Island adioyning: other then these, there was neuer any people apparelled, or white of colour, either scene, or

heard

Their weapons.

heare of amongst these people, and these aforesaid were seene onely of the inhabitantes of Secotan, which appeared to be very true, for they wondered maruelously when we were amongst them at the whiteness of our skins, euer coueting to touch our breasts, and to view the same. Besides they had our ships in maruelous admiration, & all things els were so strange vnto them, as it appeared that none of them had euer seene the like. When we discharged any piece, were it but an hargubuz, they would tremble thereat for very feare, and for the strangenesse of the same: for the weapons which themselves vse are bowes and arrowes: the arrowes are but of small canes, headed with a sharpe shell or tooth of a fish sufficient ynough to kill a naked man. Their swordes be of wood hardened: likewise they vse wooden breastplates for their defence. They haue beside a kinde of club, in the end whereof they fasten the sharpe hornes of a stagge, or other beast. When they goe to warres they cary about with them their idol, of whom they aske counsel, as the Romans were woont of the Oracle of Apollo. They sing songs as they march towardes the battell in stead of drummes and trumpets: their warres are very cruell and bloody, by reason whereof, and of their ciuill dissention which haue happened of late yeeres amongst them, the people are maruelously wasted, and in some places the countrey left desolate.

At Pananuaoc.

Adioyning to this countrey aforesaid called Secotan beginneth a countrey called Pomouik, belonging to another king whom they call Piamacum, and this king is in league with the next king adioyning towards the setting of the Sunne, and the countrey Newfiok, situate vpon a goodly riuer called Neus: these kings haue mortall warre with Wingina king of Wingandacoa: but about two yeeres past there was a peace made betweene the king Piamacum, and the Lord of Secotan, as these men which we haue brought with vs to England, haue giuen vs to vnderstand: but there remaineth a mortall malice in the Secotanes, for many iniuries & slaughters done vpon them by this Piamacum. They invited diuers men, and thirtie women of the best of his countrey to their towne to a feast: and when they were altogether merry, & praying before their Idol, (which is nothing els but a meer illusion of the deuill) the captaine or Lord of the towne came suddenly vpon them, and slewe them euery one, reseruing the women and children: and these two haue oftentimes since perswaded vs to surprize Piamacum his towne, hauing promised and assured vs, that there will be found in it great store of commodities. But whether their perswasion be to the ende they may be reuenged of their enemies, or for the loue they beare to vs, we leaue that to the triall hereafter.

Beyond this Island called Roanoak, are manie Islands very plentifull of fruits and other naturall increases, together with many townes, and villages, along the side of the continent, some bounding vpon the Islands, and some stretching vp further into the land.

When we first had sight of this countrey, some thought the first land we saw to bee the continent: but after we entred into the Hauen, we saw before vs another mighty long Sea: for there lyeth along the coast a tracte of Islands, two hundred miles in length, adioyning to the Ocean sea, and betweene the Islands, two or three entrances: when you are entred betweene them (these Islands being very narrow for the most part, as in most places sixe miles broad, in some places lesse, in fewe more) then there appeareth another great Sea, containing in bredth in some places, forty, and in some fifty, in some twenty miles ouer, before you come vnto the continent: and in this inclosed Sea there are about an hundred Islands of diuers bignesses, whereof one is sixtene miles long, at which we were, finding it a most pleasant and fertile ground, replenished with goodly Cedars, and diuers other sweete woods, full of Coyrants, of flaxe, and many other notable commodities, which we at that time had no leasure to view. Besides this Island there are many, as I haue sayd, some of two, of three, of foure, of fife miles, some more, some lesse, most beautifull and pleasant to behold, replenished with Deere, Conies, Hares and diuers beasts, and about them the goodliest and best fish in the world, and in greatest abundance.

Roanoak sixteen miles long.

Thus Sir, we haue acquainted you with the particulars of our discovery made this present voyage, as farre forth as the shortnesse of the time we there continued would affoord vs to take viewe of: and so contenting our selues with this seruice at this time, which wee hope hereafter to enlarge, as occasion and assistance shalbe giuen, we resolved to leaue the countrey and to apply our selues to returne for England, which we did accordingly, and arriued safely in the West of England about the middest of September.

And whereas wee haue aboue certified you of the countrey taken in possession by vs, to her Maiesties vse, and so to yours by her Maiesties grant, wee thought good for the better assurance thereof, to recorde some of the particular Gentlemen, & men of accompt, who then were present, as witnesses of the same, that thereby all occasion of cauill to the title of the countrey, in her Maiesties behalfe may be preuented, which other wise, such as like not the action may vse and pretend, whose names are:

Passer

Master Philip Amadas,
Master Arthur Barlow,

} Captaines.

William Greeneuile,
John Wood,
James Browewich,
Henry Greene,
Beniamin Wood,
Simon Ferdinando,
Nicholas Periman,
John Hewes,

} Of the companie.

We brought home also two of the Sauages being lustie men, whose names were Wanchese and Manteo.

The voiage made by Sir Richard Greeneuile, for Sir Walter Raleigh,
to Virginia, in the yeere 1585.

The 9. day of April, in the yeere abovesayd, we departed from Plymouth, our Fleete consisting of the number of seuen sailes, to wit, the Tyger, of the burden of seuen score tunnes, a Flie-boat called the Roe-bucke, of the like burden, the Lyon of a hundred tunnes or thereabouts, the Elizabeth, of fiftie tunnes, and the Dorothea, a small barke: whereunto were also adioyned for speedy seruices, two small pinnesses. The principall Gentlemen of our companie, were these,

M. Ralph Lane, M. Tomas Candish, M. John Arundell, M. Raymund, M. Stukeley, M. Bremige, M. Vincent, and M. John Clarke, and diuers others, whereof some were Captaines, and other some Assistants for counsell, and good directions in the voyage.

The 14. day of Aprill wee fell with Lancerota and Forteventura, Isles of the Canaries, and from thence we continued our course for Dominica, one of the Antiles of the West India, where-with we fell the 7. day of May, and the 10. day following wee came to an anchor at Cotesa, a little Island situate neere to the Island of S. Iohn, where we landed, and refreshed our selues all that day.

The 12. day of May wee came to an anchor in the Bay of Moskiro, in the Island of S. Iohn, within a Faulcon shot of the shoare: where our Generall Sir Richard Greeneuile, and the most part of our companie landed, and began to fortifie very neere to the Sea side: the river ran by the one side of our forte, and the other two sides were inuironed with woods.

They land by
on the Island of
S. Iohn de Por.
to Rico.

The 13. day we began to build a new pinnesse within the Fort, with the timber that wee then felled in the countrey, some part whereof we set three miles by in the land, and brought it to our Fort vpon trucks, the Spaniards not daring to make or offer resistance.

The 16. day there appeared vnto vs out of the woods eight horsemen of the Spaniards, about a quarter of a mile from our Fort, staying about halfe an houre in viewing our forces: but as soone as they saw ten of our shot marching towards them, they presently retired into the woods.

The 19. day Master Candish, who had bene separated from our fleete in a storme in the Bay of Portugall, arrived at Cotesa, within the sight of the Tiger: we thinking him a farre off to haue bene either a Spaniard or Frenchman of warre, thought it good to weigh anchors, and to goe roome with him, which the Tiger did, and discerned him at last to be one of our comforts, for ioy of whose conning our ships discharged their ordinance, and saluted him according to the maner of the Seas.

The 22. day twentie other Spanish horsemen shewed themselves to vs vpon the other side of the river: who being seene, our Generall dispatched 20. footemen towards them, and two horsemen of ours, mounted vpon Spanish horses, which wee before had taken in the time of our being on the Island: they shewed to our men a flagge of truce, and made signes to haue a parle with vs: where-vpon two of our men went halfe of the way vpon the lands, and two of theirs came and met them: the two Spaniards offered very great salutations to our men, but began according to their Spanish proud humors, to expostulate with them about their arrivall and fortifying in their countrey, who notwithstanding by our mens discreet answers were so cooled, that (whereas they were told, that our principall intention was onely to furnish our selues with water and victuals, and other necessaries, whereof we stood in neede, which we craued might be peeld vs with faire and friendly meanes, otherwise our resolution was to practise force, and to relieue our selues by the sword) the

the Spaniards in conclusion seeing our men so resolute, yielded to our requestes with large promises of all curtesie, and great fauour, and so our men and theirs departed.

The 23. day our pinnelle was finished, and lanchèd: which being done, our Generall with his Captaines and Gentlemen, marched vp into the Countrey about the space of 4. miles, where in a plaine marsh they stayd expecting the comming of the Spaniards according to their promise, to furnish vs with victuals: who keeping their olde custome for perurie and breach of promise, came not, whereupon our Generall fired the woods thereabout, and so retired to our Fort, which the same day was fired also, and each man came aboard to be ready to set saile the next morning.

The 29. day wee set saile from Saint Johns, being many of vs stung before vpon shoare with the Puskitos: but the same night wee tooke a Spanish Frigat, which was forsaken by the Spaniards vpon the sight of vs, and the next day in the morning very early we tooke another Frigat, with good and rich freight, and diuers Spaniards of account in her, which afterwards wee ransomed for good round summes, and landed them in S. Johns.

The 26. day our Lieutenant Master Ralph Lane went in one of the Frigats which we had taken, to Roxo bay vpon the Southwest side of Saint Johns, to fetch salt, being thither conducted by a Spanish Pilot: as soone as hee arrived there, hee landed with his men to the number of 20. and intrenched himselfe vpon the sandes immediately, compassing one of their salte hills within the trench: who being scene of the Spaniards, there came downe towards him two or thre troopes of horsemen and footmen, who gaue him the looking, and gazing on, but durst not come neere him to offer any resistance, so that Master Lane maugre their troopes, carped their salte aboard and landed his Frigat, and so returned againe to our flecte the 29. day, which rood at S. Germans Bay. The same day we all departed, and the next day arrived in the Island of Hispaniola.

June.

The 1. day of June we anchored at Isabella, on the North side of Hispaniola.

The 3. day of June, the Gouvernour of Isabella, and Captaine of the Port de Plata, being certified by the reports of sundry Spaniards, who had bene well intertained aboard our shippes by our Generall, that in our flecte were many braue and gallant Gentlemen, who greatly desired to see the Gouvernour aforesayd, he thereupon sent gentle commendations to our Generall, promising within few dayes to come to him in person, which he performed accordingly.

The 5. day the aforesayd Gouvernour accompanied with a lusty Fryer, and twenty other Spaniards, with their seruants, and Negroes, came downe to the Sea side, where our ships rood at anchor, who being scene, our Generall manned immediately the most part of his boates with the chiefe men of our flecte, every man appointed, and furnished in the best sort: at the landing of our Generall, the Spanish gouernour receiued him very courtiously, and the Spanish Gentlemen saluted our English Gentlemen, and their inferiour sort did also salute our Souldiers and Sea men, liking our men, and likewise their qualities, although at the first they seemed to stand in feare of vs, and of so many of our boates whereof they desired that all might not land their men, yet in the end, the courtesies that passed on both sides were so great, that all feare and mistrust on the Spaniards part was abandoned.

In the meane time while our English Generall and the Spanish Gouvernour discoursed betwixt them of diuers matters, as of the state of the Countrey, the multitude of the Townes and people, and the commodities of the Island, our men prouided two banquetting houses couered with greene boughes, the one for the Gentlemen, the other for the seruants, and a sumptuous banquet was brought in serued by vs all in plate, with the sound of trumpets, and consort of musicke, wherewith the Spaniards were more then delighted. Which banquet being ended, the Spaniards in recompence of our courtesie, caused a great heard of white buls, and kyne to be brought together from the mountaines, and appoynted for euery Gentleman and Captaine that would ride, a horse ready sadled, and then singled out thre of the best of them to bee hunted by horsemen after their manner, so that the pastime grewe very pleasant for the space of thre houres, wherein all thre of the beasts were killed, whereof one tooke the Sea, and there was slaine with a musket. After this sport, many rare presents and gifts were giuen and bestowed on both parts, and the next day wee played the Marchants in bargaining with them by way of trucke and exchange of diuers of their commodities, as horses, mares, kyne, buls, goates, swine, sheepe, bull-hides, sugar, ginger, pearle, tabacco, and such like commodities of the Island.

The 7. day we departed with great good will from the Spaniards from the Island of Hispaniola: but the wiser sort doe impute this great shew of friendship, and courtesie vsed towards vs by the Spaniards rather to the force that wee were of, and the vigilancie, and watchfulnesse that

that was amongst vs, then to any heartie good will, or sure friendly intertainment: for doubtlesse if they had bene stronger then wee, wee might haue looked for no better curtesie at their handes, then Master Iohn Haukins receiued at Saint Iohn de Villua, or Iohn Oxnam neere the streights of Dariene, and diuers others of our Countrymen in other places.

The 8. day we ankred at a small Iland to take Seales, which in that place wee vnderstood to haue bene in great quantitie, where the Generall and certaine others with him in the pinnelle were in very great danger to haue bene all cast away, but by the helpe of God they escaped the hazard, and returned aboard the Admirall in safetie.

The 9. day we arriued and landed in the Ile of Caycos, in which Iland we searched for salte-
pouder, vpon the aduertisement and information of a Portugall: who in deede abused our Generall
and vs, deseruing a halter for his hire, if it had so pleased vs.

They land on
the Iles of
Caicos.

The 12. we ankred at Guanima, and landed.

Guanima,
Cyguato.

The 15. and 16. we ankred and landed at Cyguato.

The 20. we fell with the maine of Florida.

The 23. we were in great danger of a wracke on a beech called the Cape of Feare.

They land in
Florida.

The 24. we came to anker in a harbour, where wee caught in one tyde so much fish as would
haue peeled vs twentie pounds in London: this was our first landing in Florida.

The 26. we came to anker at Wocokon.

The 29. wee weighed anker to bring the Tyger into the harbour, where through the unskillful-
nesse of the Master whose name was Fernando, the Admirall strooke on ground, and sunke.

The 3. we sent word of our arriuing at Wococon, to Wingina at Roanoak.

July.

The 6. P. Iohn Arundel was sent to the maine, and Manteco with him: and Captaine Aubry
and Captaine Boniten the same day were sent to Croatoan, where they found two of our men left
there with 30. other by Captaine Reymond, some 20. dayes before.

The 8. Captaine Aubry and Captaine Boniten returned, with two of our men found by them,
to vs at Wocokon.

The 11. day the Generall accompanied in his Tilt boate with Master Iohn Arundell, Master
Stukeley, and diuers other Gentlemen, Master Lane, Master Candish, Master Hariot, and twen-
tie others in the new pinnelle, Captaine Amadas, Captaine Clarke, with ten others in a shipboate,
Francis Brooke, and Iohn White in another ship-boate, passed ouer the water from Wococon to
the maine land victualled for eight dayes, in which voyage we first discouered the townes of Po-
meiok, Aquascogoc and Secotan, and also the great lake called by the Sauages Paquipe, with
diuers other places, and so returned with that discouery to our flecte.

The 12. we came to the Towne of Pomeiok.

The 13. we passed by water to Aquascogoc.

The 15. we came to Secotan, and were well entertained there of the Sauages.

The 16. wee returned thence, and one of our boates with the Admirall was sent to Aquasco-
goc, to demand a silver cup which one of the Sauages had stolen from vs, and not receiuing
it according to his promise, wee burnt, and spoiled their corne, and Towne, all the people being
fled.

The 18. we returned from the discouery of Secotan, and the same day came aboard our flecte
ryding at Wococon.

The 21. our flecte ankering at Wococon, we wayed anker for Hatoraske.

The 27. our flecte ankered at Hatorask, and there we rested.

The 29. Grangino brother to king Wingina came aboard the Admirall, and Manteco
with him.

The 2. the Admirall was sent to Weapomeiok.

The 5. P. Iohn Arundell was sent for England.

August.

The 25. our Generall wayed anker, and set saile for England.

About the 31. he tooke a Spanish ship of 300. tunne richly laden, boording her with a boate
made with boards of chests, which fell asunder, and sunke at the ships side, as soone as cuer he and
his men were out of it.

The 10. of September, by foule weather the Generall then shipped in the prize, lost sight of September
the Tyger.

The 6. the Tyger fell with the Landes end, and the same day came to anker at Palmouth.

October.

The 18. the Generall came with the prize to Plymmouth, and was courteously receiued by di-
uers of his his worshipfull friends.

The

An extract of Master *Ralph Lane's* letter to M. *Richard Hakluyt* Esquire, and another Gentleman of the middle Temple, from *Virginia*.

In the meane while you shall vnderstand, that since Sir Richard Greenuils departure from vs, as also before, we haue discovered the maine to be the goodliest coyle vnder the cope of heauen, so abounding with sweete trees, that bring such sundry rich and pleasant gummes, grapes of such greatnesse, yet wilde, as France, Spaine nor Italie haue no greater, so many sorts of Apothecarie drugs, such seuerall kindes of flaxe, & one kind like silke, the same gathered of a grasse, as common there, as grasse is here. And now within these few dayes we haue found here *Watz* or *Guinie* wheate, whose eare yeeldeth come for bread 400. vpon one eare, and the Cane maketh very good and perfect sugar, also Terra Samia, otherwile Terra sigillata. Besides that, it is the goodliest and most pleasing Territorie of the worlde: for the continent is of an huge and vnknoen greatnesse, and very well peopled and towne, though sauagely, and the climate so wholesome, that wee had not one sicke since we touched the land here. To conclude, if *Virginia* had but houses and kinde in some reasonable proportion, I dare assure my selfe being inhabited with English, no realme

in Christendome were comparable to it. For this already we finde, that what commodities soeuer Spaine, France, Italy, or the East partes doe yeeld vnto vs, in wines of all sortes, in oyles, in flaxe, in rosens, pitch, frakenfence, corrans, sugers, and such like, these parts doe abound with the growth of them all, but being Sauages that possesse the land, they know no vse of the same. And sundry other rich commodities, that no parts of the world, be they West or East Indies, haue, here wee finde great abundance of. The people naturally are most curteous, and very desirous to haue clothes, but especially of course cloth rather then silke, course canuas they also like well of, but copper carpeeth the price of all, so it be made red. Thus good M. Hakluyt and M. H. I haue ioyned you both in our letter of remembrance, as two that I loue dearly well, and commending me most heartily to you both, I commit you to the tuition of the Almightye. From the new Fort in Virginia, this thirde of September, 1585.

The rich and manifold commodities of Virginia.

Commodities fit to carie to Virginia.

Your most assured friend RALPH LANE.

An account of the particularities of the employments of the English men left in Virginia by Sir Richard Greenewill vnder the charge of Master Ralph Lane Generall of the same, from the 17. of August 1585. vntill the 18. of Iune 1586. at which time they departed the Countrey: sent and directed to Sir Walter Raleigh.

That I may proceede with order in this discourse, I thinke it requisite to diuide it into two parts. The first shall declare the particularities of such parts of the Countrey within the maine, as our weake number, and supply of things necessarie did inable vs to enter into the discovery of.

The second part shall set downe the reasons generally moving vs to resolute on our departure at the instant with the Generall Sir Francis Drake, and our common request for passage with him, when the barkes, pinnelles, and boates with the Passers and Harriers meant by him to bee left in the Countrey for the supply of such, as for a further time meant to haue stayed there, were carped away with tempest and foule weather: In the beginning whereof shall bee declared the conspiracie of Pemisapan, with the Sauages of the maine to haue cut vs off, &c.

2. parts of this discourse.

The first part declaring the particularities of the Countrey of Virginia.

First therefore touching the particularities of the Countrey, you shall vnderstand that our discoverye of the same hath bene extended from the Island of Roanoak, (the same hauing bene the place of our settlement or inhabitation) into the South, into the North, into the North-west, and into the West.

The uttermost place to the Southward of any discovery was Secotan, being by estimation fourescore miles distant from Roanoak. The passage from thence was through a broad sound within the mayne, the same being without kenning of lande, and yet full of flats and shoals: we had but one boate with foure oares to passe through the same, which boate could not carry about fiftene men with their furniture, baggage, and victuall for seuen dayes at the most: and as for our pinnelle, besides that she drew too deep water for that shallow sound, she would not stirre for an oare: for these and other reasons (winter also being at hand) we thought good wholly to leaue the discovery of those parts vntill our stronger supply.

To the Northward our furthest discovery was to the Chesepians, distant from Roanoak about 130. miles, the passage to it was very shallow and most dangerous, by reason of the bredth of the sound, and the little succour that vpon any flawe was there to be had.

But the Territorie and soyle of the Chesepians (being distant fiftene miles from the shoare) was for pleasantnes of seate, for temperature of Climate, for fertilitie of soyle, and for the commoditie of the Sea, besides multitude of Beares (being an excellent good victuall) with great woods of Sassafras, and Walnut trees, is not to be excelled by any other whatsoever.

The excellencie of the seate of Chesepiok.

There be sundry Kings, whom they call Weroances, and Countreys of great fertility adioyning to the same, as the Mandoages, Tripanicks, and Oposians, which all came to visite the Colonie of the English, which I had for a time appointed to be resident there.

To the North-west the farthest place of our discovery was to Chawanoak distant from Roanoak about 130. miles. Our passage thither lyeth through a broad sound, but all fresh water, and the chanell of a great depth, nauigable for good shipping, but out of the chanell full of shoals.

The

The Townes about the waters side situated by the way are these following: Passaquenoke The womans Towne, Chepanoc, Weapomeiok, Muscamunge, & Merackwem: all these being under the iurisdiction of the king of Weapomeiok, called Okisco: from Muscamunge we enter into the Riuer, and iurisdiction of Chawanook: There the Riuer beginneth to straighten untill it come to Chawanook, and then groweth to be as narrow as the Thames betwene Westminster, and Lambeth.

Betweene Muscamunge and Chawanook vpon the left hand as wee passe thither, is a goodly high land, and there is a Towne which we called The blinde Towne, but the Sauages called it Ohanoak, and hath a very goodly come field belonging vnto it: it is subiect to Chawanook,

The towne of
Chawanookable
to make 700.
men of warre.

Chawanook it selfe is the greatest Province & Seigniorie lying vpon that Riuer, and the very Towne it selfe is able to put 700. fighting men into the field, besides the forces of the Province it selfe.

The King of the sayd Province is called Menatonon, a man impotent in his lims, but otherwise for a Sauage, a very graue and wise man, and of a very singular good discourse in matters concerning the state, not onely of his owne Countrey, and the disposition of his owne men, but also of his neighbours round about him as well farre as neere, and of the commodities that eache Countrey yeeldeth. When I had him prisoner with me, for two dayes that we were together, he gaue mee more vnderstanding and light of the Countrey then I had receiued by all the searches and Sauages that before I or any of my companie had had conference with: it was in March last past 1586. Amongst other things he tolde me, that going three dayes iourney in a Canoe by his Riuer of Chawanook, and then descending to the land, you are within foure dayes iourney to passe ouer land Northeast to a certaine Kings countrey, whose Province lyeth vpon the Sea, but his place of greatest strength is an Island situate, as hee described vnto mee, in a Bay, the water round about the Island very deepe.

An Island in a
Bay.

Pearles in ex-
ceeding quan-
tity.

Out of this Bay hee signified vnto mee, that this King had so great quantitie of Pearle, and doeth so ordinarily take the same, as that not onely his owne skinner that hee weareth, and the better sort of his gentlemen and followers are full set with the sayd Pearle, but also his beds, and houses are garnished with them, and that hee hath such quantitie of them, that it is a wonder to see.

He shewed me that the sayd King was with him at Chawanook two yeeres before, & broughe him certaine Pearle, but the same of the worst sort, yet was he faine to buy them of him for copper at a deere rate, as he thought. Hee gaue mee a rope of the same pearle, but they were blacke, and naught, yet many of them were very great, and a few amongst a number very orient and round, all which I lost with other things of mine, comming aboard Sir Francis Drake his Fleete: yet he tolde me that the sayd King had great store of Pearle that were white, great, and round, and that his blacke Pearle his men did take out of shallow water, but the white Pearle his men fished for in very deepe water.

It seemed to me by his speech, that the sayd King had traffique with white men that had clothes as we haue, for these white Pearle, and that was the reason that hee would not depart with other then with blacke Pearles, to those of the same countrey.

The king of Chawanook promised to giue me guides to go ouer land into that kings countrey whensoever I would: but he aduised me to take good store of men with me, and good store of victuall, for he said, that king would be loth to suffer any strangers to enter into his Countrey, and especially to meddle with the fishing for any Pearle there, and that hee was able to make a great many of men into the field, which he sayd would fight very well.

Whereupon I resolved with my selfe, that if your supplie had come before the ende of Aprill, and that you had sent any store of boates or men, to haue had them made in any reasonable time, with a sufficient number of men and victuals to haue found vs untill the new come were come in, I would haue sent a small barke with two pinnettes about by Sea to the Northward to haue found out the Bay he spake of, and to haue sounded the barre if there were any, which should haue ridden there in the sayd Bay about that Island, while I with all the small boates I could make, and with two hundred men would haue gone by to the head of the riuer of Chawanook with the guides that Menatonon would haue giuen me, which I would haue bene assured should haue bene of his best men, (for I had his best beloued sonne prisoner with me) who also should haue kept me companie in an handlocke with the rest, foote by foote, all the voyage ouer land.

An enterprise
of speciall im-
portance.

My meaning was further at the head of the Riuer in the place of my descent where I would haue left my boates, to haue raised a scoule with a small trench, and a pallisado vpon the top of it, in the which, and in the guard of my boates I would haue left five and twentie, or thirtie men, with

with the rest would I haue marched with as much victuall as euery man could haue caried, with their furniture, mattocks, spades and axes, two dayes journey. In the ende of my march vpon some conuenient plot would I haue raised another scone according to the former, where I would haue left fiftene or twentie. And if it would haue fallen out conueniently, in the way I would haue raised my saide scone vpon some Cozne fielde, that my company might haue liued vpon it.

And so I would haue holden this course of insconing euery two dayes march, vntill I had bene arrived at the Bay or Port hee spake of: which finding to bee worth the possession, I would there haue raised a maine fort, both for the defence of the harborough, and our shipping also, and would haue reduced our whole habitation from Roanoak and from the harborough and port there (which by prooofe is very naught) vnto this other beforementioned, from whence, in the foure dayes march before specified, could I at all times returne with my company back vnto my boates riding vnder my scone, very neere whereunto directly from the West runneth a most notable Riuer, and in all those parts most famous, called the Riuer of Moratoc. This Riuer openeth into the broad Sound of Weapomeiok. And whereas the Riuer of Chawanook, and all the other Sounds, and Bayes, salt and fresh, shewe no current in the world in calme weather, but are mooued altogether with the winde: This Riuer of Moratoc hath so violent a current from the West and South-west, that it made me almost of opinion that with oares it would scarce be nauigable: it passeth with many creekes and turnings, and for the space of thirtie miles rowing, and more, it is as broad as the Thames betwixt Greenwich and the Isle of Dogges, in some place more, and in some lesse: the current runneth as strong, being entred so high into the Riuer, as at London bridge vpon a bale Water.

And for that not onely Menatonon, but also the Sauages of Moratoc themselues doe repute strange things of the head of that Riuer, and that from Moratoc it selfe, which is a principall Towne vpon that Riuer, it is thirtie dayes as some of them say, and some say furtiue dayes voy- age to the head thereof, which head they say springeth out of a maine rocke in that abundance, that forthwith it maketh a most violent streame: and further, that this huge rock standeth so neere vnto a Sea, that many times in stormes (the winde committing our wardly from the sea) the waves thereof are beaten into the said fresh streame, so that the fresh water for a certaine space, groweth salt and brackish: I tooke a resolution with my selfe, hauing dismissed Menatonon vpon a ran- some agreed for, and sent his sonne into the Pinnelle to Roanoak, to enter presently so farre into that Riuer with two double whirries, and fourtie persons one or other, as I could haue victuall to cary vs, vntill we could meete with more either of the Moratoks, or of the Mangoaks, which is an- other kinde of Sauages, dwelling more to the Westward of the said Riuer: but the hope of reco- uering more victuall from the Sauages made mee and my company as narrowly to escape star- uing in that discoverie before our returne, as euery men did, that missed the same.

For Pemisapan, who had changed his name of Wingina vpon the death of his brother Gran- ganimo, had giuen both the Choanists, and Mangoaks worde of my purpose touching them, I hauing bene inforced to make him priuie to the same, to bee serued by him of a guide to the Man- goaks, and yet hee did neuer rest to sollicite continually my going vpon them, certifying mee of a generall assembly euen at that time made by Menatonon at Chawanook of all his Weroances, and allies to the number of three thousand bowes, preparing to come vpon vs at Roanoak, and that the Mangoaks also were ioynd in the same confederacie, who were able of themselves to bring as many more to the enterprise: And true it was that at that time the assembly was holden at Chawanook about vs, as I found at my coming thither, which being vnlooked for did so dis- may them, as it made vs haue the better hand at them. But this confederacie against vs of the Choanists and Mangoaks was altogether and wholly procured by Pemisapan himselfe, as Men- atonon confessed vnto me, who sent them continual worde, that our purpose was fully bent to destroy them: on the other side he told me, that they had the like meaning towards vs.

Hee in like sort hauing sent worde to the Mangoaks of mine intention to passe by into their Riuer, and to kill them (as he saide) both they and the Moratoks, with whom before wee were en- tred into a league, and they had euery dealt kindly with vs, abandoned their Townes along the Riuer, and retired themselves with their *Crenepos, and their Cozne within the maine: inso- much as hauing passed three dayes voyage by the Riuer, wee could not meete a man, nor finde a graine of Cozne in any their Townes: whereupon considering with my selfe that wee had but two dayes victuall left, and that wee were then 160. miles from home, besides casualtie of contrary windes or stormes, and suspecting treason of our owne Sauages in the discoverie of our voyage intended, though wee had no intention to bee hurtfull to any of them, otherwile

ged his name.

Conspiracie of
the Sauages
against the
English.

* Their wo-
men.

then for our copper to haue had coine of them: I at night vpon the Corps of guard, before the putting forth of Centinels, aduertised the whole company of the case wee stood in for victuall, and of mine opinion that we were betrayed by our owne Sauages, and of purpose drawen forth by them vpon baine hope to be in the ende starued, seeing all the Countrey fled before vs, and therefore while wee had those two dayes victuall left, I thought it good for vs to make our returne homeward, and that it were necessary for vs to get the other side of the Sound of Weopomeioik in time, where wee might be relieved vpon the weares of Chypanum, and the womens Towne, although the people were fled.

Thus much I signified vnto them, as the safest way: neuertheless I did referre it to the greatest number of voyces, whether wee should aduenture the spending of our whole victuall in some further viewe of that most goodly Riuer in hope to meete with some better happe, or otherwise to retire our selues backe againe. And for that they might be the better aduised, I willed them to deliberate all night vpon the matter, and in the morning at our going aborde to let our course according to the desires of the greatest part. Their resolution fully and wholly was (and not three founde to bee of the contrary opinion) that whiles there was left but one halfe pinte of Coine for a man, wee should not leaue the search of that Riuer, and that there were in the company two Passiues, vpon the portage of which with Sallastras leaues (if the worst fell out) the company would make shift to liue two dayes, which time would bring them downe the current to the mouth of the Riuer, and to the entrie of the Sound, and in two dayes more at the farthest they hoped to crosse the Sound and to bee relieved by the weares, which two dayes they would fast rather then be drawen backe a foote till they had seene the Mangoaks, either as friendes or foes. This resolution of theirs did not a little please mee, since it came of themselves, although for mistrust of that which afterwards did happen, I pretended to haue bene rather of the contrary opinion.

And that which made me most desirous to haue some doings with the Mangoaks either in friendship or otherwise to haue had one or two of them prisoners, was, for that it is a thing most notorious to all the countrey, that there is a Province to the which the said Mangoaks haue recourse and trafique by that Riuer of Moratoc, which hath a marvellous and most strange Minerall. This Mine is so notorious amongst them, as not onely to the Sauages dwelling by the said riuer, and also to the Sauages of Chawanook, and all them to the Westward, but also to all them of the maine: the Countreys name is of fame, and is called Chaunis Temoatan.

The Minerall they say is Walsador, which is copper, but they call by the name of Walsador euery mettall whatsoever: they say it is of the colour of our copper, but our copper is better then theirs: and the reason is for that it is redder and harder, whereas that of Chaunis Temoatan is very soft, and pale: they say that they take the saide mettall out of a riuer that falleth very swift from hie rockes and hills, and they take it in shallow water: the maner is this. They take a great howle by their description as great as one of our targets, and wrappe a skinne over the hollow part thereof, leauing one part open to receiue in the minerall: that done, they watch the comming downe of the current, and the change of the colour of the water, and then suddenly chop downe the said howle with the skinne, and receiue into the same as much oare as will come in, which is euer as much as their howle will holde, which presently they cast into a fire, and soorthwith it melteth, and doeth peeble in fise parts, at the first melting, two parts of metall for three parts of oare. Of this metall the Mangoaks haue so great store, by report of all the Sauages adioyning, that they beautifie their houses with great plates of the same: and this to be true, I receiued by report of all the countrey, and particularly by yong Skiko, the King of Chawanooks sonne my prisoner, who also himselfe had bene prisoner with the Mangoaks, and set downe all the particularities to me before mentioned: but hee had not bene at Chaunis Temoatan himselfe: for hee said, it was twentie dayes iourney ouerland from the Mangoaks, to the said Minerall Countrey, and that they passed through certaine other territories betweene them and the Mangoaks, before they came to the said Countrey.

Upon report of the premises, which I was very inquisitiue in all places where I came to take very particular information of, by all the Sauages that dwelt towards those parts, and especially of Menatonon himselfe, who in euery thing did very particularly informe mee, and promised me guides of his owne men, who should passe ouer with me, euen to the said Countrey of Chaunis Temoatan (for ouerland from Chawanook to the Mangoaks is but one dayes iourney from Sunne rising to Sunne setting, whereas by water it is seuen dayes with the soonest:) These things, I say, made me very desirous by all meanes possible to recouer the Mangoaks, and to get some of that their copper for an assay, and therefore I willingly peeld to their resolution: But it fell

A marvellous
Mineral in the
countrey of
Chaunis Te-
moatan.

it fell out very contrary to all expectation, and likelihood: for after two dayes trauell, and our whole victuall spent, lying on shoare all night, wee could neuer see man, onely fires we might perceiue made amongst the shoare where we were to passe, and by into the Countrey, vntill the very last day. In the euening whereof, about thre of the clocke wee heard certayne Sauages call as we thought, Manteo, who was also at that time with me in the boat, whereof we all being very glad, hoping of some friendly conference with them, and making him to answer them, they presently began a song, as we thought, in token of our welcome to them: but Manteo presently betooke him to his piece, and tolde mee that they meant to fight with vs: which worde was not so soone spoken by him, and the light horseman ready to put to shoare, but there lighted a vollie of their arrowes amongst them in the boat, but did no hurt (God be thanked) to any man. Immediately, the other boate lying ready with their shot to skoure the place for our hand weapons to lande upon, which was presently done, although the land was very high and steepe, the Sauages forthwith quitted the shoare, and betooke themselves to flight: wee landed, and hauing faire and easily followed for a smal time after them, who had wooded themselves we know not where: the Sunne drawing then towards the setting, and being then assured that the next day if wee would pursue them, though we might happen to meete with them, yet wee should be assured to meete with none of their victuall, which we then had good cause to thinke of: therefore choosing for the company a conuenient ground in safetie to lodge in for the night, making a strong Corps of guard, and putting out good Centinels, I determined the next morning before the rising of the Sunne to be going backe againe, if possibly we might recouer the mouth of the riuer, into the broad sound, which at my first motion I found my whole company ready to assent vnto: for they were now come to their Dogges porredge, that they had bespoken for themselves if that befell them which did, and I before did mistrust we should hardly escape. The ende was, we came the next day by night to the Riuer's mouth within foure or fise miles of the same, hauing rowed in one day downe the current, as much as in foure dayes wee had done against the same: we lodged vpon an Island, where we had nothing in the world to eat but pottage of Sassafras leaues, the like whereof for a meate was neuer vsed before as I thinke. The broad sound wee had to passe the next day all fresh and fasting: that day the winde blew so strongly, and the billow so great, that there was no possibilitie of passage without sinking of our boates. This was vpon Easter eue, which was fasted very cruely. Upon Easter day in the morning the winde comming very calme, we entred the sound, and by foure of the clocke we were at Chipanum, whence all the Sauages that we had left there were fled, but their weares did yelde vs some fish, as God was pleased not vterly to suffer vs to be lost: for some of our company of the light horsemen were farre spent. The next morning wee arrived at our home Roanoak.

A conflict be-
gun by the
Sauages.

The great cur-
rent of the Ri-
uer of Morati-
tico,

I haue set downe this Voyage somewhat particularly, to the ende it may appeare vnto you, (as true it is) that there wanted no great good will from the most to the least amongst vs, to haue persued this discoverie of the Mine: for that the discovery of a good Mine, by the goodnesse of God, or a passage to the South-sea, or some way to it, and nothing else can bring this Countrey in request to be inhabited by our nation. And with the discovery of either of the two aboue shewed, it will bee the most sweete and healthfullest climate, and therewithall the most fertile soyle (being manured) in the world: and then will Sassafras, and many other rootes and gummies there found make good marchandise and lading for shipping, which otherwise of themselves will not be worth the fetching.

Provided also, that there be found out a better harborough then yet there is, which must be to the Northward, if any there bee, which was mine intention to haue spent this Summer in the search of, and of the Mine of Chawnis Temoatan: the one I would haue done, if the barkes that I should haue had of Sir Francis Drake, by his honourable courtesie, had not bene driuen away by Storme: the other if your supply of more men, and some other necessaries had come to vs in any conuenient sufficiency. For this riuer of Moratico promisseth great things, and by the opinion of M. Hariots the head of it by the description of the Countrey, either riseth from the bay of Mexico, or els from very neere vnto the same, that openeth out into the South sea.

And touching the Minerall, thus doeth M. Youghan affirme, that though it be but copper, seeing the Sauages are able to melt it, it is one of the richest Mineralls in the world.

Wherefore a good harborough found to the Northward, as before is saide, and from thence foure dayes ouerland, to the Riuer of Choanoak sconses being raised, from whence againe ouerland through the prouince of Choanoak one dayes voyage to the first towne of the Mangoaks vpon the Riuer of Moratico by the way, as also vpon the said Riuer for the defence of our boates like sconses being set, in this course of proceeding you shall cleare your selfe from all those dangers and

broad

broad shallow sounds before mentioned, and gaine within foure dayes trauell into the heart of the maine 200. miles at the least, and so passe your discovery into that most notable countrey, and to the likeliest parts of the maine, with farre greater felicitie then otherwise can bee performed.

Thus Sir, I haue though simply, yet truely set downe vnto you, what my labour with the rest of the gentlemen, and poore men of our company (not without both paine and perill, which the Lord in his mercy many wayes deliuered vs from) could yeeld vnto you, which might haue bene performed in some moze perfection, if the Lord had bene pleased that onely that which you had provided for vs had at the first bene left with vs, or that hee had not in his eternall prouidence now at the last set some other course in these things, then the wisdome of man coulde looke into, which truely the carping away by a most strange & vnlooked for storme of all our prouision, with Barks, Master, Mariners, and sundry also of mine owne company, al hauing bene so courteously supplied by the generall Sir Francis Drake, the same hauing bene most sufficient to haue performed the greatest part of the premisses, must euer make me to thinke the hand of God onely (for some his goodd purpose to my selfe yet vnknown) to haue bene in the matter.

The second part touching the conspiracie of Pemisapan, the discovery of the same, and at the last, of our request to depart with Sir Francis Drake for England.

Nsenore a Sauage father to Pemisapan being the onely friend to our nation that we had amongst them, and about the King, died the 20. of April 1586. He alone had before opposed himselfe in their consultations against all matters proposed against vs, which both the King and all the rest of them after Grangemoes death, were very willing to haue preferred. And he was not onely by the meere prouidence of God during his life, a meane to saue vs from hurt, as poisonings and such like, but also to doe vs very great good, and singularly in this.

The King was aduised and of himselfe disposed, as a ready meane to haue assuredly brought vs to ruine in the moneth of March 1586, himselfe also with all his Sauages to haue runne away from vs, and to haue left his ground in the Island vnswayed: which if hee had done, there had bene no possibilitie in common reason, (but by the immediate hande of God) that wee coulde haue bene preferred from staruing out of hande. For at that time wee had no weares for fish, neither coulde our men skill of the making of them, neither had wee one graine of Coyne for seede to put into the ground.

This skill of making weares would be learned.

In mine absence on my voyage that I had made against the Chaonists, and Mangoaks, they had raised a bzute among themselves, that I and my company were part slaine, and part starued by the Chaonists, and Mangoaks. One part of this tale was too true, that I and mine were like to be starued, but the other false.

Nevertheless vntill my returne it tooke such effect in Pemisapans breast, and in those against vs, that they grew not onely into contempt of vs, but also (contrary to their former reuerend opinion in shew, of the Almighty God of heauen, and Iesus Christ whom wee serue and worship, whom before they would acknowledge and confesse the only God) now they began to blaspheme, and flatly to say, that our Lord God was not God, since hee suffered vs to sustaine much hunger, and also to be killed of the Renapoaks, for so they call by that generall name all the inhabitants of the whole maine, of what prouince soeuer. Insomuch as olde Ensenore, neither any of his fellows, coulde for his sake haue no more credite for vs: and it came so farre that the king was resolved to haue presently gone away as is aforesaid.

But euen in the beginning of this bzute I returned, which when hee sawe contrary to his expectation, and the aduertisement that hee had receiued: that not onely my selfe, and my company were all safe, but also by report of his owne 3. Sauages which had bene with mee besides Manteco in that voyage, that is to say, Tetezano, his sisters husband Eracano, and Cossine, that the Chanoists and Mangoaks (whose name and multitude besides their valour is terrible to all the rest of the prouinces) durst not for the most part of them abide vs, and that those that did abide vs were killed, and that we had taken Menatonon prisoner, and brought his sonne that he best loued to Roanoak with mee, it did not a little asswage all deuises against vs: on the other side, it made Ensenores opinions to bee receiued againe with greater respects. For he had often before tolde them, and then renewed those his former speeches, both to the king and the rest, that wee were the seruants of God, and that wee were not subiect to bee destroyed by them: but contrarywise, that they amongst them that sought our destruction, should finde their owne, and not bee able to worke

worke ours, and that we being dead men were able to doe them more hurt, then now we could do being alieue: an opinion very confidently at this day holden by the wisest amongst them, and of their old men, as also, that they haue bene in the night, being 100. miles from any of vs, in the aire shot at, and stroken by some men of ours, that by sicknesse had died among them: and many of them holde opinion, that we be dead men returned into the world againe, and that wee doe not remaine dead but for a certaine time, and that then we retorne againe.

All these speeches then againe grewe in ful credite with them, the King, and all, touching vs, when hee sawe the small troupe returned againe, and in that sort from those whose very names were terrible vnto them: But that which made by the matter on our side for that time was an accident, yea rather (as all the rest was) the good prouidence of the Almighty for the sauing of vs, which was this.

Within certaine dayes after my retorne from the sayd iourney, Menatonon sent a messenger to visite his sonne the prisoner with me, and sent me certaine pearle for a present, or rather, as Pemisapan tolde mee, for the rancome of his sonne, and therefore I refused them: but the greatest cause of his sending then, was to signifie vnto mee, that hee had commaunded Okisko King of Weopomeiok, to yeelde himselfe seruant, and homager, to the great Weroanza of England, and after her to Sir Walter Raleigh: to perfourme which commandement receiued from Menatonon, the sayde Okisko toyntly with this Menatonons messenger sent foure and twentie of his principallest men to Roanoak to Pemisapan, to signifie that they were ready to perfourme the same, and so had sent those his men to let mee knowe that from that time forwarde, hee, and his successours were to acknowledge her Maestie their onely Soueraigne, and next vnto her, as is aforesayd.

All which being done, and acknowledged by them all, in the presence of Pemisapan his father, and all his Sauages in counsell then with him, it did for the time thorowly (as it seemed) change him in disposition toward vs: Insomuch as forthwith Ensenore wanne this resolution of him, that out of hand he should goe about, and withall, to cause his men to set by weares forthwith for vs: both which he at that present went in hande withall, and did so labour the expedition of it, that in the end of April he had sowed a good quantitie of ground, so much as had bene sufficient, to haue fed our whole company (God blessing the grouch) and that by the belly, for a whole yere: besides that he gaue vs a certaine plot of ground for our selues to sowe. All which put vs in marvellous comfort, if we could passe from Aprill vntill the beginning of Iuly, (which was to haue bene the beginning of their haruest,) that then a newe supply out of England or els our owne store would well ynough maintaine vs: All our feare was of the two moneths betwixt, in which meane space if the Sauages should not helpe vs with Cassai, and Chyna, and that our weares should faile vs, (as often they did,) we might very well starue, notwithstanding the growing cozne, like the starving horse in the stable, with the growing grasse, as the prouerbe is: which wee very hardly had escaped but onely by the hand of God, as it pleased him to try vs. For within few dayes after, as before is saide, Ensenore our friend died, who was no sooner dead, but certaine of our great enemies about Pemisapan, as Osacan a Weroance, Tanaquiny and Wanchese most principally, were in hand againe to put their old practises in vze against vs, which were readily embraced, and all their former deuises against vs renewed, and new brought in question. But that of staruing vs, by their forbearing to sow, was broken by Ensenore in his life, by hauing made the King all at one instant to sow his ground, not onely in the Island, but also at Dasamonquepeio in the maine, within two leagues ouer against vs. Neuerthelesse there wanted no store of mischieuous practises among them, and of all they resolved principally of this following.

First that Okisko king of Weopomeiok with the Mandoages should bee mouued, and with great quantitie of copper intertained to the number of 7. or 8. hundred bowes, to enterprise the matter thus to be ordered. They of Weopomeiok should be inuited to a certaine kind of moneths minde which they doe vse to solemnise in their Sauage maner for any great personage dead, and should haue bene for Ensenore. At this instant also should the Mandoaks, who were a great people, with the Chesepians & their friends to the number of 700. of them, be armed at a day appointed to the maine of Dasamonquepeio, and there lying close at the signe of fiers, which should interchangeably be made on both sides, when Pemisapan with his troupe aboue named should haue executed me, and some of our Weroances (as they called all our principall officers,) the maine forces of the rest should haue come ouer into the Island, where they ment to haue dispatched the rest of the company, whom they did imagine to finde both dismayed and disper sed abroad in the Island, seeking of crabs and fish to liue withall. The maner of their enterprise was this.

Tarraquine and Andacon two principall men about Pemisapan, and very lustie fellowes,

The begin-
ning of their
haruest in
Iuly.

The conspira-
cie of Pemisa-
pan.

The forme of
the treason,

with twentie more appointed to them had the charge of my person to see an order taken for the same, which they ment should in this sort haue bene executed. In the dead time of the night they would haue beset my house, and put fire in the reedes that the same was couered with: meaning (as it was likely) that my selfe would haue come running out of a sudden amazed in my spirit without armes, vpon the instant whereof they would haue knocked out my braines.

The sufficien-
cie of our men
to deale a-
gainst the Sa-
uages, 10. to
an hundred.

The same order was giuen to certaine of his fellowes, for M. Heriots: so for all the rest of our better sort, all our houses at one instant being set on fire as afoze is saide, and that as well for them of the sort, as for vs at the towne. Now to the ende that we might be the fewer in number together, and so bee the more easily dealt withall (for in deed tenne of vs without armes prepared, were a terrour to a hundred of the best sort of them,) they agreed and did immediatly put it in practise, that they should not for any copper sell vs any victuals whatsoeuer: besides that in the night they should sende to haue our weares robbed, and also to cause them to bee broken, and once being broken neuer to be repaired againe by them. By this meanes the King stood assured, that I must bee enforced for lacke of sustenance there, to disband my company into sundry places to liue vpon shell fish, for so the Sauages themselves doe, going to Hatorask, Croatoan, and other places, fishing and hunting, while their grounds be in sowing, and their corne growing: which failed not his expectation. For the famine grew so extreme among vs, our weares failing vs of fish, that I was enforced to sende Captaine Stafford with 20. with him to Croatoan my Lord Admirals Flad to serue two turnes in one, that is to say, to feede himselfe and his company, and also to keepe watch if any shipping came vpon the coast to warne vs of the same. I sent M. Pridiox with the pinnesse to Hatorask, and ten with him, with the prouost Barthol to liue there, and also to wait for shipping: also I sent euery weeke 16. or 20. of the rest of the company to the maine ouer against vs, to liue of Calada and oysters.

The Sauages
liue by fishing,
and hunting,
till harvest.

In the meane while Pemisapan went of purpose to Dasamonquepeio for three causes: The one to see his grounds there broken vp, and sowed for a second crop: the other to withdraue himselfe from my dayly sending to him for supply of victuall for my company, for hee was afraid to deny me any thing, neither durst hee in my presence but by colour and with excuses, which I was content to accept for the time, meaning in the ende as I had reason, to giue him the iumpe once for all: but in the meane whiles, as I had euer done befoze, I and mine bare all wrongs, and accepted of all excuses.

My purpose was to haue relied my selfe with Menatonon, and the Chaonists, who in trueth as they are more valiant people and in greater number then the rest, so are they more faithfull in their promises, and since my late being there had giuen many tokens of earnest desire they had to ioyne in perfect league with vs, and therefore were greatly offended with Pemisapan and Weopomeciok for making him beleue such tales of vs.

The third cause of his going to Dasamonquepeio was to dispatch his messengers to Weopomeciok, and to the Mandoages, as aforesaid: all which he did with great impress of copper in hand, making large promises to them of greater spoile.

The answer within few dayes after came from Weopomeciok, which was deuided into two parts. First for the King Okisko, who denied to be of the partie for himselfe, or any of his especiall followers, and therefore did immediatly retire himselfe with his force into the maine: the other was concerning the rest of the said prouince who accepted of it: and in like sort the Mandoags receiued the impress.

The day of their assembly aforesaid at Roanoak was appointed the 10. of Iune: all which the premises were discovered by Skyco, the King Menatonon his sonne my prisoner, who hauing once attempted to run away, I laid him in the bylboes, threatening to cut off his head, whom I remitted at Pemisapans request: whereupon hee being perswaded that hee was our enemy to the death, he did not onely feed him with himselfe, but also made him acquainted with all his practises. On the other side, the yong man finding himselfe as well vsed at my hande, as I had meanes to shew, and that all my company made much of him, he flatly discovered all vnto me, which also afterwards was reuelled vnto me by one of Pemisapans owne men, that night befoze he was slaine.

These mischiefes being all instantly vpon me and my company to be put in execution, it stood mee in hand to study how to preuent them, and also to saue all others, which were at that time as aforesaid so farre from me: whereupon I sent to Pemisapan to put suspicion out of his head, that I meant presently to go to Croatoan, for that I had heard of the arriuall of our Fleet, (though I in trueth had neither heard nor hoped for so good aduenture,) and that I meant to come by him, to borrow of his men to fish for my company, & to hunt for me at Croatoan, as also to buy some foure dayes prouision to serue for my voyage.

He sent me word that he would himselfe come ouer to Roanoak, but from day to day he deferred, onely to bring the Weopomeioks with him & the Mandoags, whose time appointed was within eight dayes after. It was the last of May 1586 when all his owne Sauages began to make their assembly at Roanoak, at his commandement sent abroad vnto them, and I resolved not to stay longer vpon his comming ouer, since he meant to come with so good company, but thought good to go and visit him with such as I had, which I resolved to do the next day: but that night I meant by the way to giue them in the Island a canuifado, and at the instant to seize vpon all the canoas about the Island, to keepe him from aduertisements.

But the towne tooke the alarme before I meant it to them; the occasion was this. I had sent the Master of the light horseman, with a few with him, to gather vp all the canoas in the setting of the Sun, & to take as many as were going from vs to Dasamonquepeio, but to suffer any that came from thence, to land. We met with a Canoa going from the shore, and ouerthrew the Canoa, and cut off two Sauages heads: this was not done so secretly but he was discovered from the shore; wherupon the cry arose: for in truerth they priuy to their owne villanous purposes against vs, held as good espiall vpon vs, both day and night, as we did vpon them.

The slaughter
and surprise of
the Sauages.

The alarme giuen, they tooke themselves to their bowes, and we to our armes: some three or foure of them at the first were slaine with our shot; the rest fled into the woods. The next morning with the light horseman & one Canoa taking 25 with the Colonel of the Chesepians, and the Sergeant maior, I went to Dasamonquepeio: and being landed, sent Pemisapan word by one of his owne Sauages that met me at the shore, that I was going to Croatoan, and meant to take him in the way to complaine vnto him of Osocon, who the night past was conueying away my prisoner, whom I had there present tied in an handlocke. Peereupon the king did abide my coming to him, and finding my selfe amidst seuen or eight of his principall Weroances and followers, (not regarding any of the common sort) I gaue the watch-word agreed vpon, (which was, Christ our victory) and immediately those his chiefe men and himselfe had by the mercy of God for our deliuerance, that which they had purposed for vs. The king himselfe being shot thorow by the Colonell with a pistoll, lying on the ground for dead, & I looking as watchfully for the sauing of Manteos friends, as others were busie that none of the rest should escape, suddenly he started vp, and ran away as though he had not bene touched, insomuch as he ouerran all the company, being by the way shot thwart the buttocks by mine Irish boy with my petronell. In the end an Irish man seruing me, one Nugent, and the deputy prouost, undertooke him; and following him in the woods, ouertooke him: and I in some doubt least we had lost both the king & my man by our owne negligence to haue bene intercepted by the Sauages, wee met him returning out of the woods with Pemisapans head in his hand.

Pemisapan
slaine.

This fell out the first of June 1586, and the eight of the same came aduertisement to me from captaine Stafford, lying at my lord Admirals Island, that he had discovered a great fleet of three and twenty sailles: but whether they were friends or foes, he could not yet discern. He aduised me to stand vpon as good guard as I could.

The ninth of the sayd month he himselfe came vnto me, hauing that night before, & that same day trauelled by land twenty miles: and I must cruelly reposit of him from the first to the last; hee was the gentleman that neuer spared labour or perill either by land or water, faire weather or foule, to perforce any seruice committed vnto him.

He brought me a letter from the Generall Sir Francis Drake, with a most bountifull and honourable offer for the supply of our necessities to the performance of the action wee were entered into; and that not only of victuals, munition, and clothing, but also of barks, pinnelles, and boats; they also by him to be victualled, manned, and furnished to my contentation.

A letter from
Sir Francis
Drake.

The tenth day he arriued in the road of our bad harborow: and comming there to an anchor, the eleuenth day I came to him, whom I found in deeds most honourably to perforce that which in writing and message he had most curteously offered, he hauing aforehand propounded the matter to all the captaines of his fleet, and got their liking and consent thereto.

With such thanks vnto him and his captaines for his care both of vs and of our action, not as the matter deserved, but as I could both for my company and my selfe, I (being aforehand prepared what I would desire) craued at his hands that it would please him to take with him into England a number of weake and unfit men for my good action, which I would deliuer to him; and in place of them to supply me of his company with oare-men, artificers, and others.

That he would leave vs so much shipping and victuall, as about August then next following would carry me and all my company into England, when we had discovered somewhat, that for lacke of needfull prouision in time left with vs as yet remained vndone.

That

That it woulde please him withall to leaue some sufficient Masters not onely to cary vs into England, when time should be, but also to search the coast for some better harbour, if there were any, and especially to helpe vs to some small boats and oare-men.

Also for a supply of calieuers, hand weapons, match and lead, tooles, apparell, and such like.

He hauing receiued these my requests, according to his vsuall commendable maner of gouernment (as it was told me) calling his capitaines to counsell; the resolution was that I should send such of my officers of my comp any as I vsed in such matters, with their notes, to goe aboord with him; which were the Master of the victuals, the Keeper of the store, and the Vice-treasurer: to whom he appointed fort, with for me *The Francis*, being a very proper barke of 70 tun, and tooke present order for bringing of victual aboord her for 100 men for foure moneths, with all my other demands whatsoeuer, to the uttermost.

And further, he appointed for me two pinnelles, and foure small boats: and that which was to performe all his former liberality towards vs, was that he had gotten the full assents of two of as sufficient experimented Masters as were any in his fleet, by iudgement of them that knew them, with very sufficient gings to tary with me, and to imploy themselves most earnestly in the action, as I should appoint them, vntill the terme which I promised of our returne into England againe. The names of one of those Masters was Abraham Kendall, the other Griffith Herne.

While these things were in hand, the provision aforesayd being brought, and in bringing aboord, my sayd Masters being also gone aboord, my sayd barks hauing accepted of their charge, and mine owne officers, with others in like sort of my company with them (all which was dispatched by the sayd Generall the 12 of the sayde moneth) the 13 of the same there arose such an vnmounted storme, and continued foure dayes, that had like to haue driuen all on shore, if the Lord had not held his holy hand ouer them, and the Generall very prouidently foresene the worst himselfe, then about my dispatch putting himselfe aboord: but in the end hauing driuen sundry of the fleet to put to Sea the *Francis* also with all my provisions, my two Masters, and my company aboord, he was seene to be free from the same, and to put cleere to Sea.

This storme hauing continued from the 13 to the 16 of the moneth, and thus my barke put away as aforesayd, the Generall coming ashore made a new proffer vnto me; which was a ship of 170 tunne, called *The Barke Bonner*, with a sufficient Master and guide to tary with me the time appointed, and victualled sufficiently to cary me and my company into England, with all provisions as before: but he tolde me that he would not for any thing vnder take to haue her brought into our harbour, and therefore he was to leaue her in the road, and to leaue the care of the rest vnto my selfe, and aduised me to consider with my company of our case, and to deliuer presently vnto him in writing what I would require him to doe for vs; which being within his power, he did assure me aswell for his Capitaines as for himselfe, should be most willingly performed.

Whereupon calling such Capitaines and gentlemen of my company as then were at hand, who were all as priuy as my selfe to the Generals offer; their whole request was to me, that considering the case that we stood in, the weaknesse of our company, the small number of the same, the carrying away of our first appointed barke, with those two especiall Masters, with our principall provisions in the same, by the very hand of God as it seemed, stretched out to take vs from thence; considering also, that his second offer, though most honourable of his part, yet of ours not to be taken, insomuch as there was no possibility for her with any safety to be brought into the harbour: seeing furthermore, our hope for supply with Sir Richard Grenuill, so vndoubtedly promised vs before, not yet come, neither then likely to come this yeere, considering the doings in England for Flanders, and also for America, that therefore I would resolue my selfe with my company to goe into England in that fleet, and accordingly to make request to the Generall in all our names, that he would be pleased to giue vs present passage with him. Which request of ours by my selfe deliuered vnto him, hee most readily assented vnto: and so he sending immediatly his pinnelles vnto our Iland for the fetching away of a few that there were left with our baggage, the weather was so boisterous, & the pinnelles so often on ground, that the most of all we had, with all our Cards, Books and writings were by the Sallers cast ouerboord, the greater number of the fleet being much agrieved with their long and dangerous abode in that miserable road.

From whence the Generall in the name of the Almighty, weying his ankers (hauing bestowed vs among his fleet) for the reliefe of whom hee had in that storme sustained more perill of wracke then in all his former most honourable actions against the Spaniards, with praises vnto God for all, set saile the nineteenth of June 1586, and arrived in Portsmouth the seuen and twentieth of July the same yeere.

The third voyage made by a ship sent in the yeere 1586, to
thereliefe of the Colony planted in *Virginia*, at the sole charges of
Sir Walter Raleigh.

In the yeere of our Lord 1586 Sir Walter Raleigh at his owne charge prepared a ship of an hundred tunne, freighted with all maner of things in most plentifull maner, for the supply and reliefe of his Colony then remaining in *Virginia*: but before they set saile from England it was after Easter, so that our Colony halfe despaired of the coming of any supply: wherefore euery man prepared for himselfe, determining resolutely to spend the residue of their life time in that countrey. And for the better performance of this their determination, they sowed, planted, and set such things as were necessary for their reliefe in so plentifull a maner as might haue sufficed them two yeeres without any further labour. Thus trusting to their owne harvest, they passed the Summer till the tenth of June: at which time their corne which they had sowed was within one fortnight of reaping: but then it happened that Sir Francis Drake in his prosperous returne from the lacking of Sant Domingo, Cartagena, and Saint Augustine, determined in his way home ward to visit his countrey men the English Colony then remaining in *Virginia*. So passing along the coasts of Florida, he fell with the parts where our English Colony inhabited: and hauing espied some of that company, there he anchored and went aland, where hee conferred with them of their state and welfare, and how things had past with them. They answered him that they liued all; but hitherto in some scarcety: and as yet could heare of no supply out of England: therefore they requested him that hee would leaue with them some two or three ships, that if in some reasonable time they heard not out of England, they might then returne themselves. Which hee agreed to. Whilest some were then writing their letters to send into England, and some others making reports of the accidents of their trauels ech to other, some on land, some on boord, a great storme arose, and droue the most of their fleet from their ankers to Sea, in which ships at that instant were the chiefe of the English Colony: the rest on land perceiuing this, hastened to those three sailes which were appointed to be left there; and for feare they should be left behinde they left all things confusedly, as if they had bene chased from thence by a mighty army: and no doubt so they were; for the hand of God came vpon them for the cruelty and outrages committed by some of them against the native inhabitants of that countrey.

Immediately after the departing of our English Colony out of this paradise of the world, the ship abouementioned sent and set forth at the charges of Sir Walter Raleigh and his direction, arrived at Hatorask; who after some time spent in seeking our Colony by in the countrey, and not finding them, returned with all the aforesayd prouision into England.

About foureteene or fifteene dayes after the departure of the aforesayd shippe, Sir Richard Grinuil Generall of *Virginia*, accompanied with three shippes well appointed for the same voyage, arrived there; who not finding the aforesayd shippe according to his expectation, nor hearing any newes of our English Colony there seated, and left by him anno 1585, himselfe traouelling by into diuers places of the countrey, as well to see if he could heare any newes of the Colony left there by him the yeere before, vnder the charge of Walter Lane his deputy, as also to discouer some places of the countrey: but after some time spent therein, not hearing any newes of them, and finding the places which they inhabited desolate, yet unwilling to loose the possession of the countrey which Englishmen had so long held: after good deliberation, hee determined to leaue some men behinde to retaine possession of the countrey: whereupon he landed fifteene men in the Isle of Roanoak, furnished plentifull with all maner of prouision for two yeeres, and so departed for England.

Not long after he fell with the Isles of Açores, on some of which Islands he landed, and spoiled the townes of all such things as were woorth cartage, where also he tooke diuers Spaniards. With these and many other exploits done by him in this voyage, as well outward as homeward, he returned into England.

This ship arrived in *Virginia*.

Sir Richard Grinuils third voyage.

Fifteene men more left in *Virginia*.

A briefe

A briefe and true report of the new found land of *Virginia* : of the commodities there found, and to be raised, aswell merchantable as others : Written by *Thomas Hariot*, seruant to *Sir Walter Raleigh*, a member of the Colony, and there employed in discouering a full tweluemonth.

Rafe Lane one of her Maiesties Esquiers, and Gouvernour of the Colony in *Virginia*, above mentioned, for the time there resident, to the gentle Reader wisheth all happinesse in the Lord.

Albeit (gentle Reader) the credit of the reports in this Treatise contained can little be furthered by the testimony of one as my selfe, through affection iudged partiall, though without desert: neuerthelesse, forsomuch as I haue bene requested by some my particular friends, who conceiue more rightly of me, to deliuer freely my knowledge of the same, not onely for the satisfying of them, but also for the true information of any other whosoeuer, that comes not with a preiudicate minde to the reading thereof: thus much vpon my credit I am to affirme, that things vniuersally are so truly set downe in this Treatise by the authour thereof, an actor in the Colony, and a man no lesse for his honesty then learning commendable, as that I dare boldly auouch, it may very well passe with the credit of trueth euen amongst the most true relations of this age. Which as for mine owne part I am ready any way with my word to acknowledge, so also (of the certaintie thereof assured by mine owne experience) with this my publike assertion I doe affirme the same. Farewell in the Lord.

To the Aduenturers, Fauourers, and Welwillers of the enterprise for the inhabiting and planting in *Virginia*.

SINCE the first vndertaking by *Sir Walter Raleigh* to deale in the action of discouering of that countrey which is now called and knowen by the name of *Virginia*, many voyages hauing bene thither made at sundry times to his great charge; as first in the yere 1584, and afterwards in the yeres 1585, 1586, and now of late this last yere 1587: there haue bene diuers and variable reports, with some slanderous and shamefull speeches byted abroad by many that returned from thence: especially of that discouery which was made by the Colony transported by *Sir Richard Griuile* in the yere 1585, being of all others the most principall, and as yet of most effect, the time of their abode in the countrey being a whole yere, when as in the other voyage before they staped but fixe weeks, and the others after were onely for supply and transportation, nothing more being discouered then had bene before. Which reports haue not done a little wrong to many that otherwise would haue also fauoured and aduentured in the action, to the honour and benefit of our nation, besides the particular profit and credit which would rebound to themselves the dealers therein, as I hope by the sequel of euents, to the shame of those that haue auouched the contrary, shall be manifest, if you the aduenturers, fauourers and welwillers doe but either increase in number, or in opinion continue, or hauing bene doubtfull, renew your good liking and furtherance to deale therein according to the woorthinesse thereof already found, and as you shall vnderstand hereafter to be requisite. Touching which woorthinesse through cause of the diuersity of relations and reports, many of your opinions could not be firme, nor the minds of some that are well disposed be settled in any certaintie.

I haue therefore thought it good, being one that haue bene in the discouerie, and in dealing with the naturall inhabitants specially employed: and hauing therefore scene and knowen more then the ordinary, to impart so much vnto you of the fruits of our labours, as that you may know how iniuriously the enterprise is slandered, and that in publique maner at this present, chiefly for two respects.

First, that some of you which are yet ignorant or doubtfull of the state thereof, may see that there is sufficient cause why the chiefe enterpriser with the fauour of her Maiesty, notwithstanding such reports, hath not onely since continued the action by sending into the countrey againe, and replanting this last yere a new Colony, but is also ready, according as the times and meanes will afford, to follow and prosecute the same.

Secondly, that you seeing and knowing the continuance of the action, by the view hereof you may

may generally know and learne what the countrey is, and thereupon consider how your dealing therein, if it proceed, may returne you profit and gaine, be it either by inhabiting and planting, or other wise in furthering thereof.

And least that the substance of my relation should be doubtfull vnto you, as of others by reason of their diuersitie, I will first open the cause in a few words, wherefore they are so different, referring my selfe to your fauourable constructions, and to be adiudged of, as by good consideration you shall finde cause.

Of our company that returned, some for their missemeanour and ill dealing in the countrey haue bene there worthily punished, who by reason of their bad natures, haue maliciously not onely spoken ill of their Gouernours, but for their sakes slandered the countrey it selfe. The like also haue those done which were of their consort.

Some being ignozant of the state thereof, notwithstanding since their returne amongst their friends & acquaintance, and also others, especially if they were in company where they might not be gainsayd, would seeme to know so much as no men more, and make no men so great traouellers as themselves. They stood so much, as it may seeme, vpon their credit and reputation, that hauing bene a twelue moneth in the countrey, it would haue bene a great disgrace vnto them, as they thought, if they could not haue sayd much, whether it were true or false. Of which some haue spoken of more then euer they saw, or otherwise knew to be there. Other some haue not bene ashamed to make absolute deniall of that, which although not by them, yet by others is most certainly and there plentifully knowen, & other some make difficulties of those things they haue no skill of.

The cause of their ignozance was, in that they were of that many that were neuer out of the Island where we were seated, or not farre, or at the least wise in few places els, during the time of our abode in the countrey: or of that many, that after gold & siluer was not so soone found, as it was by them looked for, had litle or no care of any other thing but to pamper their bellies: or of that many which had litle vnderstanding, lesse discretion, and more tongue then was needfull or requisite.

Some also were of a nice hyinging vp, only in cities or towne, or such as neuer (as I may say) had seene the world before. Because there were not to be found any English cities, nor such faire houses, nor at their owne wish any of their old accustomed dainty food, nor any soft beds of downe or feathers, the countrey was to them miserable, and their reports thereof according.

Because my purpose was but in brieft to open the cause of the variety of such speeches, the particularities of them, and of many enuious, malicious, and slanderous reports and deuices els, by our owne countrey men besides, as trifles that are not worthy of wise men to be thought vpon, I meane not to trouble you withall, but will passe to the commodities, the substance of that which I haue to make relation of vnto you.

The Treatise whereof, for your more ready view and easier vnderstanding, I will diuide into three speciall parts. In the first I will make declaration of such commodities there already found or to be raised, which will not onely serue the ordinary turnes of you which are and shall be the planters and inhabitants, but such an ouerplus sufficiently to be yeelded, or by men of skill to be prouided, as by way of traffique and exchange with our owne nation of England, will enrich your selues the prouiders: those that shall deale with you, the enterprisers in generall, and greatly profit our owne countrey men, to supply them with most things which heretofore they haue bene faine to prouide either of strangers or of our enemies, which commodities, for distinction sake, I call Merchantable.

In the second I will set downe all the commodities which we know the countrey by our experience doth yeeld of it selfe for victuall and sustenance of mans life, such as are vsually fed vpon by the inhabitants of the countrey, as also by vs during the time we were there.

In the last part I will make mention generally of such other commodities besides, as I am able to remember, and as I shall thinke behoouefull for those that shall inhabit, and plant there, to know of, which specially concerne building, as also some other necessary vles: with a brieft description of the nature and maners of the people of the countrey.

The first part of Merchantable commodities.

Silke of grasse, or Grasse silke. There is a kind of grasse in the country, vpon the blades whereof there groweth very good silke in forme of a thing glittering skin to be stript off. It groweth two foot & an halfe high or better: the blades are about two foot in length, and halfe an inch broad. The like groweth in Persia, which is in the selfe same climate as Virginia, of which very many of the Silke works that come from thence into Europe are made.

I see you more and more each day farther of earthly creature's imperfections & long to pray for you in your part

made. Whereof if it be planted and ordered as in Persia, it cannot in reason be otherwise, but that there will rise in short time great profit to the dealers therein, seeing there is so great use and benefit thereof as well in our country as elsewhere. And by the means of sowing and planting it in good ground, it will be farre greater, better, and more plentiful then it is. Although notwithstanding there is great store thereof in many places of the country growing naturally and wild, which also by proofe here in England, in making a piece of Silke grogram, we found to be excellent good.

Worme silke. In many of our iourneys we found Silke-wormes faire and great, as bigge as our ordinary Walnuts. Although it hath not bene our hap to haue found such plenty, as elsewhere to be in the country we haue heard of, yet seeing that the country doth naturally breed and nourish them, there is no doubt but if arte be added in planting of Pulberie trees, and others, fit for them in commodious places, for their feeding & nourishing, and some of them carefully gathered & husbanded in that sort, as by men of skill is known to be necessary: there will rise as great profit in time to the Virginians, as thereof doth now to the Persians, Turks, Italians and Spaniards.

Flaxe and Hempe. The truth is, that of Hempe and Flaxe there is no great store in any one place together, by reason it is not planted but as the soile doth yeeld of it selfe: and how soeuer the leafe and stemme of flaxe do differ from ours, the stuffe by iudgement of men of skill is altogether as good as ours: and if not, as further proofe should finde otherwise, we haue that experience of the soile, as that there cannot be shewed any reason to the contrary, but that it will grow there excellent well, and by planting will be yeilded plentifully, seeing there is so much ground whereof some may well be applied to such purposes. What benefit hereof may grow in cordage and linnens who cannot easily vnderstand.

Allum. There is a beine of earth along the sea coast for the space of forty or fifty miles, whereof by the iudgement of some that haue made triall here in England, is made good Allum, of that kind which is called Roch allum. The richnesse of such a commodity is so well knownen, that I need not to say any thing thereof. The same earth doth also yeeld White coppasse, Nitrum, and Alumen plumbeum, but nothing so plentifully as the common Allum, which be also of price, and profitable.

Wapeih. A kind of earth so called by the naturall inhabitants, very like to Terra sigillata, and hauing bene refined, it hath bene found by some of our Physicians and Chyrurgians, to be of the same kind of vertue, and more effectual. The inhabitants vse it very much for the cure of sores and wounds: there is in diuers places great plenty, and in some places of a blew sort.

Pitch, Tarre, Rozen and Turpentine. There are those kinds of trees which yeeld them abundantly and great store. In the very same Island where we were seated, being fiftene miles of length, and fixe or fixe miles in breadth, there are few trees els but of the same kinde, the whole Island being full.

Sassafras, called by the inhabitants Winank, a kind of wood of most pleasant and sweet smell, and of most rare vertues in physicke for the cure of many diseases. It is found by experience to be far better and of more blessing then the wood which is called Guaiacum, or Lignum vitae. For the description, the manner of vsing, and the manifold vertues thereof, I refer you to the booke of Monardes, translated and entituled in English, The ioyfull newes from the West Indies.

Cedar. A very sweet wood, and fine timber, whereof if nests of chests be there made, or timber thereof fitted for sweet and fine bedsteads, tables, desks, lutes, virginals, and many things els, (of which there hath bene proofe made already) to make by freight with other principall commodities, will yeeld profit.

Wine. There are two kindes of grapes that the soile doth yeeld naturally, the one is small and lowe, of the ordinary bignesse as ours in England, the other farre greater and of himselfe luscious sweet. When they are planted and husbanded as they ought, a principall commodity of wines by them may be raised.

Oile. There are two sorts of Walnuts, both holding oile; but the one farre more plentiful then the other. When there are mills and other devices for the purpose, a commodity of them may be raised, because there are infinite store. There are also thre severall kindes of berries in the forme of Oke-akoznes, which also by the experience and vse of the inhabitants, we find to yeeld very good and sweet oile. Furthermoze, the beates of the country are commonly very fat, and in some places there are many. Their fatnesse, because it is so liquid, may well be termed oile, and hath many speciall uses.

Furres. All along the Sea coast there are great store of Otters, which being taken by weares and other engines made for the purpose, will yeeld good profit. We heare also of Parterne furies, and make no doubt by the relation of the people, but that in some places of the country there are store,

Roze, although there were but two skinned that came to our hands. Luzernes also we haue vnderstanding of, although for the time we saw none.

Deers skinned dresled after the maner of Chamoes, or vnderdressed, are to be had of the naturall inhabitants thousands yerely by way of traffike for trifles, and no more waste or spoile of Deere then is and hath bene ordinarly in time before.

Civet-cats. In our trauels there was found one to haue bin killed by a Sauage or inhabitant, & in another place the smel where one or more had lately bene before, whereby we gather besides then by the relation of the people, that there are some in the country: good profit will rise by them.

Iron. In two places of the countrey specially, one about fourescore, & the other six score miles from the fort or place where we dwelt, we found nere the water side the ground to be rocky, which by the triall of a Minerall man was found to holde iron richly. It is found in many places of the country els: I know nothing to the contrary, but that it may be allowed for a good merchantable commodity, considering there the small charge for the labour & feeding of men, the infinite Roze of wood, the want of wood & deerensse thereof in England, and the necessity of ballasting of ships.

Copper. An hundred and fifty miles into the maine in two towne we found with the inhabitants diuers small plates of Copper, that had bene made as we vnderstood by the inhabitants that dwell further into the country, where as they say are mountaines and riuers that yeeld also white graines of mettall, which is to be deemed Siluer. For confirmation whereof, at the time of our first arriual in the countrey, I saw, with some others with me, two small pieces of Siluer grossly beaten, about the weight of a testron, hanging in the eares of a Wiroans or chiefe lord that dwelt about four score miles from vs: of whom through inquiry, by the number of dayes and the way, I learned that it had come to his hands from the same place or nere, where I after vnderstood the Copper was made, and the white graines of mettall found. The aforesayd Copper we also found by triall to holde Siluer.

Pearle. Sometimes in feeding on Muscles we found some Pearle: but it was our happe to meet with ragges, or of a pide colour: not hauing yet discovered those places where we heard of better and more plenty. One of our company, a man of skill in such matters, had gathered together from among the Sauage people about five thousand: of which number he chose so many as made a faire chaine, which for their likenesse and vniformity in roundnesse, orientnesse, and pidenesse of many excellent colours, with equality in greatnesse, were very faire and rare: and had therefore bene presented to her Maiesty, had we not by casualty, and through extremity of a Royme lost them, with many things els in coming away from the countrey.

Five thousand
pearles gathered.

Sweet gummes of diuers kinds, and many other Apothecary drugges, of which we will make speciall mention, when we shall receiue it from such men of skill in that kinde, that in taking reasonable paines shall discover them more particularly then we haue done, and then now I can make relation of, for want of the examples I had prouided and gathered, and are now lost, with other things by casualty before mentioned.

Dies of diuers kinds: There is Shoemake well known, and used in England for blacke: the seed of an herbe called Wasebur, little small roots called Chappacor, and the barke of the tree called by the inhabitants Tangomockonomindge: which dies are for diuers sorts of red: their goodness for our English clothes remaine yet to be proued. The inhabitants vse them only for the dying of haire, and colouring of their faces, and mancles made of Deere skinned: and also for the dying of rushes to make artificiall works withall in their mats and baskets: hauing no other thing besides that they account of, apt to vse them for. If they will not prouue merchantable, there is no doubt but the planters there shall finde apt vses for them, as also for other colours which we know to be there.

Woad: a thing of so great bent and vses amongst English Diers, which can not be peeld sufficiently in our owne countrey for spare of ground, may be planted in Virginia, there being ground enough. The growth thereof need not to be doubted, when as in the Islands of the Agores it groweth plentifully, which are in the same climate. So likewise of Madder.

We caried thither Suger-canes to plant, which being not so well preserued as was requisite, and besides the time of the yeere being past for their setting when we arriued, we could not make that vse of them as we desired. Notwithstanding, seeing that they grow in the same climate, in the South part of Spaine, and in Barbary, our hope in reason may yet continue. So likewise for Orenge and Limmons. There may be planted also Quinses. Whereby may grow in reasonable time, if the action be diligently prosecuted, no small commodities in Sugars, Suckers, and Marmelades.

Many other commodities by planting may there also be raised, which I leaue to your discreet

and gentle considerations: and many also may be there, which yet we haue not discovered. Two more commodities of great value, one of certinty, and the other in hope, not to be planted, but there to be raised, and in short time to be prouided, and prepared, I might haue specified. So likewise of those commodities already set downe I might haue sayd more: as of the particular places where they are found, and best to be planted and prepared: by what meanes, and in what reasonable space of time they might be raised to profit, and in what proportion: but because others then wellwillers might be therewithall acquainted, not to the good of the action, I haue wittingly omitted them: knowing that to those that are well disposed, I haue vttered, according to my promise and purpose, for this part sufficient.

The second part of such commodities as *Virginia* is knowen to yeeld for victuall and sustenance of mans life, vsually fed vpon by the naturall inhabitants; as also by vs, during the time of our abode: and first of such as are sowed and husbanded.

PAgatowr, a kinde of graine so called by the inhabitants: the same in the West Indies is called Mayz: English men call it Guiny-wheat or Turkey-wheat, according to the names of the countreys from whence the like hath beene brought. The graine is about the bignes of our ordinary English peaze, and not much different in forme and shape: but of diuers colours: some white, some red, some yellow, and some blew. All of them yeeld a very white and sweet flowze: being vsed according to his kinde, it maketh a very good bread. We made of the same in the countrey some Pault, whereof was brewed as good Ale as was to be desired. So likewise by the helpe of Hops, therof may be made as good Beere. It is a graine of maruellous great increase: of a thousand, fifteene hundred, and some two thousand folde. There are three sorts, of which two are ripe in eleuen & twelue weeks at the most, sometimes in tenn, after the time they are set, and are then of height in stalke about sixe or seuen foot. The other sort is ripe in foureteene, and is about tenn foot high, of the stalks some beare foure heads, some thre, some one, and some two; euery head containing siue, sixe, or seuen hundred graines, within a few more or lesse. Of these graines, besides bread, the inhabitants make victuall, either by parching them, or seething them whole vntill they be broken: or boiling the flowze with water into a pap.

Okindgier, called by vs Beanes, because in greatnesse and partly in shape they are like to the beanes in England, sauing that they are flatter, of more diuers colours, and some pive. The lease also of the stemme is much different. In taste they are altogether as good as our English peaze.

Wickonzowr, called by vs Peaze, in respect of the Beanes, for distinction sake, because they are much lesse, although in forme they litle differ: but in goodnesse of taste much like, and are far better then our English peaze. Both the beanes and peaze are ripe in ten weeks after they are set. They make them victuall either by boiling them all to pierces into a broth, or boiling them whole vntill they be soft, and beginne to breake, as is vsed in England, either by themselves, or mixtly together: sometime they mingle of the Wheat with them: sometime also, being whole sodden, they huse or punne them in a mortar, and therof make loaves or lumps of doughish bread, which they vse to eat for variety.

Macoequer, according to their seuerall formes, called by vs Pompions, Melons, and Gourds, because they are of the like formes as those kinds in England. In *Virginia* such of seuerall formes are of one taste, and very good, and do also spring from one seed. There are of two sorts: one is ripe in the space of a moneth, and the other in two moneths.

There is an herbe which in Dutch is called Melden. Some of those that I describe it vnto, take it to be a kinde of Dage: it groweth about foure or siue foot high: of the seed thereof they make a thicke broth, and pottage of a very good taste: of the stalke by burning into ashes they make a kinde of salt earth, wherewithall many vse sometimes to season their broths: other salt they know not. We our selues vsed the leaues also for pot-herbs.

There is also another great herbe, in forme of a Marigolde, about sixe foot in height, the head with the floure is a spanne in breadth. Some take it to be *Planta Solis*: of the seeds hereof they make both a kinde of bread and broth.

All the aforesayd commodities for victuall are set or sowed, sometimes in grounds apart and seuerally by themselves, but for the most part together in one ground mixtly: the maner thereof, with the dressing and preparing of the ground, because I will note vnto you the fertility of the soile, I thinke good briefly to describe,

The

The ground they neuer fatten with mucke, dung, or any other thing, neither plow nor digge it as we in England, but onely prepare it in sort as followeth. A few dayes before they sowe or set, the men with wooden instruments made almost in forme of mattocks or hoes with long handles: the women with short peckers or parers, because they vse them sitting, of a foot long, and about five inches in breadth, doe onely breake the upper part of the ground to raise up the weeds, grasse, and olde stubbes of corne stalks with their roots. The which after a day or two dayes drying in the Sunne, being scrapt up into many small heaps, to save them labour for carrying them away, they burne into ashes. And whereas some may thinke that they vse the ashes for to better the ground, I say that then they would either disperse the ashes abroad, which wee observed they do not, except the heaps be too great, or els would take speciall care to set their corne where the ashes lie, which also wee finde they are carelesse of. And this is all the husbanding of their ground that they vse.

Then their setting or sowing is after this maner. First for their corne, beginning in one corner of the plot, with a pecker they make a hole, wherein they put foure graines, with care that they touch not one another (about an inch asunder) & couer them with the molde againe: and so they row out the whole plot making such holes, and vling them after such maner, but with this regard, that they be made in ranks, euery ranke differing from other halfe a fadome or a paze, and the holes also in euery ranke as much. By this meanes there is a paze spare ground betwene euery hole: where according to discretion here and there, they set as many Beanes and Peaze; in diuers places also among the seeds of Macocquer, Melden, and Planta solis.

The ground being thus set according to the rate by vs experimented, an English acre containing forty pearches in length, and foure in breadth, doth there yeeld in crosse or of come of corne, Beanes and Peaze, at the least two hundred London bushels, besides the Macocquer, Melden, and Planta solis; when as in England forty bushels of our Wheat yeelded out of such an acre is thought to be much.

I thought also good to note this vnto you, that you which shall inhabit, and plant there, may know how specially that countrey corne is there to be preferred before ours: besides, the manifold wayes in applying it to victual, the increase is so much, that small labor & paines is needful in respect of that which must be vsed for ours. For this I can assure you that according to the rate we haue made pzoofe of, one man may prepare and husband so much ground (hauing once borne corne before) with lesse then foure and twenty houres labour, as shall yeeld him victual in a large proportion for a tweluemonth, if he haue nothing els but that which the same ground will yeeld, and of that kinde onely which I haue before spoken of: the sayd ground being also but of five and twenty yards square. And if need require, but that there is ground enough, there might be raised out of one and the selfesame ground two harvests or of comes: for they sow or set, and may at any time when they thinke good, from the midst of March untill the end of June: so that they also set when they haue eaten of their first crosse. In some places of the countrey notwithstanding they haue two harvests, as we haue heard, out of one and the same ground.

For English corne neuertheless, whether to vse or not to vse it, you that inhabit may doe as you shall haue further cause to thinke best. Of the growth you need not to doubt: for Barley, Dats, and Peaze, we haue seene pzoofe of, not being purposely sowed, but fallen casually in the woorst sort of ground, and yet to be as faire as any we haue euer seene heere in England. But of Wheat, because it was musty, and had taken salt water, we could make no triall: and of Rie we had none. Thus much haue I digressed, and I hope not vnnecessarily: now will I returne againe to my course, and intreat of that which yet remaineth, appertaining to this chapter.

There is an herbe which is sowed apart by it selfe, and is called by the inhabitants Vppowoc: in the West Indies it hath diuers names, according to the seuerall places and countreys where it groweth and is vsed: the Spaniards generally call it Tabacco. The leaues thereof being dried and brought into powder, they vse to take the fume or smoake thereof, by sucking it thorow pipes made of clay, into their stomacke and head; from whence it purgeth superfluous fleame and other grosse humours, and openeth all the pores and passages of the body: by which meanes the vse thereof not onely preserveth the body from obstructions, but also (if any be, so that they haue not bene of too long continuance) in short time breaketh them: whereby their bodies are notably preserved in health, and know not many grievous diseases, wherewithall we in England are often times afflicted.

This Vppowoc is of so precious estimation amongst them, that they thinke their gods are maruellously delighted therewith: whereupon sometime they make hallowed fires, and cast some of the powder therein for a sacrifice: being in a storme vpon the waters, to pacifie their gods, they call

cast some vp into the aire and into the water: so a weare for fish being newly set vp, they cast some therein and into the aire: also after an escape of danager, they cast some into the aire like wise: but all done with strange gestures, stamping, sometime dancing, clapping of hands, holding vp of hands, and staring vp into the heauens, uttering therewithall, and chattering strange words and noises.

As our selues, during the time we were there, vled to sucke it after their maner, as also since our returne, and haue found many rare and woonderfull experiments of the vertues thereof: of which the relation would require a volume by it selfe: the vse of it by so many of late men and women of great calling, as els, and some learned Physicians also, is sufficient witness.

And these are all the commodities for sustenance of life, that I know and can remember, they vse to husband: all els that follow, are found growing naturally or wilde.

Of Roots.

OPenauk are a kinde of roots of round forme, some of the bignesse of Walnuts, some farre greater, which are found in moist and marish grounds growing many together one by another in ropes, as though they were fastened with a string. Being boiled or sodden, they are very good meat. Monardes calleth these roots, Beads or Pater nostri of Santa Helena.

Monardes parte
2. lib. 1. cap. 4.

Okepenauk are also of round shape, found in dry grounds: some are of the bignesse of a maus head. They are to be eaten as they are taken out of the ground: for by reason of their bignesse they will neither roste nor seethe. Their taste is not so good as of the former roots: notwithstanding for want of bread, and sometimes for variety the inhabitants vse to eat them with fish or flesh, and in my iudgement they do as well as the householde bread made of Rie here in England.

Kaithucpenauk, a white kinde of roots about the bignesse of hennes egges, and neere of that forme: their taste was not so good to our seeming as of the other, and therefore their place and maner of growing not so much cared for by vs: the inhabitants notwithstanding vled to boile and eat many.

Thinaw, a kind of root much like vnto that which in England is called the China root brought from the East Indies. And we know not any thing to the contrary but that it may be of the same kinde. These roots grow many together in great clusters, and do bring forth a brier stalke, but the leafe in shape farre unlike: which being supported by the trees it groweth neere vnto, will reach or climbe to the top of the highest. From these roots while they be new or fresh, being chopt into small pieces, and stamp, is strained with water a iuice that maketh bread, and also being boiled, a very good spoonmeat in maner of a gelly, and is much better in taste, if it be tempered with oile. This Thinaw is not of that sort, which by some was caused to be brought into England for the China root; for it was discovered since, and is in vse as is aforesayd: but that which was brought hither is not yet known, neither by vs nor by the inhabitants to serue for any vse or purpose, although the roots in shape are very like.

The iuice of
Coscushaw is
poison.

Coscushaw some of our company tooke to be that kinde of root which the Spanyards in the West Indies call Cassau, whereupon also many called it by that name: it groweth in very muddy pooles, and moist grounds. Being dressed according to the countrey maner, it maketh a good bread, and also a good spoonmeat, and is vled very much by the inhabitants. The iuice of this root is poison, & therefore heed must be taken before any thing be made therewithall: either the roots must be first sliced and dried in the Sunne, or by the fire, and then being punned into flour, will make good bread: or els while they are greene they are to be pared, cut in pieces, and stamp: loaves of the same to be layd nere or ouer the fire vntill it be sowre; and then being well punned againe, bread or spoonmeat very good in taste and hole some may be made thereof.

Habalcon is a root of hote taste, almost of the forme and bignesse of a Parsnip: of it selfe it is no victuall, but onely a helpe, being boiled together with other meats.

There are also Leeks, differing little from ours in England, that grow in many places of the countrey; of which, when we came in places where they were, we gathered and eat many, but the naturall inhabitants neuer.

Of Fruits.

Chestnuts there are in diuers places great store: some they vse to eat raw, some they stamp and boile to make spoonmeat, and with some being sodden, they make such a maner of dough bread as they vse of their beanes before mentioned.

Walnuts,

Walnuts. There are two kinds of Walnuts, and of them infinite store: in many places, where are very great woods for many miles together, the third part of trees are Walnut trees. The one kinde is of the same taste and forme, or little differing from ours of England, but that they are harder and thicker shelled: the other is greater, and hath a very ragged and hard shell; but the kernel great, very oily and sweet. Besides their eating of them after our ordinary manner, they breake them with stones, and punne them in morters with water, to make a milke which they use to put into some sorts of their spoonmeat; also among their sodde wheat, peaze, beanes and pompions, which maketh them haue a farre more pleasant taste.

Medlars, a kinde of very good fruit; so called by vs chiefly for these respects: first in that they are not good vntill they be rotten, then in that they open at the head as our Medlars, and are about the same bignesse: other wise in taste and colour they are farre different; for they are as red as cherries, and very sweet: but whereas the chery is sharpe sweet, they are luscious sweet.

Muraquesunnauk, a kinde of pleasant fruit almost of the shape and bignesse of English peares, but that they are of a perfect red colour as well within as without. They grow on a plant whose leaues are very thicke, and full of prickles as sharpe as needles. Some that haue beene in the Indies, where they haue seene that kind of red die of great price, which is called Cochinile, to grow, doe describe his plant right like vnto this of Muraquesunnauk; but whether it be the true Cochinile, or a bastard or wilde kinde, is cannot yet be certified, seeing that also, as I heard, Cochinile is not of the fruit, but found on the leaues of the plant: which leaues for such matter we haue not so specially obserued.

There are three kinds of Tunas whereof that which beareth no fruit bringeth forth the Cochinillo.

Grapes there are of two sorts, which I mentioned in the merchantable commodities.

Strawberies there are as good and as great as those which we haue in our English gardens.

Mulberies, Applecrabs, Hurts or **Hurtleberies**, such as we haue in England.

Sacquenumener, a kinde of berries almost like vnto Capers, but somewhat greater, which grow together in clusters vpon a plant or hearbe that is found in shallow waters: being boiled eight or nine houres according to their kinde, are very good meat and wholesome; other wise if they be eaten they will make a man for the time franticke or extremely sicke.

There is a kinde of Reed which beareth a seed almost like vnto our Rye or Wheat; and being boiled is good meat.

In our trauels in some places we found Wilde peaze like vnto ours in England, but that they were lesse, which are also good meat.

Of a kinde of fruit or berry in forme of Acornes.

There is a kinde of berry or acorne, of which there are five sorts that grow on seuerall kindes of trees: the one is called Sagatemenner, the second Osamenner, the third Pummuckoner. These kinde of acornes they vse to drye vpon hurdles made of reeds, with fire vnderneath, almost after the manner as we drye Helt in England. When they are to be vsed, they first water them vntill they be soft, and then being sod, they make a good victuall, either to eat so simply, or els being also punned to make loques or lumps of bread. These be also the three kinds, of which I sayd before the inhabitants vsed to make sweet oile.

Another sort is called Sapummener, which being boiled or patched, doth eat and taste like vnto Chestnuts. They sometime also make bread of this sort.

The fift sort is called Mangummenauk, and is the acorne of their kinde of Dake, the which being dried after the manner of the first sorts, and afterward watered, they boile them, and their seruants, or sometime the chiefe themselves, either for variety or for want of bread, do eat them with their fish or flesh.

Of Beasts.

DEere, in some places there are great store: neere vnto the Sea coast they are of the ordinary bignesse of ours in England, and some lesse: but further by into the countrey, where there is better food, they are greater: they differ from ours onely in this, their tails are longer, and the snags of their homes looke backward.

Conies. Those that we haue seene, and all that we can heare of are of a gray colour like vnto Hares: in some places there are such plenty that all the people of some townes make them mantles of the furre or flue of the skinner of those which they vsually take.

Saquenuckot and **Maquowoc**, two kinds of small beasts greater then Conies, which are very good meat. We neuerooke any of them our selues, but sometime eat of such as the inhabitants had taken and brought vnto vs.

Squirrels, which are of a grey colour, we haue taken and eaten.

Bears, which are of blacke colour. The beares of this countrey are good meat. The inhabitants in time of Winter do vse to take & eat many; so also sometime did we. They are taken commonly in this sort: In some Islands or places where they are, being hunted for, as soone as they haue spiall of a man, they presently run away, and then being chased, they clime and get by the next tree they can; from whence with arrowes they are shot downe starke dead, or with those wounds that they may after easily be killed. We sometime shot them downe with our callievers.

I haue the names of eight and twenty seuerall sortes of beasts, which I haue heard of to be here and there dispersed in the countrey, especially in the maine: of which there are only twelue kinds that we haue yet discovered; and of those that be good meat we know only them before mentioned. The inhabitants sometime kill the Lion, and eat him: and we sometime as they came to our hands of their Woolues or Wooluish dogs, which I haue not set downe for good meat, least that some would vnderstand my iudgement therein to be more simple then needeth, although I could alleage the difference in taste of those kinds from ours, which by some of our company haue bene experimented in both.

Of Fowle.

Turkie cocks and Turkie hennies, Stockdoves, Partridges, Cranes, Hernes, and in Winter great store of Swannes and Geese. Of all sortes of fowle I haue the names in the countrey language of fourescore and sixe, of which number, besides those that be named, we haue taken, eaten, & haue the pictures as they were there drawn, with the names of the inhabitants, of seuerall strange sortes of water fowle eight, and seuentene kinds more of land fowle, although we haue seene and eaten of many more, which for want of leasure there for the purpose, could not be pictured: and after we are better furnished and stored vpon further discovery with their strange beasts, fish, trees, plants, and herbs, they shalbe also published.

There are also Parrots, Faulcons, and Marlin hauks, which although with vs they be not used for meat, yet for other causes I thought good to mention.

Of Fish.

Foure moneths of the peere, February, March, Aprill and May, there are plenty of Sturgeons. And also in the same moneths of Herrings, some of the ordinary bignesse of ours in England, but the most part farre greater, of eightene, twenty inches, and some two foot in length and better: both these kinds of fish in those moneths are most plentifull, and in best season, which we found to be most delicate and pleasant meat.

There are also Trouts, Porpoises, Rayes, Oldwiues, Mulletts, Plaice, and very many other sortes of excellent good fish, which we haue taken and eaten, whose names I know not but in the countrey language: we haue the pictures of twelue sortes more, as they were drawn in the countrey, with their names.

In the gulfe of California they vse the like fishing.

The inhabitants vse to take them two maner of wayes; the one is by a kinde of weare made of reeds, which in that country are very strong: the other way, which is more strange, is with poles made sharpe at one end, by shooting them into the fish after the maner as Irish men cast darts, either as they are rowing in their boats, or els as they are wading in the shallowes for the purpose.

There are also in many places plenty of these kinds which follow:

Sea-crabs, such as we haue in England.

Oysters, some very great, and some small, some round, and some of a long shape: they are found both in salt water and brackish, and those that we had out of salt water are farre better then the other, as in our countrey.

Also Mufcles, Scalops, Periwinkles, and Creuises.

Seekanauk, a kinde of crusty shel-fish, which is good meat, about a foot in bredth, hauing a crusty taile, many legges like a crab, and her eyes in her backe. They are found in shallowes of waters, and sometime on the shoze.

There are many Tortoises both of land and sea kinde, their backs and bellies are shelled very thicke; their head, feet, and taile, which are in appearance, seeme ougly, as though they were members of a serpent or venomous beasts: but notwithstanding they are very good meat, as also their egges. Some haue bene found of a pard in bredth and better.

And thus haue I made relation of all sortes of victuall that we fed vpon for the time we were in Virginia, as also the inhabitants themselves, as farre forth as I know and can remember, or that are specially woorthie to be remembered.

The

The third and last part of such other things as are behouefull for those which shall plant and inhabite to know of, with a description of the nature and maners of the people of the Countrey.

Of commodities for building and other necessary uses.

Whose other things which I am moze to make rehearſal of, are ſuch as concerne building, & other mechanicall neceſſary vſes, as diuers ſorts of trees for houſe and ſhip-timber, and other vſes elſe: Alſo lime, ſtone, and brycke, leaſt that being not mentioned ſome might haue bene doubted of, or by ſome that are malicious the contrary repoꝛted.

Oakes there are as faire, ſtraight, tall, and as good timber as any can be, and alſo great ſtoze, and in ſome places very great.

Walnut trees, as I haue ſaid befoꝛe very many, ſome haue bene ſeene excellent faire timber of foure and ſiue ſadome, and aboue foureſcoꝛe foote ſtreight without bough.

Firre trees fit for maſts of ſhips, ſome very tall and great.

Rakiock, a kinde of trees ſo called that are ſweete wood, of which the inhabitants that were neere vnto vs doe commonly make their boates or Canoas of the ſoꝛme of trowes, onely with the helpe of ſire, hatchets of ſtones, and ſpels: we haue knowen ſome ſo great being made in that ſoꝛt of one tree, that they haue caried well 20. men at once, beſides much baggage: the timber being great, tall, ſtreight, ſoft, light, and yet tough ynough I thinke (beſides other vſes) to be fit alſo for maſts of ſhips.

Cedar, a ſweete wood good for ſeelings, cheſts, boxes, bedſteads, lutes, virginals, and many things elſe, as I haue alſo ſaid befoꝛe. Some of our company which haue wandered in ſome places where I haue not bene, haue made certaine affirmation of Cyprus, which for ſuch and other excellent vſes is alſo a wood of pꝛice and no ſmall eſtimation.

Maple, and alſo Wich-hazle, whereof the inhabitants vſe to make their bowes.

Holly, a neceſſary thing for the making of birdlime.

Willowes good for the making of wearres and weeles to take fiſh after the Engliſh maner, althoꝛgh the inhabitants vſe onely reedes, which becauſe they are ſo ſtrong as alſo flexible, doe ſerue for that turne very well and ſufficiently.

Beech and Aſhe, good for calke-hoopes, and if neede require, plowe worke, as alſo for many things elſe.

Elme. } } Saffafras trees.

Aſcopo a kinde of tree very like vnto Lawrell, the barke is hot in taſte and ſpicie, it is very like to that tree which Monardes deſcribeth to be Caſſia Lignea of the Weſt Indies.

There are many other ſtrange trees whoſe names I know not but in the Virginian language, of which I am not now able, neither is it ſo conuenient for the preſent to trouble you with particular relation: ſeeing that for timber and other neceſſary vſes I haue named ſufficient. And of many of the reſt, but that they may be applied to good vſe, I know no cauſe to doubt.

Now for ſtone, brycke and lime, thus it is. Neere vnto the Sea coaſt where wee dwell, there are no kinde of ſtones to be found (except a few ſmall pebbles about foure miles off) but ſuch as haue bene brought from further out of the maine. In ſome of our voyages we haue ſeene diuers hard raggie ſtones, great pebbles, and a kinde of grey ſtone like vnto marble, of which the inhabitants make their hatchets to cleaue wood. Upon inquirie wee heard that a little further by into the Countrey were of all ſorts very many, althoꝛgh of quarries they are ignorant, neither haue they vſe of any ſtoze whereupon they ſhould haue occaſion to ſeeke any. For if euery houſholde haue one or two to cracke nuts, grinde ſhells, whet copper, and ſometimes other ſtones for hatchets, they haue ynough: neither vſe they any digging, but onely for graues about thꝛee foote deepe: and therefore no maruelle that they know neither quarries, nor lime-ſtones, which both may be in places neerer then they wot of.

In the meane time vntil there be diſcouery of ſufficient ſtoze in ſome place or other conuenient, the want of you which are & ſhalbe the planters therein may be as well ſupplied by brycke: for the making whereof in diuers places of the Countrey there is clay both excellent good, and plentie, and alſo by lime made of oꝛſter ſhells, and of others burnt, after the maner as they vſe in the Iſles of Tenet and Shepy, and alſo in diuers other places of England: Which kinde of lime is well knowen to be as good as any other. And of oꝛſter ſhells there is plentie ynough: for beſides diuers other

other particular places where are abundance, there is one shallow Sound along the coast, where for the space of many miles together in length, and two or three miles in breadth, the ground is nothing els; being but halfe a foote or a foote vnder water for the most part.

Thus much can I say furthermoze of stones, that about 120. miles from our fort neere the water in the side of a hill, was found by a Gentleman of our company, a great veine of hard ragge stones, which I thought good to remember vnto you.

Of the nature and maners of the people.

Resteth I speake a word or two of the naturall inhabitants, their natures and maners, leauing large discourse thereof vntil time moze conuenient hereafter: nowe onely so farre forth, as that you may know, how that they in respect of troubling our inhabiting and planting, are not to be feared, but that they shall haue cause both to feare and loue vs, that shall inhabite with them.

They are a people clothed with loose mantles made of deere skinned, and aprons of the same round about their middles, all els naked, of such a difference of statures onely as wee in England, hauing no edge tooles or weapons of yron or Steele to

offend vs withall, neither knowe they how to make any: those weapons that they haue, are onely bowes made of Witch-hazle, and arrowes of reedes, flat edged trunchcons also of wood about a yard long, neither haue they any thing to defend themselues but targets made of barks, and some arming made of sticks wickered together with thread.

Their townes are but small, and neere the Sea coast but fewe, some contayning but tenne or twelue houses: some 20. the greatest that we haue seene hath bene but of 30. houses: if they bee walled, it is onely done with barks of trees made fast to stakes, or els with poles onely fixed vp-right, and close one by another.

Their houses are made of small poles, made fast at the tops in round forme after the maner as is vsed in many arbozies in our gardens of England, in most townes couered with barks, and in some with artificiall mats made of long rushes, from the tops of the houses downe to the ground. The length of them is commonly double to the breadth, in some places they are but 12. and 16. yards long, and in other some we haue seene of foure and twentie.

In some places of the Countrey, one onely towne belongeth to the gouernment of a Wiroans or chiefe Lord, in other some two or three, in some five, eight, and more: the greatest Wiroans that yet wee had dealing with, had but eightene townes in his gouernment, and able to make not above seuen or eight hundred fighting men at the most. The language of euery gouernment is different from any other, and the further they are distant, the greater is the difference.

Their maner of warres amongst themselues is either by sudden surprisling one another most commonly about the dawning of the day, or moone-light, or els by ambushes, or some subtil deuises. Set battels are very rare, except it fall out where there are many trees, where either part may haue some hope of defence, after the deliury of euery arrow, in leaping behind some or other.

If there fall out any warres betwene vs and them, what their fight is likely to bee, wee haue many aduantages against them so many maner of wayes, as by our discipline, our strange weapons and deuises else, especially Ordnance great and small, it may easily bee imagined: by the experience wee haue had in some places, the turning by of their heeles against vs in running away was their best defence.

In respect of vs they are a people poore, and for want of skill and iudgement in the knowledge and vse of our things, doe esteeme our trifles before things of greater value: notwithstanding, in their proper maner (considering the want of such meanes as we haue,) they seeme very ingenious. For although they haue no such tooles, nor any such crafts, Sciences and Artes as wee, yet in those things they doe, they shew excellencie of wit. And by how much they vpon due consideration shall finde our maner of knowledges and crafts to exceede theirs in perfection, and speede for doing or execution, by so much the more is it probable that they should desire our friendship and loue, and haue the greater respect for pleasing and obeying vs. Whereby may bee hoped, if meanes of good gouernment be vsed, that they may in short time bee brought to ciuilitie, and the embracing of true Religion.

Some religion they haue already, which although it be farre from the trueth, yet being as it is, there is hope it may be the easier and sooner reformed.

They beleue that there are many gods, which they call Mantoc, but of different sorts & degrees, one onely chiefe and great God, which hath bene from all eternitie. Who, as they affirme, when

Jaques Cartier,
book page 2.
chap. 8.

when hee purposed to make the world, made first other gods of a principall order, to be as meanes and instruments to be vsed in the creation and gouernment to follow, and after the Sunne, moone, and starres as pettie gods, and the instruments of the other order more principal. First (they say) were made waters, out of which by the gods was made all diuersitie of creatures that are visible or inuisible.

For mankind they say a woman was made first, which by the working of one of the gods, conceived and brought forth children: And in such sort they say they had their beginning. But how many yeeres or ages haue passed since, they say they can make no relation, hauing no letters nor other such meanes as we to keepe Records of the particularities of times past, but onely tradition from father to sonne.

They thinke that all the gods are of humane shape, and therefore they represent them by images in the formes of men, which they call Kewasowok, one alone is called Kewas: then they place in houses appropiate of temples, which they call Machicomuck, where they worship, pray, sing, and make many times offering vnto them. In some Machicomuck we haue scene but one Kewas, in some two, and in other some three. The common sort thinke them to be also gods.

They beleue also the immortalitie of the soule, that after this life as soone as the soule is departed from the body, according to the workes it hath done, it is either caried to heauen the habitation of gods, there to enioy perpetuall blisse and happinesse, or els to a great pitte or hole, which they thinke to be in the furthest parts of their part of the world toward the Sunne set, there to burne continually: the place they call Popogusso.

For the confirmation of this opinion, they tolde me two stories of two men that had bene lately dead and reuiued againe, the one happened but few yeeres before our coming into the Countrey of a wicked man, which hauing bene dead and buried, the next day the earth of the graue being seene to moue, was taken vp againe, who made declaration where his soule had bene, that is to say, very neere entering into Popogusso, had not one of the gods saued him, and gaue him leaue to returne againe, and teach his friends what they should do to auoid that terrible place of torment. The other happened in the same yeere we were there, but in a towne that was 60. miles from vs, and it was told me for strange newes, that one being dead, buried, and taken vp againe as the first, shewed that although his body had lien dead in the graue, yet his soule was aliue, & had traualled farre in a long broad way, on both sides whereof grew most delicate and pleasant trees, bearing more rare and excellent fruites, then euer hee had seene before, or was able to expresse, and at length came to most haue and faire houses, neere which he met his father that had bene dead before, who gaue him great charge to goe backe againe, and shew his friends what good they were to doe to enioy the pleasures of that place, which when he had done he should after come againe.

What subtiltie soener be in the Wiroances and priestes, this opinion worketh so much in many of the common and simple sort of people, that it maketh them haue great respect to their Gouernours, and also great care what they doe, to auoid torment after death, and to entoy blisse, although not withstanding there is punishment ordeined for malefactours, as stealers, whope mongers, and other sorts of wicked doers, some punished with death, some with forfeitures, some with beating, according to the greatnesse of the facts.

And this is the summe of their Religion, which I learned by hauing speciall familiaritie with some of their priestes. Wherein they were not so sure grounded, nor gaue such credite to their traditions and stories, but through conuersing with vs they were brought into great doubts of their owne, and no small admiration of ours, with earnest desire in many, to learne more then wee had meanes for want of perfect vtterance in their language to expresse.

Most things they saue with vs, as Mathematicall instruments, sea Compasses, the vertue of the load-stone in drawing yron, a perspectiue glasse whereby was shewed many strange sights, burning glasses, wilde fireworkes, gunnes, hookes, writing and reading, spring-clocks that seeme to goe of themselves, and many other things that wee had were so strange vnto them, and so farre exceeded their capacities to comprehend the reason and meanes how they should be made and done, that they thought they were rather the workes of gods then of men, or at the leastwise they had bene giuen and taught vs of the gods. Which made many of them to haue such opinion of vs, as that if they knew not the trueth of God and Religion already, it was rather to bee had from vs whom God so specially loued, then from a people that were so simple, as they found themselves to be in comparison of vs. Whereupon greater credite was giuen vnto that wee spake of, concerning such matters.

Many times and in euery towne where I came, according as I was able, I made declaration of the contents of the Bible, that therein was set forth the true and onely God, and his mightie workes,

workes, that therein was contained the true doctrine of saluation through Christ, with many particularities of Miracles and chiefe points of Religion, as I was able then to utter, and thought fit for the time. And although I told them the booke materially and of it selfe was not of any such vertue, as I thought they did conceiue, but onely the doctrine therein contained: yet would many be glad to touch it, to embrace it, to kisse it, to holde it to their breastes and heads, and stroke ouer all their body with it, to shew their hungry desire of that knowledge which was spoken of.

The Wiroans with whom we dwelt called Wingina, and many of his people would be glad many times to be with vs at our Prayers, and many times call vpon vs both in his owne towne, as also in others whither hee sometimes accompanied vs, to pray and sing Psalmes, hoping thereby to be partaker of the same effects which we by that meanes also expected.

Twise this Wiroans was so grievously sicke that he was like to die, and as he lay languishing, doubting of any helpe by his owne priestes, and thinking hee was in such danger for offending vs and thereby our God, sent for some of vs to pray and bee a meanes to our God that it would please him either that he might liue, or after death dwell with him in blisse, so likewise were the requests of many others in the like case.

On a time also when their cozne began to wither by reason of a drought which happened extraordinarily, fearing that it had come to passe by reason that in some thing they had displeased vs, many would come to vs and desire vs to pray to our God of England, that he would preferue their Copue, promising that when it was ripe we also should be partakers of the fruit.

There could at no time happen any strange sicknesse, losses, hurts, or any other crosse vnto them, but that they would impute to vs the cause or meanes thereof, for offending or not pleasing vs. One other rare and strange accident, leauing others, wil I mention before I end, which moued the whole Countrey that either knew or heard of vs, to haue vs in wonderfull admiration.

There was no towne where wee had any subtille deuise practised against vs, wee leauing it unpunished or not reuenged (because we sought by all meanes possible to win them by gentlenesse) but that within a few dayes after our departure from euery such towne, the people began to die very fast, and many in short space, in some Townes about twentie, in some fourtie, and in one five score, which in truth was very many in respect of their numbers. This happened in no place that we could learne, but where we had bin, where they vsed some practise against vs, & after such time. The disease also was so strange, that they neither knewe what it was, nor how to cure it, the like by report of the oldest men in the Countrey neuer happened before, time out of minde. A thing specially obserued by vs, as also by the naturall inhabitants themselves. Inasmuch that when some of the inhabitants which were our friends, and especially the Wiroans Wingina, had obserued such effects in foure or fise Townes to followe their wicked practises, they were perswaded that it was the worke of our God through our meanes, and that we by him might kill and slay whom we would without weapons, and not come neere them. And thereupon when it had happened that they had vnderstanding that any of their enemies had abused vs in our iourneys, hearing that we had wrought no reuenge with our weapons, and fearing vpon some cause the matter should so rest: did come and increate vs that we would be a meanes to our God that they as others that had dealt ill with vs might in like sort die, alleadging how much it would bee for our credite and profite, as also theirs, and hoping furthermore that we would doe so much at their requests in respect of the friendship we professed them.

Whole entreaties although wee shewed that they were vngodly, affirming that our God would not subiect himselfe to any such prayers and requests of men: that indeede all things haue bene and were to be done according to his good pleasure as he had ordeined: and that we to shewe our selues his true seruants ought rather to make petition for the contrary, that they with them might liue together with vs, be made partakers of his trueth, and serue him in righteousness, but notwithstanding in such sort, that wee referre that, as all other things, to bee done according to his diuine will and pleasure, and as by his wisdom he had ordeined to be best.

Yet because the effect fell out so suddenly and shortly after according to their desires, they thought nevertheless it came to passe by our meanes, & that we in vsing such speeches vnto them, did but dissemble the matter, and therefore came vnto vs to giue vs thanks in their maner, that although we satisfied them not in promise, yet in deedes and effect we had fulfilled their desires.

This marvellous accident in all the Countrey wrought so strange opinions of vs, that some people could not tell whether to thinke vs gods or men, and the rather because that all the space of their sickness, there was no man of ours known to die, or that was specially sicke: they noted also that we had no women amongst vs, neither that we did care for any of theirs.

Some therefore were of opinion that we were not bozne of women, and therefore not mortal, but

but that we were men of an old generation many peeres past, then risen againe to immortallitie.

Some would likewise seeme to prophesie, that there were more of our generation yet to come to kill theirs and take their places, as some thought the purpose was, by that which was already done. Those that were immediatly to come after vs they imagined to be in the aire, yet inuisible and without bodies, and that they by our intreatie and for the loue of vs, did make the people to die in that sort as they did, by shooting inuisible bullets into them.

To confirme this opinion, their Philosophers (to excuse their ignorance in curing the disease) would not be ashamed to say, but earnestly make the simple people beleue, that the strings of blood that they sucked out of the sicke bodies, were the strings where withall the inuisible bullets were tied and cast. Some also thought that wee shot them our selues out of our pieces, from the place where wee dwelt, and killed the people in any Towne that had offended vs, as wee listed, howe farre distant from vs soeuer it were. And other some said, that it was the speciall worke of God for our sakes, as we our selues haue cause in some sort to thinke no lesse, whatsoeuer some doe, or may imagine to the contrary, specially some Astrologers, knowing of the Eclipse of the Sunne which we saw the same yeere before in our voyage thitherward, which vnto them appeared very terrible. And also of a Comet which began to appeare but a fewe dayes before the beginning of the saide sicknesse. But to exclude them from being the speciall causes of so spectall an accident, there are further reasons then I thinke fit at this present to be alleadged. These their opinions I haue set downe the more at large, that it may appeare vnto you that there is good hope they may be brought through discreete dealing and gouernment to the embracing of the truth, and consequently to honour, obey, feare and loue vs.

And although some of our company towards the end of the yeere, shewed themselues too fierce in slaying some of the people in some Townes, vpon causes that on our part might easily ynough haue bene borne withall: yet not withstanding, because it was on their part iustly deserued, the alteration of their opinions generally and for the most part concerning vs is the lesse to be doubted. And whatsoeuer els they may be, by carefullnesse of our selues neede nothing at all to be feared.

The best neuertheless in this, as in all actions besides, is to be endeouered and hoped, and of the worst that may happen notice to be taken with consideration, and as much as may be eschewed.

The conclusion.

Now I haue (as I hope) made relation not of so few and small things, but that the Countrey (of men that are indifferent and well disposed) may bee sufficiently liked: If there were no more known then I haue mentioned, which doubtlesse and in great reason is nothing to that which remaineth to be discovered, neither the soyle, nor commodities. As we haue reason so to gather by the difference we found in our trauailes, for although al which I haue before spoken of, haue bene discovered and experimented not farre from the Sea coast, where was our abode and most of our trauailing: yet sometimes as we made our iourneys further into the maine and Countrey, we found the soile to be fatter, the trees greater and to grow thinner, the ground more firme and deeper mould, more and larger champions, finer grasse, and as good as euer we saw any in England; in some places rockie and farre more high and hilly ground, more plentie of their fruites, more abundance of beastes, the more inhabited with people, and of greater pollicie and larger dominions, with greater townes and houses.

Why may wee not then looke for in good hope from the inner parts of more and greater plentie, as well of other things, as of those which wee haue already discovered? Vnto the Spaniards happened the like in discovering the maine of the West Indies. The maine also of this Countrey of Virginia, extending some wayes so many hundreds of leagues, as otherwise then by the relation of the inhabitants wee haue most certaine knowledge of, where yet no Christian prince hath any possession or dealing, cannot but yeelde many kinds of excellent commodities, which we in our discovery haue not yet seene.

What hope there is els to bee gathered of the nature of the Climate, being answerable to the Island of Iapan, the land of China, Persia, Iury, the Islands of Cyprus and Candy, the South parts of Greece, Italy and Spaine, and of many other notable and famous Countreys, because I meane not to be tedious, I leaue to your owne consideration.

Whereby also the excellent temperature of the aire there at all seasons, much warmer then in England, and neuer so vehemently hot, as sometimes is vnder and betweene the Tropikes, or neerer them, cannot be known vnto you without further relation.

For the hollesomnesse thereof I neede to say but thus much: that for all the want of provision,

This want is
hereafter to be
supplied.

as first of English victuall, excepting for twentie dayes, we liued onely by drincking water, and by the victuall of the Countrey, of which some sorts were very strange vnto vs, and might haue bene thought to haue altered our temperatures in such sort, as to haue brought vs into some grievous and dangerous diseases: Secondly the want of English meanes, for the taking of beastes, fish and foule, which by the helpe onely of the inhabitants and their meanes could not bee so suddenly and easily provided for vs, nor in so great number and quantities, nor of that choise as otherwise might haue bene to our better satisfaction and contentment. Some want also we had of clothes. Furthermoze in al our trauailes, which were most specially and often in the time of Winter, our lodging was in the open aire vpon the ground. And yet I say for all this, there were but foure of our whole company (being one hundred and eight) that died all the yeere, and that but at the latter ende thereof, and vpon none of the aforesaide causes. For all foure, especially thre, were feeble, weake, and sickly persons before euer they came thither, and those that knew them, much marvelled that they liued so long being in that case, or had aduencured to trauaile.

Seeing therefore the aire there is so temperate and holsome, the soyle so fertile, and yeelding such commodities, as I haue before mentioned, the voyage also thither to and fro being sufficiently experimented to be perfourmed twise a yeere with ease, and at any season thereof: And the dealing of Sir Walter Raleigh so liberall in large giuing and granting lande there, as is already knowne, with many helpes and furtherances else: (The least that he hath granted hath bene five hundred acres to a man onely for the aduventure of his person) I hope there remaines no cause where by the action should be misliked.

If that those which shall thither trauaile to inhabite and plant bee but reasonably provided for the first yeere, as those are which were transported the last, and being there, doe vse but that diligence and care, that is requisite, and as they may with ease: There is no doubt, but for the time following, they may haue victuals that are excellent good and plentie ynough, some moze English sorts of cattell also hereafter, as some haue bene before, and are there yet remayning, may, and shall be (God willing) thither transported. So likewise, our kinde of fruites, rootes, and hearbes, may be there planted and sowed, as some haue bene already, and proue well: And in short time also they may raise so much of those sorts of commodities which I haue spoken of, as shall both enrich themselves, as also others that shall deale with them.

And this is all the fruit of our labours, that I haue thought necessary to aduertise you of at this present: What else concerneth the nature and maners of the inhabitants of Virginia, the number with the particularities of the voyages thither made, and of the actions of such as haue bene by Sir Walter Raleigh therein, and there imployed, many worthy to be remembred, as of the first discoverers of the Countrey, of our Generall for the time Sir Richard Grinuil, and after his departure of our Gouvernour there Master Ralph Lane, with diuers other directed and imployed vnder their government: Of the Captaines and Masters of the voyages made since for transportation, of the Gouvernour and assistants of those already transported, as of many persons, accidents, and things els, I haue ready in a discourse by it selfe in maner of a Chronicle, according to the course of times: which when time shall be thought conuenient, shall be also published.

Thus referring my relation to your fauourable constructions, expecting good successe of the action, from him which is to be acknowledged the authour and gouvernour, not onely of this, but of all things els, I take my leaue of you, this moneth of February 1587.

The fourth voyage made to *Virginia* with three ships, in the yere 1587. Wherein was transported the second Colonie.

In the yeere of our Lord 1587, Sir Walter Raleigh intending to perseuere in the planting of his Countrey of Virginia, prepared a new Colonie of one hundred and fiftie men to be sent thither, vnder the charge of Iohn White, whom hee appointed Gouvernour, and also appointed vnto him twelue Assistants, vnto whom hee gaue a Charter, and incorporated them by the name of Gouvernour and Assistants of the Citie of Raleigh in Virginia.

April.

Our flecte being in number three saile, viz. the Admirall a shippe of one hundred and twentie tunnes, a flie-boate, and a pinnesse, departed the sixe and twentieth of April from Portsmouth, and the same day came to an anchor at the Cowes in the Isle of Wight, where we stayed eight dayes.

May.

May.

The fift of May, at nine of the clocke at night we came to Plimmouth, where we remained the space of two dayes.

The 8 we weped anker at Plimmouth, and departed thence for Virginia.

The 16 Simon Ferdinando, Master of our Admiral, lewoly forooke our Fly-boate, leauing her distressed in the Bay of Portugal.

Iune.

The 19 we fell with "Dominica, and the same enening we sayled betweene it, and Guadalupe: the 21 the Fly-boate also fell with Dominica.

The 22 we came to an anker at an Island called Santa Cruz, where all the planters were set on land, staying there till the 25 of the same moneth. At our first landing on this Island, some of our women, and men, by eating a small fruit like greene Apples, were fearefully troubled with a sudden burning in their mouthes, and swelling of their tongues so bigge, that some of them could not speake. Also a child by sucking one of those womens breasts, had at that instant his mouth set on such a burning, that it was strange to see how the infant was tormented for the time: but after 24 houres, it ware away of it selfe.

Also the first night of our being on this Island, we tooke five great Coxteles, some of them of such bignes, that sixteene of our strongest men were tired with carrying of one of them but from the sea side to our cabbins. In this Island we found no watering place, but a standing ponde, the water whereof was so euill, that many of our company fell sicke with drinking thereof: and as many as did but wash their faces with that water, in the morning before the Sunne had drawn away the corruption, their faces did so burne and swell, that their eyes were shut vp, and could not see in five or six dayes, or longer.

The second day of our abode there, we sent forth some of our men to search the Island for fresh water, three one way, and two another way. The Gouvernour also, with five others, went vp to the top of an high hill, to vie we the Island, but could perceiue no signe of any men, or beastes, nor any goodnes, but Parots, and trees of Guaiacum. Returning backe to our cabbins another way, he found in the discent of a hill, certaine pottheards of sauage making, made of the earth of that Island: whereupon it was iudged, that this Island was inhabited with Sauages, though Fernando had told vs for certaine the contrary. The same day at night, the rest of our company very late returned to the Gouvernour. The one company affirmed, that they had seene in a valley eleuen Sauages, and diuers houses halfe a mile distant from the steepe, or toppe of the hill where they stayed. The other company had found running out of a high rocke a very sayre spring of water, whereof they brought three bottels to the company: for before that time, wee drank the stinking water of the pond.

The same second day at night Captaine Scaffold, with the Pinnesse, departed from our fleete, riding at Santa Cruz, to an Island, called Beake, lying neere S. Iohn, being so directed by Ferdinando, who assured him he should there find great plenty of sheepe. The next day at night, our planters left Santa Cruz, and came all aboard, and the next morning after, being the 25 of Iune, we weped anker, and departed from Santa Cruz.

The seven and twentieth we came to anker at Correa, where we found the Pinnesse riding at our comming.

The 28 we weped anker at Correa, and presently came to anker at S. Iohns in Musketos Bay, where we spent three dayes vnpofitably in taking in fresh water, spending in the meane time more beere then the quantitie of the water came vnto.

Iulie.

The first day we weped anker at "Muskeroes Bay, where were left behind two Irish men of our company, Darbie Glauen, and Denice Carrell, bearing along the coast of S. Iohns till evening, at which time wee fell with Rosse Bay. At this place Ferdinando had promised wee should take in salte, and had caused vs before, to make and prouide as many sackes for that purpose, as we could. The Gouvernour also, for that hee vnderstood there was a Towne in the bottom of the Bay, not farre from the salt hills, appointed thirty shot, tenne pikes, and ten targets, to man the Pinnesse, and to goe aland for salt. Ferdinando perceiuing them in a readines, sent to the Gouvernour, vsing great perswasions with him, not to take in salt there, saying that hee knew not well whether the same were the place or not: also, that if the Pinnesse went into the Bay,

Island, where
we take in
fresh water.

he could not without great danger come backe, till the next day at night, and that if in the meane time any storme should rise, the Admirall were in danger to bee cast away. Whilēt he was thus perswading, he caused the lead to be cast, and hauing craftily brought the shippe in thre sabome and a halfe water, he suddenly began to sweare, and teare God in pieces, dissembling great danger, crying to him at the helme, beare vp hard, beare vphard: so we went off, and were disappointed of our salt, by his meanes.

"A pleasant
and fruitful
countrey, ly-
ing on the west
end of S. Iohns
Island where
groweth plen-
ty of Oranges,
Lemons, Pla-
tans, & Pines.

The next day sayling along the West end of S. Iohn, the Gouvernour determined to go aland in S. Germans Bay, to gather yong plants of Oranges, Pines, Mameas, and Plantanos, to set at Virginia, which we knew might easily be had, for that they grow neere the shore, and the places where they grew, well known to the Gouvernour, and some of the planters: but our Simon denied it, saying: he would come to an anker at Hispaniola, & there land the Gouvernour, and some other of the Assistants, with the pinnesse, to see if he could speake with his friend Alanson, of whom he hoped to be furnished both of cattel, and all such things as we would haue taken in at S. Iohn: but he meant nothing lesse, as it plainly did appeare to vs afterwards.

The next day after, being the thirde of July, we saw Hispaniola, and bare with the coast all that day, looking still when the pinnesse should be prepared to goe for the place where Ferdinando his friend Alanson was: but that day passed, and we saw no preparation for landing in Hispaniola.

The 4 of July, sayling along the coast of Hispaniola, vntill the next day at noone, and no preparation yet seene for the staying there, we hauing knowledge that we were past the place where Alanson dwelt, and were come with Isabella: hereupon Ferdinando was asked by the Gouvernour, whether he meant to speake with Alanson, for the taking in of cattell, and other things, according to his promise, or not: but he answered that he was now past the place, and that Sir Walter Raleigh told him, the French Ambassadors certified him, that the king of Spaine had sent for Alanson into Spaine: wherefore he thought him dead, and that it was to no purpose to touch there in any place, at this voyage.

The next day we left sight of Hispaniola, and haled off for Virginia, about foure of the clocke in the afternoone.

The sixt of July we came to the Island Caycos, wherein Ferdinando sayd were two salt pouders, assuring vs if they were drie, we might find salt to shift with, vntill the next supply: but it prooued as true as finding of sheepe at Baque. In this Island, whilēt Ferdinando solaced himselfe ashore, with one of the company, in part of the Island, others spent the latter part of that day in other parts of the Island, some to seeke the salt ponds, some fowling, some hunting Swans, whereof we caught many. The next day early in the morning we weped anker, leauing Caycos, with good hope, that the first land that we saw next should be Virginia.

About the 16 of July we fel with the maine of Virginia, which Simon Ferdinando tooke to be the Island of Croatoan, where we came to anker, and rode there two or thre dayes: but finding himselfe deceiued, he weped, and bare along the coast, where in the night, had not Captaine Scafford bene more carefull in looking out, then our Simon Ferdinando, we had bene all cast away vpon the breach, called the Cape of Feare, for we were come within two cables length vpon it: such was the carelesnes, and ignorance of our Master.

The two and twentieth of July wee arriued safe at Hatorask, where our ship and pinnesse ankered: the Gouvernour went aboard the pinnesse, accompanied with fortie of his best men, intending to passe by to Roanoak footwith, hoping there to finde those fifteene Englishmen, which Sir Richard Grinuile had left there the yere before, with whom hee meant to haue conference, concerning the state of the Countrey, and Sauages, meaning after he had so done, to returne againe to the fleete, and passe along the coast, to the Bay of Chesepiok, where we intended to make our seate and forte, according to the charge giuen vs among other directions in writing, vnder the hande of Sir Walter Raleigh: but as soone as we were put with our pinnesse from the ship, a Gentleman by the meanes of Ferdinando, who was appointed to returne for England, called to the sailers in the pinnesse, charging them not to bring any of the planters backe againe, but to leaue them in the Island, except the Gouvernour, & two or thre such as he approued, saying that the Summer was farre spent, wherefore hee would land all the planters in no other place. Vnto this were all the saylers, both in the pinnesse, and shippe, perswaded by the Master, wherefore it booted not the Gouvernour to contend with them, but passed to Roanoak, and the same night at sunne-set went aland on the Island, in the place where our fifteene men were left, but we found none of them, nor any signe that they had bene there, sauing onely wee found the bones of one of those fifteene, which the Sauages had slaine long before.

The thre and twentieth of July the Gouvernour with diuers of his company, walked to the North

An intent to
plant in the
Bay of Che-
sepiok,

North end of the Island, where Master Ralfe Lane had his forte, with sundry necessary and decent dwelling houses, made by his men about it the yeere before, where wee hoped to find some signes, or certaine knowledge of our fifteene men. When we came thither, we found the forte rased downe, but all the houses standing unhurt, saving that the neather roomes of them, and also of the forte, were ouergrown with Helons of diuers sortes, and Deere within them, feeding on those Helons: so wee returned to our company, without hope of euer seeing any of the fifteene men liuing.

The same day order was giuen, that euery man should be employed for the repayring of those houses, which wee found standing, and also to make other newe Cottages, for such as should neede.

The 25 our Flyboate and the rest of our planters arriued all safe at Hatoraske, to the great ioy and comfort of the whole company: but the Master of our Admirall Ferdinando grieved greatly at their safe comming: for hee purposely left them in the Bay of Portugal, and stole away from them in the night, hoping that the Master thereof, whose name was Edward Spicer, for that he neuer had bene in Virginia, would hardly finde the place, or els being left in so dangerous a place as that was, by meanes of so many men of warre, as at that time were abroad, they should surely be taken, or slaine: but God disappointed his wicked pretences.

Edward Spicer.

The eight and twentieth, George Howe, one of our twelue Assistantes was slaine by diuers Sauages, which were come ouer to Roanoak, either of purpose to espie our company, and what number we were, or else to hunt Deere, whereof were many in the Island. These Sauages being secretly hidden among high reedes, where oftentimes they find the Deere asleep, and so kill them, espied our man wading in the water alone, almost naked, without any weapon, saue only a smal forked sticke, catching Crabs therewithall, and also being straped two miles from his company, and shot at him in the water, where they gaue him sixteen wounds with their arrowes: and after they had slaine him with their wooden swoyds, they beat his head in pieces, and fled ouer the water to the maine.

On the thirtieth of July Master Seafford and twenty of our men passed by water to the Island of Croatoan, with Manceo, who had his mother, and many of his kinned dwelling in that Island, of whom wee hoped to vnderstand some newes of our fifteene men, but especially to learne the disposition of the people of the countrey towards vs, and to renew our old friendship with them. At our first landing, they seemed as though they would fight with vs: but perceiuing vs begin to march with our shot towards them, they turned their backs, and fled. Then Manceo their countrey man called to them in their owne language, whom, as soone as they heard, they returned, and threwe away their bowes and arrowes, and some of them came vnto vs, embracing and entertaining vs friendly, desiring vs not to gather or spill any of their corne, for that they had but little. We answered them, that neither their corne, nor any other thing of theirs, should be diminished by any of vs, and that our comming was onely to renew the old loue, that was betweene vs and them at the first, and to liue with them as brethren and friends: which answer seemed to please them well, wherefore they requested vs to walke vp to their Towne, who there feasted vs after their maner, and desired vs earnestly, that there might bee some token or badge giuen them of vs, whereby we might know them to be our friends, when we met them any where out of the Towne or Island. They told vs further, that for want of some such badge, diuers of them were hurt the yeere before, being found out of the Island by Master Lane his company, whereof they shewed vs one, which at that very instant lay lame, and had lien of that hurt euer since: but they sayd, they knew our men mistooke them, and hurt them in stead of Winginos men, wherefore they held vs excused.

August.

The next day we had conference further with them, concerning the people of Secotan, Aquasco, & Pomeioke, willing them of Croatoan to certifie the people of those townes, that if they would accept our friendship, we would willingly receiue them againe, and that all unfriendly dealings past on both parts, should be utterly forgiven and forgotten. To this the chiefe men of Croatoan answered, that they would gladly doe the best they could, and within fewe daies, bying the Wiroances and chiefe Gouvernours of those townes with them, to our Gouvernour at Roanoak, or their answer. We also vnderstood of the men of Croatoan, that our man Master Howe was slaine by the remnant of Winginos men dwelling then at Dasamonguepeak, with whom Wanchese kept companie: and also we vnderstood by them of Croatoan, how that the 15 Englishmen left at Roanoak the yeere before, by Sir Richard Grinuile, were suddenly

set vpon, by 30 of the men of Secora, Aquascogoc, and Dasamonguepeuk, in manner following. They conueyed themselves secretly behind the trees, neere the houses where our men carelessly liued: and hauing perceiued that of those fiftene they could see but eleuen only, two of those Sauages appeared to the 11 Englishmen, calling to them by friendly signes, that but two of their chiefeft men should come vnarmed to speake with those two Sauages, who seemed also to bee vnarmed. Wherefore two of the chiefeft of our Englishmen went gladly to them: but whilst one of those Sauages traiterously embraced one of our men, the other with his sword of wood, which he had secretly hidden vnder his mantell, strooke him on the head and slew him, and presently the other eight and twenty Sauages shewed them selues: the other Englishman perceiuing this, fled to his company, whom the Sauages pursued with their bowes, and arrowes, so fast, that the Englishmen were forced to take the house, wherein all their victuall, and weapons were: but the Sauages forthwith set the same on fire: by meanes whereof our men were forced to take by such weapons as came first to hand, and without order to runne forth among the Sauages, with whom they skirmished about an houre. In this skirmish another of our men was shotte into the mouth with an arrow, where hee died: and also one of the Sauages was shot into the side by one of our men, with a wild fire arrow, whereof he died presently. The place where they fought was of great aduantage to the Sauages, by meanes of the thicke trees, behinde which the Sauages through their nimblenes, defended themselves, and so offended our men with their arrowes, that our men being some of them hurt, retyred fighting to the water side, where their boat lay, with which they fled towards Hatorask. By that time they had rowed but a quarter of a mile, they espied their foure fellows comming from a creeke thereby, where they had bene to fetch Dyffers: these foure they receiued into their boate, leauing Roanoak, and landed on a little Island on the right hand of our entrance into the harbour of Hatorask, where they remained a while, but after ward departed, whither as yet we know not.

Hauing nowe sufficiently dispatched our businesse at Croatoan, the same day we departed friendly, taking our leaue, and came aboord the flecte at Hatorask.

The eight of August, the Gouernour hauing long expected the comming of the Wiroances of Pomciok, Aquascogoc, Secora, and Dasamonguepeuk, seeing that the seuen dayes were past, within which they promised to come in, or to send their answers by the men of Croatoan, and no tidings of them heard, being certainly also informed by those men of Croatoan, that the remnant of Wiginahis men, which were left alieue, who dwelt at Dasamonguepeuk, were they which had slaine George Howe, and were also at the drining of our eleuen Englishmen from Roanoak, hee thought to beferre the reuenge thereof no longer. Wherefore the same night about midnight, he passed ouer the water, accompanied with Captaine Stafford, and 24 men, whereof Manteo was one, whom we tooke with vs to be our guide to the place where those Sauages dwelt, where he behaued himselfe toward vs as a most faithfull Englishman.

The next day, being the 9 of August, in the morning so early that it was yet darke, we landed neere the dwelling place of our enemies, & very secretly conueyed our selues through the woods, to that side, where we had their houses betweene vs and the water: and hauing espied their fire, and some sitting about it, we presently set on them: the miserable soules herewith amazed, fled into a place of thicke reedes, growing fast by, where our men perceiuing them, shot one of them through the bodie with a bullet, and therewith we entered the reedes, among which we hoped to acquite their euill doing towards vs, but we were deceiued, for those Sauages were our friends, and were come from Croatoan to gather the corne & fruit of that place, because they vnderstood our enemies were fled immediatly after they had slaine George Howe, and for haste had left all their corne, Tabacco, and Pompions standing in such sort, that al had bene deuoured of the birds, and Deere, if it had not bene gathered in time: but they had like to haue payd deereley for it: for it was so darke, that they being naked, and their men and women apparellled all so like others, we knew not but that they were al men: and if that one of them which was a Wiroances wife had not had a child at her backe, shee had bene slaine in stead of a man, and as hap was, another Sauage knew Master Stafford, and ran to him, calling him by his name, whereby hee was saued. Finding our selues thus disappointed of our purpose, we gathered al the corne, Pease, Pompions, and Tabacco that we found ripe, leauing the rest vnspoyled, and tooke Menatoan his wife, with the yong child, and the other Sauages with vs ouer the water, to Roanoak. Although the mistaking of these Sauages somewhat grieued Manteo, yet he imputed their harme to their owne folly, saying to them, that if their Wiroances had kept their promise in comming to the Gouernour at the day appointed, they had not knowen that mischance.

The 13 of August our Sauage Manteo, by the commandement of Sir Walter Raleigh, was christened

christened in Roanoak, and called Lord thereof, and of Sasamonguepeuk, in reward of his faithful service.

The 18 Elenor, daughter to the Gouvernour, and wife to Ananias Dare one of the Assistants, was deliuered of a daughter in Roanoak, and the same was christened there the Sunday following, and because this child was the first Christian borne in Virginia, shee was named Virginia. By this time our ships had unladen the goods and victuals of the planters, and began to take in wood, and fresh water, and to new calke and trimme them for England: the planters also prepared their letters and tokens to send backe into England.

Our two ships, the Lion and the Fly boat almost ready to depart, the 21 of August, there arose such a tempest at Northeast, that our Admirall then riding out of the harbour, was forced to cut his cables, and put to sea, where he lay beating off and on five dayes before he could come to vs againe, so that we feared he had bene cast away, and the rather for that at the time that the storme tooke them, the most and best of their sailers were left a land.

At this time some controuersies arose betweene the Gouvernour and Assistants, about choosing two out of the twelue Assistants, which should goe backe as factors for the company into England: for euery one of them refused, saue onely one, which all other thought not sufficient: but at length by much perswading of the Gouvernour, Christopher Cooper only agreed to goe for England: but the next day, through the perswasion of diuers of his familiar friends, hee changed his minde, so that now the matter stood as at the first.

The next day, the 22 of August, the whole company both of the Assistants and planters came to the Gouvernour, and with one voice requested him to returne himselfe into England, for the better and sooner obtaining of supplies, and other necessaries for them: but he refused it, and alleaged many sufficient causes, why he would not: the one was, that he could not so suddenly returne backe againe without his great discredite, leauing the action, and so many whome hee partly had procured through his perswasions, to leaue their native countrey, and undertake that voyage, and that some enemies to him and the action at his returne into England would not spare to slander falsly both him and the action, by saying, hee went to Virginia, but politickely, and to no other end but to leade so many into a countrey, in which hee neuer meant to stay himselfe, and there to leaue them behind him. Also he alleaged, that seeing they intended to remoue 50 miles further vp into the maine presently, he being then absent, his stuffe and goods might be both spoiled, & most of them pilfered away in the cariage, so that at his returne he should be either forced to prouide himselfe of all such things againe, or else at his comming againe to Virginia find himselfe vtterly unfurnished, whereof already he had found some prooffe, being but once from them but three dayes. Wherefore he concluded that he would not goe himselfe.

Their meaning to remoue 50 miles into the countrey.

The next day, not onely the Assistants but diuers others, as well women as men, began to renew their requests to the Gouvernour againe, to take vpon him to returne into England for the supply, and dispatch of all such things as there were to be done, promising to make him their bond vnder all their handes and seales for the safe preserving of all his goods for him at his returne to Virginia, so that if any part thereof were spoiled or lost, they would see it restored to him, or his Assignes, whensoever the same should be missed and demanded: which bond, with a testimony vnder their handes and seales, they forthwith made, and deliuered into his hands. The copie of the testimony I thought good to set downe.

May it please you, her Maiesties subiects of England, we your friends and countrey-men, the planters in Virginia, doe by these presents let you and euery of you to vnderstand, that for the present and speedy supply of certaine our known and apparant lackes and needes, most requisite and necessary for the good and happy planting of vs, or any other in this land of Virginia, wee all of one minde & consent, haue most earnestly intreated, and vncessantly requested John White, Gouvernour of the planters in Virginia, to passe into England, for the better and more assured help, and setting forward of the foresayd supplies: and knowing assuredly that he both can best, and wil labour and take paines in that behalfe for vs all, and he not once, but often refusing it, for our sakes, and for the honour & maintenance of the action, hath at last, though much against his will, through our importunacie, yeelded to leaue his gouernement, and all his goods among vs, and himselfe in all our behalves to passe into England, of whose knowledge and fidelitie in handling this matter, as all others, we doe assure our selues by these presents, and will you to giue all credite thereunto, the 25 of August 1587.

The Gouvernour being at the last through their extreame intreating constrained to returne into England, hauing then but halfe a dayes respite to prepare himselfe for the same, departed from Roanoak the seuen and twentieth of August in the morning, and the same day about

midnight, came aboard the *Flieboat*, who already had weped anchor, and rode without the barre, the Admirall riding by them, who but the same morning was newly come thither againe. The same day both the ships weped anchor, and set saile for England: at this weping their ankers, twelue of the men which were in the *Flieboat* were throwen from the Capstone, which by meanes of a barre that brake, came so fast about vpon them, that the other two barres thereof strooke and hurt most of them so sore, that some of them neuer recovered it: neuerthelesse they assayed presently againe to wep their anker, but being so weakened with the first sling, they were not able to wepe it, but were throwen downe and hurt the second time. Wherefore hauing in all but fifteene men aboard, and most of them by this vnfortunate beginning so bruised, and hurt, they were forced to cut their Cable, and leese their anker. Neuerthelesse, they kept company with the Admirall, vntill the seuenteenth of September, at which time wee fell with Coruo, and sawe Flores.

September.

The eighteenth, perceiuing of all our fifteene men in the *Flieboat* there remained but siue, which by meanes of the former mischance, were able to stand to their labour: and that the Admirall meant not to make any haste for England, but to linger about the Island of *Tercera* for purchase: the *Flieboat* departed for England with letters, where we hoped by the help of God to arrive shortly: but by that time we had continued our course homeward about twenty dayes, hauing had sometimes scarce and variable windes, our fresh water also by leaking almost consumed, there arose a storme at Northeast, which for fixe dayes ceased not to blowe so exceeding, that we were driuen further in those fixe then we could recouer in thirteene daies: in which time others of our saylers began to fall very sicke and two of them dyed, the weather also continued so close, that our *Haster* sometimes in foure dayes together could see neither sunne nor starre, and all the beuerage we could make, with stinking water, dregs of beere, and lees of wine which remayned, was but thye gallons, and therefore now we expected nothing but famine to perish at Sea.

October.

The 16 of October we made land, but we knewe not what land it was, bearing in with the same land at that day: about sunne set we put into a harbour, where we found a Hulke of Dublin, and a pinnesse of Hampton riding, but we knew not as yet what place this was, neither had we any boate to goe ashore, vntill the pinnesse sent off their boate to vs with 6 or 8 men, of whom we vnderstood wee were in *Smerwick* in the West parts of Ireland: they also releued vs presently with fresh water, wine, and other fresh meate.

Smerwick in the West of Ireland

The 18 the Gouvernour and the *Haster* ryd to Dingen a Cushe, 5 miles distant, to take order for the new victualing of our *Flieboat* for England, and for reliefe of our sicke and hurt men, but within foure daies after the Boatwain, the Steward, and the Boatwains mate died aboard the *Flieboat*, and the 28 the *Hasters* mate and two of our chiefe saylers were brought sicke to Dingen.

November.

The first the Gouvernour shipped himselfe in a ship called the *Monkie*, which at that time was ready to put to sea from Dingen for England, leaving the *Flieboat* and all his companie in Ireland. The same day we set saile, and on the third day we fell with the North side of the lands end, and were shut by the Seuerne, but the next day we doubled the same for Mounts Bay.

The 5 the Gouvernour landed in England at Martalew, neere Saint Michaels mount in Cornewall.

The 8 we arrived at Hampton, where we vnderstood that our consort the Admirall was come to Portsmouth, and had bene there thye weekes before: and also that Ferdinando the *Haster* with all his company were not onely come home without any purchase, but also in such weaknesse by sicknesse, and death of their chiefe men, that they were scarce able to bring their ship into harbour, but were forced to let fall anker without, which they could not wep againe, but might all haue perished there, if a small barke by great hap had not come to them to helpe them. The names of the chiefe men that died are these, Roger Large, John Mathew, Thomas Smith, and some other saylers, whose names I knew not at the writing hereof. An. Dom. 1587.

Sanages.

Manteo. } That were in England
Towaye. } and returned home in
to Virginia with them.

To the Worshipful and my very friend Master Richard Hakluyt,
much happinesse in the Lord.

It, as well for the satisfying of your earnest request, as the performance of
my promise made vnto you at my last being with you in *England*, I haue
sent you (although in a homely stile, especially for the contentation of a de-
licate eare) the true discourse of my last voyage into the *West Indies*, and
partes of *America* called *Virginia*, taken in hand about the end of Februa-
rie, in the yeare of our redemption 1590. And what euent happened vnto

vs in this our journey, you shall plainly perceiue by the sequele of my discourse. There were at the time aforesaid three ships absolutely determined to goe for the *West Indies*, at the speciall charges of *M. John Wates* of *London* Marchant. But when they were fully furnished, and in readinesse to make their departure, a generall stay was commanded of all ships thorowout *England*. Which so soone as I heard, I presently (as I thought it most requisite) acquainted *Sir Walter Raleigh* therewith, desiring him that as I had sundry times afore bene chargeable and troublesome vnto him, for the supplies and reliefes of the planters in *Virginia*: to likewise, that by his endeuour it would please him at that instant to procure license for those three ships to proceede on with their determined voyage, that thereby the people in *Virginia* (if it were Gods pleasure) might speedily be comforted and relieued without further charges vnto him. Whereupon he by his good meanes obtained license of the *Queenes Maiestie*, and order to be taken, that the owner of the 3 ships should be bound vnto *Sir Walter Raleigh* or his assignes, in 3000 pounds, that those 3 ships in consideration of their releasement should take in, & transport a conuenient number of passengers, with their furnitures and necessaries to be landed in *Virginia*. Neuerthelesse that order was not obserued, neither was the bond taken according to the intencion aforesaid. But rather in contempt of the aforesaid order, I was by the owner and Commanders of the ships denied to haue any passengers, or any thing els transported in any of the said ships, sauing only my telfe & my chest; no not so much as a boy to attend vpon me, although I made great sute, & earnest intreatie aswell to the chiefe Commanders, as to the owner of the said ships. Which crosse and vnkind dealing, although it very much discontented me, notwithstanding the scarcety of time was such, that I could haue no opportunity to go vnto *Sir Walter Raleigh* with complaint: for the ships being then all in readinesse to goe to the Sea, would haue bene departed before I could haue made my returne. Thus both *Gouernors*, *Masters*, and *sailers*, regarding very smally the good of their countrey men in *Virginia*; determined nothing lesse then to touch at those places, but wholly disposed themselves to seeke after purchase & spoiles, spending so much time therein, that sommer was spent before we arriued at *Virginia*. And when we were come thither, the season was so vnfit, & weather so foule, that we were constrained of force to forsake that coast, hauing not seene any of our planters, with losse of one of our ship-boates, and 7 of our chiefe men: and also with losse of 3 of our ankers and cables, and most of our caskes with fresh water left on shore, not possible to be had aboard. Which euils & vnfortunate euent (as wel to their owne losse as to the hinderance of the planters in *Virginia*) had not chanced, if the order set downe by *Sir Walter Raleigh* had bene obserued, or if my dayly & continuall petitions for the performance of the same might haue taken any place. Thus may you plainly perceiue the successe of my fift & last voiage to *Virginia*, which was no lesse vnfortunately ended then frowardly begun, and as lucklesse to many, as sinister to my telfe. But I would to God it had bene as prosperous to all, as noysome to the planters; & as ioyfull to me, as discomfortable to them. Yet seeing it is not my first crossed voyage, I remaine contented. And wanting my wishes, I leaue off from prosecuting that wherunto I would to God my wealth were answerable to my will. Thus committing the reliefe of my discomfortable company the planters in *Virginia*, to the merciful help of the Almighty, whom I most humbly beseech to helpe & comfort them, according to his most holy will & their good desire, I take my leaue: from my house at *Newtowne* in *Kylmore* the 4 of February, 1593.

Your most welwishing friend,

JOHN WHITE.

The fift voyage of *M. John White* into the *West Indies* and parts of *America* called *Virginia*, in the yeere 1590.

The 20 of March the three shippes the *Hopewell*, the *John Evangelist*, and the *Little John*, put to Sea from *Plymouth* with two small *Shallops*.

The 25 at midnight both our *Shallops* were sunke being towed at the ships steernes by the Boatswaines negligence.

On the 30 we saw a head vs that part of the coast of *Barbary*, lying East of *Cape Cantyn*, and the Bay of *Asaphi*.

The next day we came to the Ile of *Mogador*, where rode, at our passing by, a *Pinelle* of *London* called the *Mooneshine*.

April.

April.

On the first of Aprill we anchored in Santa Cruz roade, where we found two great shippes of London lading in Sugar, of whom we had 2 shipboates to supply the losse of our Shallops.

On the 2 we set sayle from the roade of Santa Cruz, for the Canaries.

On Saturday the 4 we saw Alegranza, the East Ile of the Canaries.

On Sunday the 5 of Aprill we gaue chase to a double flyboat, the which, we also the same day fought with, and tooke her, with losse of three of their men kaine, and one hurt.

On Monday the 6 we saw Grand Canarie, and the next day we landed and tooke in fresh water on the Southside thereof.

On the 9 we departed from Grand Canarie, and framed our course for Dominica.

The last of Aprill we saw Dominica, and the same night we came to an anchor on the Southside thereof.

May.

The first of May in the morning many of the Saluages came aboard our ships in their Canoes, and did traffique with vs; we also the same day landed and entered their Towne from whence we returned the same day aboard without any resistance of the Saluages; or any offence done to them.

The 2 of May our Admirall and our Pinnesse departed from Dominica leauing the Iohn our Viceadmirall playing off and on about Dominica, hoping to take some Spaniard ourwardes bound to the Indies; the same night we had sight of three small Ilands called Los Santos, leauing Guadalupe and them on our starboord.

The 3 we had sight of S. Christophers Iland, bearing Northeast and by East off vs.

On the 4 we sayled by the Virgines, which are many broken Ilands, lying at the East ende of S. Iohns Iland; and the same day towards evening we landed upon one of them called Blanca, where we killed an incredible number of foules: here we stayed but three houres, & from thence stood ineb the shore Northwest, and hauing brought this Iland Southeast off vs, we put towards night thow an opening or watch, called The passage, lying betwene the Virgines, and the East end of S. Iohn: here the Pinnesse left vs and sayled on the South side of S. Iohn.

The 5 and 6 the Admirall sayled along the Northside of S. Iohn, so neere the shore that the Spaniards discerned vs to be men of warre; and therefore made fires along the coast as we sailed by, for so their custome is, when they see any men of warre on their coasts.

The 7 we landed on the Northwest end of S. Iohn, where we watered in a good riuer called Yaguana; and the same night following we tooke a Frigate of tenne Tunne comming from Gwathanelo laden with hides and ginger. In this place Pedro a Mollato, who knewe all our state, ranne from vs to the Spaniards.

On the 9 we departed from Yaguana.

The 13 we landed on an Iland called Mona, whereon were 10 or 12 houses inhabited of the Spaniards; these we burned & tooke from them a Pinnesse, which they had drawn aground and funke, and carried all her sayles, mastes, and rudders into the woods, because we should not take him away; we also chased the Spaniards ouer all the Iland; but they hid them in caues, hollow rocks, and bushes, so that we could not find them.

On the 14 we departed from Mona, and the next day after wee came to an Iland called Saona, about 5 leagues distant from Mona, lying on the Southside of Hispaniola neere the East end: betwene these two Ilands we lay off and on 4 or 5 dayes, hoping to take some of the Domingo fleet doubling this Iland, as a neerer way to Spaine then by Cape Tyburon, or by Cape S. Anthony.

On Thursday being the 19 our Viceadmirall, from whom we departed at Dominica, came to vs at Saona, with whom we left a Spanish Frigate, and appointed him to lie off and on other five daies betwene Saona and Mona to the ende aforesaid; then we departed from them at Saona for Cape Tyburon. Here I was informed that our men of the Viceadmirall, at their departure from Dominica brought away two young Saluages, which were the chiefe Caciques sonnes of that Countrey and part of Dominica; but they shortly after ran away from them at Santa Cruz Iland, where the Viceadmirall landed to take in ballast.

On the 21 the Admirall came to the Cape Tyburon, where we found the Iohn Euangelist our Pinnesse staying for vs: here we tooke in two Spaniards almost starued on the shore, who made a fire to our ships as we passed by. Those places for an 100 miles in length are nothing els but a desolate,

desolate and meere wilderness, without any habitation of people, and full of wilde Bulles and Bores, and great Serpents.

sp. William
Lane.

The 22 our Pinnesse came also to an anker in Aligato Bay at cape Tyburon. Here we understood of M. Lane, Captaine of the Pinnesse; how he was set upon with one of the kings Gallies belonging to Santo Domingo, which was manned with 400 men, who after he had fought with him 3 or 4 houres, gaue over the fight & forooke him, without any great hurt done on eyther part.

The 26 The John our Viceadmirall came to vs to cape Tyburon, and the Frigat which we left with him at Saona. This was the appointed place where we should attend for the meeting with the Santo Domingo Fleete.

On Whitsunday Euen at Cape Tyburon one of our boyes ranne away from vs, and at ten dayes end returned to our ships almost starued for want of food. In sundry places about this part of Cape Tyburon we found the bones and carkases of diuers men, who had perished (as wee thought) by famine in those woods, being either stragled from their company, or landed there by some men of warre.

June.

On the 14 of June we tooke a small Spanish frigate which fell amongst vs so suddenly, as he doubled the point at the Bay of Cape Tyburon, where we roade, so that he could not escape vs. This Frigat came from Santo Domingo, and had but 3 men in her, the one was an expert Pilot, the other a Mountainer, and the third a Mintener, who escaped all out of prison at Santo Domingo, purposing to fly to Yaguana which is a towne in the West parts of Hispaniola where many fugitiue Spaniards are gathered together.

Spanish fugitives.

The 17 being Wednesday Captaine Lane was sent to Yaguana with his Pinnesse and a Frigat to take a Shippe, which was there taking in freight, as we understood by the old Pilot, whom we had taken three dayes before.

The 24 the Frigat returned from Captaine Lane at Yaguana, and brought vs word to cape Tyburon, that Captaine Lane had taken the Shippe, with many passengers and Negroes in the same; which proved not so rich a prize as we hoped for, for that a Frenchman of warre had taken and spoiled her before we came. Nevertheless her loading was thought worth 1000 or 1300 pounds, being hives, ginger, Cannastula, Copper-pannes, and Calau.

July.

Edward Spicer.

The second of July Edward Spicer whom we left in England came to vs at Cape Tyburon, accompanied with a small Pinnesse, whereof one M. Harps was Captaine. And the same day we had sight of a fleete of 14 saile all of Santo Domingo, to whom we presently gaue chase, but they upon the first sight of vs fled, and separating themselves scattered here and there: Wherefore we were forced to diuide our selues and so made after them untill 12 of the clocke at night. But then by reason of the darkenesse we lost sight of each other, yet in the end the Admirall and the Moonelight happened to be together the same night at the fetching up of the Viceadmirall of the Spanish fleete, against whom the next morning we fought and tooke him, with losse of one of our men and two hurt, and of theirs 4 slaine and 6 hurt. But what was become of our Viceadmirall, our Pinnesse, and Prize, and two Frigates, in all this time, we were ignorant.

This fight was in sight of the Island of Nauaza.

The 3 of July we spent about rifling, romaging and fitting the Prize to be sailed with vs. The 6 of July we saw Iamayca the which we left on our larboord, keeping Cوبا in sight on our starboord.

Upon the 8 of July we saw the Island of Pinos, which lieth on the Southside of Cuba nigh unto the West end of Cape called Cape S. Anthony. And the same day we gaue chase to a Frigat, but at night we lost sight of her, partly by the slow sayling of our Admirall, & lacke of the Moonelight our Pinnesse, whom Captaine Cooke had sent to the Cape the day before.

On the 11 we came to Cape S. Anthony, where we found our comfort the Moonelight and her Pinnesse abiding for our comming, of whom we understood that the day before there passed by them 22 saile, some of them of the burden of 300 and some 400 tunnes loaden with the Kings treasure from the maine, bound for Hauana; from this 11 of July untill 22 we were much beleaumed: and the wine being very scarce, and the weather exceeding hot, we were much pestered with the Spaniards we had taken: wherefore we were driuen to land all the Spaniards slaying three, but the place where we landed them was of their owne choise on the Southside of Cuba neere unto the Organes and Rio de Puercos.

The 23 we had sight of the Cape of Florida, and the broken Islands therof called the Martires.

The

The 25 being S. Iames day in the morning we fell with the Marañcas, a head-land 8 leagues towards the East of Hauana, where we purposed to take fresh water in, and make our abode two or three dayes.

On Sunday the 26 of July plying too and fro betweene the Marañcas and Hauana, we were espied of three small Pinnasses of S. Iohn de Vllua bound for Hauana, which were exceeding richly laden. These 3 Pinnasses came very boldly vnto vs, and so continued vntill they came within musket shot of vs. And we supposed them to be Captaine Harps pinnelle, and two small Frigats taken by Captaine Harpe: wherefore we shewed our flag. But they presently vpon the sight of it turned about & made all the saile they could from vs toward the Shore, & kept themselves in so shallow water, that we were not able to follow them, and therefore gaue them ouer with expence of shot & powder to no purpose. But if we had not so rashly set out our flagge, wee might haue taken them all three, for they would not haue knowen vs before they had bene in our hands. This chase brought vs so far to leeward as Hauana: wherefore not finding any of our consorts at y Marañcas, we put ouer again to the cape of Florida, & from thence thorow the chanel of Bahama.

On the 28 the Cape of Florida bare West off vs.

The 30 we lost sight of the coast of Florida, and stood to Sea for to gaine the helpe of the current which runneth much swifter a farre off then in sight of the coast. For from the Cape to Virginia all along the Shore are none but eddie currents, setting to the South and Southwest.

The 31 our three ships were clearly disbocked, the great prize, the Admirall, and the Mooneshine, but our prize being thus disbocked departed from vs without taking leaue of our Admirall or consort, and sayled directly for England.

The state of the currents from the Cape of Florida to Virginia.

August.

On the first of August the winde scanted, and from thence forward we had very foule weather with much raine, thundering, and great spouts, which fell round about vs nigh vnto our ships.

The 3 we stood againe in for the Shore, and at midday we tooke the height of the same. The height of that place we found to be 34 degrees of latitude. Towards night we were within three leagues of the Low Sandie Islands West of Wokokon. But the weather continued so exceeding foule, that we could not come to an anker nye the coast: wherefore we stood off againe to Sea vntill Monday the 9 of August.

Sandie Islands West of Wokokon.

On munday the storme ceased, and we had very great likelihood of faire weather: therefore we stood in againe for the Shore: & came to an anker at 11 fadome in 35 degrees of latitude, within a mile of the Shore, where we went on land on the narrow sandy Island, being one of the Isles West of Wokokon: in this Island we tooke in some fresh water and caught great store of fish in the shallow water. Betweene the maine (as we supposed) and that Island it was but a mile ouer and three or foure foote deepe in most places.

They land in 35 degrees.

On the 12 in the morning we departed from thence and toward night we came to an anker at the Northeast end of the Island of Croatoan, by reason of a breach which we perceiued to lie out two or three leagues into the Sea: here we roade all that night.

A breach 2 or 3 leagues into Sea.

The 13 in the morning before we wayed our ankens, our boates were sent to sound ouer this breach; our ships riding on the side thereof at 5 fadome; and a ships length from vs we found but 4 and a quarter, and then deeping and shallowing for the space of two miles, so that sometimes we found 5 fadome, and by & by 7, and within two casts with the lead 9, & then 8, next cast 5, & then 6, & then 4, & then 9 againe, and deeper; but 3 fadome was the least, 2 leagues off from the Shore. This breach is in 35 degr. & a halfe, & lyeth at the very Northeast point of Croatoan, whereas goeth a fret out of the maine Sea into the inner waters, which part the Islandes and the maine land.

Great diversity of soundings.

The 15 of August towards Euening we came to an anker at Hatorask, in 36 degr. and one third, in five fadom water, three leagues from the Shore. At our first coming to anker on this Shore we saw a great smoke rise in the Ile Raonoak neere the place where I left our Colony in the yeere 1587, which smoake put vs in good hope that some of the Colony were there expecting my returne out of England.

Hatorask in 36 degr. & a third.

The 16 and next morning our 2 boates went a Shore, & Captain Cooke, & Cap. Spicer, & their company with me, with intent to passe to the place at Raonoak where our countrey men were left. At our putting from the ship we commanded our Master gunner to make readie 2 Pinions and a Falkon well laden, and to shoot them off with reasonable space betweene euery shot, to the ende that their reportes might bee heard to the place where wee hoped to finde some of our people. This was accordingly performed, & our twoe boates put off vnto the Shore, in the Admirals boate we

• *Chop land.*

*Fresh water
found in sandy
hilles.*

*Captaine Spi-
cer drowned.*

we founded all the way and found from our shippe vntill we came within a mile of the shore nine, eight, and seuen sadome: but befoze we were halfe way betweene our ships and the shore we saw another great smoke to the Southwest of Kindrikers mountes: we therefore thought good to goe to that second smoke first: but it was much further from the harbour where we landed, then we supposed it to be, so that we were very sore tired befoze wee came to the smoke. But that which grieued vs moze was that when we came to the smoke, we found no man nor signe that any had bene there lately, nor yet any fresh water in all this way to drinke. Being thus wearied with this iourney we returned to the harbour where we left our boates, who in our absence had brought their caske a shore for fresh water, so we deferred our going to Roanoak vntill the next morning, and caused some of those saylers to digge in those sandie hilles for fresh water whereof we found very sufficient. That night wee returned aboord with our boates and our whole company in safety.

The next morning being the 17 of August, our boates and company were prepared againe to goe by to Roanoak, but Captaine Spicer had then sent his boat ashore for fresh water, by meanes whereof it was ten of the clocke afozenoon befoze we put from our ships which were then come to an anchor within two miles of the shore. The Admirals boat was halfe way toward the shore, when Captaine Spicer put off from his ship. The Admirals boat first passed the breach, but not without some danger of sinking, for we had a sea brake into our boat which filled vs halfe full of water, but by the will of God and carefull styrage of Captaine Cooke we came safe ashore, sauing onely that our furniture, victuals, match and powder were much wet and spoyled. For at this time the winde blew at North-east and direct into the harbour so great a gale, that the Sea brake extremely on the barre, and the tide went very forcibly at the entrance. By that time our Admirals boate was halled ashore, and most of our things taken out to dry, Captaine Spicer came to the entrance of the breach with his mast standing vp, and was halfe passed ouer, but by the rash and indiscreet styrage of Ralph Skinner his Masters mate, a very dangerous Sea brake into their boate and ouerset them quite, the men kept the boat some in it, and some hanging on it, but the next sea set the boat on ground, where it beat so, that some of them were forced to let goe their hold, hoping to wade ashore, but the Sea still beat them downe, so that they could neither stand nor swimme, and the boat twise or thise was turned the keele vppward; whereon Captaine Spicer and Skinner hung vntill they sunke, & were seene no moze. But foure that could swimme a litle kept themselves in deeper water and were saued by Captain Cookes meanes, who so soone as he saw their ouersetting, stripped himselfe, and foure other that could swimme very well, & with all haste possible rowed vnto them, & saued foure. They were a 11 in all, & 7 of the chiefe were drowned, whose names were Edward Spicer, Ralph Skinner, Edward Kelley, Thomas Bewis, Hance the Surgion, Edward Kelborne, Robert Coleman. This mischance did so much discomfort the saylers, that they were all of one mind not to goe any further to seeke the planters. But in the end by the commandement & perswasion of me and Captaine Cooke, they prepared the boates: and seeing the Captaine and me so resolute, they seemed much moze willing. Our boates and all things fitted againe, we put off from Hatorask, being the number of 19 persons in both boates: but befoze we could get to the place, where our planters were left, it was so exceeding darke, that we ouershot the place a quarter of a mile: there we espied towards the North end of the Island y light of a great fire thorow the woods, to the which we presently rowed: when wee came right ouer against it, we let fall our Grapnel neere the shore, & sounded with a trumpet a Call, & after wardes many familiar English tunes of Songs, and called to them friendly; but we had no answer, we therefore landed at day-breake, and coming to the fire, we found the grasse & sundry rotten trees burning about the place. From hence we went thorow the woods to that part of the Island directly ouer against Dasamongwepeuk, & from thence we returned by the water side, round about the North point of the Island, vntill we came to the place where I left our Colony in the yeere 1586. In all this way we saw in the sand the print of the Saluages feet of 2 or 3 sorts troaden y night, and as we entred vpp the sandy banke vpon a tree, in the very browe thereof were curiously carued these faire Romane letters C R O: which letters presently we knew to signifie the place, where I should find the planters seated, according to a secret token agreed vpon betweene them & me at my last departure fro them, which was, that in all wayes they should not faile to write or carue on the trees or posts of the dozes the name of the place where they should be seated; for at my coming away they were prepared to remoue from Roanoak 50 miles into the maine. Therefore at my departure from them in An. 1587 I willed them, that if they should happen to be distressed in any of those places, that then they should carue ouer the letters or name, a Crosse + in this forme, but we found no such signe of distresse. And hauing well considered of this, we passed toward the place where

where they were left in sunny houses, but we found the houses taken downe, and the place very strongly enclosed with a high palisado of great trees, with corynes and flankers very ffort-like, and one of the chiefe trees or postes at the right side of the entrance had the barke taken off, and 5. foote from the ground in sayze Capitall letters was grauen CROATOAN without any crosse or signe of distresse; this done, we entred into the palisado, where we found many barres of Iron, two pigges of Lead, foure pyon fowlers, Iron sacker-shotte, and such like heauie things, thowen here and there, almost ouergrown with grasse and weedes. From thence wee went along by the water side, towards the poynt of the Creeke to see if we could find any of their botes or Pinnisse, but we could perceiue no signe of them, nor any of the last falkons and small Dydinance which were left with them, at my departure from them. At our returne from the Creeke, some of our Saylers meeting vs, tolde vs that they had found where diuers chests had bene hidden, and long thence digged vp againe and broken vp, and much of the goods in them spoyled and scattered about, but nothing left, of such things as the Sauages knew any vse of, vndefaced. Presently Captaine Cooke and I went to the place, which was in the ende of an olde trench, made two peeres past by Captaine Amadas: where wee found five Chests, that had bene carefully hidden of the Planters, and of the same chests three were my owne, and about the place many of my things spoyled and broken, and my bookes torne from the couers, the frames of some of my pictures and Happes rotten and spoyled with rayne, and my armour almost eaten through with rust; this could bee no other but the deeде of the Sauages our enemies at Dasamongwepeuk, who had watched the departure of our men to Croatoan; and as soone as they were departed, digged vp euery place where they suspected any thing to be buried: but although it much grieved me to see such spoyles of my goods, yet on the other side I greatly ioyed that I had safely found a certaine token of their safe being at Croatoan, which is the place where Manteo was bozne, and the Sauages of the Island our friends.

When we had seene in this place so much as we could, we returned to our Boates, and departed from the shoare towards our Shippes, with as much speede as wee could: For the weather beganne to ouercast, and very likely that a foule and stormie night would ensue. Therefore the same Evening with much danger and labour, we got our selues aboard, by which time the winde and seas were so greatly risen, that wee doubted our Cables and Anchors would scarcely holde vntill Morning; wherefore the Captaine caused the Boate to be manned with five lusty men, who could swimme all well, and sent them to the little Island on the right hand of the Harbour, to bring aboard sixe of our men, who had filled our caske with fresh water: the Boate the same night returned aboard with our men, but all our Caske ready filled they left behinde, impossible to bee had aboard without danger of casting away both men and Boates; for this night prooued very stormie and foule.

The next Morning it was agreed by the Captaine and my selfe, with the Master and others, to wey anchor, and goe for the place at Croatoan, where our planters were: for that then the winde was good for that place, and also to leaue that Caske with fresh water on shoare in the Island vntill our returne. So then they brought the cable to the Capston, but when the anchor was almost apeeke, the Cable broke, by meanes whereof we lost another Anchor, wherewith we droue so fast into the shoare, that wee were forced to let fall a third Anchor; which came so fast home that the Shippe was almost aground by Kenricks mounts: so that wee were forced to let slippe the Cable ende for ende. And if it had not chanced that wee had fallen into a channell of deeper water, closer by the shoare then wee accounted of, wee could neuer haue gone cleare of the poynt that lyeth to the Southwardes of Kenricks mounts. Being thus cleare of some dangers, and gotten into deeper waters, but not without some losse; for wee had but one Cable and Anchor left vs of foure, and the weather grew to be fouler and fouler; our victuals scarce, and our caske and fresh water lost: it was therefore determined that we should goe for Saint Iohn or some other Island to the Southward for fresh water. And it was further purposed, that if wee could any wayes supply our wants of victuals and other necessities, either at Hispaniola, Sane Iohn, or Trynidad, that then wee should continue in the Indies all the Winter following, with hope to make 2. rich voyages of one, and at our returne to visit our countrymen at Virginia. The captaine and the whole company in the *Animall* (with my earnest petitions) thereunto agreed, so that it rested onely to knowe what the Master of the Moone-light our consozt would doe herein. But when we demanded them if they would accompany vs in that new determination, they alledged that their weake and leake Shippe was not able to continue it; wherefore the same night we parted, leauing the Moone-light to goe directly for England, and the Admirall set his course for Trynidad, which course we kept two dayes.

They leane the coast of Virginia.

On the 28. the winde changed, and it was sette on foule weather euery way: but this storme brought the winde West and North west, and blew so forcibly, that wee were able to beare no sayle, but our fore-course halfe mast high, wherewith wee ranne vpon the winde perforce, the due course for England, so that wee were driuen to change our first determination for Trynidad, and Roode for the Ilands of Azores, where wee purposed to take in fresh water, and also there hoped to meete with some English men of warre about those Ilands, at whose hands wee might obtaine some supply of our wants. And thus continuing our course for the Azores, sometimes with calmes, and sometimes with very scarce windes, on the sixteenth of September the winde came South Southeast, and blew so exceedingly, that wee were forced to lye atry all that day. At this time by account we iudged our selues to be about twentie leagues to the West of Cuerno and Flores, but about night the storme ceased, and sayre weather ensued.

On Thursday the seuenteenth wee saw Cuerno and Flores, but we could not come to anker that night, by reason the winde shifted. The next Morning being the eighteenth, standing in againe with Cuerno, we espyed a sayle ahead vs, to whom we gaue chase: but when wee came neere him, we knew him to be a Spaniard, and hoped to make sure purchase of him; but we vnderstood at our speaking with him, that he was a prize, and of the Domingo fleete already taken by the Iohn our consort, in the Indies. We learned also of this prize, that our Viceadmirall and Pinnisse had fought with the rest of the Domingo fleete, and had forced them with their Admirall to flee vnto Iamaica vnder the Fort for succour, and some of them ran themselves aground, whereof one of them they brought away, and tooke out of some others so much as the time would permit. And further wee vnderstood of them, that in their returne from Iamaica about the Organes neere Cape Saint Anthony, our Viceadmirall mette with two Shippes of the Inapne land, come from Mexico, bound for Hauana, with whom he fought; in which fight our Viceadmirals Lieutenant was slaine, and the Captaines right arme strooken off, with foure other of his men slaine, and sixteene hurt. But in the ende he entred, and tooke one of the Spanish shippes, which was so sore shot by vs vnder water, that before they could take out her treasure, she sunke; so that we lost thirteene Pipes of Silver which sunke with her, besides much other rich merchandise. And in the meane time the other Spanish shippe being peaced with nine shotte vnder water, got away; whom our Viceadmirall intended to pursue: but some of their men in the toppe made certaine rockes, which they saw aboue water neere the shoare, to be Gallies of Hauana and Cartagena, comming from Hauana to rescue the two Shippes; wherefore they gaue over their chase, and went for England. After this intelligence was giuen vs by this our prize, he departed from vs, and went for England.

13 Pipes of
Silver.

On Saturday the 19. of September we came to an Ancre neere a small village on the North side of Flores, where we found ryding 5. English men of warre, of whom wee vnderstood that our Viceadmirall and Prize were gone thence for England. One of these five was the Moonelight our consort, who vpon the first sight of our comming into Flores, set sayle and went for England, not taking any leaue of vs.

On Sunday the 20. the Mary Rose, Admirall of the Queenes fleete, wherein was Generall Sir Iohn Hawkins, stood in with Flores, and diuers other of the Queenes ships, namely the Hope, the Nonpareilla, the Rainebow, the Swift-sure, the Foresight, with many other good merchants ships of warre, as the Edward Bonaventure, the Marchant Royal, the Amitie, the Eagle, the Dainy of Sir Iohn Hawkins, and many other good ships and pinnisses, all attending to meete with the king of Spaines fleete, comming from Terra firma of the West Indies.

The 22. of September we went aboard the Raynebow, and towards night we spake with the Swift-sure, and gaue him 3. pieces. The captaines desired our company; wherefore we willingly attended on them: who at this time with 10. other ships stood for Faial. But the Generall with the rest of the Fleete were separated from vs, making two fleetes, for the surer meeting with the Spanish fleete.

On Wednesday the 23. we saw Gratiola, where the Admiral and the rest of the Queens fleete were come together. The Admirall put forth a flag of counsel, in which was determined that the whole fleete should go for the mayne, and spred themselves on the coasts of Spaine and Portugal, so farre as conueniently they might, for the surer meeting of the Spanish fleete in those parts.

The 26. we came to Faial, where the Admiral with some other of the fleete ankred, other some plyed vp and downe betwene that and the Pico vntill midnight, at which time the Antony shot off a piece and weped, shewing his light: after whom the whole fleete stood to the East, the winde at Northeast by East.

On Sunday the 27. towards Euening wee tooke our leaue of the Admirall and the whole fleete,

fleete, who stood to the East. But our shippe accompanied with a flyboate stood in againe with S. George, where we purposed to take in moze fresh water, and some other fresh victuals.

On Wednesday the 30. of September, seeing the winde hang so Northerly, that wee could not attaine the Island of S. George, we gaue ouer our purpose to water there, and the next day framed our due course for England.

October.

The 2. of October in the Morning we saw S. Michaels Island on our Starre board quarter.

The 23. at 10. of the clocke afore noone, we saw Vlhant in Britaigne.

On Saturday the 24. we came in safetie, God be thanked, to an anchor at Plymouth.

CERTAINE VOYAGES TO FLORIDA, AND
the later and more perfect discoueries thereof, to wit, of all
the Seacoasts, Riuers, Bayes, Hauens, Isles, and maine landes farre vp
into the Countrey, and a report of some colonies and fortes there planted
and displant, with a description of the gouernment, disposition
and qualitie of the naturall inhabitants, and a declaration
of the temperature of the climate, and of the
manifolde good commodities
found in those regions.

TO THE MOST CHRISTIAN
King of France, Francis the
first.

The relation of John de Verrazano a Florentine, of the land by him discovered in the name
of his Maiestie. Written in Diepe the eight of Iuly, 1524.

Wrote not to your Maiesty, most Christian king, since the time we suffered the tempest in the North partes, of the successe of the foure Shippes, which your Maiestie sent forth to discouer new lands by the Ocean, thinking your Maiestie had bene already duely enformed thereof. Now by these presents I will giue your Maiestie to vnderstand, how by the violence of the windes we were forced with the two ships, the Norman and the Dolphin (in such euill case as they were) to land in Britaine. Where after wee had repayed them in all poyntes as was needefull, and armed them very well, we tooke our course along by the coast of Spaine, which your Maiestie shall vnderstand by the profite that we receiued thereby. Afterwards with the Dolphin alone we determined to make discouerie of new Countreies, to prosecute the nauigation we had already begun, which I purpose at this present to recount vnto your Maiestie, to make manifest the whole proceeding of the matter.

The 17. of January the yeere 1524. by the grace of God we departed from the dishabited rocke by the isle of Madéra, appertaining to the king of Portugal, with 50. men, with victuals, weapons, and other ship-munition very well prouided & furnished for 8. moneths: And sayling Westwards with a faire Easterly winde, in 25. dayes we ran 500. leagues, and the 20. of Februarie we were overtaken with as sharpe and terrible a tempest as euer any saylers suffered: whereof with the diuine helpe and mercifull assistance of Almighty God, and the goodnesse of our shippe, accompanied with the good happe of her fortunate name, we were deliuered, and with a prosperous winde followed our course West and by North. And in other 25. dayes we made aboue 400. leagues moze, where we discovered a new land, neuer before seene of any man either ancient or moderne, and at the first sight it seemed somewhat low, but being within a quarter of a league of it, we perceived by the great fires that we saw by the Sea coast, that it was inhabited: and saw that the land stretched to the Southwards. In seeking some conuenient Parborough wherein to anchor and to haue knowledge of the place, we sayled fiftie leagues in vaine, and seeing the land to runne still to the Southwards, we resolved to returne backe againe towards the North, where wee found our selues troubled with the like difficultie. At length being in despaire to finde any Port, we cast anchor vpon the coast, and sent our Boate to shore, where we saw great stoe of people which came to the Sea side; and seeing vs appoach, they fled away, and sometimes would stand still and

The Isle of
Madéra.

They discouered
land.

looke backe, beholding vs with great admiration: but afterwards being animated and assured with signes that we made them, some of them came hard to the Sea side, seeming to reioyce very much at the sight of vs, and marueiling greatly at our apparel, shape and whitenesse, shewed vs by sundry signes where we might most commodiously come a land with our Boat, offering vs also of their victuals to eat. Now I wil briefly declare to your Maiestie their life and maners, as farre as we could haue notice thereof: These people goe altogether naked, except only that they couer their priuie parts with certaine skins of beastes like vnto Parterns, which they fasten vnto a narrow girdle made of grasse very artificially wrought, hanged about with tayles of diuers other beastes, which round about their bodies hang dangling downe to their knees. Some of them weare garlands of byrdes feathers. The people are of colour russet, and not much vnlike the Saracens: their haire blacke, thicke and not very long, which they tye together in a knot behind and weare it like a hile talle. They are well featured in their limbes, of meane stature, and commonly somewhat bigger then we: broad breasted, strong armed, their legs and other parts of their bodies well fashioned, and they are disfigured in nothing, sauing that they haue somewhat broad visages, and yet not all of them: for we saw many of them wel fauoured, hauing blacke and great eyes, with a cheerefull and ready looke, not strong of body, yet sharpe witted, nimble and exceeding great runners, as farre as we could learne by experience, and in those two last qualities they are like to the people of the East partes of the world, and especially to them of the bettermost partes of China. We could not learne of this people their maner of liuing, nor their particular customs, by reason of the short abode we made on the shoare, our company being but small, and our ship riding farre off in the Sea. And not farre from these wee found another people, whose liuing wee thinke to be like vnto theirs; (as hereafter I wil declare vnto your Maiestie) shewing at this present the situation and nature of the foresayd land. The shoare is all couered with small sand, and so ascendeth upwards for the space of 15. foote, rising in forme of little hils about 50. paces broad. And sayling for wards, we found certaine small Riuer and armes of the Sea, that fall downe by certaine creekes, washing the shoare on both sides as the coast lyeth. And beyond this we saw the open Countrey rising in height aboue the sandie shoare with many faire fields and plaines, full of mightie great woods, some very thicke, and some thinne, replenished with diuers sorts of trees, as pleasant and delectable to behold, as is possible to imagine. And your Maiesty may not thinke that these are like the woods of Hercynia or the wilde deserts of Tartary, and the Northerne coasts full of fruitlesse trees: But they are full of Palme trees, Bay trees, and high Cypresse trees, and many other sortes of trees vnknewen in Europe, which yeld most sweete saours farre from the shoare, the proprietie whereof we could not learne for the cause aforesaid, and not for any difficulty to passe through the woods, seeing they are not so thicke but that a man may passe through them. Neither doe we thinke that they partaking of the East world round about them, are altogether boyd of drugs or spicery, and other riches of golde, seeing the colour of the land doth so much argue it. And the land is full of many beastes, as Stags, Deere and Pares, and likewise of Lakes and Pooles of fresh water, with great plentie of Fowles, conuenient for all kinde of pleasant game. This land is in latitude 34. degrees, with good and wholesome ayre, temperate, betweene hot and colde, no belement windes doe blowe in those Regions, and those that doe commonly reigne in those coasts, are the North west and West windes in the summer season, (in the beginning whereof we were there) the skie cleere and faire with very litle raine: and if at any time the ayre be cloudye and mistie with the Southerne winde, immediately it is dissolued and wapeth cleere and sayre againe. The Sea is calme, not boysterous, the waues gentle: and although all the shoare be somewhat sholde and without harborough, yet is it not dangerous to the saylers, being free from rocks and deepe, so that within 4. or 5. foote of the shoare, there is 20. foote deepe of water without ebbe or flood, the depth still increasing in such vniforme proportion. There is very good ryding at Sea: for any ship being shaken in a tempest, can neuer perishe there by breaking of her cables, which we haue proued by experience, if or in the beginning of March (as it is vsuall in all regions) being in the Sea oppressed with Northerne windes, and ryding there, wee found our anchor broken before the earth sayled or mooued at all. We departed from this place, still running along the coast, which we found to trend toward the East, & we saw euery where very great fires, by reason of the multitude of the inhabitants. While we rode on that coast, partly because it had no harborough, and for that we wanted water, we sent our boat ashore with 25. men: where by reason of great and continuall waues that beat against the shoare, being an open Coast, without succour, none of our men could possibly goe ashore without loosing our boate. Wee saw there many people which came vnto the shoare, making diuers signes of friendship, and shewing that they were content we should come a land, and by trial we found them to be very courteous and gentle, as your Maiestie shal vnderstand

34. Degrees.

The coast trendeth to the East in 34. degrees of latitude.

Courteous and gentle people.

derstand by the successe. To the intent we might send them of our things, which the Indians commonly desire and esteeme, as sheetes of paper, glasses, beles, and such like trifles; we sent a young man one of our Mariners ashore, who swimming towards them, & being within 3. or 4. yards of the shore, not trusting them, cast the things vpon the shoare: but seeking afterwards to retorne, he was with such violence of the waues beaten vpon the shore, that he was so bruised that he lay there almost dead: which the Indians perceiuing, ranne to catch him, and drawing him out, they caried him a litle way off from the sea. The yong man perceiuing they caried him, being at the first dismayed, began then greatly to feare, and cried out piteously: likewise did the Indians which did accompany him, going about to cheere him and to giue him courage, and then setting him on the ground at the foote of a litle hil against the sunne, they began to behold him with great admiration, maruelling at the whitenesse of his flesh: And putting off his clothes, they made him warme at a great fire, not without our great feare which remayned in the boate, that they would haue roasted him at that fire, and haue eaten him. The yong man hauing recovered his strength, and hauing stayed a while with them, shewed them by signes that he was desirous to retorne to the ship: and they with great loue clapping him fast about with many imbracings, accompanying him vnto the sea, and to put him in more assurance, leauing him alone, went vnto a high ground and stood there, beholding him vntill he was entered into the boate. This yong man obserued, as we did also, that these are of colour inclining to Blacke as the other were, with their flesh very shining, of meane stature, handsome visage, and delicate limmes, and of very litle strength, but of prompt wit: farther we obserued not.

Departing from hence, following the shore which trended somewhat to ward the North, in 50. leagues space we came to another land which shewed much more faire and full of woods, being very great, where we rode at anchor: and that we might haue some knowledge thereof, wee sent 20. men aland, which entered into the countrey about 2. leagues, and they found that the people were fled to the woods for feare. They saw onely one olde woman with a yong maide of 18. or 20. yeeres olde, which seeing our company, hid themselves in the grasse for feare: the olde woman caried two Infants on her shoulders, and behind her necke a child of 8. yeeres olde. The yong woman was laden likewise with as many: but when our men came vnto them, the women cried out: the olde woman made signes that the men were fledde vnto the woods. Assoone as they saw vs to quiet them and to winne their fauour, our men gaue them such victuals as they had with them, to eat, which the old woman receiued thankfully: but the yong woman disdained them all, & threw them disdainfully on the ground. They tooke a child from the olde woman to bring into France, and going about to take the yong woman which was very beautiful and of tall stature, they could not possibly, for the great outcries that she made, bring her to the sea: and especially hauing great woods to passe thorow, and being farre from the ship, we purposed to leaue her behind, bearing away the child onely. We found those folkes to be more white then those that we found before, being clad with certaine leaues that hang on boughs of trees, which they sewe together with threds of wilde hempe: their heads were trussed up after the same maner as the former were: their ordinary foode is of pulse, whereof they haue great store; differing in colour and taste from ours; of good and pleasant taste. Moreover they liue by fishing and fowling, which they take with ginnes, and bowes made of hard wood, the arrowes of Canes, being headed with the bones of fish, & other beasts. The beasts in these parts are much wilder then in our Europe, by reason they are continually chased and hunted. We saw many of their boats made of one tree 20. foote long, and 4. foote broad, which are not made with yron or stone, or any other kind of metall (because that in all this countrey for the space of 200. leagues which we ranne, we neuer saw one stone of any sort:) they helpe themselves with fire, burning so much of the tree as is sufficient for the hollownesse of the boat; the like they doe in making the sterne & the forepart, vntill it be fit to saile vpon the sea. The land is in situation, goodnes and fairenesse like the other: it hath woods like the other, thinne and full of diuers sorts of trees: but not so sweete, because the country is more Northerly and colde.

We saw in this Countrey many Vines growing naturally, which growing vp, tooke holde of the trees as they doe in Lombardie, which if by husbandmen they were dressed in good order, without all doubt they would yeeld excellent wines: for hauing oftentimes seene the fruit thereof dyed, which was sweete and pleasant, and not differing from ours, wee thinke that they doe esteeme the same, because that in euery place where they growe, they take away the vnder branches growing round about, that the fruit thereof may ripen the better.

We found also roses, violets, lilies, and many sorts of herbes, and sweete and odoriferous flowers different from ours. We knewe not their swellings, because they were farre vp in the land, and we iudge by many signes that we saw, that they are of wood & of trees framed together.

They run 50. leagues farther.

Wilde hempe.

They ran along the coast 200. leagues. They make hollow their Canoes with fire.

Vines like those of Lombardie.

The description
of Claudia
Island, tenne
leagues from
the mapne.
Claudia was
mother of King
Francis.
A passing good
hauen.

Copper more
esteemed then
golde.

We doe beleene also by many coniectures and signes, that many of them sleeping in the fields, haue no other couert then the open sky. Further knowledge haue we not of them: we thinke that all the rest whose countreys we passed, liue all after one maner. Putting made our aboade these dayes in this country, and ryding on the coast for want of harboroughs, we concluded to depart from thence, trending along the shore betwene the North and the East, sayling onely in the day time, and riding at anker by night. In the space of 100. leagues sayling we found a very pleasant place situated amongst certaine litle deepe hills: from amidst the which hills there ran downe into the sea an exceeding great streame of water, which in the mouth was very deepe, & from the sea to the mouth of the same with y^e tide which we found to rise 8. foote, any great ship laden may passe by.

But because we rode at anker in a place well fenced from the wind, we would not venture our selues without knowledge of the place: and we passed by with our boat onely into the sayd Riuer, and saw the countrey very well peopled. The people are almost like vnto the others, and are clad with the feathers of fowles of diuers colours: they came towards vs very cheerefully, making great shewes of admiration; shewing vs where we might come to land most safely with our boat. We entered by the sayd riuer into the land about halfe a league, where it made a most pleasant lake about 3. leagues in compasse: on the which they rowed from the one side to the other to the number of 30. of their small boats, wherein were many people which passed from one shore to the other to come and see vs. And behold vpon the sudden (as it is wont to fall out in sayling) a contrary flay of wind comming from the sea, we were inforced to retourne to our ship, leauing this land to our great discontentment, for the great commodity and pleasantnesse thereof, which we suppose is not without some riches, all the hills shewing mineriall matters in them. We weyed anker, and sayled toward the East, for so the coast trended, and so alwayes for 50. leagues being in the sight thereof, we discovered an Island in forme of a triangle, distant from the maine land 10. leagues, about the bignesse of the Island of the Rhodes: it was full of hills couered with trees, well peopled, for we saw fires all along the coast: wee gaue it the name of your Maiesties mother, not staying there by reason of the weather being contrary.

And we came to another land being 5. leagues distant from the Island, where we found a passing good hauen, wherein being entered, we found about 20. small boats of the people, which with diuers cries and wondrings came about our ship, continuing no neerer then 50. paces towards vs: they stayed and beheld the artificiallnesse of our ship, etc. Hape & apparel: then they all made a loud shew together, declaring that they reioyced. When we had something animated them, vling their gestures, they came so neere vs, that we cast them certaine bels and glasses, and many toys, which when they had receiued, they looked on them with laughing, and came without feare aboard our ship. There were amongst these people 2. kings of so goodly stature and shape as is possible to declare: the eldest was about 40. yeeres of age, the second was a yong man of 20. yeeres olde. Their apparell was on this maner: the elder had vpon his naked body a parts skin wrought artificiallly with diuers branches like damaske: his head was bare with the hayre tyed by behind with diuers knots: about his necke he had a large chaine, garnished with diuers stones of sunby colours: the yong man was almost apparelled after y^e same maner. This is the goodliest people, & of the fairest conditions that we haue found in this our voyage. They exceed vs in bignes: they are of the colour of hyalle, some of them incline more to whitenesse: others are of yellow colour, of comely visage, with long and blacke haire, which they are very careful to trim and decke vp: they are blacke and quicke eyed, and of sweete and pleasant countenance, imitating much the old fashion. I write not to your Maiestie of the other parts of their body, hauing al such proportion as apperteineth to any handsome man. The women are of the like conformitie and beautie: very handsome and well fauoured, of pleasant countenance, and comely to behold: they are as wel manered and continent as any women, and of good education: they are all naked saue their priuy partes, which they couer with a Deeres skin branched or embrodered as the men be: there are also of them which weare on their armes very rich skinnies of Luzernes: they adorne their heads with diuers ornaments made of their owne haire, which hang downe before on both sides their hesties: others vse other kinde of dressing themselves like vnto the women of Egypt and Syria, these are of the elder sort: and when they are married, they weare diuers toys, according to the vsage of the people of the East, as well men as women.

Among whom we saw many plates of wrought copper, which they esteeme more then golde, which for the colour they make no account of, for that amongst all other it is counted the basest: they make most account of Azure and Red. The things that they esteeme most of all those which we gaue them, were bels, chrystal of Azure colour, and other toys to hang at their eares or about their necke. They did not desire cloth of silke or of golde, much lesse of any other sort, neither cared they

they for things made of Steele and yron, which wee often shewed them in our armour which they made no wonder at; and in beholding them they onely asked the arte of making them: the like they did at our glasses, which when they beheld, they suddenly laught and gaue them vs againe. They are very liberall for they giue that which they haue: we became great friends with these, and one day we entered into the Hauens with our ship, where as before we rode a league off at Sea by reason of the contrary weather. They came in great companies of their small boats vnto the ship with their faces all bepaintes with diuers colours, the wing vs that it was a signe of ioy, bringing vs of their victuals, they made signes vnto vs where we might safest ride in the Hauens for the safeguard of our ship keeping still our company: and after we were come to an anchor, wee bestowed 15 dayes in providing our selues many necessary things, whiche every day the people repaired to see our ship, bringing their wifes with them, whereof they were very ielous: and they themselves entering aboard the ship & staying there a good space, caused their wifes to stay in their boats, and for all the intreatie we could make, offering to giue them diuers things, we could neuer obtaine that they would suffer them to come aboard our ship. And oftentimes one of the two kings comming with his queene, and many gentlemen for their pleasure to see vs, they all stayed on the shore 200 paces from vs, sending a small boat to giue vs intelligence of their comming, saying they would come to see our ship: this they did in token of safety, and alosome as they had answered from vs, they came immediately, and hauing staid a while to behold it, they wondered at hearing the cries and noyses of the mariners. The queene and her maids staid in a very light boat, at an Island a quarter of a league off, while the king abode a long space in our ship, offering diuers conceits with gestures, desiring with great admiration all the furniture of the ship, demanding the property of euery thing particularly. He tooke likewise great pleasure in beholding our apparell, and in tasting our meates, & so courteously taking his leaue departed. And sometimes our men staying 2 or 3 dayes on a little Island neere the ship for diuers necessities (as it is the vse of seamen) he returned with 7 or 8 of his gentlemen to see what we did, & asked of vs oftentimes if we meant to make any long abode there, offering vs of their provision: then the king drawing his bow and running vp and down with his gentlemen, made much sport to gratifie our men: we were oftentimes within the land 5 or 6 leagues, which we found as pleasant as is possible to declare, very apt for any kind of husbandry of coyne, wine and oyle: for that there are plaines 25 or 30 leagues broad, open and without any impediment, of trees of such fruitfulnesse, that any seed being sown therein, will bring forth most excellent fruit. We entered afterwards into the woods, which we found so great and thicke, that any army were it neuer so great might haue hid it selfe therein. The trees whereof are oaks, cypresse trees, and other sortes vnknewen in Europe. We found Pomi appii, damson trees, and nut trees, and many other sortes of fruit differing from ours: there are beasts in great abundance, as harts, deere, luzzerns, & other kinds which they take with their nets & bowes which are their chiefe weapons: the arrowes which they vse are made with great cunning, and in stead of yron, they head them with flint, with lasper stone & hard marble & other sharp stones which they vse in stead of yron to cut trees, & to make their boates of one whole piece of wood, making it hollow with great and wonderful art, wherein 10 or 12 men may sit commodiously: their oares are short and broad at the end, and they vse them in the sea without any danger, and by maine force of armes, with as great speedines as they list themselves. We saw their houses made in circular or round forme 10 or 12 paces in compasse, made with halfe circles of timber, separate one from another without any order of building, couered with matces of straw wrought cunningly together, which saue them from the wind and raine: and if they had the order of building and perfect skil of workmanship as we haue, there were no doubt but that they would also make edifices great & stately buildings. For all the sea coasts are full of cleare and glittering stones, & alabaster, and therefore it is full of good hauens and harboroughs for ships. They moue the foresaid houses from one place to another according to the commoditie of the place & season wherein they will make their abode, and only taking off the matces, they haue other houses builded incontinent. The father and the whole family dwell together in one house in great number: in some of them we saw 25 or 30 persons. They feed as the other doe aforesaid of pulse which grow in that Countrey with better order of husbandry then in the others. They obserue in their sowing the course of the Moone and the rising of certaine starres, and diuers other customes spoken of by antiquity. Whereouer they liue by hunting and fishing. They liue long, & are seldom sick, and if they chance to fall sicke at any time, they heale themselves with fire without any physician, and they say that they die for very age. They are very pitifull and charitable towards their neighbours, they make great lamentations in their aduersitie: and in their miserie, the kindred reckon vp all their felicitie. At their departure out of life, they vse mourning mixt with singing, which continueth for a long space.

Most pleasant and fruitful lands.

degrees.

This is as much as we could learne of them. This land is situated in the Paralele of Rome, in 41. degrees and 2. merces: but somewhat more colde by accidentall causes and not of nature, (as I will declare unto your highnesse elsewhere) describing at this present the situation of the foresaid Countrey, which lieth East and West. I say that the mouth of the Haven lieth open to the South halfe a league broad, and being entered within it betweene the East and the North, it stretcheth twelue leagues: where it wateh broader and broader, and maketh a gulfie about 20. leagues in compasse, wherein are five small Islands very fruitfull and pleasant, full of hie and broade trees, among the which Islandes any great Naue may ride safe without any feare of tempest or other danger. Afterwards turning towardes the South in the entering into the Haven on both sides there are most pleasant hils, with many riuers of most cleare water falling into the Sea.

In the middell of this entrance there is a rocke of free stone growing by nature apt to build any Castle or Fortresse there, for the keeping of the haven. The fift of May being furnished with all things necessarie, we departed from the said coast keeping along in the sight thereof, and wee sailed 150. leagues finding it alwayes after one maner: but the land somewhat higher with certaine mountaines, all which beare a shew of minerall matter, wee sought not to land there in any place, because the weather serued our turne for sailing: but wee suppose that it was like the former, the coast ranne Eastward for the space of fiftie leagues. And treading afterwards to the North, we found another land high full of thicke woods, the trees whereof were firres, cypresses and such like as are wont to grow in cold Countreys. The people differ much from the other, and looke how much the former seemed to be courteous and gentle: so much were these full of rudenesse and ill maners, and so barbarous that by no signes that euer we could make, we could haue any kind of traffike with them. They cloth themselves with Beares skinnies and Luzernes and Seales and other beasts skinnies. Their food, as farre as we could perceiue, repairing often unto their dwellings, we suppose to be by hunting & fishing, and of certaine fruits, which are a kind of roots which the earth yeeldeth of her own accord. They haue no graine, neither saw we any kind of signe of tillage, neither is the land, for the barrennesse thereof, apt to beare fruit or seed. If at any time we desired by exchange to haue any of their comodities, they used to come to the sea shore upon certaine craggy rocks, and we standing in our boats, they let downe with a rope what it pleased them to giue vs, crying continually that we should not appoch to the land, demanding immediatly the exchange, taking nothing but knives, fishhookes, and tooles to cut withall, neyther did they make any account of our courtesie. And when we had nothing left to exchange with them, when we departed from them, the people shewed all signes of discourtesie and disdain, as were possible for any creature to inuent. We were in dispyght of them 2 or 3 leagues within the land, being in number 25 armed men of vs: And when we went on shore they shot at vs with their bowes making great outcries, and after wards fled into the woods. We found not in this land any thing notable, or of importance, sauing very great woods and certaine hilles, they may haue some minerall matter in them, because wee saw many of them haue beadstones of Copper hanging at their eares. We departed from thence keeping our course North-east along the coast, which we found more pleasant champion and without woods, with high mountaines within the land continuing directly along the coast for the space of fiftie leagues, we discovered 32 Islands lying al neere the land, being small and pleasant to the view, high and hauing many turnings and windings betweene them, making many faire harbours and chanelles as they doe in the gulfie of Venice in Sclauonia, and Dalmatia, we had no knowledge or acquaintance with the people: we suppose they are of the same maners and nature as the others are. Sailing North-east for the space of 150. leagues we appoched to the land that in times past was discovered by the Britons, which is in fiftie degrees. Having now spent all our prouision and victuals, and hauing discovered about 700 leagues and more of new Countreys, and being furnished with water and wood, we concluded to returne into France.

Touching the religion of this people, which wee haue found, for want of their language wee could not vnderstand neither by signes nor gesture that they had any religion or lawe at all, or that they did acknowledge any first cause or moouer, neither that they worship the heauen or stars the Sunne or Moone or other planets, and much lesse whether they be idolaters, neither could wee learne whether that they used any kind of sacrifices or other adorations, neither in their villages haue they any Temples or houses of prayer. We suppose that they haue no religion at all, and that they liue at their owne libertie. And that all this proceedeth of ignorance, for that they are very easie to be perswaded: and all that they see vs Christians doe in our diuine seruice, they did the same with the like imitation as they saw vs to doe it.

A notable

A notable historie containing foure voyages made by certaine French Capitaines into *Florida*: Wherein the great riches and fruitfulness of the Countrey with the maners of the people hitherto concealed are brought to light, written all, sauing the last, by *Monsieur Landonniere*, who remained there himselfe as the French Kings Lieutenant a yeere and a quarter:

Translated out of French into English by M.

RICHARD HAKLVYT.

To the right honourable Sir *Walter Ralegh* Knight, Captaine of her Maiesties Gard, Lord Warden of the Stanneries, and her Highnesse Lieutenant generall of the Countie of *Cornewall*, *R. H.* wisheith true felicitie.

IR, after that this historie, which had bene concealed many yeeres, was lately committed to print and published in *France* vnder your Name by my learned friend M. *Martine Basanier* of *Paris*, I was easily enduced to turne it into English, vnderstanding that the same was no lesse gratefull to you here, then I know it to be acceptable to many great and worthie persons there. And no maruaile though it were very welcome vnto you, and that you liked of the translation thereof, since no history hitherto set forth hath more affinitie, resemblance or conformitie with yours of *Virginia*, then this of *Florida*. But calling to minde that you had spent more yeeres in *France* then I, and vnderstand the French better then my selfe, I forthwith perceiued that you approoued mine endeour, not for any priuate ease or commoditie that thereby might redound vnto you, but that it argued a singular and especiall care you had of those which are to be employed in your owne like enterprise, whom, by the reading of this my translation, you would haue forewarned and admonished as well to beware of the grosse negligence in prouiding of sufficiency of victuals, the securitie, disorders, and mutinies that fell out among the French, with the great inconueniences that thereupon ensued, that by others mishaps they might learne to preuent and auoyde the like, as also might be put in minde, by the reading of the manifold commodities and great fertilitie of the places herein at large described and so neere neighbours vnto our Colonies, that they might generally bee awaked and stirred vp vnto the diligent obseruation of euery thing that might turne to the aduancement of the action, wherinto they are so cheerefully entered. Many speciall poynts concerning the commodities of these partes, the accidents of the French mens government therein, the causes of their good or bad successe, with the occasions of the abandoning one of their forts, and the surprise of the other by the enemy are herein truly and faithfully recorded: Which because they be quoted by me in the margents, and reduced into a large alphabeticall table, which I haue annexed to the ende of the worke, it shall be needlesse to reckon vp againe. And that the rather, because the same with diuers other things of chiefe importance are liuely drawne in colours at your no smal charges by the skillfull painter *James Morgues*, sometime liuing in the *Black-fryers* in *London* (whom *Monsieur Chastillon* then Admirall of *France* sent thither with *Landonniere* for that purpose) which was an eye-witnesse of the goodnesse and fertility of those regions, and hath put downe in writing many singularities which are not mentioned in this treatise: which since he hath published together with the purtraitures. These foure voyages I knew not to whom I might better offer then to your selfe, and that for diuers iust considerations. First, for that as I haue sayd before, they were dedicated vnto you in French: secondly because now foure times also you haue attempted the like vpon the ielfe same coast neere adioyning: thirdly in that you haue perfered as farre vp into the maine and discovered no lesse secrets in the partes of your abroad, then the French did in the places of their inhabiting: lastly considering you are now also ready (vpon the late returne of Captaine *Stafford* and good newes which he brought you of the safe arrival of your last Colony in their wished haven) to prosecute this action more thoroughly then euer. And here to speake somewhat of this your enterprise, I affirme, that if the same may speedily and effectually be pursued, it will prooue farre more beneficiall in diuers respects vnto this our realme, then the world, yea many of the wiser sort, haue hitherto imagined. The particular commodities whereof are wel known vnto your selfe and some few others, and are faithfully and with great iudgement comitted to writing, as you are not ignorant, by one of your followers,

Other mens misfortune ought to be our warning.

The chiefe things whiche the obseruacion in Florida are drawen in colours by James Morgues painter sometime liuing in the Black-fryers in London.

2. Cor. 13. 14.

Iosue 1. 6.

which remained there about a tweluemonth with your worshipful Lieutenant M. Ralph Lane, in the diligent search of the secrets of those Countreys, Touching the speedy and effectually pursuing of your action, though I wote well it would demaund a princes purse to haue it thoroughly followed without lingring, yet am I of opinion, that you shall drawe the same before it be long to be profitable and gainful aswel to those of our nation there remaining, as to the merchants of *England* that shall trade hereafter thither, partly by certaine secret commodities already discovered by your seruants, & partly by breeding of diuers sorts of beasts in those large and ample regions, and planting of such things in that warme climat as wil best prosper there, and our realme standeth most in need of. And this I find to haue bin the course that both the Spaniards and Portugals tooke in the beginnings of their discoveries & conquests. For the Spaniards at their first entrance into *Hispaniola* found neither suger-canes nor ginger growing there, nor any kind of our cattel: But finding the place fit for pasture they sent kine & buls and sundry sorts of other profitable beasts thither, & transported the plants of suger-canes, and set the rootes of ginger: the hides of which oxen, with suger and ginger, are now the chiefe merchandise of that Island. The Portugals also at their first footing in *Madera*, as *John Barros* writes in his first Decade, found nothing there but mighty woods for timber, whereupon they called the Island by that name. Howbeit the climate being fauourable, they enriched it by their own industry with the best wines and sugers in the world. The like maner of proceeding they vsed in the Isles of the *Azores* by sowing therein great quantity of Woad. So dealt they in *S. Thomas* vnder the Equinoctial, and in *Brasil*, and sundry other places. And if our men will follow their steps, by your wise direction I doubt not but in due time they shall reape no lesse commoditie and benefit. Moreouer there is none other likelihood but that her Maiesty, which hath Christened and giuen the name to your *Virginia*, if need require, will deale after the maner of honorable godmothers, which, seeing their gossip not fully able to bring vp their children themselves, are wont to contribute to their honest education, the rather if they find any towardlines or reasonable hope of goodnesse in them. And if *Elizabeth Queene of Castile and Aragon*, after her husband *Ferdinando* and she had emptied their cofers and exhausted their treasures in subduing the kingdome of *Granada* and rooting the Mores, a wicked weed, out of *Spainne*, was neuertheless so zealous of Gods honour, that (as *Fernandus Columbus* the sonne of *Christopher Columbus* recordeth in the history of the deedes of his father) she layd part of her owne iewels, which she had in great account, to gage, to furnish his father forth vpon his first voyage, before any foot of land of all the *West Indies* was discovered; what may we expect of our most magnificent and gracious prince *ELIZABETH* of *England*, into whose lappe the Lord hath most plentifully throwne his treasures, what may wee, I say, hope of her forwardnesse and bounty in aduancing of this your most honourable enterprife, being farre more certaine then that of *Columbus*, at that time especially, and tending no lesse to the glorie of God then that action of the Spanyardes? For as you may read in the very last wordes of the relation of *Newe Mexico* extant now in English, the maine land, where your last Colonie meane to seate themselves, is replenished with many thousands of Indians, which are of better wittes then those of *Mexico* and *Peru*, as hath bene found by those that haue had some triall of them: whereby it may bee gathered that they will easily embrace the Gospell, forsaking their idolatrie, wherein at this present for the most part they are wrapped and intangled. A wise Philosopher noting the sundry desires of diuers men, writeth, that if an oxe bee put into a medowe hee will seeke to fill his bellie with grasse, if a Storke bee cast in shee will seeke for Snakes, if you turne in a Hound he will seeke to start an Hare: So sundry men entring into these discoveries propose vnto themselves seuerall endes. Some seeke authoritie and places of commandement, others experience by seeing of the worlde, the most part worldly and transitorie gaine, and that often times by dishonest and vnlawfull meanes, the fewest number the glorie of God and the sauing of the soules of the poore and blinded infidels. Yet because diuers honest and well disposed persons are entred already into this your businesse, and that I know you meane hereafter to sende some such good Churchmen thither, as may truly say with the Apostle to the Sauages, *Wee seeke not yours but you*: I conceiue great comfort of the successe of this your action, hoping that the Lorde, whose power is wont to bee perfected in weakenesse, will blesse the feeble foundations of your building. Onely bee you of a valiant courage and faint not, as the Lorde sayd vnto *Iosue*, exhorting him to proceede on forward in the conquest of the land of promise, and remember that priuate men haue happily wielded and waded through as great enterprises as this, with lesser meanes then those which God in his mercie hath bountifully bestowed vpon you, to the singuler good, as I assure my selfe, of this

our

our Common wealth wherein you liue. Hereof we haue examples domesticall and forreine. Remember I pray you, what you find in the beginning of the Chronicle of the conquest of *Ireland* newly dedicated vnto your selfe. Read you not that *Richard Strangbow* the decayed earle of *Chepstow* in Monmouthshire, being in no great fauour of his soueraigne, passed ouer into that Island in the yere 1171. and accompanied only with certain of his priuate friends had in short space such prosperous successe, that he opened the way for king *Henry* the second to the speedy subiection of all that warlike nation to this crowne of *England*? The like conquest of *Brasilia*, and annexing the same to the kingdome of *Portugall* was first begun by meane and priuate men, as *Don Antonio de Castillio*, Ambassadour here for that realme, and by office keeper of all the records and monuments of their discoueries, assured me in this city in the yere 1581. Now if the greatnes of the maine of *Virginia*, and the large extension therof, especially to the West, should make you thinke that the subduing of it, were a matter of more difficulty then the conquest of *Ireland*, first I answer, that as the late experience of that skilfull pilote and Captaine *M. John Davis* to the Northwest (toward which his discouery your selfe haue thrise contributed with the forwardest) hath shewed a great part to be maine sea, where before was thought to be maine land, so for my part I am fully perswaded by *Ortelius* late reformation of *Culuacan* and the gulfes of *California*, that the land on the backe part of *Virginia* extendeth nothing so far westward as is put downe in the Maps of those parts. Moreouer it is not to be denied, but that one hundred men will do more now among the naked and vnarmed people in *Virginia*, then one thousand were able then to do in *Ireland* against that armed and warlike nation in those daies. I say further, that these two yeres last experience hath plainly shewed, that we may spare 10000. able men without any misse. And these are as many as the kingdome of *Portugal* had euer in all their garrisons of the *Acores*, *Madera*, *Arguin*, *Cape verde*, *Guinea*, *Brasill*, *Mozambique*, *Melinde*, *Zocotora*, *Ormuz*, *Diu*, *Goa*, *Malaca*, the *Malucos*, and *Macao* vpon the coast of *China*. Yea this I say by the confession of singuler expert men of their own nation (whose names I suppress for certain causes) which haue bene personally in the *East Indies*, & haue assured me that their kings had neuer aboue ten thousand natural borne *Portugals* (their slaues excepted) out of their kingdome remaining in all the aforesaid territories. Which also this present yeere I saw confirmed in a secrete extract of the particular estate of that kingdome and of euery gouernement and office subiect to the same, with the seuerall pensions thereunto belonging. Seeing therefore we are so farre from want of people, that retyring daily home out of the Lowe Countreys they go idle vp and down in swarms for lack of honest intertainment, I see no fitter place to employ some part of the better sort of them trained vp thus long in seruice, then in the inward partes of the firme of *Virginia* against such stubborne Sauages as shal refuse obedience to her Maiestie. And doubtlesse many of our men will bee glad and faine to accept this condition, when as by the reading of this present treatie they shal vnderstand the fertilitie and riches of the regions confining so neere vpon yours, the great commodities and goodnesse wherof you haue bin contented to suffer to come to light. In the meane season I humbly commend my selfe and this my translation vnto you, and your selfe, and all those which vnder you haue taken this enterprize in hand to the grace and good blessing of the Almighty, which is able to build farther, and to finish the good worke which in these our dayes he hath begun by your most Christian and charitable endeour. From London the 1. of May 1587.

Your L. humble at commandement, R. HAKI VYT.

The Preface of M. Rene Laudonniere.

Here are two things, which according to mine opinion haue bene the principall causes, in consideration whereof as well they of ancient times, as those of our age haue bene induced to trauell into farre and remote regions. The first hath bene the naturall desire which wee haue to search out the commodities to liue happily, plentifully, and at ease: be it whither one abandon his naturall Countrey altogether to dwell in a better, or bee it that men make voyages thither, there to search out and bring from thence such things as are there to be found, and are in greatest estimation and in most request in our Countreys. The second cause hath bene the multitude of people too fruitfull in generation, which being no longer able to dwell in their native soyles, haue entred vpon their neighbours limites, and oftentimes passing further haue pearced euen vnto the vttermost regions. After this sort the North climate, a fruitfull father

Nota.

of so many nations hath oftentimes sent forth this way and that way his valiant people, and by this meane hath peopled infinite Countreys: so that most of the nations of *Europe* drawe their originall from these parts. Contrariwise the more Southerne regions, because they bee too barren by reason of their insupportable heate which raigneth in them, neede not any such sending forth of their inhabitants, and haue bene oftentimes constrained to receiue other people more often by force of armes then willingly. All *Africke*, *Spaine*, and *Italie* can also testifie the same, which neuer so abounded with people that they had neede to send them abroad to inhabite elsewhere: as on the contrary *Scythia*, *Norway*, *Gotland*, and *France* haue done. The posterity of which nations remaineth yet not only in *Italy*, *Spaine* & *Africke*, but also in fruitful and faire *Asia*. Neuerthelesse I find that the Romans proceeding further, or rather adding vnto these two chiefe causes aforesaid, (as being most curious to plant not onely their ensignes and victories, but also their lawes, customes, & religion in those prouinces which they had conquered by force of armes) haue oftentimes by the decree of their soueraigne Senate sent forth inhabitants, which they called Colonies (thinking by this way to make their name immortall) euen to the vnsurnishing of their own Countrey of the forces which should haue preserued the same in her perfection: a thing which hindred them much more, then advanced them to the possession of the vniuersal monarchy, whereunto their intencion did aspire. For it came to passe that their Colonies here and there being miserably sacked by strange people did vtterly ruine and ouerthrow their Empire. The brinks of the riuer of *Rhene* are yet red, those of *Danubius* are no lesse bloody, and our *France* became fat with their blood which they lost. These are the effects and rewards of al such as being pricked forward with this Romane and tyrannical ambition will goe about thus to subdue strange people: effects, I say, contrary to the profit which those shall receiue, which onely are affectioned to the common benefite, that is to say, to the generall policie of all men, and endeuour to vnite them one with another aswell by trafficke and ciuill conuersations, as also by military vertues, and force of armes, when as the Sauages will not yeeld vnto their endeuours so much tending vnto their profit.

For this cause princes haue sent forth out of their Dominions certaine men of good actiuitie, to plant themselves in strange Countreys, there to make their profite to bring the Countrey to ciuilitie, and if it might be, to reduce the inhabitants to the true knowledge of our God: an end so much more commendable, as it is farre from all tyrannicall and cruell gouernement: and so they haue alwayes thrived in their enterprises, and by little and little gained the heartes of them which they haue conquered or wonne vnto them by any meanes. Hereof wee may gather that sometimes it is good, yea very expedient to send forth men to discover the pleasure and commoditie of strange Countreys: But so, that the Countrey out of which these companies are to passe remaine not weakned, nor deprived of her forces; And againe in such sort that the company sent forth be of so iust & sufficient number, that it may not be defeated by strangers, which euery foote endeuour nothing else but to surpris the same vpon the sudden. As within these few daies past the French haue proued to my great grieve, being able by no means possible to withstand the same, considering that the elements, men, and all the fauours which might be hoped for of a faithfull and Christian alliance fought against vs: which thing I purpose to discover in this present historie with so euident trueth, that the kings Maiesty my soueraigne prince shall in part be satisfied of the diligence which I haue vsed in his seruice, and mine aduersaries shall find themselves so discovered in their false reports, that they shall haue no place of refuge. But before I begin, I will briefly set downe the situation and description of the land whereunto we haue sailed and where we haue inhabited from the yeere 1561. vnto sixty five, to the ende that those things may the more easily be borne away, which I meane to describe in this discourse.

The description of the *West Indies* in generall, but chiefly and particularly of *Florida*.

America hitherto
knowne to all
antiquity.

That part of the earth which at this day we call the fourth part of the world, or *America*, or rather the *West India*, was vnknowne vnto our ancestors by reason of the great distance thereof. In like maner all the *Westerne* *Islands* and fortunate *Isles* were not discovered but by those of our age. Whomever there haue bin some which haue said that they were discovered in the time of *Augustus Caesar*, and that *Virgil* hath made mention thereof in the first booke of his *Aeneidos*, when he saith, There is a land beyond the *Starres*, and the course of the yeere and of the *Sunne*, where

where Atlas the Porter of heauen sustaineth the pole vpon his shoulders: neuertheless it is easie to iudge that hee meant not to speake of this land, whereof no man is found to haue written before his time, neither yett aboue a thou and yeeres after. Christopher Colon did first light vpon this land in the yeere 1492. And fure yeeres after Americus went thither by the commandement of the king of Castile, and gaue vnto it his owne name, wherupon afterward it was called America. This man was very well scene in the Arte of Navigation and in Astronomie: whereby hee discovered in his time many lands unknowne vnto the ancient Geographers. This Countrey is named by some, the land of Bresill, and the lande of Parors. It stretcheth it selfe, according vnto Postell, from the one Pole to the other, sauing at the streight of Magelan, wherunto it reacheth 53. degrees beyond the Equator. I will diuide it for the better understanding into three principall parts. That which is toward the Pole Arcticke or the North is called new France, because that in the yeere 1524. Iohn Verrazano a Florentine was sent by King Francis the first, and by Adam the Regent his mother vnto these new Regions, where he went on land, and discovered all the coast which is from the Tropicke of Cancer, to wit, from the eight and twentieth vnto the fiftieth degree, and farther vnto the North. Hee planted in this Countrey the Ensignes and Armes of the king of France: so that the Spaniards themselves which were there afterwarde, haue named this Countrey Terra Francesca. The same then extendeth it selfe in Latitude from the 25. degree vnto the 54. toward the North: and in Longitude from 210. vnto 330. The Easterne part thereof is called by the late writers The land of Norumbega, which beginneth at the Bay of Gama, which separateth it from the Isle of Canada, whither Iaqués Cartier sayled the yeere 1535. About the which there are many Islands, among which is that which is named Terra de Labrador stretching toward Groenland. In the Westerne part there are many known Countreys, as the Regions of Quiuira, Ciuola, Astatlan, and Terlichichimic. The Southerne part is called Florida, because it was discovered on Palme-sunday, which the Spaniards call Pascha Florida. The Northerne part is altogether unknowne.

Christopher Colon or Columbe. Americus Vesputius of whome America tooke the name. The first general part of America. Cabota in the yeere 1497 had discovered all this tract for the crowne of England.

The second part of all America is called new Spaine. It extendeth from the Tropicke of Cancer in twentie three degrees and a halfe, vnto the ninth degree. In the same is situated the Citie of Themiltitan, and it hath many Regions, and many Islandes adioyned vnto it, which are called the Antilles, whereof the most famous and renowned are Hispaniola and Isabella, with an infinite number of others. All this land, together with the Bay of Mexico, and all the Islands aforesayd, haue not in Longitude past seuentie degrees, to wit, from the two hundred and fortie, vnto three hundred and ten: it is also long and narrowe as Italie. The third part of America is called Peru, it is very great, and extendeth it selfe in Latitude from the tenth degree vnto the three and fiftieth beyond the Equator, to wit, as I haue sayde before, vnto the streight of Magelan. It is made in fashion like to an egge, and is very well knowne vpon all sides. The part where it is largest hath threescore degrees, and from thence it waxeth narrower and narrower toward both the endes. In one part of this lande Villegaignon planted right vnder the Tropicke of Capricorne, and he called it France Antarctick, because it draweth toward the pole Antartick, as our France doeth toward the Arctick.

The second general part of America.

The third general part of America.

Villegaignon.

Florida with an ample description thereof.

New France is almost as great as all our Europe. Howbeit the most knowne and inhabited part thereof is Florida, whither many Frenchmen haue made diuers voyages at sundry times, insomuch that now it is the best knowne Countrey which is in all this part of new France. The Cape thereof is as it were a long head of lande stretching out into the Sea an hundred leagues, and runneth directly toward the South: it hath right ouer against it fure and twentie leagues distant the Isle of Cuba otherwise called Isabella, toward the East the Isles of Bahama and Lucaya, and toward the West the Bay of Mexico. The Countrey is flat, and diuided with diuers riuers, and therefore moyst, and is sandie towards the Sea shore. There groweth in those partes great quantitie of Pinetrees, which haue no kernels in the apples which they beare. Their woods are full of Oakes, Walnuttrees, blacke Cherrietrees, Mulberry trees, Lentilkes, and Chestnut trees, which are more wilde then those in France. There is great store of Cedars, Cypresses, Bayes, Palme trees, Hollies, and wilde Vines, which climbe vp along the trees and beare good Grapes. There is there a kinde of Pedlers, the fruite whereof is better then that of France, and bigger. There are also Plumtrees, which beare very faire fruite, but such as is not very good. There are Raspalles, and a little berrie which we call among vs Blues, which are very good to eat. There growe in that Countrey a kinde of Rootes which they call in their language Hafez, whereof in necessitie they make bread. There is also there the tree called Esquine, which is very good against the Pockes and other contagious diseases. The Beastes best knowne in this Countrey are Stagges, Hindes, Goates, Deere, Leopards,

tations.

Dunces, Luscins, diuers sortes of Molues, wilde Dogs, Hares, Cunnies, and a certaine kinde of beast that differeth little from the Lyon of Africa. The foules are Turkeycocks, Partridges, Parrots, Pigeons, Ringdoves, Turtles, Blackbirdes, Crows, Carrils, Faulcons, Lanyers, Herons, Cranes, Storkes, wilde Geese, Palards, Cormorants, Herons, white, red, blacke and gray, and an infinite sort of all wilde foule. There is such abundance of Crocodiles, that oftentimes in swimming men are assailed by them: of Serpents there are many sorts. There is found among the Sauages good quantitie of Gold and Silver, which is gotten out of the shippes that are lost vpon the coast, as I haue vnderstood by the Sauages themselves. They vse traffique thereof one with another. And that which maketh me the rather beleue it, is, that on the coast toward the Cape, where commonly the shippes are call away, there is more store of Silver then toward the North. Neuerthelesse they say, that in the Mountaines of Appalacy there are Mines of Copper, which I thinke to be Golde. There is also in this Countrey great store of graynes and herbes, whereof might be made excellent good dyes and paintings of all kind of colours. And in truely the Indians which take pleasure in painting of their skins, know very well how to vse the same. The men are of an Olive colour, of great stature, faire, without any deformitie, and well proportioned. They couer their priuities with the skinne of a Stagge well dressed. The most part of them haue their bodies, armes, and thighes painted with very faire deuises: the painting whereof can neuer bee taken away, because the same is pricked into their flesh. Their haire is very blacke, and reacheth euen downe to their hips, howbeit they trusse it vp after a fashion that becommeth them very well. They are great dissemblers and traitours, valiant of their persons & fight very well. They haue none other weapons but their bowes and arrowes. They make the string of their bow of a gut of a Stag, or of a Stags skin, which they know how to dresse as well as any man in France, and with as different sortes of colours. They head their arrowes with the teeth of fishes and stone, which they worke very finely and handsomly. They exercise their yong men to ruine well, and they make a game among themselves, which he winneth that hath the longest breath. They also exercise themselves much in shooting. They play at the ball in this maner: they set vp a tree in the midst of a place which is eight or nine fathem high, in the top whereof there is set a square mat made of reedes or Bulrushes, which whosoever hitteth in playing thereat, winneth the game. They take great pleasure in hunting and fishing. The kings of the Countrey make great warre one against the other, which is not executed but by surprise, and they kill all the men they can take: afterward they cut of their heads to haue their haire, which returning home they carry away, to make thereof their triumph when they come to their houses. They saue the women and children, and nourish them and keepe them alwayes with them. Being returned home from the warre, they assemble all their subiects, and for ioy three dayes and three nights they make good cheare, they dance & sing, likewise they make the most ancient women of the Countrey to dance, holding the haire of their enemies in their hands: and in dauncing they sing praises to the Sunne, ascribing vnto him the honour of the victorie. They haue no knowledge of God, nor of any religion, sauing of that which they see, as the Sunne and the Moone. They haue their Priests to whom they giue great credit, because they are great magicians, great soothsayers, and callers vpon diuels. These Priests saue them in stead of Physicians and Chirurgions. They carry alwayes about them a bag full of herbes and drugs to cure the sicke diseased which for the most part are sick of the pocks, for they loue women & maidens exceedingly, which they call the daughters of the Sunne: and some of them are Sodomites. They marry, and euery one hath his wife, and it is lawfull for the King to haue two or three: yet none but the first is honoured and acknowledged for Queene: and none but the children of the first wife inherite the goods and authoritie of the father. The women doe all the businesse at home. They keepe not house with them after they know they be with child. And they eate not of that which they touch as long as they haue their flowers. There are in all this Countrey many Hermaphrodites, which take all the greatest paine, and beare the victuals when they goe to warre. They paint their faces much, and sticke their haire full of feathers or downe, that they may seeme more terrible. The victuals which they carry with them, are of bread, of hony, and of meale made of Maiz parched in the fire, which they keepe without being marred a long while. They carry also sometimes fish, which they cause to be dressed in the smoke. In necessitie they eat a thousand rascals, euen to the swallowing downe of coales, and putting sand into the pottage that they make with this meale. When they goe to warre, their King marcheth first, with a clubbe in the one hand, and his bowe in the other, with his quiver full of arrowes. All his men follow him, which haue likewise their bowes and arrowes. While they fight, they make great cries and exclamations. They take no enterpryse in hand, but first they assemble oftentimes their Councell together, and

they

they take very good aduifement before they growe to a resolution. They meete together euery morning in a great common houle, whither their King repaireth, and setteth him downe vpon a feat: which is higher then the feates of the other: where all of them one after another come and salute him: and the most ancient begin their salutations, lifting by both their handes twise as high as their face, saying, *Ya, he, ya*, and the rest answer *ha, ha*. Assoone as they haue done their salutation, euery man sitteth him downe vpon the feates which are round about in the houle. If there be any thing to intreate of, the King calleth the *Jawas*, that is to say, their Priests, and the most ancient men, and asketh them their aduise. Afterward he commaundeth *Cassine* to be brewed, which is a drinke made of the leaues of a certaine tree: They drinke this *Cassine* very hotte: he drinketh first, then he causeth to be giuen thereof to all of them one after another in the same boule, which holdeth well a quart measure of Paris. They make so great account of this drinke, that no man may taste thereof in this assembly, vntill hee hath made prooffe of his valure in the warre. Moreover this drinke hath such a vertue, that assoone as they haue drinke it, they become all in a sweate, which sweate being past, it taketh away hunger and thirst for foure and twenty houres after. When a King dyeth, they burie him very solemnly, and vpon his graue they set the cuppe wherein he was wont to drinke: and round about the sayde graue they sticke many arrowes, and weepe and fast three dayes together without ceasing. All the kings which were his friends make the like mourning: and in token of the loue which they bare him, they cut of more then the one halfe of their haire, as well men as women. During the space of sixe Moones (so they reckon their moneths) there are certaine women appoynted which bewaile the death of this King, crying with a loude voyce thise a day, to wit, in the Morning, at Noone, and at Euening. All the goods of this King are put into his houle, and afterward they set it on fire, so that nothing is euer more after to be scene. The like is done with the goods of the Priests, and besides they burie the bodies of the Priests in their houles, and then they set them on fire. They sowe their *Patz* twise a yere, to wit, in March and in June, and all in one and the same soyle. The sayd *Patz* from the time that it is sowed vntill the time that it be ready to be gathered, is but three moneths on the ground. The other 6. moneths they let the earth rest. They haue also faire Pumpions, & very good Beanes. They neuer dung their land, onely when they would sowe, they set the weedes on fire, which grewe vpon the 6. moneths, and burne them all. They dig their ground with an instrument of wood which is fashioned like a broad mattocke, wherewith they digge their Vines in France, they put two graines of *Patz* together. When the land is to be sowed, the King commaundeth one of his men to assemble his subiects euery day to labour, during which labour the King causeth store of that drinke to be made for them, wherof we haue spoken. At the time when the *Patz* is gathered, it is all carried into a common houle, where it is distributed to euery man according to his qualitie. They sowe no more but that which they thinke will serue their turnes for sixe moneths, & that very scarcely. For during the Winter they retire themselves for three or foure moneths in the yere into the woods, where they make little cotages of Palme boughes for their retraite, and liue there of *Halte*, of *Fish* which they take, of *Dillers*, of *Staggess*, of *Turkeycockes*, and other beastes which they take. They eat all their meate broyled on the coales, and dyessed in the smoake, which in their language they call *Boucaned*. They eat willingly the flesh of the *Crocodile*: and in deede it is faire and white: and were it not that it saoureth too much like *Dulke* we would oftentimes haue eaten thereof. They haue a custome among them, that when they finde themselves sicke, where they feeble the paine, whereas we cause our selues to be let blood, their Physicians sucke them vntill they make the blood follow.

The women are likewise of good proportion and tall, and of the same colour that the men be of, painted as the men be: Howbeit when they are borne, they be not so much of an *Olue* colour, and are farre whiter. For the chiefe cause that maketh them to be of this colour proceedes of anointings of oyle which they vse among them: and they doe it for a certaine ceremonie which I could not learne, and because of the Sunne which shineth hote vpon their bodies. The agilitie of the women is so great, that they can swimme ouer the great Riues bearing their children vpon one of their armes. They climbe by also very nimbly vpon the highest trees in the Countrey.

Beholde in brieft the description of the Countrey, with the nature and customes of the Inhabitants: which I was very willing to write, before I entred any further into the discourse of my historie, to the end that the Readers might be the better prepared to vnderstand that, which I meane hereafter to entreate of.

The first voyage of John Ribault to Florida 1562.

The course of the Spaniards not altogether necessary. Cape François in 30 degrees.

A pillar set up

Prayer and thanks to God.

Presentes given to Ribault.

Their fish wears like those of Virginia.

Then passed over the river. Goodly strawberries white and red.

MY Lord Admirall of Chastillon, a noble man more desirous of the publique then of his private benefite, understanding the pleasure of the King his prince, which was to discover new and strange Countreys, caused vessels fit for this purpose to be made ready with all diligence, and men to be leuied meete for such an enterpryse: Among whom hee chose Captaine Iohn Ribault, a man in truerth expert in sea causes: which hauing receiued his charge, set himselfe to Sea the yeere 1562. the eighteenth of Februarie, accompanied onely with two of the kings shippes, but so well furnished with Gentlemen, (of whose number I my selfe was one) and with olde Souldiers, that he had meanes to atchieue some notable thing and worthy of eternall memorie. Hauing therefore sayled two moneths, neuer holding the vsuall course of the Spaniards, hee arriued in Florida, landing neere a Cape or Promontorie, which is no high lande, because the coast is all flatte, but onely rising by reason of the high woods, which at his arriuall he called Cape François in honour of our France. This Cape is distant from the Equator about thirtie degrees. Coasting from this place towards the North, he discovered a very faire and great Riuer, which gaue him occasion to cast anker that hee might search the same the next day very early in the morning: which being done by the breake of day, accompanied with Captaine Fiquinville and diuers other souldiers of his shippe, he was no sooner arriued on the brinke of the shoare, but straight hee perceiued many Indians men and women, which came of purpose to that place to receiue the Frenchmen with all gentlenesse and amitie, as they well declared by the Oration which their king made, and the presents of Chamois skimes wherewith he honoured our Captaine, which the day following caused a pillar of hard stone to be planted within the sayde Riuer, and not farre from the mouth of the same vpon a little sandie knappe, in which pillar the Armes of France were carued and engraued. This being done hee embarked himselfe againe, to the ende alwayes to discover the coast toward the North which was his chiefe desire. After he had sayled a certaine time he crossed ouer to the other side of the riuer, and then in the presence of certaine Indians, which of purpose did attend him, hee commaunded his men to make their prayers, to giue thanks to G D D, for that of his grace hee had conducted the French nation vnto these strange places without any danger at all. The prayers being ended, the Indians which were very attentiu to hearken vnto them, thinking in my iudgement, that wee worshipped the Sunne, because wee alwayes had our eyes lifted vp toward heauen, rose all vp and came to salute the Captaine Iohn Ribault, promising to shew him their King, which rose not vp as they did, but remained still sitting vpon greene leaues of Bayes and Palmetrees: toward whom the Captaine went and sate downe by him, and heard him make a long discourse, but with no great pleasure, because hee could not vnderstand his language, and much lesse his meaning. The King gaue our Captaine at his departure a plume of fenne of Bernshawes feathers died in red, and a basket made of Palme-boughes after the Indian fashion, and wrought very artificially, and a great skime painted and drawen throughout with the pictures of diuers wilde beasts so liuely drawen and portrayed, that nothing lacked but life. The Captaine to shew himselfe not vnthankfull, gaue him prettye time bracelets, a cutting hooke, a looking glasse, and certaine knives: wherupon the King shewed himselfe to be very glad and fully contented. Hauing spent the most part of the day with these Indians, the Captaine imbarcked himselfe to passe ouer to the other side of the Riuer, whereto the king seemed to bee very sorie. Neuertheless being not able to stay vs, hee commaunded that with all diligence they should take fish for vs: which they did with all speede. For being entred into their Meares or inclosures made of reedes and framed in the fashion of a Labyrinth or Maze, they loaded vs with Troutes, great Gullers, Plasse, Turbutts, and maruelous store of other sortes of fishes altogether different from ours.

This done, we entred into our Boates and went toward the other shore. But before we came to the shore, we were saluted with a number of other Indians, which entring into the water to their arimepits, brought vs many litle baskets full of Maiz, and goodly Hubberries both red and white: Others offered themselves to beare vs on shoare, where being landed we perceiued their King sitting vpon a place dressed with boughes, and vnder a little Arbour of Cedars and Bay trees somewhat distant from the waters side. He was accompanied with two of his sonnes which were exceeding faire and strong, and with a troope of Indians who had all their bowes and arrowes in maruelous good order. His two sonnes receiued our Captaine very graciously: but the king their father, representing I wot not what kinde of grauitie, did nothing but shake his head a litle: then the Captaine went forward to salute him, and without any other mouing of himselfe he retained so constant a kind of grauitie, that hee made it seeme vnto vs that by good and lawfull right hee bare the title of a King. Our Captaine knowing not what to iudge of this mans behauiour, thought he was ielous because wee went first vnto the other king, or else that he was not well pleased with the

the Pillar or Colunne which he had planted. While thus he knew not what hereof to thinke our Captaine shewed him by signes, that he was come from a farre Countrey to seeke him, to let him understand the amitie which he was desirous to haue with him: for the better confirmation whereof, hee drew out of a budget certaine trifles, as certaine bracelets couered as it were with siluer and gulse, which hee presented him with all, and gaue his sonnes certaine other trifles. Whereupon the King beganne very louingly to intreate both our Captaine and vs. And after these gentle intertainments, wee went our selues into the woods, hoping there to discover some singularities: where were great store of Hulberrie trees white and red, on the toppes whereof there was an infinite number of silkewoymes. Following our way wee discovered a faire and great meadowe, diuided notwithstanding with diuers Harshes, which constrained vs by reason of the water, which euironed it about, to returne backe againe toward the Riuer side. Finding not the King there, which by this time was gone home to his house, wee entred into our Boates and sayled toward our shippes: where after we arriued, we called this Riuer The Riuer of May, because we discovered it the first day of the sayde moneth.

Great store of
silkewoymes.

The river of
May.

Soone after we returned to our shippes, wee weighed our ankers and hoysed our sailes to discover the coast farther forward, along the which wee discovered another faire Riuer, which the Captaine himselfe was minded to search out, and hauing searched it out with the king and inhabitants thereof, hee named it Seine, because it is very like vnto the Riuer of Seine in France. From this Riuer wee retired toward our shippes, where being arriued, we trimmed our sailes to saile further toward the North, and to descry the singularities of the coast. But wee had not sayled any great way before wee discovered another very faire Riuer, which caused vs to cast anker ouer against it, and to trimme out two Boates to goe to search it out. Wee found there an Ile

The river of
Seine.

and a king no lesse affable then the rest, afterwarde we named this Riuer Soume. From thence wee sayled about fixe leagues, after wee discovered another Riuer, which after wee had viewed was named by vs by the name of Loyre. And consequently we there discovered five others: whereof the first was named Cherente, the second Garonne, the third Gironde, the fourth Belle, the fift Grande: which being very well discovered with such things as were in them, by this time in lesse then the space of threescore leagues wee had found out many singularities along nine Riuers. Neuerthelesse not fully satisfied wee sayled yet further toward the North, following the course that might bring vs to the Riuer of Iordan one of the fairest Riuers of the North, and holding our wonted course, great fogges and tempests came vpon vs, which constrained vs to leaue the coast to beate toward the maine Sea, which was the cause that we lost the sight of our Pinnelles a whole day and a night vntill the next day in the morning, what time the weather waxing faire and the Sea calme, wee discovered a Riuer which wee called Belle a veoir. After wee had sayled thre or foure leagues, wee began to espie our Pinnelles which came straight toward vs, and at their arriual they reported to the Captaine, that while the foule weather and fogges endured, they harboured themselves in a mightie Riuer which in bignesse and beautie exceeded the former: wherewithall the Captaine was exceeding ioyfull, for his chiefe desire was to finde out an Hauen to harbour his shippes, and there to refresh our selues for a while. Thus making thitherward wee arriued athwart the sayde Riuer, (which because of the fairenesse and largenesse thereof wee named Port Royall) wee strooke our sailes and cast anker at ten fathom of water: for the depth is such, namely when the Sea becommeth to flowe, that the greatest shippes of France, yea, the Arguzes of Venice may enter in there. Hauing cast anker, the Captaine with his Souldiers went on shoare, and hee himselfe went first on land: where we found the place as pleasaunt as was possible, for it was all couered ouer with mightie high Dakes and infinite store of Cedars, and with Lenticles growing vnderneath them, smelling so sweetly, that the very fragrant odor only made the place to seeme exceeding pleasant. As we passed thorow these woods we saw nothing but Turkepeocks flying in the Forrests, Partridges gray and red, little different from ours, but chiefly in bignesse. Wee heard also within the woods the voyces of Stagges, of Beares, of Lulernes, of Leopards, & diuers other sortes of Beastes vnknewen vnto vs. Being delighted with this place we set our selues to fishing with nets, & we caught such a number of fish, that it was wonderfull. And amongst other wee tooke a certaine kind of fish which we call Salliroques, which were no lesse then Creusles, so that two draughts of the net were sufficient to feede all the companie of our two ships for a whole day. The Riuer at the mouth thereof from Cape to Cape is no lesse then 3. French leagues broad: it is diuided into two great armes, whereof the one runneth toward the West, the other towards the North: And I beleue in my iudgement that the arme which stretcheth toward the North runneth vp into the Countrey as faire as the Riuer Iordan, the other arme runneth into the Sea, as it was known and vnderstood by those of our

company, which were left behind to dwell in this place. These two armes are two great leagues broad: and in the midst of them there is an Ile, which is pointed towardes the opening of the great River, in which Island there are infinite numbers of all sortes of strange beasts. There are Simples growing there of so rare properties, and in so great quantitie, that it is an excellent thing to behold them. On every side there is nothing to be seene but Palme trees, and other sortes of trees bearing blossoms and fruite of very rare shape and very good smell. But seeing the evening approach, and that the Captaine determined to returne unto the shippes, wee prayed him to suffer vs to passe the night in this place. In our absence the Pilots and chiefe Mariners aduertised the Captaine that it was needefull to bring the shippes further by within the River, to auoyde the dangers of the windes which might annoy vs, by reason of our being so neere to the mouth of the River: and for this cause the Captaine sent for vs. Being come to our shippes, wee sayled three leagues further by within the River, and there we cast anchor. A little while after, John Ribault accompanied with a good number of souldiers imbarcked himselfe, desirous to sayle further by into the arme that runneth toward the West, and to search the commodities of the place. Having sayled twelue leagues at the least, we perceiued a troope of Indians, which alldone as euer they espied the Pinnelles, were so afrayd that they fled into the woods leauing behind them a yong Lucerne which they were a turning vpon a spit: for which cause the place was called Cape Lucerne: proceeding forth on our way, we found another arme of the River, which ranne toward the East, by which the Captaine determined to sayle and to leaue the great current. A little while after they began to espie diuers other Indians both men and women halfe hidden within the woods: who knowing not that wee were such as desired their friendship, were dismayed at the first, but soone after were emboldened, for the Captaine caused stoepe of marchandise to bee shewed them openly whereby they knew that we meant nothing but well unto them: and then they made a signe that we should come on lande, which wee would not refuse. At our comming on shoare diuers of them came to salute our Generall according to their barbarous fashion. Some of them gaue him skins of Chamois, others little baskets made of Palme leaues, some presented him with Pearles, but no great number. Afterwards they went about to make an arbour to defend vs in that place from the parching heate of the Sunne. But wee would not stay as then. Wherefore the Captaine thanked them much for their good will, and gaue presents to each of them: wherewith hee pleased them so well before hee went thence, that his suddaine departure was nothing pleasant unto them. For knowing him to bee so liberall, they would haue wished him to haue stayed a little longer, seeking by all meanes to giue him occasion to stay, shewing him by signes that he should stay but that day onely, and that they desired to aduertise a great Indian Lord which had Pearles in great abundance, and Silver also, all which things should bee giuen unto him at the Kings arriuall: saying further that in the meane time while that this great Lord came thither, they would lead him to their houses, and shewe him there a thousand pleasures in shooting, and seeing the Stagge killed, therefore they prayed him not to denie them their request. Notwithstanding wee returned to our shippes, where after wee had bene but one night, the Captaine in the morning commanded to put into the Pinnelle a pillar of hard stone fashioned like a colunne, wherein the Armes of the king of France were grauen, to plant the same in the fairest place that he could finde. This done, wee imbarcked our selues, and sayled three leagues towards the West: where we discovered a little riuer, by which we sayled so long, that in the ende we found it returned into the great current, and in his returne to make a little Island separated from the firme land, where wee went on shore: and by commandement of the Captaine, because it was exceeding faire and pleasant, there wee planted the Pillar vpon a hillock open round about to the view, and environed with a lake halfe a fathom deepe of very good and sweete water. In which Island wee sawe two Stagges of exceeding bignesse, in respect of those which we had seene before, which we might easily haue killed with our harguebuzes, if the Captaine had not forbidden vs, moued with the singular fairnesse and bignesse of them. But before our departure we named the little riuer which enuironed this Ile, The River of Liborne. Afterward we imbarcked our selues to search another Ile not farre distant from the former: wherein after wee had gone a land, wee found nothing but tall Cedars, the fairest that were scene in this Countrey. For this cause wee called it The Ile of Cedars: so wee returned into our Pinnelle to go towards our shippes.

A few dayes afterward John Ribault determined to returne once againe toward the Indians which inhabited that arme of the River which runneth toward the West, and to carrie with him good stoepe of souldiers. For his meaning was to take two Indians of this place to bring them into France, as the Queene had commaunded him. With this deliberation againe wee tooke our former course so farre forth, that at the last wee came to the selfe same place where at the first we found

found the Indians, from thence we tooke two Indians by the permission of the king, which thinking that they were more fauoured then the rest, thought themselves very happy to stay with vs. But these two Indians seeing we made no shew at all that we would goe on land, but rather that wee followed the middlest of the current, began to be somewhat offended, and would by force haue leapt into the water, for they are so good swimmers that immediately they would haue gotten into the forrestes. Neuer thelesse being acquainted with their humour, wee watched them narrowly and sought by all meanes to appeale them: which we could not by any meanes do for that time, though we offered them things which they much esteemed, which things they disdained to take, and gaue backe againe whatsoeuer was giuen them, thinking that such giftes should haue altogether bound them, and that in restoring them they should be restored vnto their libertie. In fine, perceiuing that all that they did auayled them nothing, they prayed vs to giue them those things which they had restored, which we did incontinent: then they approached one toward the other and began to sing, agreeing so sweetely together, that in hearing their song it seemed that they lamented the absence of their friendes. They continued their songs all night without ceasing: all which time we were constrained to ly at anker by reason of the tyde that was against vs, but we hoysed sayle the next day very early in the morning, and returned to our ships. Assoone as we were come to our ships, every one sought to gratifie these 2 Indians, & to shew them the best countenance that was possible: to the intent that by such courtesies they might perceiue the good desire and affection which we had to remaine their friends in time to come. Then we offered them meate to eate, but they refused it, and made vs vnderstand that they were accustomed to wash their face and to stay vntill the Sunne were set before they did eate, which is a ceremonie common to all the Indians of Newe France. Neuer thelesse in the end they were constrained to forget their superstitions, and to apply themselves to our nature, which was somewhat strange vnto them at the first. They became therefore more iocunde, every houre made vs a 1000 discourtes, being merueilous sorry that we could not vnderstand them. A few daies after they began to beare so good wil towards mee, that, as I thinke, they would rather haue perished with hunger & thirst, then haue taken their resceiue at any mans hand but mine. Seeing this their good wil, I sought to learne some Indian words, & began to aske them questions, shewing the thing wherof I desired to know the name, how they called it. They were very glad to tell it me, and knowing the desire that I had to learne their language, they encouraged me afterward to aske them euery thing. So that putting downe in writing the words and phrases of the Indian speech, I was able to vnderstand the greatest part of their discourtes. Every day they did nothing but speak vnto me of the desire that they had to vse me wel, if we returned vnto their houses, and caule me to receiue all the pleasures that they could deuise, as well in hunting as in seeing their very strange and superstitious ceremonies at a certaine feast which they call Toya. Which feast they obserue as straightly as we obserue the Sunday. They gaue me to vnderstand, that they would bring me to see the greatest Lord of this countrey which they called Chiquola, which exceedeth them in height (as they tolde me) a good foote and a halfe. They said vnto me that he dwelt within the land in a very large place and inclosed exceeding high, but I could not learne wherewith. And as farre as I can iudge, this place wherof they spake vnto me, was a very faire citie. For they said vnto me that within the inclosure there was great store of houses which were built very high, wherewith there was an infinite number of men like vnto themselves, which made none account of gold, of siluer, nor of pearles, seeing they had thereof in abundance. I began then to shew the parts of heauē, to the intent to learne in which quarter they dwelt. And straightway one of them stretching out his hand shewed me y they dwelt toward the North, which makes me thinke that it was the riuer of Iordan. And now I remember, that in the raigne of the Emperour Charles the fift, certaine Spaniards inhabitants of S. Domingo (which made a voyage to get certaine slaues to work in their mines) stole away by subtilty the inhabitants of this riuer, to the number of 40, thinking to cary the into their new Spaine. But they lost their labour: for in despite they died all for hunger, sauing one that was brought to the Emperour, which a litle while after he caused to be baptised, and gaue him his own name & called him Charles of Chiquola, because he spake so much of this Lorde of Chiquola whose subject hee was. Also, he reported continually, that Chiquola made his a bode within a very great inclosed citie. Besides this proof, those which were left in the first voyage haue certified me, that the Indians shewed the by euident signes, that farther within the land toward the North, there was a great inclosure or city, where Chiquola dwelt. After they had staid a while in our ships, they began to be sorry, and stil demanded of me when they should returne. I made them vnderstand that the Captaines will was to send them home againe, but that first he would bestow apparell of them, which fewe dayes after was deliuered vnto them. But seeing he would not giue them licence to depart, they resolved with them

themselves to steale away by night, and to get a litle boat which we had, and by the help of the tyde to saile home toward their dwellings, and by this meanes to saue themselves. Which thing they failed not to doe, and put their enterprize in execution, yet leaving behinde them the apparel which the Captaine had giuen them, and car'ying away nothing but that which was their owne, shewing well hereby that they were not void of reason. The Captaine cared not greatly for their departure, considering they had not bene vnto otherwise then well: and that therefore they woulde not estrange themselves from the Frenchmen. Captaine Ribault therefore knowing the singular fairness of this riuer, desired by all meanes to encourage some of his men to dwell there, well foreseeing that this thing might be of great importance for the Kings seruice, and the releife of the Common wealth of France. Therefore proceeding on with his intent, he commanded the ankers to bee weighed and to set things in order to returne vnto the opening of the riuer, to the ende that if the winde came faire he might passe out to accomplish the rest of his meaning. When therefore we were come to the mouth of the riuer, he made them cast anker, whereupon we stayed without discovering any thing all the rest of the day. The next day he commanded that all the men of his ship should come vp vpon the decke, saying that he had somewhat to say vnto them. They all came vp, and immediately the Captaine began to speake vnto them in this maner.

I thinke there is none of you that is ignorant of how great consequence this our enterprize is, and also how acceptable it is vnto our yong King. Therefore my friendes (as one desiring your honour and benefite) I would not faile to aduertise you all of the exceeding good happe which should fall to them, which, as men of valure and worthy courage, would make tryall in this our first discoverie of the benefits and commodities of this new land: which should be, as I assure my selfe, the greatest occasion that euer could happen vnto them, to arise vnto the title and degree of honour. And for this cause I was desirous to propose vnto you and set downe before your eyes the eternall memorie which of right they deserue, which forgetting both their parents and their countrey haue had the courage to enterprize a thing of such importance, which euen kings themselves vnderstanding to be men aspiring to so high degree of magnanimitie and increase of their maiesties, doe not disdain so wel to regard, that afterwards imploying them in maters of weight & of high enterprize, they make their names immortall for euer. Howbeit, I would not haue you perswade your selues, as many doe, that you shall neuer haue such good fortune, as not being knowne neither to the king nor the Princes of the Realme, and besides descending of so poore a stocke, that few or none of your parents, hauing euer made profession of armes, haue bene knowne vnto the great estates. For albeit that from my tender yeeres I my selfe haue applyed all my industry to follow them, and haue hazarded my life in so many dangers for the seruice of my prince, yet could I neuer attaine therunto (not that I did not deserue this title and degree of gouernment) as I haue seene it happen to many others, onely because they descende of a noble race, since more regard is had of their birth then of their vertue. For wel I know that if vertue were regarded, ther would more be found worthy to deserue the title, & by good right to be named noble and valiant. I will therefore make sufficient answeere to such propositions and such things as you may object against me, laying before you the infinite examples which we haue of the Romans; which concerning the point of honour were the first that triumphed ouer the world. For how many finde we among them, which for their so valiant enterprizes, not for the greatnesse of their parentage, haue obtained the honour to triumph? If we haue recourse vnto their ancessors, wee shall finde that their parents were of so meane condition, that by labouring with their hands they liued very basely. As the father of *Elivs Pertinax*, which was a poore artisan, his Grandfather likewise was a bond man, as the historiographers do witnes: and neuerthelesse, being moued with a valiant courage, he was nothing dismayed for all this, but rather desirous to aspire vnto high things, he began with a braue stomacke to learne feates of armes, and profited so wel therein, that from step to step he became at length to be Emperour of the Romans. For all this dignitie he despised not his parents: but contrariwise, & in remembrance of them, he caused his fathers shop to be couered with a fine wrought marble, to serue for an example to me descended of base & poore linages, to giue them occasion to aspire vnto high things notwithstanding the meannesse of their ancessors. I wil not passe ouer in silence the excellencie & p'ouesse of the valiant & renowned *Agathocles* the sonne of a simple potter, and yet forgetting the contemptible estate of his father, he so applied himselfe to vertue in his tender yeeres, that by the fauour of armes he came to be king of *Sicilie*: and for all this title he refused not to be counted the sonne of a Potter. But the more to exermize the memorie of his parentes and to make his name renowned, he commanded that he should be serued at the Table in vessels of

of gold and siluer and others of earth: declaring thereby that the dignitie wherein hee was placed came not vnto him by his parents, but by his owne vertue onely. If I shal speake of our time, I will lay before you onely *Rusten Bassha*, which may be a sufficient example to all men: which though he were the sonne of a poore heard-man, did so apply his youth in all vertue, that being brought vp in the seruice of the great Turke, he seemed to aspire to great and high matters, in such sort that growing in yeres he increased also in courage, so far forth, that in fine for his excellent vertues he married the daughter of the great Turke his Prince. Howe much then ought so many worthy examples to moue you to plant here? Considering also that hereby you shalbe registred for euer as the first that inhabited this strang countrey. I pray you therefore all to aduise your selues thereof, and to declare your mindes freely vnto mee, protesting that I will so well imprint your names in the kings eares, and the other princes, that your renowne shall hereafter shine vnquenchable through our Realme of France. He had scarcely ended his Oracion, but the greatest part of our souldiers replied: that a greater pleasure could neuer betide them, perceiuing well the acceptable seruice which by this meanes they shoulde doe vnto their Prince: besides that this thing should be for the increase of their honours: therefore they besought the Capitaine, before he departed out of the place, to begin to build them a Fort, which they hoped afterward to finish, and to leaue them munition necessarie for their defence, shewing as it seemed that they were displeased, that it was so long in doing. Whereupon Iohn Ribault being as glad as might be to see his men so well willing, determined the next day to search the most fit and conuenient place to be inhabited. Therefore he embarked himselfe very early in the morning and commanded them to followe him that were desirous to inhabite there, to the intent that they might like the beter of the place. Having sayled by the great riuer on the North side, in coasting an Isle which ended with a sharpe point toward the mouth of the riuer, hauing sailed a while, he discovered a small riuer, which entered into the Islande, which hee would not faile to search out. Which done, & finding the same deep enough to harbour therein Gallies and Gallies in good number, proceeding further, he found a very open place, lying upon the brinke thereof, where he went on land, and seeing the place fit to build a Fortresse in, and commodious for them that were willing to plant there, he resolved incontinent to cause the bignes of the fortification to be measured out. And considering that there stayed but sixe and twentie there, he caused the Fort to be made in length but sixtene fathome, and thirteene in breadth, with flankes according to the proportion thereof. The measure being taken by me and Captaine Salles, we sent vnto the shippes for men, and to bring shouels, pickaxes and other instruments necessarie to make the fortification. We traualled so diligently, that in a short space the Fort was made in some sort defensible. In which meane time Iohn Ribault caused victuals and warrelike munition to be brought for the defence of the place. After he had furnished them with all such things as they had neede of, he determined to take his leaue of them. But before his departure he used this speech vnto Capitaine Albert, which he left in this place.

Rusten Bassha of an heardmans sonne through his valure became the great Turkes sonne in law.

The souldiers answered to Ribaults Oracion,

Having sailed about ten leagues from thence, we espied a riuer, whereupon we sent our pinnesse thither to discover it. At their returne they brought vs word that they found not past halfe a fathom water in the mouth thereof. Which whē we understood, without doing any thing els, we continued our way, and called it the Base or Shallow riuer. As we still went on sounding we found

not past five or six fathome water, although we were six good leagues from the shoare: at length we found not past three fathomes, which gave vs occasion greatly to muse. And without making any farther way we strook our sayles, partly because we wanted water, & partly because the night approached: during which time Captaine John Ribault bethought with himselfe whether it were best for him to passe any farther, because of the eminent dangers which euery houre we saw before our eyes: or whether he should content himselfe with that which he had certainly discovered, & allow left men to inhabite the countrey. Being not able for that time to resolue with himselfe, he referred it vntill the next day. The morning being come he proposed to all the company what was best to be done, to the end that with good aduise ment euery man might deliuer his opinion. Some made answer, that according to their iudgement he had occasion fully to content himselfe, considering that he could doe no more: laying before his eyes, that he had discovered more in six weekes, then the Spaniards had done in two yeres in the conquest of their New Spaine: and that he should do the king very great seruice, if he did bring him newes in so short a time of his happy discoverie. Other shewed vnto him the losse and spoile of his victuals, and on the other side the inconuenience that might happen by the shallow water that they found continually along the coast. Which things being well and at large debated, we resolved to leaue the coast, forsaking the North, to take our way toward the East, which is the right way and course to our France, where we happily arrived the twentieth day of July, the yere 1562.

The state and condition of those which were left behind in *Charles-fort.*

Our men after our departure neuer rested, but night and day did fortifie themselves, being in good hope that after their fort was finished, they would begin to discover farther vp within the riuer. It happened one day, as certaine of them were in cutting of rootes in the groues, that they espied on the sudden an Indian that hunted the Deere, which finding himselfe so neere vpon them, was much dismayed, but our men began to draw neere vnto him and to vse him so courteously, that he became assured and followed them to Charles-fort, where euery man sought to doe him pleasure. Captaine Albert was very ioyfull of his comming, which after he had giuen him a shirt and some other trifles, he asked him of his dwelling: the Indian answered him that it was farther vp within the riuer, and that he was vassal of king Audusta: he also shewed him with his hand the limits of his habitation. After much other talke the Indian desired leaue to depart, because it drew toward night, which Captaine Albert granted him very willingly. Certaine dayes after the Captaine determined to saile toward Audusta, where being arrived, by reason of the honest entertainment which he had giuen to the Indian, he was so courteously receiued, that the king talked with him of nothing else but of the desire which he had to become his friend: giuing him besides to vnderstand, that he being his friend and allie, he should haue the amitie of foure other kings, which in might & authoritie were able to do much for his sake: Besides all this, in his necessitie they might be able to succour him with victuals. One of these kings was called Mayon, another Hoya, the third Touppa, and the fourth Scalame. He told him moreover, that they would be very glad, when they should vnderstand the newes of his comming, and therefore he prayed him to vouchsafe to visit them. The Captaine willingly consented vnto him, for the desire that he had to purchase friends in that place. Therefore they departed the next morning very early, and first arrived at the house of king Touppa, and afterward went into the other kings houses, except the house of king Scalame. He receiued of each of them all the amiable courtesies that might be: they shewed themselves to be as affectioned friends vnto him as was possible, and offered vnto him a thousand small presents. After that he had remained by the space of certaine daies with these strange kings, he determined to take his leaue: and being come backe to the house of Audusta, he commanded all his men to goe aboard their Pinnesse: for he was minded to goe towardes the countrey of king Scalame, which dwelt toward the North the distance of 15 great leagues from Charles-fort. Therefore as they sailed by the riuer they entered into a great current, which they followed so farre till they came at the last to the house of Scalame: which brought him into his lodging, where he sought to make them the best cheere he could deuise. He presented immediately vnto Captaine Albert his bow and arrowes, which is a signe and confirmation of alliance betweene them. He presented him with Chamops kinnes. The Captaine seeing the best part of the day was now past, tooke his leaue of king Scalame to returne to Charles-fort, where hee arrived the day following. By this time the friendship was growne so great betweene our men and king Audusta, that in a manner all things were common betweene him and them: in such sort that this good Indian king did nothing of importance, but he called our men therunto. For when the time drew neere of the celebrating their feasts of Toya, which are ceremonies most strange to recite, he sent Ambassadors to our men to request

request them on his behalfe to be there present. Whereunto they agreed most willingly for the desire that they had to understand what this might be. They imbarcked themselves therefore and sailed towards the kings house, which was already come forth on the way towards the, to receive them courteously, to bid them welcome & bring them to his house, where he sought to intreat them the best he might. In the meane while the Indians prepared themselves to celebrate the feast the morrow after, and the king brought them to see the place, wherein the feast should be kept: where they saw many women round about, which laboured by all meanes to make the place cleane & neat. This place was a great circuit of ground with open prospect and round in figure. On the morrow therefore early in the morning, all they which were chosen to celebrate the feast, being painted and trimmed with rich feathers of divers colours, put themselves on the way to go to the kings house toward the place of Toya: wherunto when they were come they set themselves in order, & followed three Indians, which in painting and in gesture were differing from the rest: each of them bare a Tabret in their hand, dancing & singing in a lamentable tune, when they began to enter into the midst of the round circuit, being followed of others which answered them again. After that they had sung, danced, and turned 3 times, they set on running like unbridled horses, through the midst of the thickest woods. And then the Indian women continued all the rest of the day in teares as sad & woful as was possible: & in such rage they cut the armes of the pong girls, which they lanced so cruelly with sharpe shels of Muskles that the blood followed which they slung into the ayre, crying out three times, He Toya. The king Audusta had gathered all our men into his house, while the feast was celebrated, and was exceedingly offended when he saw them laugh. This he did, because the Indians are very angry when they are seene in their ceremonies. Notwithstanding one of our men made such shift that by subtle meanes he gat out of the house of Audusta, and secretly went and hid himselfe behinde a very thicke bush, where at his pleasure, he might easily descry the ceremonies of the feast. They three that began the feast are named Iawas: and they are as it were three Priestesses of the Indian law: to whom they giue credite and beliefe partly because that by kinred they are ordained to be ouer their Sacrifices, and partly also because they be so subtle magicians that any thing that is lost is straightway recovered by their meanes. Againe they are not onely reuerenced for these things, but also because they heale diseases by I wotte not what kinde of knowledge and skill they haue. Those that ran so through the woodes returned two dayes after: after their returne they began to dance with a cherefull courage in the midst of the faire place, and to cheere up their good olde Indian fathers, which either by reason of their too great age, or by reason of their naturall indisposition and feebleness were not called to the feast. When all these dances were ended, they fell on eating with such a greedynesse, that they seemed rather to deuoure their meate then to eat it, for they had neither eaten nor drinke the day of the feast, nor the two dayes following. Our men were not forgotten at this good cheere, for the Indians sent for them all thither, shewing themselves very glad of their presence. While they remained certaine time with the Indians, a man of ours got a pong boy for certaine trifles, and inquired of him, what the Indians did in the wood during their absence: which boy made him vnderstand by signes, that the Iawas had made inuocations to Toya, and that by Magicall Characters they had made him come that they might speake with him and demand diuers strange things of him, which for feare of the Iawas he durst not vtter. They haue also many other ceremonies, which I will not here rehearse for feare of molesting the reader with a matter of so small importance.

When the feast therefore was finished our men returned vnto Charles-fort: where hauing remained but a while their victualles beganne to waxe short, which forced them to haue recourse vnto their neighbours, and to pray them to succour them in their necessitie: which gaue them part of all the victualles which they had, and kept no more vnto themselves then would serue to sow their fields. They tolde them farther that for this cause it was needefull for them to retire themselves into the woods, to liue of Mast and rootes untill the time of haruest, being as long as might be that they were not able any farther to ayde them. They gaue them also counsell to goe toward the countreys of King Couexis a man of might and renoume in this prouince, which maketh his aboad toward the South abounding at all seasons and replenished with such quantitie of mill corne, and beanes that by his onely succour they might be able to liue a very long time. But before they should come into his territories, they were to repayre vnto a king called Ouade the brother of Couexis, which in mill, beanes, and corne was no lesse wealthy, and withall is very liberall, and which would be very ioyfull if he might but once see them. Our men perceiuing the good relation which the Indians made them of those two kings resolved to go thither: for they felt already the necessity which oppressed them. Therefore they made request vnto king Maccou, that it would please him to giue them one of his subiects to guide the right way thither: wherupon he

Ouade.

condescended very willingly, knowing that without his saueur they should haue much ado to bring their interprise to passe. Wherefore after they had giuen order for all things necessary for the voyage, they put themselves to Sea, and sailed so farre that in the end they came into the countrey of Ouade, which they found to be in the river Belle. Being there arrived they perceiued a company of Indians, which as soone as they knew of their being there came before them. As soone as they were come neere them, their guides shewed them by signes that Ouade was in this company, wherefore our men set forward to salute him. And then two of his sonnes which were with him, being goodly and strong men saluted them againe in very good sort, and vied very friendly entertainment on their part. The king immediatly began to make an Oration in his Indian language of the great pleasure and contentment which he had to see them in that place, protesting that he would become so loyall a friend of theirs hereafter, that he would be their faithfull defendour against all them that would offer to be their enemies. After these speeches he led them toward his house, where he sought to entreate them very courteously. His house was hanged about with Capistris of feathers of diuers colours the height of a pike. Moreover the place where the king tooke his rest was couered with white Couerlettes embroydered with deuilles of very wittie and fine workmanship, and fringed round about with a Fringe dyed in the colour of Skarlet. They aduertised the king by one of the guides which they brought with them, how that (hauing heard of his great liberality) they had put to the Sea to come to beseech him to succour them with victuals in their great want and necessitie: and that in so doing, he should binde them all hereafter to remaine his faithfull friends and loyall defenders against all his enemies. This good Indian as soone ready to doe them pleasure, as they were to demand it, commanded his subiects that they should fill our Pinnesse with mil and beanes. Afterward he caused them to bring him sixe pieces of his Capistris made like little couerlets, & gaue them to our men with so liberal a minde, as they easily perceiued the desire which he had to become their friend. In recompence of all these gifts our men gaue him two cutting hookes and certaine other trifles, wherewith he held himselfe greatly satisfied. This being done, our men tooke their leaue of the king, which for their farewell, sayd nothing els but that they should returne if they wanted victuals, & that they might assure themselves of him, that they should neuer want any thing that was in his power. Wherefore they imbarcked themselves, and sayled towards Charles-fort, which from this place might be some fife and twenty leagues distant. But as soone as our men thought themselves at their ease, & free from the dangers wherinto they had exposed themselves night and day in gathering together of victuals here and there: Lo, euen as they were asleepe, the fire caught in their lodgings with such furie, being increased by the winde, that the roome that was built for them before our mens departure, was consumed in an instant, without being able to saue any thing, sauing a little of their victualles. Whereupon our men being farre from all succours, found themselves in such extremitie, that without the ayd of Almighty God, the onely searcher of the hearts and thoughts of men, which neuer forsaketh those that seeke him in their afflictions, they had bene quite and cleane out of all hope. For the next day betimes in the morning the King Audusta and King Maccou came thither, accompanied with a very good companie of Indians, which knowing the misfortune, were very sorry for it. And then they vttered vnto their subiects the speedy diligence which they were to vse in building another house, shewing vnto them that the Frenchmen were their louing friends, & that they had made it euident vnto them by the gifts and presents which they had receiued: protesting that whosoever put not his helping hand vnto the worke with all his might, should be esteemed as vniprofitable, and as one that had no good part in him, which the Sauages feare aboue all things. This was the occasion that euery man began to endeavour himselfe in such sort, that in lesse then 12 houres, they had begun and finished a house which was very neere as great as the former. Which being ended, they returned home fully contented with a few cutting hookes, and hatchets, which they receiued of our men. Within a small while after this mischance, their victuals began to waxe short: and after our men had taken good deliberation, thought and bethought themselves againe, they found that there was no better way for them then to returne againe to the king Ouade and Couexis his brother. Wherefore they resolved to send thither some of their company the next day following: which with an Indian Canoe sayled vp into the countrey about 10 leagues: afterward they found a very faire & great river of fresh water, which they failed not to search out: they found therein a great number of Crocodiles which in greatnes passe those of the river Nilus: moreover, al along the bankes thereof, there grow mighty high Cypresses. After they had stayed a small while in this place, they purposed to follow their journey, helping themselves so wel with the tydes, that without putting themselves in danger of the continuall perill of the Sea, they came into the countrey of Ouade: of whom they were most courteously receiued. They aduertised him of the occasion,

casion wherefore they came againe to visite him, and told him of the mischance, which happened vnto them since their last voyages: how they had not onely lost their household stuffe by casualtie of fire, but also their victuals which he had giuen them so bountifullly: that for this cause they were so bolde as to come once againe vnto him, to beseech him to vouchsafe to succour them in such neede and necessitie.

After that the king had vnderstood their case, he sent messengers vnto his brother Couexis, to request him vpon his behalfe to send him some of his mill and beanes, which thing he did: and the next morning, they were come againe with victuals, which the king caused to be borne into their Canoa. Our men would haue taken their leaue of him, finding themselves more then satisfied with this liberalitie. But for that day hee would not suffer them, but retained them, and sought to make them the best cheere hee could deuise. The next day very early in the morning, he tooke them with him to shewe them the place where his corne grewe, and saide vnto them that they should not want as long as all that mil did last. Afterward he gaue them a certaine number of exceeding faire pearles, & two stones of fine Christal, and certaine silver paxe. Our men forgot not to giue him certaine trifles in recompence of these presentes, and required of him the place whence the silver paxe and the Christal came. He made them answere, that it came ten dayes journey from his habitation by within the countrey: and that the inhabitants of the countrey did dig the same at the foote of certaine high mountaines, where they found of it in very good quantitie. Being ioyfull to vnderstand so good newes, and to haue come to the knowledge of that which they most desired, they tooke their leaue of the king, and returned by the same way, by which they came.

Exceeding faire pearles, fine Christal, silver axe. The place where christall groweth in very good quantitie ten dayes journey from the river Belle More.

Behold therefore how our men behaued themselves very well hitherto, although they had endured many great mishaps. But misfortune or rather the iust iudgement of God would haue it, that those which could not bee ouercome by fire nor water, should be vndone by their owne selues. This is the common fashion of men, which cannot continue in one state, and had rather to ouerthrow themselves, then not to attempt some new thing daily. We haue infinite examples in the ancient histories, especially of the Romanes, vnto which number this little handfull of men, being farre from their countrey and absent from their countrey men, haue also added this present example. They entred therefore into partialities and dissensions, which began about a souldier named Guernache, which was a drummer of the French bands: which, as it was told me, was very cruelly hanged by his owne captaine, and for a smal fault: which captaine also vnto the threaten the rest of his souldiers which staid behind vnder his obedience, and peradventure (as it is to be presumed) were not so obedient to him as they should haue bene, was the cause that they fell into a mutinie, because that many times he put his threatnings in execution: whereupon they so chased him, that at the last they put him to death. And the principall occasion that moued them therunto was, because he degraded another souldier named La Chere (which he had banished) and because he had not performed his promise: for hee had promised to send him victuals, from 8 dayes to 8 dayes, which thing he did not, but said on the contrary, that he would be glad to heare of his death. He said moreouer, that he would chastise others also, & vied so euill sounding speeches, that honestie forbiddeth me to repeat the. The souldiers seeing his madness to increase from day to day, and fearing to fall into the dangers of the other, resolved to kil him. Hauing executed their purpose, they went to seeke the souldier that was banished, which was in a small Island distant fro Charles-fort about 3 leagues, where they found him almost half dead for hunger. When they were come home againe, they assembled themselves together to choole one to be gouernour ouer them, whose name was Nicolas Barre a man worthy of commendation, and one which knewe so well to quite himselfe of his charge, that all rancour and dissention ceased among them, and they liued peaceably one with another. During this time, they began to build a small house, with hope to return into France, if no succours came vnto them, as they expected from day to day. And though there were no man among them that had any skill, notwithstanding necessitie, which is the maistrresse of all sciences, taught them the way to build it. After that it was finished, they thought of nothing else sauing how to furnish it with all things necessarie to vndertake the voyage. But they wanted those things that of all other were most needefull, as cordage and sayles, without which the enterprise coulde not come to effect. Hauing no meanes to recouer these things, they were in worse case then at the first, and almost ready to fall into despayre. But that good God, which neuer forsakeeth the afflicted, did succour them in their necessitie.

Putting as gainst the captaine, and the causes thereof.

Captaine Albert slain by his owne souldiers.

Nicolas Barre, chosen capitaine

with two hundred Indians at the least, whom our Frenchmen went forth to meete withall, and shewed the king in what neede of cordage they stood: who promised them to returne within two dayes, and to bring so much as should suffice to furnish the *Pinelle* with tackling. Our men being pleased with these good newes & promises, bestowed upon them certaine cutting hookes and shirres. After their departure our men sought all meanes to recouer rosen in the woodes, wherein they cut the pine trees round about, out of which they drew sufficient reasonable quantitie to buy the vessell. Also they gathered a kind of mosse which groweth on the trees of this countrey, to serue to calke the same withall. There now wanted nothing but sayles, which they made of their owne shirres and of their sheetes. Within few dayes after the Indian kings returned to Charles fort with so good store of cordage, that there was found sufficient for tackling of the small *Pinelle*. Our men as glad as might be, used great liberalitie towards them, and at their leaving of the countrey, left them all the marchandise that remained, leaving them thereby so fully satisfied, that they departed from them with all the contentation of the worlde. They went forward therefore to finish the *Brigandine*, & used so speedie diligence, that within a short time afterward they made it ready furnished with all things. In the meane season the winde came so fit for their purpose that it seemed to invite them to put to the Sea: which they did without delay, after they had set all their things in order. But before they departed they embarked their artillerie, their forge, and other munitions of warre which Captaine Ribault had left them, and then as much mill as they could gather together. But being drunken with the too excessive ioy, which they had conceived for their returning into France, or rather deprived of all foresight & consideration, without regarding the inconstancie of the winds, which change in a moment, they put themselves to sea, and with so slender victuals, that the end of their enterprise became unluckily and unfortunate.

For after they had sayled the third part of their way, they were surprized with calmes which did so much hinder them, that in three weekes they sailed not above five and twentie leagues. During this time their victuals consumed, and became so short, that every man was constrained to eat not past twelve graines of mill by the day, which may be in value as much as twelve peason. Pea, and this felicitie lasted not long: for their victuals failed them altogether at once: and they had nothing for their more assured refuge but their shooes and leather ierkins which they did eat. Touching their beverage, some of them dranke the sea water, others did drinke their owne urine: and they remained in such desperate necessitie a very long space, during the which part of them died for hunger. Beside this extreme famine, which did so grievously oppresse them, they fell every minute of an houre out of all hope ever to see France againe, insomuch that they were constrained to cast the water continually out, that on all sides entered into their Barke. And every day they fared worse and worse: for after they had eaten by their shooes and their leather ierkins, there arose so boisterous a winde and so contrary to their course, that in the turning of a hande, the waues filled their vessell halfe full of water and brused it upon the one side. Being now more out of hope the ever to escape out of this extreme peril, they cared not for casting out of the water which now was almost ready to drowne them. And as men resolved to die, every one fell downe backward, and gaue themselves over altogether unto the will of the waues. When as one of them a little having taken heart unto him declared unto them how little way they had to sayle, assuring them, that if the winde held, they should see land within three dayes. This man did so incourage them, that after they had throwne the water out of the *Pinelle* they remained three dayes without eating or drinking, except it were of the sea water. When the time of his promise was expired, they were more troubled then they were before, seeing they could not descry any land. Wherefore in this extreme despaire certaine among them made this motion, that it was better that one man should dye, then that so many men should perishe: they agreed therefore that one should die to sustaine the others. Which thing was executed in the person of La Chere, of whom we have spoken heretofore, whose flitch was deuided equally among his fellowes: a thing so pitifull to recite, that my pen is loth to write it.

After so long time and tedious trauels, God of his goodnesse vnto his accustomed fauour, changed their sorrow into ioy, and shewed vnto them the sight of land. Whereof they were so exceeding glad, that the pleasure caused them to remaine a long time as men without sence: whereby they let the *Pinelle* flote this and that way without holding any right way or course. But a small English barke boarded the vessell, in the which there was a Frenchman which had bene in the first voyage into Florida, who easily knew them, and spake vnto them, and after ward gaue them meat and drinke. Incontinently they recovered their naturall courages, and declared vnto

unto him at large all their navigation. The Englishmen consulted a long while what were best to be done, and in fine they resolved to put on land those that were most feeble, and to carry the rest unto the Queene of England, which purposed at that time to send into Florida. Thus you see in brieft that which happened to them which Captaine Iohn Ribault had left in Florida. And now will I go forward with the discourse of mine owne voyage.

It seemeth here
meaneth the
voyage intrens
ded by Stukely.

The second voyage vnto Florida, made and written by Cap-
taine Laudonniere, which fortified and inhabited there two Summers
and one whole Winter.

After our arriuall at Diepe, at our comming home, from our first voyage (which was the twentieth of July 1562) we found the ciuill warres begun, which was in part the cause why our men were not succoured, as Captaine Iohn Ribault had promised them: whereof it followed that Captaine Albert was killed by his souldiers, and the country abandoned, as heretofore we haue sufficiently discoursed, and as it may more at large be vnderstood by those men which were there in person. After the peace was made in

The ciuill
warres the
cause why the
Frenchmen
were not sup-
plied, which
were left be-
hinde in their
first voyage.

France, my Lord Admirall De Chastillon shewed vnto the king, that he heard no newes at all of the men which Captaine Iohn Ribault had left in Florida, & that it were pity to suffer them to perish. In which respect, the king was content he should cause 3 ships to be furnished, the one of fife score tonnes, the other of 100, and the third of 60, to seeke them out, and to succour them.

My Lord Admirall therefore being well informed of the faithfull seruice which I had done, aswell vnto his Maestie as to his predecessors kings of France, aduertised the king how able I was to doe him seruice in this voyage, which was the cause that he made me chiefe Captaine ouer these 3 shippes, and charged me to depart with diligence to performe his commandement, which for mine owne part I would not gaine say, but rather thinking my selfe happy to haue bene chosen out among such an infinite number of others, which in my iudgement were very well able to haue quitted themselves in this charge, I embarked my selfe at New Hauen the 22 of Aprill 1564, and sayled so, that we fell neere vnto the coast of England: and then I turned towards the South, to sayle directly to the fortunate Islands, at this present called the Canaries, one of which called the Isle Saluage (because as I thinke it is altogether without inhabitants) was the first that our ships passed. Sayling therefore on forward, we landed the next day in the Isle of Teneriffa, otherwise called the Pike, because that in the middell thereof there is an exceeding high mountaine, neere as high as that of Etna, which riseth vp like a pike, into the top whereof no man can go by but from the middell of May vntill the middell of August, by reason of the ouer great colde which is there all the yere: which is a wonderfull strange thing, considering that it is not past 27 degrees and an half distant from the Equator. We saw it all covered ouer with snow, although it were then but the fift of May. The inhabitants in this Isle being heretofore pursued by the Spaniards, retired themselves into this mountaine, where for a space they made warre with them, and would not submit themselves to their obedience, neither by foule nor faire meanes, they disdained so much the losse of their Island. For those which went thither on the Spaniards behalfe, left their carkasses there, so that not so much as one of them returned home to bring newes. Notwithstanding in the ende, the inhabitants not able to live in that place according to their nature, or for want of such things as were necessary for the commoditie of their liuelyhood, did all die there. After I had furnished my selfe with some fresh water, very good and excellent, which sprang out of a rocke at the foote of this mountaine, I continued my course toward the West, wherein the windes fauoured me so well, that 15 dayes after our ships arrived safe and sound at the Antilles: and going on land at the Isle of Martinico, one of the first of them, the next day we arrived at Dominica, twelue leagues distant from the former.

Laudonniere
second voyage
to Florida, with
three ships the
22 of Aprill
1564.

The Isle of
Teneriffa, or the
Pike.

The Isle of
Martinico,
Dominica and
Island.

Dominica is one of the fairest Islands of the West, full of hilles, and of very good smell. Whose singularities desiring to know as we passed, and seeking also to refresh our selues with fresh water, I made the Partners cast anker, after wee had sayled about halfe along the coast thereof. As soone as we had cast anker, two Indians inhabitants of that place sayled toward vs in two Canoas full of a fruite of great excellencie which they call Ananas. As they approached vnto our Barke, there was one of them which being in some misdoubt of vs, went backe againe on land, and fled his way with as much speed as he could possibly. Which our men per-

Ananas a fruite
of great excel-
lencie.

ceived and entered with diligence into the other Canoa, wherein they caught the poore Indian, & brought him unto me. But the poore fellow became so astonied in beholding vs, that he knew not which way to behaue himselfe, because that (as after ward I understood) he feared that he was fallen into the Spaniards hands, of whom he had bene taken once before, and which, as he shewed vs, had cut of his stones. At length this poore Indian was secure of vs, and discoursed unto vs of many things, wherof we receiued very small pleasure, because we understood not his minde but by his signes. Then he desired me to giue him leaue to depart, and promised me that he would bring me a thousand presents, whereunto I agreed on condition that he would haue patience untill the next day, when I purposed to goe on land, where I suffered him to depart after I had giuen him a shirte, and certaine small trifles, wherewith he departed very well contented from vs.

The place where we went on shore was hard by a very high Rocke, out of which there ran a litle riuer of sweet and excellent good water: by which riuer we stayed certaine dayes to discover the things which were worthy to be seene, and traffiqued dayly with the Indians: which about all things belought vs that none of our men should come neere their lodgings nor their gardens, otherwise that we should giue them great cause of ielousie, and that in so doing, wee should not want of their fruite which they call Ananas, whereof they offered vs very liberally, receiuing in recompence certaine things of small value. This notwithstanding, it happened on a day that certaine of our men desirous to see some new things in these strange countries, walked through the woods: and following still the litle riuers side, they spied two serpents of exceeding bignes, which went side by side ouerthwart the way. My souldiers went before them thinking to let them from going into the woods: but the serpents nothing at all astonied at these gestures glanced into the bushes with fearful hyssings: yet for all that, my men drew their swords and killed them, and found them after ward 9 great foote long, and as big as a mans leg. During this combate, certaine others more indiscreete went and gathered their Ananas in the Indians gardens, trampling through them without any discretion: and not therewithall contented they wet toward their dwellings, whereat the Indians were so much offended, that without regarding any thing they rushed upon them and discharged their shot, so that they hit one of my men named Martine Chauveau, which remained behind. We could not know whether hee were killed on the place, or whether he were taken prisoner: for those of his company had inough to doe to saue themselves without thinking of their companion. Whereof Monsieur de Origni my Lieutenant being aduertised, sent unto me to know whether I thought good that he should lay an ambush for the Indians which had either taken or killed our man, or whether hee should go directly to their dwellings to know the truth. I sent unto him after good deliberation hereupon, that he should not attempt any thing, and that for diuers occasions: but contrariwise that he should embarke himself with al diligence, & consequently al they that were on land: which he did with speed. But as he sailed towards our ships he perceiued along the shore a great number of Indians which began to charge them with their arrowes: hee for his part discharged store of shot against them, yet was not able to hurt them, or by any meanes to surpise them: for which cause he quite forsooke them, and came unto our ship. Where staying untill the next day morning we set saile following our wonted course, and keeping the same, we discovered diuerse Isles conquered by the Spaniards, as the Isles of S. Christopher, and of the Saintes, of Monserrate, and La Redonda: Afterward we passed between Anguilla and Anegada, sayling toward New France. Where we arriued 15 dayes after, to witte, on Thursday the 22 of June about 3 of the clocke in the afternoone, and landed neere a litle riuer which is 30 degrees distant from the Equator, and 10 leagues about Cape Francois drawing toward the South, and about thirtie leagues about the Riuer of May. After wee had strooken saile and cast anker athwart the Riuer, I determined to goe on shore to discover the same. Therefore being accompanied with Monsieur Origni, with Monsieur de Arlac mine Ensigne, & a certaine number of Gentlemen and souldiers, I embarked my selfe about 3 or 4 of the clocke in the euening. And being arriued at the mouth of the riuer, I caused the chanell to be sounded, which was found to be very shallow, although that farther within the same the water was there found reasonable deepe, which separateth it selfe into two great aimes, whereof one runneth toward the South, and the other toward the North. Having thus searched the Riuer, I went on land to speake with the Indians which waited for vs upon the shore, which at our comming on land, came before vs, crying with a loude voyce in their Indian language, Anticola Bonassou, which is as much to say, as brother, friend, or some such like thing. After they had made very much of vs, they

This arrival in Florida the 22 of June 1564. Cape Francois being between the Riuer of Dolphins and the Riuer of May, maketh the distance 30 leagues about, which is but 10 leagues over land.

they shewed vs their Paracoussy, that is to say, their King and Gouvernour, to whom I presented certaine toys, where with he was well pleased. And for mine owne part, I prayle God continually, for the great loue which I haue found in these Sauages, which were loy for nothing, but that the night approached, and made vs retire vnto our ships.

The great
loue and cour-
tesie of the
Indians.

For though they endeouored by al meanes to make vs tary with them, and shewed by signes the desire that they had to present vs with some rare things, yet neuerthelesse for many ill and reasonable occasions I would not stay on shore all night: but excusing my selfe for all their offers, I embarked my selfe againe and returned toward my ships. Howbeit, before my departure, I named this Riuer, the riuer of Dolphines, because that at mine arriual, I saw there a great number of Dolphines, which were playing in the mouth thereof. The next day the 23 of this moneth (because that toward the South I had not found any commodious place for vs to inhabit, and to build a fort) I gaue commandement to weigh anker, & to hoile our sailes to saile toward the riuer of May, where we arrived two dayes after, & cast anker. Afterward going on land, with some number of Gentlemen and Souldiers to know for a certaintie the singularities of this place, we espied the Paracoussy of the countrey, which came towards vs (this was the very same that we saw in the voyage of Captaine Iohn Ribault) which hauing espied vs, cryed very far off, Antipola, Antipola: and being so loyful that he could not containe himselfe, he came to meet vs, accompanied then with two of his sonnes, as faire and mightie persons as might be found in al the world, which had nothing in their mouthes but this word, Amy, Amy: that is to say, friend, friend: yea, and knowing those which were there in the first voyage, they went principally to them to vse this speech vnto them. There was in their trayne a great number of men and women, which still made very much of vs, and by euident signes made vs understand how glad they were of our arriual. This good entertainment past, the Paracoussy prayed me to goe see the pillar which we had erected in the voyage of Iohn Ribault (as we haue declared heretofore) as a thing which they made great account of.

The riuer of
Dolphins, called
Selo by the
Sauages.

Their arriual
at the riuer of
May.

Hauing peeld vnto him and being come to the place where it was set vp, wee found the same crowned with crownes of Bay, and at the foote thereof many little baskets full of Shell which they call in their language Tapaga Tapola. Then when they came thither they kissed the same with great reuerence and belought vs to do the like, which we would not denie them, to the ende we might drawe them to be more in friendship with vs. This done, the Paracoussy tooke me by the hand, as if he had desire to make me understand some great secret, & by signes shewed me very well vp within the riuer the limits of his dominion, and said that he was called Paracoussy Satourioua, which is as much as King Satourioua. His children haue the selfe same title of Paracoussy: The eldest is named Athore, a man, I dare say, perfect in beautie, wisdom, and honest sobrietie, shewing by his modest grauitie that he deserueth the name which he beareth; besides that he is gentle and tractable. After we had sojourned a certaine space with them, the Paracoussy prayed one of his sonnes to present vnto me a wedge of silver, which hee did & that with a good will: in recompence whereof I gaue him a cutting hooke and some other better present: wherewith he seemed to be very well pleased. Afterward we tooke our leaue of them, because the night approached, & then returned to lodge in our shippes. Being assured with this good entertainment I failed not the next day to imbarke my selfe againe with my Lieutenant Ottigni and a number of souldiers to returne toward the Paracoussy of the riuer of May, which of purpose waited for vs in the same place, where the day before we conferred with him. We found him under the shadow of an arbour accompanied with fourescore Indians at the least, and apparelled at that time after the Indian fashion, to wit, with a great Harts skinnie dressed like Chamois, and painted with deuices of strange and diuers colours, but of so liuely a portraiture, and representing antiquity, with rules so iustly compassed, that there is no Painter so exquisite that could finde fault therewith: the naturall disposition of this strange people is so perfect and well guided, that without any ayd and fauour of artes, they are able by the helpe of nature onely to content the eye of artizans, yea euen of those which by their industry are able to aspire vnto things most absolute.

The pillar set
up before by
Ribault crown-
ed with gar-
lands of Lau-
rell and inuol-
ued with small
paniers full of
corne, worship-
ped by the
Sauages.
Paracoussy
Satourioua.

A wedge of
silver.

Then I aduertised Paracoussy Satourioua, that my desire was to discouer farther vp into the riuer, but that this should be with such diligence that I would come againe vnto him very speedily: wherewith he was content, promising to stay for me in the place where he was: and for an earnest of his promise, he offered me his goodly skinnie, which I refused then, and promised to receiue it of him at my returne. For my part I gaue him certaine small trifles, to the intent to retaine him in our friendship.

Grosses.

Monsieur de
Ottigni.The curtesie
of the Floris-
bians to the
French.Open of excee-
ding olde age.

Departing from thence, I had not sayled three leagues up the river, still being followed by the Indians, which coasted me a long the river, crying still, Amy, Amy, that is to say friends, friends: but I discovered an hill of meane height, neere which I went on land, hard by the fieldes that were sowed with mill, at one corner whereof there was an house built for their lodging, which keepe and garde the mill: for there are such numbers of Cornish choughes in this Countrey, which continually deuoure and spoyle the mill, that the Indians are constrained to keepe and watch it, otherwise they should be deceiued of their harvest. I rested my selfe in this place for certaine houres, & commanded Monsieur de Ottigni, and my Sergeant to enter into the woodes to search out the dwellings of the Indians: where after they had gone awhile, they came vnto a Parish of Reeds, where finding their way to bestopped, they rested vnder the shadow of a mightie Bay tree to refresh themselves a little and to resolute which way to take. Then they discovered, as it were on the suddaine, five Indians halfe hidden in the woodes, which seemed somewhat to distrust our men, untill they said vnto them in the Indian language Antipola Bonassou, to the end that understanding their speech they might come vnto vs more boldly, which they did incontinently. But because they sawe, that the foure that went last, bare by the traine of the skinne wherewith he that went foremost was apparrelled, our men imagined that the foremost must needes bee some man of greater qualitie then the rest, seeing that withal they called him Paracously, Paracously, wherfore some of our company went towards him, and vsing him courteously shewed him, Monsieur de Ottigni, their Lieutenant, for whom they had made an harbour with Bay and Palme boughes after the Indian fashion, to the ende that by such signes the Sauages might thinke the Frenchmen had companied with such as they at other times.

The Indian Paracously drew neere to the French, and began to make him a long Oration, which tended to no other end, but that he besought the Frenchmen very earnestly to come and see his dwelling and his parents, which they granted him, and straight for pledge of better amitie, he gaue vnto my Lieutenant Ottigni, the very skinne that he was clad with.

Then he tooke him by the hande, leading him right toward the Parishes, ouer which the Paracously, Monsieur Ottigni, and certaine other of our men were borne vpon the Indians shouldiers: and the rest which could not passe because of the myze and reedes, went through the woodes, and followed a narrow path which led them forth untill they came vnto the Paracouslies dwelling: out of which there came about fiftie Indians to receiue our men gallantly, and to feast them after their manner. After which they brought at their entrance a great vessell of earth, made after a strange fashion full of fountaine water cleare and very excellent.

This vessell was borne by an Indian, and there was another younger which bare of this water in another little vessell of wood, and presented thereof to euery one to drinke, observing in doing the same, a certaine order and reuerence, which hee made to each of them, to whome hee gaue drinke. Our thirst well quenched by this meanes, and our men being sufficiently refreshed, the Paracously brought them to his fathers lodging, one of the oldest men that liued vpon the earth. Our men regarding his age, began to make much of him, vsing this speech, Amy, Amy, that is to say, friends, friends, wherewith the olde fier shewed himselfe very glad.

Afterward they questioned with him concerning the course of his age: whereunto he made answer, shewing that he was the first liuing originall, from whence five generations were descended, as he shewed vnto them by another olde man that sat directly ouer against him, which farre exceeded him in age. And this man was his father, which seemed to be rather a dead carkeis then a liuing body: for his sinewes, his veines, his artiers, his bones, and other parts, appeared so cleerly thorow his skinne, that a man might easily tell them, and discern them one from another. Altho his age was so great, that the good man had lost his sight, and could not speake one onely word but with exceeding great paine. Monsieur de Ottigni hauing scene so strange a thing, turned to the younger of these two olde men, praying him to vouchsafe to answer him to that which he demanded touching his age. Then the olde man called a company of Indians, and striking twice vpon his thigh, and laying his hand vpon two of them, he shewed him by signes, that these two were his sonnes: againe limiting vpon their thighs, he shewed him others not so olde, which were the children of the two first, which he continued in the same manner untill the fift generation. But though this olde man had his father aloue more olde then himselfe, and that both of them did weare their haire very long, and as white as was possible,

yet

yet it was tolde them, that they might yet live thirtie or fortie yeeres more by the course of nature: although the younger of them both was not lesse then two hundred and fiftie yeeres olde. After he had ended his communication, hee commaunded two young Eagles to be given to our men, which he had bred up for his pleasure in his house. Hee caused also little Paniers made of Palme leaues full of Gourds red and blew to bee delivered unto them. For recompence of which presents he was satisfied with French toys.

These two olde men caused our men to be guided backe againe to the place from whence they came, by the young Paracoussy which had brought them thither. And having taken leave of the Paracoussy, they came and sought me out in the place where I stayed, and rehearsed unto mee all that they had seene, praying mee also that I would rewarde their guide, which so frankly and heartily had received them into his house, which I would not faile to doe by any meanes.

Howe was I determined to search out the qualities of the hill. Therefore I went right to the toppe thereof, where we found nothing else but Cedars, Palme, and Baytrees of so soureigne odour, that Baulme smelleth nothing like in comparision. The trees were environed rounde about with Vines bearing grapes in such quantitie, that the number would suffice to make the place habitable. Besides this fertilitie of the soyle for Vines, a man may see Esquine wreathed about the shrubs in great quantitie. Touching the pleasure of the place, the Sea may be seene plaine and open from it, and more then fife great leagues off, neere the River Belle, a man may beholde the medowes divided asunder into Isles and Illets enterlacing one another: Briefly the place is so pleasant, that those which are melancholicke would be enforced to change their humour.

After I had stayed there a while, I imbarcked againe my people to sayle towards the mouth of the River, where wee found the Paracoussy, which according to his promise waited for vs. Therefore to content him, we went on shore, and did him that reuerence that on our part was requisite. Then hee gaue me the skinne so richly painted, and I recompensed him with somewhat of our marchandise. I forgot not to demand of him the place whence the wedge of silver came which he had given me before: whereunto he made me a very sudden answer, which notwithstanding I understood not, which he well perceived. And then he shewed me by evident signes that all of it came from a place more within the River by certaine dayes iourneyes from this place, and declared unto vs that all that which they had thereof, they gat it by force of armes of the inhabitants of this place, named by them Thimogoa, their most ancient and naturall enemies, as hee largely declared. Whereupon when I sawe with what affection hee spake when hee pronounced Thimogoa, I understood what he would say. And to bring my selfe more into his fauour, I promised him to accompany him with all my force, if hee would fight against them: which thing pleased him in such sorte, that from thenceforth hee promised himselfe the victorie of them, and assured mee that hee would make a voyage thither within a short space, would cause store of Mill to be prepared, and would commaund his men to make ready their Bowes, and furnish themselves with such store of arrowes, that nothing should be wanting to giue battaile to Thimogoa. In fine hee prayed mee very earnestly not to faile of my promise, and in so doing, hee hoped to procure mee Golde and Silver in such good quantitie, that mine affaires should take effect according to mine owne and his desire.

The matter thus fully resolved upon, I tooke my leave of him to returne unto my shippes, where after wee had rested our selves all the night following, wee hopled sayles the next day very early in the morning, and sayled towards the River of Seine, distant from the River of May about foure leagues: and there continuing our course towards the North, wee arrived at the mouth of Somme, which is not past fife leagues distant from the River of Seine: where wee cast Anker, and went on shoare to discover that place as wee had done the rest. There wee were graciously and courteously received of the Paracoussy of the Countrey, which is one of the tallest men and best proportioned that may be founde. His wife late by him, which besides her Iudian beautie, wherewith shee was greatly endewed, had so vertuous a countenance and modest grauitie, that there was not one amongst vs but did greatly commend her: shee had in her traine five of her daughters of so good grace and so well brought up, that I easily perswaded my selfe that their mother was their Mistresse, and had taught them well and straightly to preserve their honestie. After that the Paracoussy had received vs as I haue sayde, hee commaunded his wife to present mee with a certaine number of

Sanages in Florida of 250. yeeres olde. Eagles in Florida.

bullets

bullets of silver, for his owne part hee presented mee with his bowe and his arrowes, as hee had done unto Captaine Iohn Ribault in our first voyage, which is a signe of a perpetuall amitie and alliance with those which they honour with such a kinde of present. In our discouraging with one another, wee entred into speech as touching the exercise of armes. Then the Paracoussy caused a corselet to be set on end, and prayed me to make a prooofe of our Harguebuzes and their bowes: but this prooofe pleased him very little; for assoone as hee knew that our Harguebuzes did easily pearce that which all the force of their bowes could not hurt, he seemed to be lozie, musing with himselfe how this thing might bee done. Neuerthelesse, going about to dissemble in his minde that which his countenance could not doe by any meanes, hee began to fall into another matter, and prayed vs very earnestly to stay with him that night in his house or lodging, affirming that no greater happinesse could come unto him then our long abode, which he desired to recompence with a thousand presents.

Laudonniere's
consultation
with his com-
panie where
it might be
best for them
to plant.

Neuerthelesse wee could not grant him this poynt, but tooke our leaue of him to returne to our shippes: where soone after I caused all my companie to bee assembled, with the Masters and Pilots of my shippes, to consult together of the place whereof wee should make choise to plant our habitation. First I let them vnderstand, howe none of them were ignorant, that the part which was toward the Cape of Florida, was altogether a marish Countrey, and therefore vnpromisable for our inhabitation: A thing which could yeelde neither profite to the King, nor any contentment or pleasure to vs, if peradventure we would inhabite there. On the other side if wee passed further toward the North to seeke out Port Royall, it would be neither very profitable nor conuenient: at the least if wee should giue credit to the report of them which remained there a long time, although the Hauens were one of the fairest of the West Indies: but that in this case the question was not so much of the beautie of the place, as of things necessary to sustaine life. And that for our inhabiting it was much more needefull for vs to plant in places plentifull of victuall, then in goodly Hauens, faire, deepe and pleasant to the view. In consideration whereof that I was of opinion, if it seemed good vnto them, to seate our selues about the Riuer of May: seeing also that in our first voyage wee found the same onely among all the rest to abounde in Barz and corne, besides the Golde and Silver that was found there: a thing that put me in hope of some happye discouerie in time to come.

Golde and Sil-
uer found at
the riuer of
May.

June the 29.

After I had proposed these things, euery one gaue his opinion thereof: and in fine all resolved, namely those which had bene with me in the first voyage, that it was expedient to seate themselves rather on the Riuer of May then on any other, vntill they might heare newes out of France. This poynt being thus agreed vpon, wee sayled toward the Riuer, and vied such diligence, that with the fauour of the windes wee arrived there the morrow after about the breake of day, which was on Thursday the 29. of the moneth of Iune. Having cast anchor, I embarked all my stuffe and the souldiers of my companie, to sayle right toward the opening of the Riuer: wherein we entred a good way vp, and found a Creeke of a reasonable bignesse, which invited vs to refresh our selues a little, while wee reposed our selues there. Afterward wee went on shoare to seeke out a place plaine without trees, which wee perceiued from the Creeke.

But because wee found it not very commodious for vs to inhabite there: wee determined to returne vnto the place which wee had discovered before, when wee had sayled by the Riuer. This place is ioyning to a mountaine, and it seemed vnto vs more fit and commodious to build a fortesse, then that where we were last. Therefore we tooke our way towards the forrests being guided therein by the young Paracoussy which had ledde vs before to his fathers lodging. Afterward we found a large plaine couered with high Junetrees distant a little from the other: vnder which wee perceiued an infinite number of Stagges which brayed amidst the plaine, athwart the which we passed: then wee discovered a little hill adioyning vnto a great vale very Greene and in forme flat: wherein were the fairest meadowes of the world, and grasse to feede cattel. Moreover it is inuironed with a great number of brookes of fresh water, & high woods, which make the vale more delectable to the eye. After I had taken the viewe thereof at mine ease, I named it at the request of our souldiers, The Vale of Laudonniere. Thus we went forward. Anon having gone a little forward, we met an Indian woman of tall stature, which also was an Hermaphrodite, who came before vs with a great basket full of cleere fountaine water, wherewith she greatly refreshed vs. For we were exceeding faint by reason of the ardent heate which molested vs as we passed through those high woods. And I beleue that without the succour of that Indian Hermaphrodite, or rather, if it had not bene for the great desire which we had

The Vale of
Laudonniere.

An Hermaph-
rodite.

had to make vs resolute of our selues, we had taken vp our lodging all night in the wood. Being therfore refreshed by this meane, wee gathered our spirits together, and marching with a cheerefull courage, wee came to the place which wee had chosen to make our habitation in: whereupon at that instant neere the riuers brinke we strowed a number of boughes and leaues, to take our rest on them the night following, which wee found exceeding sweete, because of the paine which before we had taken in our trauell.

On the morrow about the breake of day, I commaunded a trumpet to be sounded, that being assembled we might giue God thanks for our sauourable and happie arriual. There wee sang a psalme of thanksgiuing vnto God, beseeching him that it would please him of his grace to continue his accustomed goodnesse toward vs his poore seruants, and ayde vs in all our enterprises, that all might turne to his glory and the aduancement of our King. The prayer ended, euery man began to take courage.

They began their planting with prayer to God.

Afterward hauing measured out a piece of ground in forme of a triangle, wee indeuoured our selues of all sides, some to bring earth, some to cut fagots, and others to rattle and make the rampire, for there was not a man that had not either a shouell, or cutting hooke, or hatchet, as well to make the ground plaine by cutting downe the trees, as for the building of the Fort, which we did hasten wth such cheerefulness, that within few dayes the effect of our diligence was apparant: in which meane space the Paracoussy Satourioua our neerest neighbour, & on whose ground wee built our Fort, came vsually accompanied with his two sonnes and a great number of Indians to offer to doe vs all courtesie. And I likewise for my part bestowed diuers of our trifles frankly on him, to the end he might know the good will we bare him, and thereby make him more desirous of our friendship, in such sort, that as the dayes increased, so our amitie and friendship increased also.

After that our Fort was brought into forme, I began to build a Grange to retire my munition and things necessarie for the defence of our Fort: praying the Paracoussy to command his subiects to make vs a couering of Palme leaues, and this to the end that when that was done, I might unfraight my shippes, and put vnder couerture those things that were in them. Suddenly the Paracoussy commaunded in my presence all the Indians of his companie to besse the next day morning so good a number of Palme leaues, that the Grange was couered in lesse then two dayes: so that businesse was finished. For in the space of those two dayes, the Indians neuer ceased from working, some in fetching Palme leaues, others in interlacing of them: in such sort that their Kings commandement was executed as he desired.

In Florida they couer their houses with Palme leaues

Our Fort was built in forme of a triangle. The side toward the West, which was toward the lande, was inclosed with a little trench and raised with turues made in forme of a Battlement of nine foote high: the other side which was toward the Riuer, was inclosed with a Pallisado of planks of timber after the maner that Gabions are made. On the South side there was a kinde of bastion within which I caused an house for the munition to be built: it was all builded with fagots and sand, sauing about two or three foot high with turues, whereof the battlements were made. In the midst I caused a great Court to be made of eightene paces long and broad, in the midst whereof on the one side drawing toward the South I builded a Corps de gard, and an house on the other side toward the North, which I caused to be raised somewhat too high: for within a short while after the wind beat it down: and experience taught me, that we may not build with high stages in this Countrey, by reason of the windes whereunto it is subiect. One of the sides that inclosed my Court, which I made very faire and large, reached vnto the Grange of my munitions: and on the other side towardes the Riuer was mine owne lodging, round about which were galleries all couered. The principall doore of my lodging was in the midst of the great place, and the other was toward the Riuer. A good distance from the Fort I built an Ouen to auoyde the danger against fire, because the houses are of Palme leaues, which will soone be burnt after the fire catcheth holde of them, so that with much adoe a man shall haue leasure to quenck them. Doe here in briebe the description of our Fortresse, which I named Caroline in the honour of our Prince King Charles.

The forme of the Fort Caroline. The West side. The South side.

High building is not good for this Countrey.

Nota.

Caroline.

After wee were furnished with that which was most necessarie, I would not lose a minute of an houre, without imploying of the same in some vertuous exercise: therefore I charged Monsieur de Orrigni my Lieutenant, a man in truely worthy of all honour for his honestie and vertue, to search vp within the Riuer, what this Thimogoa might be, whereof the Paracoussy Satourioua had spoken to vs so often at our coming on shoare. For execution hereof

the Paracouly gaue him two Indians for his guides, which taking vpon them to lead him in this voyage, seemed to goe vnto a wedding, so desirous they were to fight with their enemies.

Being imbarked they hoisted sayle, and hauing sayled about twentie leagues, the Indians which still looked on this side and that side to elpie some of their enemies, discovered three Canoas. And immediatly they began to crie Thimogoa, Thimogoa, and spake nothing else but to hasten forward to goe fight with them: which the Captaine seemed to be willing to doe, to content them. When they came to boord them, one of the Indians gat holde of an Halbert, another of an Coutelas in such a rage, that hee would haue leapt into the water to haue fought with them alone. Neuerthelesse Orrigni would not let them doe it, for while hee deferred to boord them, he gaue the others respit to turne the prowes of their Canoas toward the shoare, and so to escape into the woods. Again, the meaning of Orrigni was not to make warre vpon them of Thimogoa, but rather to make them friends, and to make them thenceforth to liue in peace one with another if it were possible, hoping by this meane to discover dayly some new thing, & especially the certaine course of the Riuer. For this purpose he caused the barke to retire, wherein were the two Indians his guides, and went with his men toward the Canoas which were on the Riuer's side. Being come vnto them, he put certaine trifles into them, and then retired a good way from them, which thing caused the Indians which were fled away to returne to their boats, and to vnderstand by this signe, that those of our Barke were none of their enemies, but rather come onely to traffique with them. Wherefore being thus assured of vs, they called to our men to come neere vnto them: which they did incontinently and set foote on lande, and spake freely vnto them, with diuers ceremonies ouer long to recount. In the ende Orrigni demaunded of them by signes if they had any Golde or Silver among them. But they tolde him they had none as then: and that if he would send one of his men with them, they would bring him without danger into a place where they might haue some. Orrigni seeing them so willing, deliuered them one of his men which seemed very resolute, to undertake this voyage: this fellow stayed with them vntill tenne of the clocke the next morning, so that Captaine Orrigny somewhat offended with his long stay, sayled ten great leagues further by the Riuer: although he knew not which way he should goe, yet he went so farre by that hee espied the Boate wherein his souldier was: which reported vnto him, that the Indians would haue carried him three great dayes iourney further, & told him that a King named Mayra rich in Gold and Silver, dwelt in those quarters, and that for small quantitie of marchandise enough might be had of him: yet that hee would not hazard himselfe without his leaue, and that he brought but a very little Golde. This being done, our men returned toward our Fort Caroline, after they had left the souldier with the Indians to enscourme himselfe more and more of such things as he might discover more at leasure.

Fifteene dayes after this voyage to Thimogoa, I dispatched Captaine Vasseur and my Sergeant also to returne againe into this Countrey, and to seeke out the souldier which remained there in the former voyage. Being therefore imbarked, they sayled two whole dayes: and before they came to the dwelling of the Indians, they found two of them on the Riuer's side, which were expressely sent vnto that place to descry whether any of their enemies were come to that part, with intention to surpriue them, as they did vsually.

When they perceiued Captaine Vasseur, they knew incontinently that he was none of their enemies, and therefore made no difficultie to come neere vnto the Barke, and shewed him by signes that the Souldier which they sought was not in that place, but was at that present in the house of King Molloua which was vassall vnto another great King named by them Olata Ouac Vina: and that if the Captaine would sayle thitherward, hee should come thither very quickly: wherewith he was content, and caused his men to rowe to that part which the Indians shewed him: wherewith they were so glad, that they ranne quickly before by land to declare his arriual, which was at the lodging of king Molloua, after he had rowed not past halfe a league. While king Molloua had ended entertaining Captaine Vasseur and his men, the souldier came in with five or six pounds weight of silver which he had trucked and traffiqued with Indians.

This King caused bread to bee made, and fish to bee dressed after the Indian fashion to feast our men: to whom, while they were at meate, hee made a discourse of diuers other Kings his friends & allies, reckoning vp to the number of nine of them by name, to wit, Cadecha, Chilibi, Eclauon, Enacappe, Calany, Anacharaqua, Omuraqua, Aequera, Moquoso: all which with him to the number of more then fortie, hee assured vs to bee the vassals of the most renowned Olata Ouac Vina.

This

This done, hee went about likewise to discover the enemies of Ouac Vcina, in which number hee placed as the first the Paracouffy Satourioua Monarch of the confines of the riuer of May, which hath vnder his obeyfance thirtie other Paracouffies, whereof there were ten which were all his brethren, and that therefore hee was greatly esteemed in those partes: then hee named three others no lesse puissant then Satourioua, whereof the first dwelt two dayes iourney from his lord Olata Ouac Vcina, and ordinarily made warre vpon him, whose name was Potanou, a man cruell in warre, but pitifull in the execution of his furie. For hee tooke the prisoners to mercy, being content to marke them on the left arme with a great marke like vnto a seale, and so imprinted as if it had bene touched with an hotte yron, then hee let them goe without any more hurt. The two others were named Onatheaqua, and Houstaqua, being great Lords, and abounding in riches, and principally Onatheaqua, which dwelt neere vnto the high mountaines, wherein there was abundance of many rare things, and infinite quantitie of a kinde of slate stone, wherewith they made wedges to cleaue their wood. The occasion which (as he sayd) moued Potanou to wage warre against Olata Ouac Vcina, was the feare that he had, lest he and his companions should get of that hard stone in his Countrey, wherewith they headed their arrowes, and could not get it in any neerer place.

King Potanou.

An exceeding rich place.

Besides all this, Molloua recited to Captaine Vasseur, that the kings allies the bassals of the great Olata, armed their vests, armes, thighes, legs, & foreheads with large plates of gold and siluer: and that by this meanes the arrowes that were discharged vpon them could do them no manner of hurt at all, but rather were broken against them. Hereupon Captaine Vasseur inquired whether the Kings Onatheaqua and Houstaqua were like vnto vs. For by the description that they made of them, he began to doubt whether they were Spaniards or no: but Molloua tolde him that they were not, but that they were Indians like the rest, sauing that they painted their faces with blacke, and that the rest as Molloua, painted them with red. Then my Lieutenant Vasseur, and my Sergeant promised him, that one day I should march with my forces into those Countreys, and that ioyning my selfe with his Lord Olata, I would subdue the inhabitants of the highest of those mountaines. Hee was very glad of this speech, and answered that the least of these Kings which hee had named, should present vnto the Generall of these succours the height of two foot of gold and siluer, which by force of armes they had already gotten of those two Kings, Onatheaqua, and Houstaqua.

Large plates of gold and siluer.

Some paint their faces with blacke, and some with red.

The good cheere being done, and the discourtes ended, my men imbarcked themselves againe, with intention to bring mee those good newes vnto the Fort Caroline. But after they had sayled a very long while downe the Riuer, and were come within three leagues of vs, the tyde was so strong against them, that they were constrained to goe on lande, and to retire themselves because of the night, vnto the dwelling of a certaine Paracouffy named Molona, which shewed himselfe very glad of their arriual: for hee desired to know some newes of Thimogoa, and thought that the French men went thither for none other occasion but for to invade them. Which Captaine Vasseur perceiuing, dissembled so well that he made him beleue that he went to Thimogoa with none other intention, but to subdue them, and to destroy them with the edge of the sword without mercy, but that their purpose had not such successe as they desired, because that the people of Thimogoa being aduertised of this enterpryse, retired into the woods, and saued themselves by flight: that neuertheless they had taken some as they were fleeing away, which carried no newes thereof vnto their fellowes.

The Paracouffy was so glad of this relation, that he interrupted him, and asked Vasseur of the beginning and manner of his execution, and prayed him that hee would shew him by signes howe all things passed. Immediately Francis la Caille the Sergeant of my band tooke his sword in his hand, saying, that with the point thereof he had thrust through two Indians which ranne into the woods, and that his companions had done no lesse for their partes. And that if fortune had so fauoured them, that they had not bene discovered by the men of Thimogoa, they had had a victorie most glorious and worchie of eternall memorie. Hereupon the Paracouffy shewed himselfe so well satisfied, that he could not deuise how to gratifie our men, which hee caused to come into his house to feast them more honourably: and hauing made Captaine Vasseur to sit next him, and in his owne chaire (which the Indians esteeme for the chiefest honour) and then vnderneath him two of his sonnes, goodly and mightie fellowes, hee commanded all the rest to place themselves as they thought good. This done, the Indians came according to their good custome, to present their drinke Cassine to the Paracouffy, and then to certaine of his chiefest friends, and the Frenchmen. Then hee which brought it set the

cup

cup aside, and drew out a little dagger stucke vp in the rooſe of the houſe, and like a mad man he liſt his head aloft, and raine apace, and went and ſmote an Indian which ſate alone in one of the corners of the hall, crying with a loud voyce, Hyou, the poore Indian ſtiring not at all for the blowe, which he ſeemed to endure patiently. He which held the dagger went quickly to put the ſame in his former place, and began againe to giue vs drinke, as hee did before: but he had not long continued, and had ſcarce giuen three or ſoure thereof, but he left his bowle againe, tooke the dagger in his hand, and quickly returned vnto him which hee had ſtrooken before, to whom he gaue a very ſore blow on the ſide, crying Hyou, as he had done before: and then hee went to put the dagger in his place, and ſet himſelfe downe among the reſt. A little while after he that had bene ſtricken fell downe backwards, ſtretching out his armes and legs, as if hee had bene ready to yeeld by the latter gaspe. And then the younger ſonne of the Paracouſſy apparellled in a long white ſkinne, fell downe at the feete of him that was fallen backward, weeping bitterly halfe a quarter of an houre: after, two other of his brethren clad in like apparell, came about him that was ſo ſtricken, and began to ſigh pittifully. Their mother hearing a little infant in her armes came from another part, and going to the place where her ſonnes were, at the firſt ſhee bleſt infinite numbers of outcries, then one while liſting vp her eyes to heauen, another while falling downe vnto the ground, ſhee cryed ſo dolefully, that her lamentable mournings would haue moued the moſt hard and ſtony heart in the world with pittie. Yet this ſufficed not, for there came in a companie of young gyles, which did neuer leaue weeping for a long while in the place where the Indian was fallen downe, whom after ward they tooke, and with the ſaddeſt geſtures they could deuife, carried him away into another houſe a little way off from the great hall of the Paracouſſy, and continued their weepings and mournings by the ſpace of two long houres: in which meane while the Indians ceaſed not to drinke Caſſine, but with ſuch ſilence that one word was not heard in the parlour.

King Malica.

Vaſſeur being grieued that he vnderſtood not theſe ceremonies, demanded of the Paracouſſy what theſe things meant: which answered him ſlowly, Thimogoa, Thimogoa without ſaying any more. Being more diſpleaſed then he was before with ſo ſleight an anſwere, he turned vnto another Indian the Paracouſſyes brother, who was a Paracouſſy as well as his brother, called Malica, which made him a like anſwere as hee did at the firſt, praying him to aſke no more of theſe matters, and to haue patience for that time. The ſubtil old Paracouſſy prayed him with- in a while after, to ſhew him his ſword, which he would not denie him, thinking that hee would haue beheld the faſhion of his weapons: but he ſoone perceiued that it was to another end: for the old man holding it in his hand, behelde it a long while on euery place, to ſee if he could finde any blood vpon it, which might ſhew that any of their enemies had bene killed: for the Indians are wont to bring their weapons wherewith their enemies haue bene defeated, with ſome blood vpon them, for a token of their victories. But ſeeing no ſigne thereof vpon it, he was vpon the point to ſay vnto him, that he had killed none of the men of Thimogoa: when as Vaſſeur preventing that which hee might object, declared and ſhewed vnto him by ſignes, the manner of his enterpriſe, adding, that by reaſon of the two Indians which he had ſlaine, his ſword was ſo bloudy, that hee was inforced to waſh and make it cleane a long while in the Riuer: which the olde man beleued to be like to be true, and made no manner of replie therunto.

Tapiſtry made of ſmall reeds.

Vaſſeur, La Caille, and their other companions went out of the hal to go into the roome whither they had carried the Indian: there they found the Paracouſſy ſitting vpon tapiſtries made of ſmall reeds, which was at meate after the Indian faſhion, and the Indian that was ſmiten hard by him lying vpon the ſelfe ſame tapiſtry, about whom ſtoode the wiſe of the Paracouſſy, with all the young damſels which before bewailed him in the hall: which did nothing elſe but warme a great deal of moſſe in ſtead of naphkins to rub the Indians ſide. Per vpon our men aſked the Paracouſſy againe for what occaſion the Indian was ſo perſecuted in his preſence: hee anſwered, that this was nothing elſe but a kinde of ceremonie, whereby they would call to minde the death and perſecutions of the Paracouſſies their anceſtors executed by their enemy Thimogoa: alleaging moreouer, that as often as he himſelfe, or any of his friends and allies returned from the Countrey, without they brought the heads of their enemies, or without bringing home ſome priſoner, hee bleſt for a perpetuall memorie of all his predecessors, to beate the beſt beloued of all his children with the ſelfe ſame weapons, wherewith they had bene killed in times paſt: to the end that by renewing of the wound their death ſhould be lamented afreſh. Now whē they were thus informed of thoſe ceremonies, they thanked the Paracouſſy for their good intertainment which they had receiued, & ſo ſetting ſaile came to me vnto the ſort: where they

They laype moſſe about their woundes and ble it in ſtead of naphkins. A ceremonie to call to mind the death of their anceſtors ſlaine by their enemies.

they declared all vnto me as I haue recited it heretofore. The eight and twentieth of July our shippes departed to returne into France. And within a while, about two moneths after our arrivall in Florida, the Paracouffy Satourioua sent certaine Indians vnto mee to knowe whether I would stande to my promise which I had made him at my first arrivall in that Countrey, which was that I would shewe my selfe friend to his friendes, and enemie vnto his enemies, and also to accompany him with a good number of Harquebuzes, when he should see it expedient, and should finde a fit occasion to goe to warre. Now seeing he rested vpon this promise, he prayed mee not to deferre the same: seeing also that making accompt thereof, hee had taken such good order for the execution of his enterprize, that he was ready, and was furnished with all things that were necessary for the voyage: I made him answer, that for his amitie I would not purchase the enmitie of the other, and that albeit I would, yet notwithstanding I wanted meanes to doe it. For it behoued mee at that present to make prouision of victuals and munition for the defence of my Fort. On the other side, that my Barkes were nothing ready, and that this enterprize would require time: Whereouer, that the Paracouffy Satourioua might holde himselfe ready to depart within two moneths, and that then I would thinke of fulfilling my promise to him.

The Indians caried this answer to their Paracouffy, which was little pleased with it, because hee could not deferre his execution or expedition, aswell because all his victuals were ready, as also because tenne other Paracouffies were assembled with him for the performance of this enterprize. The ceremonie which this Sauage vled before hee embarked his armie deserueth not to be forgotten. For when hee was set downe by the Riuer side, being compassed about with ten other Paracouffies, hee commaunded water to be brought him speedily. This done, looking vp into heauen, he fell to discourse of diuers things with gestures that shewed him to be in exceeding great choller, which made him one while shake his head hither and thither, and by and by with I wote not what furie to turne his face toward the Countrey of his enemies, and to threaten to kill them. Hee oftentimes looked vpon the Sunne, praying him to graunt him a glorious victory of his enemies. Which when hee had done by the space of halfe an houre, hee sprinkled with his hand a little of the water which hee helde in a vessell vpon the heads of the Paracouffies, and cast the rest as it were in a rage and despite into a fire which was there prepared for the purpose. This done, hee cried out thise, He Thimogoa, and was followed with fise hundred Indians at the least, which were there assembled, which cried all with one voyce, He Thimogoa. This ceremonie, as a certaine Indian tolde mee familiarly, signified nothing else, but that Satourioua besought the Sunne to graunt vnto him so happy a victory, that hee might shed his enemies blood, as he had shed that water at his pleasure. Whereouer, that the Paracouffies which were sprinkled with a part of that water, might returne with the heads of their enemies, which is the onely and chiefe triumph of their victories.

The Paracouffy Satourioua had no sooner ended his ceremonies and had taken a viewe of all his company, but he embarked himselfe, and vled such diligence with his Almadies or boates, that the next day two houres before the Sunnes set, he arrived on the territories of his enemies about eight or tenne leagues from their villages. Afterward causing them all to goe on land, hee assembled his counsell, wherein it was agreed that fise of the Paracouffies should saile by the Riuer with halfe of the troupes, and by the breake of the day should appoche vnto the dwelling of their enemies: for his owne part, that hee would take his journey through the woods and Forrests as secretly as hee coulde: that when they were come thither, as well they that went by water as hee which went by land should not faile by the breake of the day to enter into the village, and cut them all in pieces, except the women and little children.

These things which were thus agreed vpon, were executed with as great fury as was possible: which when they had done, they tooke the heades of their enemies which they had slaine, and cut off their haire round about with a piece of their skulles: they tooke also foure and twentie prisoners, which they led away, and retired themselves immediatly vnto their Boates which waited for them. Being come thither, they beganne to singe praises vnto the Sunne, to whom they attributed their victorie. And afterwards they put the skins of those heades on the end of their ianelings, and went altogether toward the territories of Paracouffy Omoloa, one of them which was in the company. Being come thither, they deuised their prisoners equally to each of the Paracouffies, and left thirteene of them to Satourioua, which straightway dispatched an Indian his subject, to carry netwes before of the victory to them which stayed at home to guard their houses, which immediatly beganne to weepe. But alldone as night was come, they neuer left dancing and playing a thousand gambols in honour of the feast.

The next day the Paracouffy Satourioua came home, who before hee entered into his lodging caused

caused all the haire skuls of his enemies to bee set by before his doore, and crowned them with branches of Lawrell, shewing by this glorious spectacle the triumph of the victorie which hee had obtained. Straightway beganne lamentation and mournings, which as soone as the night beganne were turned into pleasures and dances.

After that I was aduertised of these things, I sent a Souldier vnto Satourioua, praying him to sende mee two of his prisoners: which hee denied mee, saying that hee was nothing beholding vnto mee, and that I had broken my promise, against the oath which I had swoyne vnto him at my arriuall. Which when I vnderstoode by my Souldier, which was come backe with speede, I deuised howe I might be reuenged of this Sauage, and to make him know how dearely this bolde brauado of his should cost him: therefore I commanded my Sergeant to prouide mee twentie Souldiers to goe with mee to the house of Satourioua: Where after I was come and entered into the hall without any manner of salutation, I went and sate mee downe by him, and stayed a long while without speaking any woordes vnto him, or shewing him any signe of friendship, which thing put him deeply in his dumps: besides that certaine Souldiers remained at the gate, to whom I had giuen expresse commaundement to suffer no Indian to goe forth: hauing stood still about halfe an houre with this countenance, at length I demaunded where the prisoners were which hee had taken at Thimogoa, and commaunded them presently to bee brought vnto me.

Ashore.

Thereunto the Paracouffy angry at the heart, and astonied wonderfully, stood a long while without making any answer, notwithstanding at last hee answered me very stoutly, that being a fraide to see vs comming thither in such warrelke maner they fled into the woods, and that not knowing which way they were gone, they were not able by any meanes to bring them againe; Then I seemed to make as though I vnderstood not what he saide, and asked for his prisoners againe, and for some of his principall allies. Then Satourioua commaunded his sonne Achore to seeke out the prisoners, and to cause them to be brought into that place, which thing he did within an houre after.

*Excellent
Pumpions.*

After they were come to the lodging of the Paracouffy, they humbly saluted mee, and lifting vp their hands before me, they would haue fallen downe prostrate as it were at my feet: but I would not suffer them, and soone after ledde them away with me vnto my owne Fort. The Paracouffy being wonderfully offended with this brauado, bethought himselfe by all meanes how hee might be reuenged of vs. But to giue vs no suspition thereof, and the better to couer his intention, hee sent his messengers oftentimes vnto vs bringing alwayes with them some kinde of presents. Among others one day hee sent three Indians, which brought vs two baskets full of great Pumpions, much more excellent then those which we haue in France, and promised me in their kings behalfe, that during mine abode in that Countrey, I should neuer want victuals: I thanked them for their Kings good will, and signified vnto them the great desire which I had, as well for the benefit of Satourioua, as for the quiet of his Subiects, to make a peace betweene him and those of Thimogoa: which thing coulde not choose but turne to their great benefite, seeing that being allied with the Kings of those parts, hee had an open passage against Onatheaqua his ancient enemy, which other wise he coulde not set vpon. Moreover that Olata Ouac Vtina was so mightie a Paracouffy, that Satourioua was not able to withstand his forces: but being agreed together they might easily ouerthrow all their enemies, and might passe the confines of the farthest Riuers that were towards the South. The messengers prayed mee to haue patience vntill the morowe, at what time they would come againe vnto me to certifie me of their Lords inclination: which they failed not to doe, aduertising me that Paracouffy Satourioua was the gladdest man in the world to create of this accord (although indeed hee was quite contrary) and that he besought mee to be diligent therein, promising to obserue and performe whatsoeuer I should agree vpon with those of Thimogoa: which things the messengers also rehearsed vnto the prisoners which I had ledde away. After they were departed, I resolved within two dayes to sende backe againe the prisoners to Olata Ouac Vtina, whose subiects they were: but before I embarked them, I gaue them certaine small trifles, which were little knives or tablets of glasse, wherein the image of King Charles the ninth was drawn very liuely, for which they gaue me very great thanks, as also for the honest entertainment which was giuen him at the Fort Caroline. After this they embarked themselves, with Captaine Vasseur, and with Monsieur de Arlac mine Ensigne, which I had sent of purpose to remaine a certaine time with Ouac Vtina, hoping that the fauour of this great Paracouffy would serue my turne greatly to make my discoueries in time to come. I sent with him also one of my Sergeants, and five gallant Souldiers.

Thus things passed on this maner, and the hatred of Paracouffy Satourioua against mee did

still

will continue, until that on the nine and twentieth of August a lightning from heauen fell within halfe a league of our Fort, more worthy I beleue to be wondered at, and to bee put in writing, then all the strange signes which haue bene seene in times past, and whereof the histories haue neuer written. For although the medowes were at that season all greene, and halfe covered ouer with water, neuertheless the lightning in one instant consumed aboue five hundred acres therewith, and burned with the ardent heate thereof all the foules which tooke their pastime in the medowes, which thing continued for three dayes space, which caused vs not a little to muse, not being able to iudge whereof this fire proceeded: for one while wee thought that the Indians had burnt their houses, and abandoned their places for feare of vs: another while wee thought that they had discovered some shippes in the Sea, and that according to their custome they had kindled many fires here and there, to signifie that their Countrey was inhabited: neuertheless being not assured, I determined to sende to Paracoussy Serranay to knowe the trueth thereof. But euen as I was vpon the point to sende one by boate to discover the matter, five Indians came vnto mee from Paracoussy Allimacany, which at their first entrie made vnto mee a long discourse, and a very large and ample oration (after they had presented mee with certaine baskets full of Peas, of Pumpions and of Grapes) of the louing amitie which Allimacany desired to continue with mee, and that hee looked from day to day when it would please mee to employ him in my seruice. Therefore considering the seruiceable affection that hee bare vnto mee, hee found it very strange, that I thus discharged mine Ordinance against his dwelling, which had burnt by an infinite sight of greene medowes, and consumed euen downe vnto the bottome of the water, and came so neere vnto his mansion, that hee thought hee sawe the fire in his house: wherefore hee besought mee most humbly to commaund my men that they would not shoote any more towards his lodging, otherwise that hereafter he should be constrained to abandon his countrey, and to retire himselfe into some place further off from vs.

Having understood the foolish opinion of this man, which notwithstanding coulde not choose but bee very profitable for vs, I dissembled what I thought thereof for that time, and answered the Indians with a cherefull countenance, that the relation which they made vnto mee of the obedience of their Paracoussy did please mee right well, because that before hee had not behaued himselfe in such sort towards mee, especially when I summoned him to sende mee the prisoners of great Olata Odae Vcina which he detained, whereof notwithstanding he made no great accompt, which was the principall cause wherefore I had discharged mine Ordinance against him: not that I meant to reach vnto his house (as I might haue done easily, if it had pleased me) but that I was content to shoote the halfe way to make him knowe my force: assuring him furthermore, that on condition that he would continue in his good affection, no more ordinance should be discharged against him hereafter: and besides that I would become his faithfull protectour against his greatest enemies.

The Indians contented with mine answer returned to assure their Paracoussy, which notwithstanding the assurance withorewe himselfe from his dwelling twentie or five and twentie leagues off, and that for the space of more then two moneths. After that three dayes were expired, the fire was quite extinguished. But for two dayes after there followed such an excessive heate in the aire, that the Riuer neere vnto which we planted our habitation, became so hot, that I thinke it was almost ready to seeth. For there died so great abundance of fish, and that of so many diuers sorts, that in the mouth of the Riuer onely there were founde dead ynough to haue laden fiftie Carts, whereof there issued a putrefaction in the aire, which bred many dangerous diseases amongst vs, insomuch that most of my men fell sicke, and almost ready to ende their dayes. Yet notwithstanding it pleased our mercifull God so to prouide by his prouidence, that all our men recovered their health without the losse of any one of them.

Monsieur de Arlac, Capitaine Vasseur, and one of my Sergeants being embarked with their tenne Souldiers about the tenth of September, to cary backe the prisoners vnto Vcina, sailed so farre by the Riuer, that they discovered a place called Mayarquas distant from our Fort about fourescore leagues, where the Indians gaue them good entertainment, and in many other villages which they found. From this place they rowed to the dwelling of Paracoussy Vcina, which after hee had feasted them according to his abilitie and power, prayed Monsieur de Arlac and all his Souldiers to stay a while with him, to ayde and assist him in battaille against one of his enemies called Porahou, whereunto Monsieur de Arlac consented willingly. And because hee knew not how long he might haue occasion to stay in these parts, hee sent mee Capitaine Vasseur and the Barke backe againe, which brought home onely five Souldiers with him.

Now because the custome of the Indians is alwayes to wage war by surprize, Vcina resolved to

take his enemy Potanou in the morning by the breake of the day : to bring this to passe, hee made his men to trauaile all the night, which might be in number two hundred persons, so well advised, that they prayed our French-shot to be in the fore-front, to the ende (as they saide) that the noise of their pieces might astonish their enemies : notwithstanding they coulde not march so secretly, but that those of the village of Potanou, distant from the dwelling of Vina about fise and twentie leagues, were ware of them : which suddenly employed and bestowed all their endeouour to defend their village enclosed all with trees, and issued out in great companies: but finding themselves charged with shotte, (a thing wherewith they neuer had bene acquainted) also beholding the Captaine of their bande fall downe dead in the beginning of their skirmish, with a shot of an Harquebuse which strooke him in the forehead, discharged by the bande of Monsieur de Arlac, they left the place : and the Indians of Vina gate into the village, taking men, women, and children prisoners. Thus Paracouffy Vina obtained the victory by the ayde of our men, which slew many of his enemies, and lost in this conflict one of their companions, wherewith Vina was very much grieved. Eight or tenne dayes after, I sent Captaine Vasseur backe againe with a Barke to fetch home Monsieur de Arlac and his Souldiers, which at their returne brought mee certaine presents from Vina, as some silver, a small quantitie of golde, painted skinnies, and other things, with a thousand thanks, which the Paracouffy gaue me, which promised that if in any enterprize of importance I should haue neede of his men, he would furnish mee with three hundred and aboue.

While I thus trauailed to purchase friends, & to practise one while with one here, an other while with another there, certaine Souldiers of my company were suborned vnder hand by one named La Roquette of the Countrey of Perigori, which put in their heads that hee was a great Magician, and that by the secrets of Art-magick he had discovered a Mine of golde and silver farre by within the Riuer, whereby (vpon the losse of his life,) every Souldier should receiue in ready Bullion the value of tenne thousand Crownes, beside and aboue fiftene hundred thousand which should be reserved for the Kings Maestie : wherefore they allied themselves with La Roquette and another of his confederates, whose name was Le Genre, in whom notwithstanding I had great affiance. This Genre exceeding desirous to enrich himselfe in those parts, and seeking to be reuenged, because I would not giue him the carriage of the Paquet into France, secretly enfourmed the Souldiers that were already suborned by La Roquette, that I would deprive them of this great gaine, in that I did let them dayly on worke, not sending them on euery side to discover the Countreys : therefore that it were a good deede, after they had made mee vnderstand so much, to seeke meanes to dispatch mee out of the way, and to choose another Captaine in my place, if I would not giue them victuals according to their disordinate appetite. Hee also brought mee word hereof himselfe, making a large discourse vnto mee of the good affection of the Souldiers, which all besought mee that I would conduct them to the Countreys where the Mine was : I made him answer that all could not goe thither, and that it was necessary before their departure to settle our Fortresse in such estate, that those which were to stay at home behind should remaine in securitie against the Indians which might surprisethem. Furthermore, that their manner of proceeding seemed strange vnto mee, for that they imagined, that the Kings Maestie was at the charges of our voyage for none other ende, but onely to enrich them at their first arrivall, in as much as they shewed themselves much more giuen vnto couetousnesse, then vnto the seruice of their Prince : But seeing mine answer tended vnto none other ende but to make our Fortresse strong and defensible, they determined to trauaile in the worke, and made an ensigne of olde linnen, which ordinarily they bare vpon the rampart when they went to worke, alwayes wearing their weapons, which I thought they had done to incourage themselves to worke the better. But as I perceived afterwards, and that by the confession of Genre sent mee in letters which he writ to mee of that matter, these gentle Souldiers did the same for none other ende, but to haue killed mee, and my Lieutenant also, if by chance I had giuen them any hard speeches. About the twentieth of September, as I came home from the woods and coppises to finish the building of my Fort, (and that according to my vsuall maner, I marched first to giue encouragement vnto my Souldiers) I chafed my selfe in such sort, that I fell into a sore and grievous sicknesse, whereof I thought I should haue died : During which sicknesse, I called Le Genre often vnto mee, as one that I trusted aboue all others, and of whose conspiracies I doubted not any whit at all. In this meane while assembling his complices, sometime in his chamber and sometime in the woods to consult with them, hee spake vnto them to choose another Captaine besides mee, to the intent to put mee to death : but being not able by open force to execute his malicious intention, hee gate him vnto mine Apothecarie, praying him instantly to mingle in my medicine,

medicine, which I was to receiue one or two dayes after, some drugges that should make mee pitch ouer the pearch, or at the least that hee would giue him a little Arsenike or quicke Siluer, which hee himselfe would put into my drinke. But the Apothecary denied him, as did in like manner Master S. which was Master of the fire-works. Thus wholly disappointed of both his meanes, hee with certaine others resolved to hide a little barrell of gunne-powder vnderneath my bed, and by a traine to set it on fire.

The Master of the fire-works.

Upon these practises a Gentleman which I had dispatched to retorne into France, being about to take his leaue of me, aduertised me, that Gieure had giuen him a booke full of all kinde of lewde inuectiues and slanders against me, against Monsieur de Ottigny, and against the principal of my company: vpon which occasion I assembled all my Souldiers together, and Captaine Bourdet with all his, which on the fourth of September arriued in the roade, and were come into our Riuer. In their presence I caused the contents of the booke to be read aloud, that they might heare record of the vntruths that were written against mee. Gieure, which had gotten him into the woods for feare of being taken, (where he liued for a while after with the Sauages by my permission,) writ vnto mee often, and in many of his letters confessed vnto mee, that he had deserued death, condemning himselfe so farre forth, that he referred all to my mercie and pitie.

Captaine Bourdet arriued in Florida the 4. of September.

The seventh or eighth day of Nouember, after I had caused sufficient provision of such victuals as were needefull to be made, I sent two of my men, to wit, La Roche Ferriere, and another towarde King Vcina, to discouer euery day more and more of the Countrey: where hee was the space of five or sixe moneths, during which hee discouered many small villages, and among others one named Hostagua, the King whereof being desirous of my friendship, sent vnto mee a quiver made of a Luserna skinne full of arrowes, a couple of bowes, foure or five skinnies painted after their maner, and a chaine of Siluer weying about a pounce weight. In recompence of which presents I sent him two whole suites of apparell, with certaine cutting hookes or hatchets.

The 4. voyage the 7 of Nouember.

Hostagua a village.

After these things therfore in this sort passed, about the tenth of this moneth, Captaine Bourdet determined to leaue mee and to retorne into France. Then I requested him, yea rather was exceeding importunate with him, to carry home with him some sixe or seuen Souldiers, whom I could not trust by any meanes: which hee did for my sake, and would not charge himselfe with Gieure, which offered him a great summe of money, if it would please him to carry him into France: hee transported him onely to the other side of the Riuer. Thre dayes after his departure thirteene Hariners which I had brought out of France, suborned by certaine other Hariners which Captaine Bourdet had left me, stole away my Barkes in maner following. These Hariners of Captaine Bourdet put mine in the head, that if they had such Barkes as mine were, they might gaine very much in the Isles of the Antilles, and make an exceeding profitable voyage. Whereupon they beganne to deuise howe they might steale away my Barkes, and consulted that when I should command them to goe vnto the village of Sarauahi distant about a league and an halfe from our Fort, and situated vpon an arme of the Riuer, (whither according to my maner I sent them daily to seeke clay, to make bricke and morter for our houses) they would retorne no more, but would furnish themselves with victuals as well as they might possibly: and then would embarke themselves all in one vessel, and would goe their way: as in deede they did, And that which was worse, two Flemish Carpenters, which the saide Bourdet had left mee, stole away the other Barke, and before their departure cut the cables of the Barke, and of the ship-boate, that it might goe away with the tyde, that I might not pursue them: so that I remained without either Barke or boate, which fell out as unluckily for mee as was possible. For I was ready to imbarke my selfe with all speede, to discouer as farre by our Riuer, as I might by any meanes. Nowe my Hariners, (as I vnderstood afterwards) tooke a Barke that was a passenger of the Spaniards neere the Isle of Cuba, wherein they founde a certaine quantitie of golde and siluer, which they seized vpon. And hauing this bootie they lay a while at Sea, vntill their victuals beganne to faile them: which was the cause, that oppressed with famine they came vnto Hauana the principall Towne of the Isle of Cuba: whereupon proceeded that mischiefe which hereafter I will declare more at large. When I saw my Barkes returned not at their wonted houre, and suspecting that which fell out indeed, I commanded my Carpenters with all diligence to make a little boat with a flat bottome, to search those Riuers for some newes of these Hariners. The boate dispatched within a day and a night, by reason that my Carpenters found planks and timber ready sawed to their hands, as commonly I caused my Sawyers to prouide it, I sent men to seeke some newes of my thieues: but all was in vaine. Therefore I determined to cause two great Barkes to be built, eche of which might be thirtie five, or thirtie sixe foote long in the keele.

One of his Barkes stolne away by his Hariners.

Diers.

And now the worke was very well forwarde which I set my workmen about, when ambition and auarice, the mother of all mischief, tooke roote in the hearts of foure or five souldiers which could not away with the worke and paines taking: and which from hence forward (namely one Fourniaux, and one La Croix, and another called Steuen le Geneuois, the three principall authours of the sedition) beganne to practise with the best of my troupe, shewing them that it was a vile thing for men of honest parentage, as they were, to mople themselves thus with abiect and base worke, seeing they had the best occasion of the worlde offered them to make themselves all riche: which was to arme the two Barkes which were in building, and to furnish them with good men: and then to saile vnto Peru, and the other Isles of the Antilles, where euery Souldier might easily enrich himselfe with tenne thousand Crownes. And if their enterprise should bee misliked withall in France, they should bee alwayes able, by reason of the great wealth that they should gaine, to retire themselves into Italy, vntill the heate were ouerpasse, and that in the meane season some warre would fall out, which would cause all this to be quite forgotten.

This word of riches sounded so well in the eares of my Souldiers, that in fine, after they had oftentimes consulted of their affaires, they grew to the number of threescore and sixe: which to colour their great desire which they had to goe on stealing, they caused a request to bee presented vnto mee by Francis de la Caille Sergeant of my company, contayning in sum a declaration of the small store of victuals that was left to maintaine vs, vntill the time that shippes might returne from France: for remedy whereof they thought it necessary to sende to New Spaine, Peru, and all the Isles adioyning, which they besought mee to be content to graunt. But I made them answer, that when the Barkes were finished, I would take such good order in generall, that by meanes of the Kings marchandise, without sparing mine owne apparell, wee would get victuals of the inhabitants of the Countrey: seeing also that wee had ynough to serue vs for foure moneths to come. For I feared greatly, that vnder pretence of searching victuals, they would enterprise somewhat against the King of Spaines Subiects, which in time to come might iustly bee layde to my charge, considering that at our departure out of France, the Queene had charged me very expressely, to doe no kinde of wrong to the King of Spaines Subiects, nor any thing whereof he might conceiue any ielousie.

They made as though they were content with this answer. But eight dayes after, as I continued in working vpon our fort, and on my Barkes, I fell sicke. Then my seditious companions forgetting all honour and duetie, supposing that they had found good occasion to execute their rebellious enterprise, beganne to practise afresh their former designes, handling their businesse so well, during my sicknesse, that they openly vowed that they would seaze on the Corps de gard, and on the fort, yea, and force mee also, if I would not consent vnto their wicked desire. My Lieutenant being hereof aduertised, came and tolde mee that he suspected some euill practise: and the next day in the morning I was saluted at my gate with men in complet harness, what time my Souldiers were about to play mee a shewde trick: then I sent to seeke a couple of Gentlemen whom I most trusted, which brought mee word that the Souldiers were determined to come to me to make a request vnto me: But I tolde them that this was not the fashion to present a request vnto a Capitaine in this manner, and therefore they should send some set vnto me to signifie vnto mee what they would haue. Hereupon the five chiefe authours of the sedition armed with Corsets, their Pistolles in their handes already bent, prest into my chamber, saying vnto mee, that they would goe to New Spaine to seeke their aduenture. Then I warned them to bee well aduised what they meant to doe: but they forthwith replied, that they were fully aduised already, and that I must graunt them this request. Seeing then (quoth I) that I am enforced to doe it, I will sende Capitaine Vasseur and my Sergeant, which will make answer and giue mee an accompt of euery thing that shall be done in this voyage: And to content you, I thinke it good that you take one man out of euery chamber, that they may accompany Capitaine Vasseur and my Sergeant. Whereupon, blaspheming the Name of God, they answered that they must goe thither: and that there lacked nothing, but that I should deliuer them the armour which I had in my custodie, for feare least I might vse them to their disadvantage (being so villanously abused by them:) wherein notwithstanding I would not yeeld vnto them. But they tooke all by force, and caried it out of my house, yea and after they had hurt a Gentleman in my chamber, which spake against their doings, they layd hands on mee, and caried mee very sicke, as I was, prisoner into a shippe which rode at anker in the midst of the Riuer, wherein I was the space of fiftene dayes, attended vpon with one man onely without permission for any of my seruants to come to visite mee: from euery one of whom, as also from the rest that tooke my part, they tooke away their armour. And they sent mee a passport to signe, telling me plainly after I had denied them, that

that if I made any difficulty, they would all come and cut my throat in the shippe. This was I constrained to signe their Passe-port, and forthwith to grant them certaine mariners, with Trenchant an honest and skilfull Pilot. When the barks were finished, they armed them with the kings munition, with powder, with bullets, and artillery, as much as they needed, and chose one of my Sergeants for their Captain, named Bertrand Conferrent, and for their Ensigne one named La Croix. They compelled Captaine Vasseur to deliuer them the flag of his ship. Then hauing determined to saile vnto a place of the Antilles, called Leauguaue, belonging vnto the king of Spaine, and there to goe on land on Christmasse night, with intention to enter into the Church while the Masse was sayd after midnight, and to murder all those that they found there, they set saile the eight of December. But because the greatest part of them by this time repented them of their enterpryse, and that now they began to fall into mutinies among themselves, when they came forth of the mouth of the riuer, the two barks diuided themselves; the one kept along the coast vnto Cuba, to double the Cape more easily, and the other went right forth to passe athwart the Isles of Lucaya: by reason whereof they mette not vntill sixe weeks after their departure. During which time the barke that tooke her way along the coast, wherein one of the chiefe conspiratours named De Orange was Captaine, and Trenchant his Pilot, neere vnto a place called Archaha, tooke a Bzigantine laden with a certaine quantity of Cassau, which is a kinde of bread made of roots, and yet neuertheless is very white, and good to eat, and some little Wine, which was not without some losse of their men: for in one assault that the inhabitants of Archaha made vpon them, two of their men were taken, to wit, Steven Gondeau, and one named Grand Pré, besides two more that were slaine in the place, namely Nicolas Master and Doublet: yet neuertheless they tooke the Bzigantine, wherein they put all their stuffe that was in their owne Barke, because it was of greater burthen and better of saile then their owne. Afterward they sailed right vnto the Cape of Santa Maria nere to Leauguaue, where they went on land to calke and bray their ship which had a great leake. In this meane while they resolved to saile to Baracou, which is a village of the Isle of Iamaica: where at their arriual they found a Carauel of fifty or threescore tunnes burden, which they tooke without any body in it: and after they had made good cheere in the village the space of five or sixe dayes, they embarked themselves in it, leauing their second ship: then they returned to the Cape of Tiburon, where they met with a Patach, which they tooke by force after a long conflict. In this Patach the gouernour of Iamaica was taken, with great store of riches, as well of golde and siluer as of merchandise and wine, and many other things; wherewith our seditious companions not content, determined to seeke more in their carauell, and their gouernour of Iamaica also. After they were come to Iamaica, they missed of another carauel which did saue it selfe in the hauen. The gouernour being fine and subtle, seeing himselfe brought vnto the place which he desired and where he commanded, obtained so much by his faire words, that they which had taken him let him put two little hoes which were taken with him into a little cocke boat, and send them to his wife into the village, to aduertise her that she should make provision of victuals to send vnto him. But in stead of writing vnto his wife, he spake vnto the hoes secretly that with all diligence she should send the vessels that were in the hauens neere that place to succour and rescue him. Which he did so cunningly, that on a morning about the breake of the day, as our seditious companions were at the hauens mouth (which reacheth aboute two leagues by within the land) there came out of the hauen a malgualire which maketh saile both forward and backward, and then two great shippes, which might be ech of them of fourescore or an hundred tunnes a piece, with good store of ordinance, and well furnished with men: at whose coming our mutinous fellows were surprised, being not able to see them when they came, as well because of the darknesse of the weather, as also by reason of the length of the hauen, considering also they mistrusted nothing. True it is that five or six & twenty that were in the bzigantine discovered these ships when they were nere them, which seeing themselves pressed for want of leasure to weigh their anker, cut their cable, and the trumpeter which was in it aduertised the rest: whereupon the Spaniards seeing themselves descried, discharged a volley of canon shot against the French men, which they followed by the space of three leagues, and recovered their own ships: the bzigantine which escaped away, passed in the sight of the Cape des Aigrettes, and the Cape of S. Anthony situate in the Isle of Cuba, & from thence passed with in the sight of Hauana; but Trenchant their pilot, and the trumpeter, and certaine other mariners of this bzigantine, which were led away by force in this voyage (as elsewhere we haue declared) desired nothing more then to returne to me: wherefore these men agreed together (if peraduenture the wind serued them well) to passe the chanell of Bahama, while their seditious companions were asleepe: which they did accomplish with such good successe, that in the morning toward

mutinous
souldiers.The sentence
of death.

Execution.

The continu-
ation of the
histoy.

the breake of the day about the five and twentieth of March they arrived vpon the coast of Florida: where knowing the fault which they had committed, in a kinde of mockery they counterfeited the Judges: but they played not this pranke vntill they had tippled well of the Wine which remained yet in their prize. One counterfeited the Judge, another presented my person: one other after he had heard the matter pleaded, concluded thus: Make you your causes as good as it pleaseth you, but if when you come to the fort Caroline the Captaine cause you not to be hanged, I will neuer take him for an honest man: others thought that my choler being passed, I would easily forget this matter. Their saile was no sooner descried vpon our coast, but the king of the place named Patica, dwelling eight leagues distant from our fort, and being one of our good friends, sent an Indian to aduertise me that he had descried a shippe vpon the coast, and that he thought it was one of our nation. Whereupon the brigantine oppressed with famine, came to an anchor at the mouth of the riuer of May, when at the first blush we thought they had bene shippes come from France; which gaue vs occasion of great ioy: but after I had caused her to be better viewed, I was aduertised that they were our seditious companions that were returned. Therefore I sent them word by Captaine Vasseur and my Sergeant, that they should bring vp their brigantine before the fortresse: which they promised to doe. Now there was not about two leagues distance from the mouth of the riuer where they cast anchor vnto the fortresse. The next day I sent the same Captaine and Sergeant with thirty souldiers, because I saw they much delayed their coming. Then they brought them: and because certaine of them had sworne at their departure, that they would neuer come againe within the fort, I was well pleased they should keepe their oth. For this purpose I waited for them at the riuers mouth, where I made my barks to be built, and commanded my Sergeant to bring the foure chiefe authours of the mutiny on shore; whom I caused immediatly to be put in fetters: for my meaning was not to punish the rest, considering that they were suborned, and because my counsell expressly assembled for this purpose had concluded that these foure only should die, to serue for an example to the rest. In the same place I made an Oration vnto them in this maner.

MY friends, you know the cause why our king sent vs vnto this country; you know that he is our naturall Prince, whom we are bound to obey according to the comendement of God, in such sort, that we ought neither to spare our goods nor liues to do those things that concerne his seruice: ye know, or at least you cannot be ignorant, that besides this general and naturall obligation, you haue this also ioyned thereunto, that in receiuing of him reasonable pay and wages, you are bound to follow those whom he hath established ouer you to be your gouernours, and to command you in his name, hauing for this purpose giuen him an oth of fidelitie, which you cannot by any meanes reuoke for any faire apparance which you haue to doe the contrary: for this is reason, that seeing you liue vpon his charges on this condition, (this is reason I say) that you should be faithfull vnto him. Notwithstanding you haue had more regard vnto your vnbridled affections then vnto vertue, which inuited you to the obseruance of your oth, in such sort that being become contemnners of all honesty, you haue passed your bonds, and thought that all things were lawfull for you. Whereupon it is fallen out, that while you thought to escape the iustice of men, you could not auoid the iudgement of God, which as a thing by no meanes to be auoided hath led you, and in spight of you hath made you to arrive in this place, to make you confesse how true his iudgements are, and that he neuer suffereth so foule a fault to escape unpunished.

After that I had vsed vnto them these or the like speeches, following that which wee had agreed vpon in counsell, in respect of the crimes which they had committed, aswel against the kings Maiesty as against mee which was their Captaine, I commanded that they should be hanged. Seeing therefore that there was no starting hole, nor meanes at all to saue themselves from this arrest, they tooke themselves vnto their prayers: yet one of the foure, thinking to raise a mutiny among my souldiers, sayd thus vnto them: What, brethren and companions, will you suffer vs to die so shamefully? And taking the word out of his mouth, I sayd vnto him, that they were not companions of authours of sedition and rebels vnto the kings seruice. Whereupon the souldiers besought me not to hang them, but rather let them be shot thorow, & then afterward, if I thought good, their bodies might be hanged vpon certaine gibbets along the hauens mouth: which I caused presently to be put in execution. Loe here what was the end of my mutinous souldiers, without which I had alwayes liued peaceably, and enioyed the good desire which I had to make an happy and quiet voyage. But because I haue spoken of nothing but their accidentes and aduentures which happened vnto them after their departure, without making any mention of our fort, I will returne to the matters from which I digressed, to declare that which fell out after their departure.

departure. First I began to consider, to the end I might confirme and make my selfe more constant in mine affliction, that these murmurers could not ground their sedition vpon want of victuals: for from the time of our arriual, euery souldier dayly vnto this day, and besides vntill the eight and twentieth of February, had a loafe of bread weighing two and twenty ounces. Again I recounted with my selfe that all new conquests by sea or by land are ordinarily troubled with rebellions, which are easie to be raised, as well in respect of the distance of place, as in respect of the hope that the souldiers haue to make their profit, as we may be well informed both by ancient histories and also by the troubles which lately happened vnto Christopher Columbus, after his first discouery, to Francis Pizarro, & Diego de Almagro in Peru, & to Fernando Cortes. An hundred thousand other things came vnto my minde, to incourage and confirme me. My Lieutenant Origony, and my Sergeant of my band came to seeke me in the ship, where I was prisoner, and carried me from thence in a barke as soone as our rebels were departed. After I was come vnto the fort, I caused all my company that remained, to be assembled in the midst of the place before the Corps de garde, and declared vnto them the faults which they that had forsaken vs had committed, praying them to beare them in memory, to beare witnesse thereof when need should require. Fourthly I ordained new Captaines to command the troupes; and prescribed them an order, according whereunto they were to gouerne themselves from thence forward, and to enter into their watch: for the greatest part of the souldiers, of whom I had the best opinion, were gone away with them. My declaration ended, they promised mee all with one accord to obey mee most humbly, and to doe whatsoeuer I should command them, though it were to die at my feet for the Kings seruice; wherein assuredly they neuer after failed: so that I dare say, after the departure of my mutinous companions I was as well obeyed as euer was Captaine in place where he commanded. The next day after my returne vnto the fort, I assembled my men together againe, to declare vnto them that our fort was not yet finished, and that it was needfull that all of vs should put thereto our helping hands, to assure our selues against the Indians: wherein hauing willingly agreed vnto mee, they raised it all withurfes from the gate vnto the riuer which is on the West side. This done, I set my Carpenters on worke to make another barke of the same bignesse that the others were of: I commanded the Sawyers that they should prepare plancks, the Smithes to prepare yron and nails, and certaine others to make coales: so that the barke was finished in eigheteen dayes. Afterward I made another lesser then the first, the better to discover by the riuer. In this meane space the Indians visited me, and brought me dayly certaine presents, as Fish, Deere, Turki-cocks, Leopards, little Beares, and other things according to the place of their habitation. I recompensed them with certaine Hatchets, Knives, Beads of glasse, Combes, and Looking-glasse. Two Indians came vnto me one day to salute me on the behalfe of their King, whose name was Marracon, dwelling from the place of our fort some forty leagues toward the South, and tolde mee that there was one in the house of King Onahagua which was called Barbu or the bearded man, and in the house of King Mathiaca another man whose name they knew not, which was not of their nation; whereupon I conceiued that these might be some Christians. Wherefore I sent to all the kings my neighbours to pray them, that if there were any Christian dwelling in their countreys, they would finde meanes that he might be brought vnto mee, and that I would make them double recompense. They, which loue rewards, tooke so much paine, that the two men, whereof we haue spoken, were brought vnto the fort vnto me. They were naked, wearing their haire long vnto their hanches as the Satiages vse to do, and were Spaniards borne, yet so well accustomed to the fashion of the countrey, that at the first sight they found our manner of apparell strange. After that I had questioned of certaine matters with them, I caused them to be apparellled, and to cut their haire; which they would not loose, but lapped it vp in a linnen cloth, saying that they would carry it into their countrey to be a testimony of the misery that they had indured in the Indies. In the haire of one of them was found a little gold hidden, to the value of fife and twenty crownes, which he gaue vnto me. And examining them of the places where they had bene, and how they came thither, they answered me that fiftene yeeres past, three shippes, in one of which they were, were cast away ouer against a place named Calos vpon the flats which are called The Marcyres, and that the king of Calos recovered the greatest part of the riches which were in the sayd shippes, traouelling in such sort that the greatest part of the people was saued, and many women; among which number there were three or foure women married, remaining there yet, and their childzen also, with this king of Calos. I desired to learne what this king was. They answered me, that he was the goodliest and the tallest Indian of the countrey, a mighty man, a warriour, and hauing many subiects vnder his obedience. They tolde me moreouer, that he had great store of golde and siluer, so farre soorthly

that in a certaine village he had a pit full thereof, which was at the least as high as a man, and as large as a cumme: all which wealth the Spaniards fully perswaded themselves that they could cause me to recouer; if I were able to march thither with an hundred shot, besides that which I might get of the common people of the countrey, which had also great store thereof. They further also aduertised me, that the women going to dance, did weare about their girdles plates of golde as broad as a sawcer, and in such number, that the weight did hinder them to dance at their ease; and that the men ware the like also. The greatest part of these riches was had, as they sayd, out of the Spanish shippes, which commonly were cast away in this straight; and the rest by the traffique which this king of Calos had with the other kings of the countrey: Finally, that he was had in great reuerence of his subiects; and that hee made them beleue that his sorceries and charmes were the causes that made the earth bring forth her fruit: and that hee might the easier perswade them that it was so, he retired himselfe once or twice a yeere to a certaine house, accompanied with two or three of his most familiar friends, where hee used certaine enchantments; and if any man intruded himselfe to goe to see what they did in this place, the king immediately caused him to be put to death. Moreover, they tolde me, that euery yeere in the time of harvest, this Savage king sacrificed one man, which was kept expressly for this purpose, and taken out of the number of the Spaniards which by tempest were cast away vpon that coast. One of these two declared vnto me, that hee had serued him a long time for a messenger; and that often times by his commandement he had visited a king named Oathcaqua, distant from Calos foure or five dayes iourney, which alwayes remained his faithfull friend: but that in the midway there was an Island situate in a great lake of fresh water, named Sarope, about five leagues in bignesse, abounding with many sorts of fruits, specially in Dates, which growe on the Palme trees, whereof they make a woonderfull traffique; yet not so great as of a kinde of root, whereof they make a kinde of meale, so good to make bread of, that it is impossible to eate better, and that for fiftene leagues about, all the countrey is fed therewith: which is the cause that the inhabitants of the Isle gaine of their neighbours great wealth and profit: for they will not depart with this root without they be well payed for it. Besides that, they are taken for the most warlike men of all that countrey, as they made good prooue when the king of Calos, hauing made alliance with Oathcaqua, was deprived of Oathcaquas daughter, which he had promised to him in marriage. He tolde me the whole matter in this sort: As Oathcaqua well accompanied with his people carried one of his daughters, exceeding beautifull, according to the colour of the countrey, vnto king Calos, to giue her vnto him for his wife, the inhabitants of this Isle aduertised of the matter, layed an ambush for him in a place where he should passe, and so behaued themselves, that Oathcaqua was discomfited, the betrothed young spouse taken, and all the damoels that accompanied her; which they caried vnto their Isle; which thing in all the Indians countrey they esteeme to be the greatest victory: for after ward they marry these virgins, and loue them aboue all measure. The Spaniard that made this relation, tolde mee that after this defeat he went to dwell with Oathcaqua, and had bene with him full eight yeeres, euén vntill the time that he was sent vnto me. The place of Calos is situate vpon a riuer which is beyond the Cape of Florida, forty or fifty leagues towards the South-west: and the dwelling of Oathcaqua is on this side the Cape toward the North, in a place which we call in the Chart Cannaueral, which is in 28 degrees. About the five and twentieth of January Paracussy Saourioia my neighbour sent me certaine presents by two of his subiects, to perswade me to loyne with him, and to make warre vpon Ouac Vrina which was my friend: and further besought me to retire certaine of my men which were with Vrina; for whom if he had not bene, he had often times set vpon him, and defeated him. He besought me heerein by diuers other kings his allies, which for three weekes or a more thence sent messengers vnto mee to this end and purpose: but I would not grant vnto them that they should make warre vpon him; yea rather contrariwise I endeoured to make them friends; whereint they condescended vnto me, so farre forth that they were content to allow of any thing that I would set downe: whereupon the two Spaniards which of long time knew well the nature of the Indians, warned me that in any case I should not trust vnto them, because that when they shewed good countenance and the best cheere vnto men, then was the time that they would surpise and betray them; and that of their nature they were the greatest traitours and most deepe dissemblers of the world. Besides I neuer trusted them but vpon good ground; as one that had discovered a thousand of their crafts and subtilties, as well by experience as by reading of the histories of late yeres. Our two barks were not so soone finished, but I sent Captaine Vasseur to discover along the coast lying toward the North, and commanded him to saile vnto a riuer, the king whereof was called Audusta, which was lord of that place, where those of the yere 1562 inhabited,

habited. I sent him two suites of apparell, with certaine hatchets, knives, and other small trifles, the better to insinuate my selfe into his friendship. And the better to win him, I sent in the barke with capitaine Vasseur a souldier called Aimon, which was one of them which returned home in the first voyage, hoping that king Audusta might remember him. But before they were imbar- ked I commanded them to make inquiry what was become of another called Rouffi, which re- mained alone in those parts when Nicolas Masson and those of the first voyage imbar- ked selues to returne into France. They vnderstood at their arriual there, that a barke passing that way had caried away the same souldier: and afterward I knew for a certainty that they were Spaniards which had caried him to Hauana. The king Audusta sent me backe my barke full of mill, with a certaine quantity of beanes, two stags, some skinnes painted after their maner, and certaine pearles of small value, because they were burnt: and sent me word that if I would dwell in his quarters, he would giue me a great countrey: and that after he had gathered his mill, he would spare me as much as I would haue. In the meane while there came vnto our fort a flocke of stocke-doues in so great number, and that for the space of seuen weeks together, that euery day wee killed with harquebush shot two hundred in the woods about our fort. After that Capitaine Vasseur was returned, I caused the two barks to be furnished againe with souldiers & mariners, and sent them to carry a present from me vnto the widow of king Hiocaia, whose dwelling was distant from our fort about twelue legues Northward. She courteously receiued our men, sent me backe my barks full of mill and acornes with certaine baskets full of the leaues of Cassine, wherewith they make their drinke. And the place where this widow dwelleth is the most plenti- full of mill that is in all the coast, and the most pleasant. It is thought that the queene is the most beautifull of all the Indians, and of whom they make most account: yea, and her subiects honour her so much, that almost continually they beare her on their shoulders, and will not suffer her to go on foot. Within a few dayes after the returne of my barks, she sent to visit me by her Hiaticui, which is as much to say, as her interpreter. Now while I thought I was furnished with victu- als vntill the time that our ships might come out of France (for feare of keeping my people idle) I sent my two barks to discouer along the riuer, and by toward the head thereof, which went so far by that they were thirtie leagues good beyond a place named Machiaqua, and there they disco- uered the entrance of a lake, vpon the one side whereof no land can be seene, according to the report of the Indians, which had oftentimes climed on the highest trees in the countrey to see land, and notwithstanding could not discerne any: which was the cause that my men went no further, but returned backe; and in comming home went to see the Island of Edelano situated in the midst of the riuer, as faire a place as any that may be seene thorow the world: for in the space of some three leagues, that it may containe in length and bredth, a man may see an exceeding rich countrey, and maruellously peopled. At the comming out of the village of Edelano to go vnto the riuers side a man must passe thorow an alley about three hundred paces long and fifty paces broad: on both sides wherof great trees are planted, the boughes whereof are tied together like an arch, and meet together so artificially that a man would thinke it were an arbour made of purpose, as faire I say, as any in all christendome, although it be altogether natural. Our men departing from this place rowed to Eneguape, then to Chilily, from thence to Patica, & lastly they came vnto Coya: where leauing their barks in a litle creeke of the riuer with men to guard them, they went to visit Vana, which receiued them very courteously: and when they departed from his house, he intreated them so earnestly, that five of my men remained with him; of which number there was one gentleman, named Grouald, which after he had abode there about two moneths, and taken great paines to discouer the countrey, with another which I had left a great while thereto that intent, came vnto me to the fort, and tolde me that he neuer saw a fairer countrey. Among other things, he repor- ted vnto me that he had seene a place named Hostaqua, and that the king thereof was so mighty, that he was able to bring three or foure thousand Sauages to the field; with whom if I would toyne and enter into league, we might be able to reduce all the rest of the inhabitants vnto our o- bedience: besides that this king knew the passages vnto the mountaine of Apalaci, which the French men desired so greatly to attaine vnto, and where the enemy of Hostaqua made his a- bode; which was easie to be subdued, if so be wee would enter into league together. This king sent me a plate of a minerall that came out of this mountaine, out of the foot whereof there run- neth a streame of golde or copper, as the Sauages thinke, out of which they dig by the sand with an hollow and drie cane of reed vntill the cane be full; afterward they shake it, and finde that there are many small graines of copper and silver among this sand: which giueth them to vnderstand, that some rich mine must needs be in the mountaine. And because the mountaine was not past five or sixe dayes iourney from our fort, lying toward the North-west, I determined alioone as our

supply should come out of France, to remooue our habitation vnto some riuer moze toward the North, that I might be nerer thereunto. One of my souldiers whose name was Peter Gamby, which had remained a long space befoze in this countrey to learne the languages and traffique with the Indians, at the last came to the village of Edelano, where hauing gotten together a certaine quantity of golde and silver, and purposing to returne vnto me, he prayed the king of the village to lend him a canoa (which is a vessel made of one whole piece of wood, which the Indians vse to fish withal, and to row vpon the riuers) which this lord of Edelano granted him. But being greedy of the riches which he had, he commanded two Indians, which he had charged to conduct him in the canoa, to murder him & bying him the merchandise and the gold which he had. Which the two traitours villanously executed: for they knockt him on the head with an hatchet, as he was blowing of the fire in the canoa to seethe fish. The Paracoussy Vcina sent certeine dayes afterward, to pray me to lend him a dozen or fifteene of my shot, to inuade his enemy Potanou, and sent me word, that this enemy once vanquished, he would make me passage, yea, and would conduct me vnto the mountaines in such sort, that no man should be able to hinder me. Then I assembled my men to demand their aduice, as I was wont to do in all mine enterprises. The greater part was of opinion, that I should do well to send succour vnto this Paracoussy, because it would be hard for me to discouer any further vp into the countrey without his helpe: and that the Spanyards when they were imployed in their conquests, did alwayes enter into alliance with some one king to ruine another. Notwithstanding, because I did alwayes mistrust the Indians, and that the moze after the last aduertisement that the Spanyards had giuen me, I doubted lest the small number which Vcina demanded might incurre some danger; wherefoze I sent him thirty shot vnder the charge of my Lieutenant Outigny, which stayed not about two dayes with Vcina, while he prepared victuals for his voyage, which ordinarily and according to the custome of the countrey are caried by women and yong boyes, and by hermaphrodites. Vcina setting forward with three hundred of his subiects, hauing ech of them their bowe and quiver full of arrowes, caused our thirty shot to be placed in the foreward, and made them march all the day, vntill that the night appoaching, and hauing not gone past halfe the way, they were inforced to lie all night in the woods, nere a great lake, and there to incampe themselves: they separated themselves by fire and fire, making ech of them a fire about the place where their king lay, for whose guard they ordeined a certeine number of those archers, in whom he put most confidence. As soone as day was come, the campe of the Indians marched within three leagues of Potanou: there king Vcina requested my Lieutenant to grant him foure or fife of his men to go and discouer the countrey; which departed immediately, and had not gone farre, but they perceived vpon a lake, distant about three leagues from the village of Potanou, three Indians which fished in a canoa. Now the custome is that when they fish in this lake, they haue alwayes a company of watchmen, armed with bowes and arrowes to guard the fishers. Our men being hereof aduertised by those of the company, durst not passe any further, for feare of falling into some ambush: wherefoze they returned towards Vcina, which suddenly sent them backe with a greater company to surprize the fishers, befoze they might retire and aduertise their king Potanou of the comming of his enemies. Which they could not execute so policieky, but that two of them escaped; the third also did the best he could to saue himselfe by swimming, in which meane while he was stayed with shot of arrowes, and they drew him starke dead vnto the banks side, where our Indians slayed off the skinne of his head, cut off both his armes in the high way, reseruing his haire for the triumph, which their king hoped to make for the defeat of his enemy. Vcina fearing lest Potanou aduertised by the fishers which were escaped, should put himselfe in armes to withstand him valiantly, asked counsell of his Iawa, which is as much to say in their language as his Magician, whether it were best to goe any further. Then this Magician made certeine signes, hidious and fearefull to beholde, and bled certeine words; which being ended, he sayd vnto his king, that it was not best to passe any further, and that Potanou accompanied with two thousand Indians at the least stayed in such and such a place for him, to bidde him battell: and besides this, that all the sayd Indians were furnished with cords to binde the prisoners which they made full account to take.

This relation caused Vcina to be vnwilling to passe any further: whereupon my Lieutenant being as angry as euer he might be, because hee had taken so great paines without doing of any thing of account, sayd vnto him, that hee would neuer thinke well of him nor of his people, if hee would not hazzard himselfe: and that if he would not doe it, at the least, that he would giue him a guide to conduct him and his small company to the place where the enemies were encamped. Whereupon Vcina was ashamed, and seeing the good affection of Monsieur de Outigny determined to go forward: and he failed not to finde his enemies in the very place which the Magician had

had named: where the skirmish beganne, which lasted three long houres: wherein without doubt Vrina had bene defeated; vnlesse our harquebussiers had not borne the burthen and brunt of all the battell, and slaine a great number of the souldiers of Potanou, vpon which occasion they were put to flight. Where withall Vrina being content for the present, caused his people to retire and returne homeward to the great discontentment of Monsieur de Ottigny, which desired nothing moze, then to pursue his victorie. After he was come home to his house he sent messengers to eightene or twentie villages of other kings his vassals, and summoned them to be present at the feasts and dances which he purposed to celebrate because of his victorie. In the meane while Monsieur de Ottigny refreshed himselfe for two dayes: and then taking his leaue of the Paracoussi, and leauing him twelue of his men to see that Potanou, be thinking himselfe of his late losse, should not come to burne the houses of Vrina, he set forward on his way to come vnto me vnto our Fort, where he by and told me how euery thing had passed: and withall that he had promised the twelue souldiers, that he would come backe againe to fetch them. Then the kings my neighbours all enemies to Vrina, being aduertised of the returne of my Lieutenant, came to visite me with presents and to enquire how things had passed, praying me all to receiue them into my fauour, and to become enemy to Vrina, which notwithstanding I would not grant them for my reasons that moued me.

Vrina hath 18
or 20 kings to
his Vassals.

The Indians are wont to leaue their houses and to retire themselves into the woods, the space of three moneths, to wit January, February, and March: during which time by no meanes a man can see one Indian. For when they goe on hunting, they make little cottages in the woods, whereunto they retire themselves, liuing vpon that which they take in hunting. This was the cause that during this time, we could get no victuals by their meanes: and had it not bene that I had made good provision thereof, while my men had store, vntill the end of Aprill (which was the time when at the bettermost, we hoped to haue had succour out of France) I should haue bene greatly amazed. This hope was the cause that the souldiers tooke no great care to looke well vnto their victuals, although I deuided equally among them that which I could get abroad in the countrey, without reseruing vnto my selfe any moze then the least souldier of all the company. The moneth of May approaching and no manner of succour come out of France, we fell into extreme want of victuals, constrained to eat the rootes of the earth and certayne sorrell which we found in the fields. For although the Sauages were returned by this time vnto their villages, yet they succoured vs with nothing but certayne fish, without which assuredly wee had perished with famine. Besides they had giuen vs before the greatest part of their maiz and of their beanes for our marchandise. This famine held vs from the beginning of May vntill the middle of June. During which time the poore souldiers and handicraftsmen became as feeble as might be, and being not able to worke did nothing but goe one after another in Centinel vnto the clift of an hill, situate very neere vnto the Fort, to see if they might discouer any French ship. In fine being frustrated of their hope, they assembled altogether, & came to beseech me to take some order that they might returne into France, considering that if we let passe the season to embarke our selues, we were neuer like to see our countrey, where it could not be chosen but that some troubles were fallen out, seeing they had broken their promise made vnto vs, and that no succour was come from thence. Therupon it was consulted and resolved by all the company, that the barke Breton should be trimmed vp, whereof Capitaine Vasseur had charge. But because the ship was not bigge enough to receiue vs all, some thought good to build the Brigandine two deckes higher, which our malicious souldiers had brought backe, and that 25 men should hazard themselves to passe therein into France. The rest being better aduised said that it should be farre better to build a faire shippe vpon the keele of the Galiole which I had caused to be made, promising to labour courageously therupon. Then I enquired of my shipwrights to knowe in what space they could make this shippe readie. They assured the whole company that being furnished with all things necessarie, they would make it readie by the 8 of August. Immediately I disposed of the time to worke vpon it, I gaue charge to Monsieur de Ottigny my Lieutenant to cause timber necessary for the finishing of both the vessels to be brought, and to Monsieur de Arlac my Standard-bearer to goe with a barke a league off from the Fort to cut downe trees fit to make planks, and to cause the sawiers which he carried with him to saw them: and to my Sergeant of the company to cause fifteene or seeteene men to labour in making coales: and to Master Hance keeper of the Artillery, & to the gunner to gather store of rosent to bray the vessels: wherein he vsed such diligence, that in lesse then 3 weekes he gathered 2 hogs-heads of the same together. There remained now but the principal, which was to recouer victuals to sustaine vs while our worke endured: which I undertooke to doe with the rest of my company & the Mariners of the ship. To this end I embarked my selfe making vp

the thirtieth in my great barke, to make a voyage of forty or fifty leagues, hauing with vs no prouision at all of victuals: whereby it may easily be gathered how simply those of our Fort were prouided. True it is that certaine souldiers being better husbandes then the rest, and hauing made some prouision of mast, solde a little measure thereof for fiftene and twentie sous vnto their companions. During our voyage we liued of nothing else but raspices, of a certaine round graine little and blacke, and of the rootes of palmitos which we got by the riuer sides: wherein after we had sayled a long time in vaine, I was constrained to returne to the Fort: where the souldiers beginning to be wearie of working, because of the extreme famine which did consume them, assembled themselves and declared vnto me, that seeing we could get no victuals of the Indians, it was expedient for the sauing of their liues, to seaze vpon the person of one of the Kings of the Countrey: assuring themselves that one being taken, the subiects would not suffer our men to want victuals. I made them answer that this enterprize was not rashly to be attempted: But that wee ought to haue good regarde vnto the consequence that might insue thereof. Whereupon they replied vnto me, that seeing the time was past of our succour from France, & that we were resolved to abandon the Countrey, that there was no danger to constrain the Sauages to furnish vs with victuals: which for the present I would not grant vnto them, but promised them assuredly that I would send to aduertise the Indians that they should bring me victuals for exchange of marchandise and apparell: which they also did for the space of certaine daies, during which they brought of their mast and of their fish: which these Indians being traiterous, & mischievous of nature, and knowing our exceeding strange famine, sold vs at so deere a price, that for lesse then nothing they had gotten from vs al the rest of our marchandise which remained. And which was worse, fearing to be forced by vs and seeing that they had gotten all from vs, they came no neerer to our Fort then the shot of an Harquebuz. Thither they brought their fish in their little boats, to which our poore souldiers were constrained to goe, and oftentimes (as I haue seene) to giue away the very shirts from their backs to get one fish. If at any time they shewed vnto the Sauages the excellent price which they tooke, these villaines would answer them roughly & churlishly: if thou make so great account of thy marchandise, eat it, and we will eat our fish: then fell they out a laughing and mocked vs with open throat. Whereupon our souldiers vterly impatient, were oftentimes ready to cut them in pieces, and to make them pay the price of their foolish arrogancie. Notwithstanding considering the importance hereof, Iooke paines to appease the impatient souldier: for I would not by any meanes enter into question with the Sauages, & it sufficed me to delay the time. Wherefore I deuised to send vnto Vcina to pray him to deale so farre forth with his subiects, as to succour me with mast and maiz: which he did very sparingly, sending me 12 or 15 baskets of mast, and two of pinocks, which are a kind of little greene fruits which grow among the weedes in the riuer, and are as big as cherries: yea & this was not but by giuing of them in exchange twice as much marchandise and apparell as they were worth. For the subiectes of Vcina perceived evidently the necessitie wherein we were, & began to vse the like speech vnto vs, as the others did: as it is commonly seene that neede altereth mens affections. While these things were in doing, a certain breathing space presented it selfe: for Vcina gaue me to vnderstand that there was a king his subiect whose name was Astina, which he determined to take prisoner, and to chastise him for his disobedience: that for this cause, if I would giue him aide with a certaine number of my souldiers, he would bring them to the village of Astina, where there was meanes to recouer mast and maiz. In the meane season he excused himselfe vnto me because he had sent me no more maiz, and sent me word that the little store that he had left, was scarcely sufficient for his seede-corne. Now being some what relieved, as I thought, by the hope which I had of this offer, I would not faile to send him the men which he desired of me, which neuerthelesse were very euill intreated: for he deceiued them, and in stead of leading them against Astina, he caused them to march against his other enemies. By Lieutenant which had the charge of this enterprize with Captaine Vasseur and my Sergeant was determined to be reuenged of Vcina and to cut him in pieces & his people: and had it not bene that they feared to do any thing against my wil, without all doubt they would haue put their enterprize in execution. Therefore they would not passe any further without aduertising me thereof. Wherefore being come backe againe vnto the Fort, angry & pricked deeply to the quicke for being so mocked, they made their complaints vnto me, declaring vnto me that they were almost dead for hunger. They told the whole matter to the rest of the souldiers, which were very glad that they had not entered into that action, & resolved, assembling themselves againe together, to let me vnderstand that they did persist in their first deliberation, which was, to punish the boldnesse and maliciousnes of the Sauages, which they could no longer endure, & were determined to take one of their kings prisoner: which thing I was enforced to grant vnto them, to p end to auoid a greater

a greater mischiefe, and the sedition which I foresaw would ensue, if I had made refusall thereof. For, sayd they, what occasion haue you to deny vs, considering the necessitie wherein we are, and the small account that they make of vs. Shall it not be lawfull for vs to punish them for the wrongs which they doe vnto vs, besides that we know apparantly how little they respect vs? Is not this sufficient although there were no necessitie at all, since they thus delude vs, and haue broken promise with vs? After I had therefore resolued with them to seaze on the person of Vcina, which besides that he had giuen vs occasion hereof, was also most able to help vs to recouer victuals, I departed with fiftie of my best souldiers all embarked in two Barkes & we arriued in the dominions of Vcina, distant from our ffort about 40 or 50 leagues: then going on shore we drew towards his village situated 6 great leagues from the riuer, where we tooke him prisoner, howbeit not without great cries and alarmes, and led him away in our barkes, hauing first signified vnto his ffather in law and his chiefe subiects, that in that I had taken him, it was not for any desire that I had to doe him any harme, but onely to relieue my necessitie and want of victuals which oppressed me, and that in case they would helpe me to some, I would find meanes to set him againe at libertie: that in the meane space I would retire my selfe into my Barkes (for I feared least they would there assemble themselves together, and that some mischiefe might thereof insue) where I would stay for him two dayes to receiue his answer: notwithstanding that my meaning was not to haue any thing without exchange of marchandise. This they promised they would doe. And in very deede the very same euening, his wife accompanied with all the women of the village came vnto the Riuer bzinke, and cryed vnto me to enter into the barke, to see her husband and her sonne, which I held both prisoners. I discovered the next day ffire or sixe hundred Indian archers, which drew neere vnto the riuer side, and came to me to signifie vnto me how that during the absence of their king, their enemy Potanou being thereof aduertised, was entred into their village, and had set all on fire. They prayed me that I would succour them: neuerthelesse in the meane while they had one part of their troope in ambush, with intent to set vpon me if I had come on land, which was easie for mee to discerne. For seeing that I refused so to doe, they greatly doubted that they were discouered, and sought by all meanes to remooue out of my minde that euill opinion which I had conceiued of them. They brought mee therefore fish in their little boates and of their meale of Maiz, they made also of their drinke which they call cassine, which they sent to Vcina and me.

Now albeif I had gotten this point of them that I held their king prisoner, yet neuerthelesse I could not get any great quantitie of victuals for the present: the reason was, because they thought that after I had drawn victuals from them, I would put their king to death. For they measured my will according to their custome, whereby they put to death all the men prisoners that they take in warre. And thus being out of all hope of his libertie, they assembled themselves in the great house, and hauing called all the people together they proposed the election of a new King, at which time the ffather in lawe of Vcina set one of the kings young sonnes vpon the Royall throne: and tooke such paynes that euery man did him homage by the maior part of the voyces. This election had like to haue bene the cause of great troubles among them. For there was a kinsman of the kings neere adioyning, which pretended a Title to the kingdome, and in deede he had gotten one part of the subiects: notwithstanding this enterprise could not take effect, forasmuch as by a common consent of the chiefe, it was consulted and concluded, that the sonne was more meete to succede the ffather then any other. Now all this while I kept Vcina with me, to whom I had giuen some of mine apparell to cloth him, as I had likewise done vnto his sonne. But his subiects which before had an opinion that I would haue killed him, being aduertised of the good entertainment which I vled towards him, sent two men which walked along the riuer, and came to visite him, and brought vs some victuals. These two men at their coming were receiued by me with all courtesie, and entertained according to the victuals which I had. While these things thus passed, there arriued from all quarters many Sauages of the countries adioyning, which came to see Vcina, and sought by all meanes to perswade me to put him to death, offering that if I would do so, they would take order that I should want no victuals. There was also a King my neighbour whose name was Saturioia, a subtil and craftie man, and one that shewed by prooffe that he was greatly practised in affaires. This King sent ordinarily messengers vnto me, to pray me to deliuer Vcina vnto him: and to win me the more easily, he sent twise seuen or eight baskets of Maiz or of Maiz, thinking by this way to allure me, & to make me come to composition with him: in the end notwithstanding when he saw he lost his time, he ceased to visite me with ambassages & victuals: & in the meane while I was not able with the same troope of victuals which I had, so well to proportion out the trauaile vpon the ships which we built to returne into

France, but that in the end we were constrained to indure extreme famine, which continued among vs all the moneth of May: for in this latter season, neither Maiz nor Beanes, nor Hatt was to be found in the villages, because they had employed all for to sowe their fields, insomuch that we were constrained to eate rootes, which the most part of our men panned in the morters which I had brought with me to beate gunnepowder in, and the graine which came to vs from other places: some tooke the wood of Esquine, beate it, and made meale thereof, which they boyled with water, and eate it: others went with their harguebules to seeke to kill some foule. Pea this miserie was so great, that one was found that gathered vp among the filth of my house, all the fish bones that he could finde, which he dyed and beate into powder to make bread thereof. The effects of this hideous famine appeared incontinently among vs, for our bones eftsoones beganne to cleave so neere vnto the skinne, that the most part of the souldiers had their skinnes peirced thorow with them in many partes of their bodies: in such sort that my greatest feare was, least the Indians would rise vp against vs, considering that it would haue bene very hard for vs to haue defended our selues in such extreme decay of all our forces, besides the scarcitie of all victuals, which fayled vs all at once. For the very riuer had not such plentie of fish as it was wont, and it seemed that the land and water did fight against vs. Now as we were thus vpon termes of dispayre, about the end of the moneth of May, and the beginning of June, I was aduertised by certaine Indians that were my neighbours, that in the high Countrey vp about the riuer, there was new Maiz, and that that countrey was most forward of all. This caused me to take vpon me to go thither with a certaine number of my men, and I went by the riuer to a place called Enecaque: where I met the sister of Vcina in a village where she made vs very good cheere and sent vs fish. We found that which was tolde vs to be true: for the maiz was now ripe: but by this good lucke one shewde turne happened vnto me. For the most part of my souldiers fell sicke with eating more of it then their weakened stomackes could digest. We had also bene the space of foure dayes since we departed from our Fort, without eating any thing, sauing little pinockes, and a little fish, which we got of the fishers which wee met sometimes along the riuer. And yet this was so little that certaine souldiers eate priuily little whelpes which were newly whelped. The next day I purposed to go into y^e Ile of Edelano to take the king which had caused one of my men to be slaine, as I haue mentioned before: but being aduertised of my departing out of my Fort, and of the way which I tooke vp the riuer, he feared that I went forth with a purpose to be reuenged of the euill turne which he played: so that when I came thither, I found the houses empty, for he was repyed a little before with all his people: & I could not by any meanes keepe my souldiers, being angry because they had lost one of their companions, from setting the village on fire. At my departure from thence I passed backe againe by Enecaque, where I gathered as much maiz as I could possibly: which with great diligence I conueied to our Fort to succour my poore men, which I had left in great necessitie. They therefore seeing me a farre off comming, ranne to that side of the riuer where they thought I would come on land: for hunger so pinched them to the heart, that they could not stay vntill the victuals were brought them to the Fort. And that they well shewed alldone as I was come, and that I had distributed that little maiz among them, which I had giuen to ech man, before I came out of the barke: for they eate it before they had taken it out of the hulke. But seeing my selfe in this extreme neede, I tooke paines day by day to seeke some villages where there was some food. And as I trauailed this way and that way, it happened that two of my Carpenters were killed by the two sonnes of king Emola, and by one whose name was Casti, as they went on walking to the village called Achore. The cause of this murder was, because they could not refraine themselves as they walked through the fields from gathering a little maiz, which as they were doing, they were taken in the maner: wherof I was presently aduertised by an Indian which a little before had brought me a present from Nia Cubacani Queene of a village, and neighbour to our Fort. Upon receipt of this aduertisement, I sent my Sergeant with a number of souldiers which found nothing else but the 2 dead corpes, which they buried and returned without doing any other exploit, because the inhabitants were fled away, fearing they should be punished for such a foule fact. As these things thus passed, & that by this time we had almost dyuen out the moneth of May, two subiects of king Vcina came vnto me with an Hermaphrodite, which shewed mee that by this time the maiz was ripe in the greatest part of their quarters. Whereupon Vcina signified vnto me that in case I would carrie him home to his house, he would take such good order that I should haue plentie of maiz & beanes: and withall, that the field which he had caused to be sown for me, should be referued to my vse. I consulted with my men concerning this matter, and found by the aduice of all my company, that it was best to grant him his request, saying, that he had meanes to succour vs with food sufficient

to serue our turnes for our embarkement, and that therefore I might do well to carry him home. Therefore I caused the two barks forthwith to be made readie, wherein I sailed to Patica, a place distant from his village 8 or 9 leagues, where I found no bodie, for they were gotten into the woods, and would not shew themselves, albeit Vcina shewed himselfe vnto them, for as much as they imagined that I should be constrained to let him go. But seeing no body to shew themselves, I was constrained to hazard one of my men which had bene acquainted with the state of the countrey, to whom I deliuered the young sonne of Vcina, and commanded him to goe with diligence to the village of Vcina, vnto his father in law and his wife, to aduertise them that if they would haue their king againe, they should bring me victuals vnto the side of the little riuer whither I was gone. At my mans comming euery one made much of the little childe, neither was there a man that thought not himselfe well appaied to touch him. His father in law and his wife hearing of these newes came presently towards our barks, and brought bread which they gaue vnto my souldiers, they held me there three dayes, and in the meane while did all that they could to take me: which presently I discovered, and therefore stood diligently vpon my gard. Therefore perceiving they could not haue their purpose, and that they were already discovered, they sent to aduertise me that as yet they could not helpe me to victuals, and that the corne was not yet ripe. Thus I was constrained to returne and to carry backe Vcina home, where I had much adoe to saue him from the rage of my souldiers: which perceiving the maliciousnes of the Indians, went about to haue murdered him. Howouer it seemed they were content that they had gotten the sonne, & that they cared not greatly for the father. Now my hope fayling me on this side, I deuised to send my men to the villages where I thought the maiz was by this time ripe: I went to diuers places, and continued so doing 15 daies after, when as Vcina besought me againe to send him vnto his village, assuring himselfe that his subiects would not sticke to giue me victuals: and that in case they refused so to do, he was content that I should do what I thought good with him. I undertooke this voyage the second time with the two barks furnished as before. At my comming vnto the little riuer, we found his subiects there, which failed not to come thither with some quantitie of bread, beanes, and fish, to giue my souldiers. Neuerthelesse returning againe to their former practise they sought all meanes to entrap me, hoping to cry quittance for the imprisonment of their king, if they might haue gotten the victorie of me. But after that they sawe the small meanes, which they had to annoy me, they returned to intreaties, and offered that if I would giue them their king with certaine of my souldiers, they would conduct them vnto the village, and that the subiects seeing him, would be more willing to giue vs victuals. Which thing notwithstanding I would not grant vnto them (mistrusting their subtiltie, which was not so couert, but that one might espie day at a little hole) vntill they had first giuen me two men in pledge with charge that by the next day they should bring me victuals. Which thing they granted, and gaue mee two men which I put in chaines for feare they should escape away, as I knew well they were instructed to doe. Foure dayes were spent in these conferences, at the end whereof they declared vnto me, that they could not fully and wholly performe their promise: and that the uttermost that they could doe for the present, was to cause ech subiect to bring his burthen of mill. To conclude, they were content to doe so on condition that I would send them their two pledges within ten dayes. As my Lieutenant was ready to depart, I warned him aboue all things to take heede he fell not into the Indians hands: because I knew them to be very subtil and craftie to enterprize and execute any thing to our disadvantage. He departed therefore with his troope, and came to the small riuer whereinto we were accustomed to enter to approach as neere as we could vnto the village of Vcina, being five French leagues distant from thence. There he went on shore, put his men in good array, and drew straight towards the great house that was the kings, where the chiefe men of the countrey were assembled, which caused very great store of victuals to be brought now one and then another, in doing whereof they spent notwithstanding three or foure dayes: in which meane while they gathered men together to set vpon vs in our retreat. They vied therefore many meanes to holbe vs still in breath. For one while they demanded their pledges, another while (seeing my Lieutenant would not yeeld to them, vntill such time as they had brought the victuals vnto the boats, according to the agreement passed betwene vs) they signified vnto him that the women and young children were affraide out of all measure to see fire in their matches to neere their harquebuses: and that therefore they most earnestly besought them to put them out, that they might more easily get people enough to carry the victuals, and that they for their partes would leaue their bowes and arrowes, and would be contented that their seruants should carrie them. This second request was as flatly denied them as the former: For it was an easie matter to smel out their intention. But while these things were thus in handling, Vcina by no meanes

Desire of revenge rooted in the savages.

A necessarie admonition.

The Florida ans subtilties.

was to be seen, but hid and kept himselfe secret in a little house apart, where certaine chosen men of mine went to see him shewing themselves agreeued with him for the long delayes of his subiects: whereunto he answered, that his subiects were so much incensed against vs, that by no meanes possible he was able to keepe them in such obedience as he willingly would haue done, and that he could not hold them from waging of warre against Monsieur de Ottigny. That he also called to minde, that euen while he was prisoner, at what time our men ledde him into his Country to obtaine some victuals, he saw along the high wayes arrowes stucke vp, at the endes whereof long hairens were fastened, which was a certaine signe of open warre proclaimed, which arrowes the Captaine also carried with him to the fort. He said further that in respect of the good will he bare to the Captaine, he forewarned his Lieutenant that his subiects were determined to cut downe the trees, and cause them to fall a chwart the little riuer where the boates were, to keepe them from departing thence, that they might fight with them at their ease, and that if it thus fell out, he assured him for his part he would not be there to meddle in the matter. And that which much more augmented the suspicion of warre was, that as my messengers departed from Vtina, they heard the voyce of one of my men, which during the voyage had alwayes bene among the Indians, and whom as yet they would neuer render, but till they had gotten their pledges home. This poore fellow cryed out a maine because two Indians would haue carried him into the woods to haue cut his throat: whereupon he was succoured and deliuered. These admonitions being well vnderstoode, after ripe deliberation thereof Monsieur de Ottigny resolved to retire himselfe the seuen and twentieth of July. Wherefore he set his souldiers in order, and deliuered to ech of them a sacke full of mill: and afterward hee marched toward his barkes, thinking to prevent the enterprise of the Sauages. There is at the comming forth of the village a great alley about three or foure hundred paces long, which is couered on both sides with great trees. By Lieutenant disposed his men in this alley and set them in such order as they desired to march: for he was well assured that if there were any ambush, it would be at the comming out of the trees. Therefore he caused Monsieur de Arlac mine Ensigne to march somewhat before with 8 harquebustiers to discover whether there were any danger: besides he commanded one of my Sergeants & Corporals to march on the out side of the alley with foure harquebustiers while he himselfe conducted the rest of his company through it. Now as he suspected, so it fell out: for Monsieur de Arlac met with two or three hundred Indians at the end of the alley, which saluted him with an infinite number of their arrowes, & with such furie that it was easie to see with what desire they fought to charge vs. Howbeit they were so well sustained in the first assault which mine Ensigne gaue them, that they which fell downe dead, did somewhat abate the choler of those which remained aliu. This done my Lieutenant hastned to gaine ground in such sort as I haue already said. After he had marched about foure hundred paces, he was charged afresh with a new troope of Sauages which were in number about 300, which assailed him before, while the rest of the former set vpon him behind. This second assault was so valiantly sustained, that I may iustly say that Monsieur de Ottigny so well discharged his dutie, as was possible for a good Captaine to doe. And so it stood them vpon: for he had to deale with such kind of men, as knewe well how to fight and to obey their head which conducted them, and which knewe so well to behaue themselves in this conflict, as if Ottigny had not prevented their practise, he had bene in danger to haue bene defeated. Their maner in this fight was, that when two hundred had shot, they retyred themselves and gaue place to the rest that were behind, and all the while had their eye and foot so quicke and readie, that as soone as euer they saw the harquebuz laid to the checke, so soone were they on the ground, and eftsoone vp to answere with their bowes and to flie their way, if by chance they perceived we went about to take them: for there is nothing that they feare so much, because of our swordes and daggers. This conflict continued and lasted from nine of the clocke in the morning, vntill the night departed them. And if Ottigny had not bethought himselfe to cause his men to breake the arrowes which they found in the way, & so to deprive the Sauages of the means to beginne againe, without all doubt he should haue had very much to do: for by this meane they lacked arrowes, and so were constrained to retire themselves. During the time of the conflict they cryed and made signes that they were the Captaines and Lieutenants friends: and that they fought for none other cause but to be reuenged on the souldiers, which were their mortall enemies. By Lieutenant being come vnto his boates tooke a reuiue of his companie, and found two men wanting which were killed, of whom the one was called James Sale, and the others name was Mesureur. He found moreover 22 of them wounded, which with much adoe he caused to be brought vnto the boates. All the mill that he found among his company came but to two mens burdens, which he deuided equally among them. For as soone as the conflict began, every man was

was constrained to leaue his sacke to put his hand to his weapon. In this meane while I remained at the forte, and caused euery man diligently to trauell, hoping that my Lieutenant would bring vs victuals. But seeing the time consume away, I began to suspect the truth of that which fell out, whereof I was assured immediately after at their returne. Seeing therefore mine hope frustrate on that side, I made my prayer vnto God, and thanked him of his grace which hee had shewed vnto my pooze souldiers which were escaped: Afterward I thought vpon new meanes to obtaine victuals, aswell for our returne into France, as to driue out the time vntill our embarking. I was aduertised by certaine of our company, which vsually went on hunting into the woods and through the villages, that in the village Sarauahi situated on the other side of the river, and two leagues distant from the forte, and in the village Emoloa there were fields where in the mill was very for ward, and that there was thereof in those partes in great abundance. Wherefore I caused my boates to be made ready, and sent my Sergeant thither with certaine souldiours, which vled such diligence, that wee had good store of mill. I sent also to the river which the Sauages call Iracana, named by Captaine Ribault the River of Somme, where Captaine Vasseur and my Sergeant arrived with two boates and their ordnary furniture, and found there a great assembly of the Lords of the countrey, among whome was Achore the sonne of Satourioua, Apalou, and Tacadocorou, which were there assembled to make merrie: because that in this place are the fairest maids and women of all the countrey. Captaine Vasseur in my name gaue certaine small trifles to all the Lords, to the Queene, to the maids and women of the villages. Whereupon the boates were forthwith laden with mill, after they had made our men as good cheere as they could deuise. The Queene sent me two small Mats so artificially wrought as it was impossible to make better. Nowe finding our selues by this meane sufficiently furnished with victuals, we began each of vs in his place, to traualle and vse such diligence, as the desire to see our native countrey might moue vs. But because two of our Carpenters were slaine by the Indians (as heretofore I mentioned) Iohn de Hais, master Carpenter, a man very worthy of his vocation, repaired vnto me, and tolde me that by reason of want of men hee was not able to make me vp the ship against the time that he had promised me: which speech caused such a mutinie among the souldiers that very hardly he escaped killing: howbeit I appeased them aswell as I could, and determined to worke no more from thenceforth vpon the shippe, but to content our selues to repaire the Brigandine which I had. So we began to beate downe all the houses that were without the forte, and caused coles to be made of the timber thereof: likewise the souldiers beate downe the palisade which was toward the waters side, neither was I neuer able to keepe them from doing it. I had also determined to beat downe the forte before my departure and to set it on fire, for feare least some new-come guest should haue enioyed and possessed it. In the meane while there was none of vs to whom it was not an extreme grieue to leaue a countrey, wherein wee had endured so great traualles and necessities, to discouer that which we must forsake through our owne countreymens default. For if wee had bene succoured in time a place, according to the promise that was made vnto vs, the warre which was between vs and Veina, had not fallen out, neither should wee haue had occasion to offend the Indians, which with all paines in the world I entertained in good amitie, aswell with merchandise and apparel, as with promise of greater matters, and with whom I so behaued my self, that although sometimes I was constrained to take victuals in some few villages, yet I lost not the alliance of eight Kings and Lords my neighbours, which continually succoured and ayded me with whatsoever they were able to afford. For this was the principall scope of all my purposes, to winne and entertaine them, knowing how greatly their amitie might auance our enterprize, and principally while I discouered the commodities of the countrey, and sought to strengthen my selfe therein. I leaue it to your cogitation to thinke how neere it went to our hearts, to leaue a place abounding in riches (as we were thoroughly enformed thereof) in comming wherunto, and doing seruice vnto our Prince, we left our owne countrey, wiues, children, parents, and friends, and passed the perils of the sea, and were therein arrived, as in a plentifull treasure of all our hearts desire. As each of vs were much tormentted in minde with these or such like cogitations, the third of August I descried foure sayles in the sea, as I walked vpon a little hill, whereof I was exceeding well apaid: I sent immediately one of them which were with me to aduertise those of the forte thereof, which were so glad of those newes, that one would haue thought them to bee out of their wittes to see them laugh and leape for ioy. After these ships had cast anchor, we descried that they sent one of their ship boates to land: whereupon I caused one of mine to be armed with diligence, to send to meete them, and to know who they were. In the meane while fearing lest they were Spaniards, I set my souldiers in order and in readinesse, attending the returne of

The great im-
portance of
this enterprize.

Captaine Vasseur and my Lieutenant, which were gone to meete them, which brought me word that they were Englishmen: and in trueth they had in their company one whose name was Martine Arinas of Diepe, which at that time was in their service, which on the behalfe of Master John Hawkins their Generall came to request mee that I would suffer them to take fresh water, whereof they stood in great neede, signifying unto me that they had bene aboue fiftene dayes on the coast to get some. Dee brought unto mee from the Generall two flagons of wine, and bread made of wheate: which greatly refreshed me, forasmuch as for seven moneths space I never tasted a drop of wine: neuertheless it was all divided among the greatest part of my souldiers. This Martine Arinas had guided the Englishmen unto our coast, where with he was acquainted: for in the yeere 1562 he came thither with me, and therefore the Generall sent him to me. Therefore after I had granted his request, hee signified the same unto the Generall, which the next day following caused one of his small shippes to enter into the riuer, and came to see me in a great ship-boate, accompanied with gentlemen honourably apparelled, yet unarmed. He sent for great store of bread and wine, to distribute thereof to every one: On my part I made him the best cheere I could possibly, and caused certaine sheepe and poultry to be killed, which vntill this present I had carefully preferred hoping to store the countrey withall. For notwithstanding all the necessities and sicknesse that happened unto me, I would not suffer so much as one chicken to be killed: by which meanes in a short time I had gathered together aboue an hundred pullets. Nowe three dayes passed, while the English Generall remained with me, during which time the Indians came in from all parts to see him, and asked me whether he were my brother: I tolde them he was so, and signified unto them, that he was come to see me and apde me with so great store of victuals, that from thence forthward I should haue no neede to take any thing of them. The bruit hereof incontinently was spread ouer ouer all the countrey, in such sort as Ambassadors came unto me from all parts, which on the behalfe of the kings their masters desired to make alliance with me: and euen they, which before sought to make warre against me, came to offer their friendship and service unto me: Whereupon I receiued them and gratified them with certaine presents. The Generall immediately vnderstood the desire & vrgent occasion which I had to returne into France: whereupon he offered to transport me and all my company home: whereunto notwithstanding I would not agree, being in doubt vpon what occasion he made so large an offer. For I knewe not how the case stood betweene the French and the English: and although hee promised me in his faith to put mee on land in France, before hee would touch in England, yet I stood in doubt least he would attempt somewhat in Florida in the name of his mistresse. Wherefore I flatly refused his offer: whereupon there arose a great mutinie among my souldiers, which sayd that I sought to destroy them all, and that the Brigandine, wherof I spake before, was not sufficient to transport them, considering the season of the yeere wherein wee were. The bruit and mutiny increased more and more: for after that the Generall was returned to his ships, he told certaine gentlemen and souldiers which went to see him, partly to make good cheere with him, hee declared, I say vnto them, that he greatly doubted that hardly we should be able to passe safely in those vessels which we had: and that in case we should enterprize the same, we should no doubt be in great jeopardy: notwithstanding, if I were so contented, he would transport part of my men in his ships, and that he would leaue me a small ship to transport the rest. The souldiers were no sooner come home, but they signified the offer vnto their companions, which incontinently consented together that in case I would not accept the same, they would embarke themselves with him and forsake mee, so that he would receiue them according to his promise. They therefore assembled themselves all together and came to seeke me in my chamber, and signified vnto me their intention, wherunto I promised to answer within one houre after. In which meane space I gathered together the principall members of my company, which after I had broken the matter with them, answered me all with one voyce, that I ought not to refuse this offer, nor contemne the occasion which presented it selfe, and that they could not thinke euill of it in France, if being forsaken, as we were, we aided our selues with such means as God had sent vs. After sundry debatinges of this matter, in conclusion I gaue mine aduise, that wee ought to deliuer him the price of the ship which he was to leaue vs, and that for my part I was content to giue him the best of my stuffe, and the silver which I had gathered in the countrey. Whereupon notwithstanding it was determined that I should keepe the silver, for feare lest the Queene of England seeing the same, should the rather be encouraged to set footing there, as before she had desired: that it was far better to carie it into France to giue encouragement vnto our Princes not to leaue off an enterprize of so great importance for our commonwealth, and that seeing wee were resolved to depart, it was farre better to giue him our Artillerie, which otherwise we should be constrained to leaue behind vs, or to hide it in the

the ground by reason of the weakenesse of our men, being not able to embarke the same. This point being thus concluded and resolved on, I went my selfe vnto the English Generall, accompanied with my Lieutenant, and Captaine Vasseur, Captaine Verdier, and Trenchant the Pilot, and my Sergeant, all men of experience in such affaires and knowing sufficiently how to vniue such a bargain. We therefore tooke a view of the ship which the Generall would sell, whom we dyed to such reason, that he was content to stand to mine owne mens iudgement, who esteemed it to be worth seuen hundred crowns, whereof we agreed very friendly. Wherefore I deliuered him in earnest of the summe, two bastards, two myntons, one thousand of iron, & one thousand of powder. This bargain thus made, he considered the necessity wherein we were, hauing for all our sustentance but mill and water: whereupon being moued with pittie, he offered to relieue me with 20 barrels of meale, five pipes of beanes, one hoghead of salt, and a hundred of ware to make candels. Moreover forasmuch as he sawe my souldiers goe barefoote, hee offered me besides fifty paires of shoes, which I accepted and agreed of a price with him, and gaue him a bill of mine hand for the same, for which vntill this present I am indebted to him. He did more then this: for particularly he bestowed vpon my selfe a great iarre of oyle, a iarre of vineger, a barell of Oliues, and a great quantitie of Rice, and a barell of white Biscuit. Besides he gaue diuers presents to the principall Officers of my company according to their qualities: so that I may say that we receiued as many courtellies of the Generall, as it was possible to receiue of any man liuing. Wherein doubtlesse he hath wonne the reputation of a good and charitable man, deseruing to be esteemed as much of vs all as if he had saued all our liues. Incontinent after his departure I spared no paine to ha- ken my men to make biscuits of the meale which he had left me, and to hooke my caske to take in water needfull for the voyage. A man may well thinke what diligence we vsed, in respect of the great desire we had to depart, wherein we continued so well, that the fifteenth day of August the biscuit, the greatest part of our water, & all the souldiers stuffe was brought aboard: so that from that day forward wee did nothing but stay for good windes to vniue vs into France: which had freed vs from an infinite number of mischiefes which afterward wee suffered, if they had come as we desired: but it was not Gods good pleasure, as shall appeare hereafter. Being thus in a readinesse to set sayle, we bethought our selues that it would doe well to bring certaine men and women of the countrey into France, to the end that if this voyage should be taken in hand againe they might declare vnto their Kings the greatnesse of our King, the excellencie of our Princes, the goodnesse of our Countrey, and the maner of liuing of the Frenchmen: and that they might also learne our language, to serue our turnes thereby in time to come. Wherein I tooke so good order, that I found meanes to bring away with me the goodliest persons of all the countrey, if our intentions had succeeded as I hoped they would haue done. In the meane season the Kings my neighbours came often to see and visite me: which, after that they understood that I would returne into France, demanded of mee whether I meant to returne againe or no, and whether it should be in short time. I signified vnto them that within tenne Moones (so they call their Mo- neths) I would visite them againe with such force, that I would be able to make them Conque- rours ouer all their enemies. They prayed me that I would leaue them my house, that I would forbid my souldiers to beate downe the Fort and their lodgings, and that I would leaue them a boate to adde them withall in their warre against their enemies. Which I made as though I would grant vnto them, to the end I might alwaies remaine their friend vntill my last departure.

August 15.

The Florida- ans measure their moneths by the reuolu- tions of the spoone.

The third voyage of the Frenchmen made by Captaine Iohn Ribault vnto Florida.

AS I was thus occupied in these conferences, the winde and the tide serued well to set sayle, which was the eight and twentieth of August, at which instant Cap- taine Vasseur which commanded in one of my shippes, and Captaine Verdier which was chiefe in the other, now ready to goe forth, began to descrie certaine sayles at sea, whereof they aduertised mee with diligence: whereupon I appointed to arme forth a boate in good order to goe to discerie and know what they were. I sent also to the Centinels, which I caused to be kept on a little knappe, to cause certaine men to climbe vp to the toppe of the highest trees the better to discouer them. They descried the great boate of the shippes, which as yet they could not perfectly discerne, which as farre as they could iudge, seemed to chafe my boate, which by this time was passed the barre of the riuer: so that we could not possibly iudge whether they were enemies which would haue caried her away with them: for it was too great a ken to iudge the truerth thereof. Upon this doubt I put my men in order and in

such array as though they had beene enemies: and indeede I had great occasion to mistrust the same: for my boate came vnto their ship about two of the clocke in the afternoone, and sent me newes all that day long to put me out of doubt who they should be. The next day in the morning about eight or nine of the clocke I saw seuen boates (among which mine owne was one) full of souldiers enter into the riuer, hauing euery man his harquebuz and morion on his head, which marched all in battaile along the clifles where my centinels were, to whom they would make no kind of answer, notwithstanding all the demandes that were made vnto them, insomuch as one of my souldiers was constrained to bestowe a shot at them without doing hurt neuerthelesse to any of them, by reason of the distance between him and the boates. The report hereof being made vnto me, I placed each of my men in his quarter, with full deliberation to defend our selues, if they had bene enemies, as in trueth wee thought them to haue bene: likewise I caused the two small field-pieces which I had left me, to be trunimed in such sort, as if in appproching to the Fort they had not cryed that it was Captaine Ribault, I had not failed to haue discharged the same vpon them. Afterward I vnderstood that the cause why they entered in this maner, proceeded of the false reports which had bene made vnto my Lord Admirall by those which were returned into France in the first shippes. For they had put in his head, that I played the Lord and the King, and that I would hardly suffer that any other saue my selfe should enter in thither to gouerne there. Thus we see how the good name of the most honest is oftentimes assailed by such, as hauing no meanes to win themselves credit by vertuous and laudable endeours, thinke by debasing of other mens vertues to augment the feeble force of their faint courage, which neuerthelesse is one of the most notable dangers which may happen in a commonwealth, and chiefly among men of warre which are placed in gouernment. For it is very hard, yea vterly vnpossible, that in gouerning of a company of men gathered out of diuers places and sundry Nations, and namely such as we know them to be in our warres, it is, I say, vnpossible, but there will be alwayes some of euill conditions and hard to be ruled, which easily conceiue an hatred against him, which by admonitions and light corrections endeouret to reduce them to the discipline of warre. For they seeke nothing else, but for a small occasion grounded vpon a light pretext to sound into the eares of great Lords that which mischieuously they haue contriued against those, whose execution of iustice is odious vnto them. And albeit I will not place my selfe in the ranke of great and renowned Captaines, such as liued in times passed, yet we may iudge by their examples, how hurtfull backbiters haue bene vnto commonwealths. I will onely take Alcibiades for witness in the commonwealth of the Athenians, which by this meane was cast into banishment, whereupon his citizens felt the smart of an infinite number of mischiefes: insomuch as in the end they were constrained to call him home againe, and acknowledge at length the fault they had committed in forgetting his good seruices, and rather beleening a false report, then hauing had regard vnto so many notable exploits which in former time hee had atchieued. But that I loose not my selfe in digressing so farre in this my iustification, I will returne againe to my first course. Being therfore aduertised that it was Captaine Ribault, I went forth of the Fort to goe to meete him, and to do him all the honour I could by any meanes, I caused him to be welcommed with the artillery, and a gentle volley of my shot, whereunto he answered with his. Afterward being come on shore and receiued honourably with toy, I brought him to my lodging, reioycing not a little because that in this company I knew a good number of my friends, which I intreated in the best sorte that I was able, with such victuals as I could get in the countrey, and that small store which I had left me, with that which I had of the English General. Howbeit I marvelled not a little when as all of them with one voice began to vtter vnto me these or the like speeches. My Captaine, we praise God that we haue found you alieue, and chiefly because we know, that the reports which haue bene made of you, are false. These speeches mooued me in such sort, that I would needes out of hand know more, mistrusting some euill. Wherefore hauing accosted Captaine John Ribault, & going both of vs aside together out of the Fort, he signified vnto me the charge which he had, praying mee not to returne into France, but to stay with him my selfe and my company, and assured me that he would make it well thought of at home. Whereupon I replied that out of this place I would do him all seruice: that for the present I could not nor ought not accept this offer, since he was come for no other intent then to occupie the place which I before possessed, that I could haue no credite to be there commanded: that my friends would neuer like of it, and that he would hardly giue me that counsaile, if in good earnest I should demand his aduise therein. He made me answer, that he would not command me, that we should be companions, & that he would build another fortresse, & that he would leaue mine owne vnto me. This notwithstanding I fully aduertised him that I could not receiue a greater comfort then the newes which he brought me to returne into France:

and

and farther that though I should stay there, yet it must needs be that one of vs both was to command with title of the Kings Lieutenant, that this could not well agree together: that I had rather haue it cast in my teeth to be the poorest begger in the world, then to be commanded in that place, where I had endured so much to inhabite and plant there, if it were not by some great Lord or Knight of the order: and that in these respects I prayed him very hartly to deliuer me the letters which my Lord Admirall had written vnto me, which he performed.

The contents of those letters were these.

Captaine Landonniere, because some of them which are returned from Florida speake indifferently of the Countrey, the King desireth your presence, to the end, that according to your tryall, he may resolute to bestow great cost thereon, or wholly to leaue it: and therefore I send Captaine Iohn Ribault to bee gouernour there, to whom you shall deliuer whatsoever you haue in charge, and informe him of all things you haue discovered. And in a postscript of the letter was thus written. Thinke not, that whereas I send for you, it is for any euill opinion or mistrust that I haue of you, but that it is for your good and for your credit, and assure your selfe that during my life you shall find me your good Master.

Letters of the
Lord Admirall
vnto Landon-
niere.

CHASTILLON.

Now after I had long discoursed with Captaine Ribault, Captaine la Grange accosted mee, and told me of an infinite number of false reports which had bene made of mee to my great hindrance: and among other things he informed me, that my Lord Admirall tooke it very euill that I had caried a woman with mee: likewise that some bodie had tolde him that I went about to counterfeite the King, and to play the tyrant: that I was too cruell vnto the men that went with mee: that I sought to be aduanced by other meanes then by my Lord Admirall: and that I had written to many Lords of the Court, which I ought not to haue done. Whereunto I answered, that the woman was a poore chambermayd, which I had taken by in an Inne, to ouersee my household businesse, to looke to an infinite sort of diuers beasts, as sheepe and poultrie which I caried ouer with me to store the countrey withall: that it was not meete to put a man to attend this businesse: likewise, considering the length of the time that I was to abide there, mee thought it should not offend any body to take a woman with me, as well to help my souldiers in their sicknesses, as in mine owne, whereinto I fell afterward. And how necessary her seruice was for vs, ech one at that time might easily perceiue: That all my men thought so well of her, that at one instant there were fixe or seuen which did demand her of mee in mariage; as in very deepe on of them had her after our returne. Touching that which was sayd that I playd the King, these reports were made, because I would not beate with any thing which was against the duety of my charge, and the Kings seruice. Whereouer, that in such enterprises it is necessary for a Gouernour to make himselfe knownen and obeyed, for feare least euery body would become a master, perceiuing themselves far from greater forces. And that if the tale-tellers called this rigour, it rather proceeded of their disobedience, then of my nature lesse subiect to cruelty then they were to rebellion. For the two last points, that I had not written to any of the Lords of the Court but by the aduice & commandement of my Lord Admirall, which willed me at my departure to send part of such things as I should find in the countrey vnto the Lords of the Counsel: to the end that being moued by this meane, they might deale with the Queene mother for the continuance of this enterprise: that hauing bene so small time in the countrey, continually hindred with building of fortresses, and unlading of my ships, I was not able to come by any newe or rare things to send them, whereupon I thought it best to content them in the meane while with letters, vntill such time as I might haue longer space to search out the Countrey, and might recouer something to sende them: the distribution of which letters I meant not otherwise but to referre to my Lord Admirals good pleasure: that if the bearer had forgot himselfe so farre, as that he had broken the couering of the letters, and presented them himselfe for hope of gaine, it was not my commandement. And that I neuer honoured noble man so much, nor did to any man moze willing and faithfull seruice then to my Lord Admirall, nor euer sought aduancement but by his meanes. You see how things passed for this day. The next day the Indians came in from all parts, to know what people these were: to whom I signified that this was he which in the yeere 1562. arrived in this countrey, and erected the pillar which stood at the entrie of the river. Some of them knew him: for in truce he was easie to be knownen by reason of the great bearde which he ware. He receiued many presents of them which were of the villages neere adioping, among whom there were some

King Emola.

some that he had not yet forgotten. The kings Homolaa, Serauahi, Alimacani, Mahca, and Ca-
ri came to visit him and welcome him with diuers gifts according to their manner. I aduertised
them that hee was sent thither by the king of France, to remaine there in my roome, and that I
was sent for. Then they demanded and prayed him, if it might stand with his good pleasure, to
cause the merchandise that hee had brought with him to be deliuered them, and that in fewe daies
they would bring him to the mountaines of Apaltec, whither they had promised to conduct me,
and that in case they perfozmed not their promise, that they were content to be cut in pieces. In
those mountaines, as they sayd, is found redde copper, which they call in their language Sieroa
Pira, which is as much to say as red metall, whereof I had a piece, which at the very instant I
shewed to Captaine Ribault, which caused his gold-siner to make an assay thereof, which repo-
zed vnto him that it was perfect golde. About the time of these conferences, coninnings and go-
ings of the kings of the countrey, being weakened with my former trauaile, and fallen into a
melancholy vpon the false repozes that had bene made of mee, I fell into a great continuall fe-
uer, which held me eight or nine daies: during which time Captaine Ribault caused his victuals
to be brought on shore, and bestowed the most part thereof in the house which my Lieutenant
had built about two hundred pases without the foyle: which hee did to the ende they might bee
the better defended from the weather, and likewise to the intent that the meale might bee neerer
to the bake-house, which I had built of purpose in that place, the better to auoide the danger of
the fire, as I sayd before. But loe howe oftentimes misfortune doth searce and pursue vs, euen
then when we thinke to be at rest. Ioe see what happened after that captaine Ribault had brought
vp three of his small ships into the river, which was the fourth of September. Sixe great Spa-
nish ships arrived in the rode, where four of our greatest ships remained, which cast anker, assuring
our men of good amity. They asked how the chiefe captaines of the enterprize did, & called them
all by their names and surnames. I repoze me to you if it could be other wise but these men before
they went out of Spaine must needs be informed of the enterprize & of those that were to execute
the same. About the break of day they began to make toward our men: but our men which tru-
sted them neuer a deale, had hoysed their sayles by night, being ready to cut the strings that tyed
them. Wherefore perceiuing that this making toward our men of the Spaniards was not to doe
them any pleasure, and knowing wel that their furniture was too smal to make head against them,
because that the most part of their men were on shore, they cut their cables, left their ankens, and
set sailer. The Spaniards seeing themselves discovered, sent them certaine volleys of their great
ordnance, made saile after them, and chased them all day long: but our men got way of them still
toward the sea. And the Spaniards seeing they could not reach them, by reason that the French
ships were better of saile then theirs, and also because they would not leaue the coast, turned backe
and went on shore in the river Seloy, which we call the river of Dolphins 8 or 10 leagues distant
from the place where we were. Our men therefore finding themselves better of saile then they,
followed them to descry what they did, which after they had done, they returned vnto the river of
May, where captaine Ribault having descried them, embarked himselfe in a great boat to know
what newes they had. Being at the entry of the river he met with the boat of captaine Coufers
ship, wherein there was a good number of men which made relation vnto him of all the Spaniards
doings: and how the great ship named the Trinicie had kept the sea, and that she was not retur-
ned with them. They told him mozeouer that they had seen three Spanish ships enter into the ri-
uer of Dolphins, & the other three remained in the rode; farther that they had put their souldiers,
their victuals & munition on land. After he vnderstood these newes hee returned to the foztresse,
and came to my chamber where I was sick, and there in the presence of the captaines, La Grange,
S. Marie, Origny, Visty, Yonuille, and other gentlemen, he propounded, that it was necessary for
the kings seruice, to embarke himselfe with all his forces, and with the three ships that were in
the rode to seeke the Spanish flecte, whereupon he asked our aduise. I first replied, and shewed
vnto him the consequence of such an enterprize, aduertising him among other things of the peri-
lous flawes of windes that rise on this coast, and that if it chanced that hee were driuen from the
shore, it would be very hard for him to recouer it againe, that in the meane while they which should
stay in the Foyle should be in feare and danger. The Captaines, Saint Marie, and La Grange
declared vnto him farther, that they thought it not good to put any such enterprize in execution,
that it was farre better to keepe the land, & do their best in deuour to fortifie themselves: And that
after that the Trinicie (which was the principall ship) were returned, there would be much moze
likelihood to enterprize this voyage. This notwithstanding he resolved to undertake it, and that
which moze is, after he vnderstood by king Emola, one of our neighbours which arrived vpon the
handling of these matters, that the Spaniards in great numbers were gone on shore, which had
taken

taken possession of the houses of Seloy, in the most part whereof they had placed their Negroes, which they had brought to labour, and also lodged themselves and had cast diuers trenches about them. Thus for the considerations which he had, and doubting (as he might well doe) that the Spanyards would entrappe themselves there to molest vs, and in the ende to chase vs out of the Countrey, he resolved and continued in his embarkment, caused a Proclamation to be made, that all souldiers that were under his charge should presently with their weapons embarke them, and that his two ensignes should march: which was put in execution. He came into my chamber, and prayed me to lend him my Lieutenant, mine ensigne, and my sergeant, and to let all my good souldiers, which I had, goe with him, which I denied him, because my selfe being sicke, there was no man to stay in the fort. Thereupon he answered me that I needed not to doubt at all, and that he would returne the morrow after, that in the meane space Monsieur de Lys should stay behind to looke to all things. Then I shewed unto him that he was chiefe in this Countrey, and that I for my part had no further authoritie: that therefore hee would take good aduise what hee did, for feare least some inconuenience might ensue. Then he tolde me that he could doe no lesse, then to continue this enterpryse, and that in the letter which he had receiued from my Lord Admirall, there was a postscript, which hee shewed mee written in these wordes: Capitaine Iohn Ribault, as I was enclosing vp this letter, I receiued a certaine aduice, that Don Pedro Melendes departeth from Spaine to goe to the coast of Newe France: see you that you suffer him not to encroch vpon you, no more then he would that you should encroch vpon him. You see (quoth he) the charge that I haue, and I leaue it vnto your selfe to iudge, if you could do any lesse in this case, considering the certaine aduertisement that we haue, that they are already on land, and will inuade vs. This stopped my mouth. Thus therefore confirmed or rather obstinate in this enterpryse, and hauing regard rather vnto his particular opinion then vnto the aduertisements which I had giuen him, and the inconueniences of the time whereof I had forewarned him, he embarked himselfe the eight of September, and tooke mine ensigne and eight and thirtie of my men away with him. I report mee to those that know what warres meane, if when an ensigne marcheth, any souldier that hath any courage in him will stay behind, to forsake his ensigne: Thus no man of commandement stayed behind with mee, for ech one followed him as chiefe, in whose name straight after his arriual, all cries and proclamations were made. Capitaine Grange, which liked not very well of this enterpryse, was vnto the tenth of the moneth with mee, and would not haue gone aboarde, if it had not beene for the instant requestes that Capitaine Ribault made vnto him, which staid two dayes in the robe attending vntill La Grange was come vnto him: Who being come aboarde, they set sayle altogether, and from that time forward I neuer saw them more. The very day that he departed, which was the tenth of September, there rose so great a tempest accompanied with such stormes, that the Indians themselves assured me that it was the worst weather that euer was seene on the coast: whereupon two or thre dayes after, fearing least our ships might be in some distresse, I sent for Monsieur du Lys vnto mee, to take order to assemble the rest of our people to declare vnto them what neede wee had to fortifie our selues: which was done accordingly: and then I gaue them to vnderstand the necessity and inconueniences wherein to we were like to fall, as well by the absence of our ships, as by the neerenesse of the Spanyards, at whose hands we could looke for no lesse then an open and sufficient proclaimed war, seeing they had taken land and fortified themselves so neere vnto vs. And if any misfortune were fallen vnto our men which were at Sea, we ought to make a full account with our selues that wee were to endure many great miseries, being in so small number, and so many wayes afflicted as we were. Thus euery one promised mee to take paines: and therefore considering that their proportion of victuals was small, and that so continuing, they would not be able to doe any great worke, I augmented their allowance: although that after the arriual of Capitaine Ribault my portion of victuals was allotted vnto mee as vnto a common souldier, neither was I able to giue so much as part of a bottell of wine to any man which deserued it: for I was so farre from hauing meanes to doe so, that the Capitaine himselfe tooke two of my boates, wherein the rest of the meale was, which was left me of the victuals which I caused to be made to returne into France: so that if I shoulde say that I receiued more fauour at the handes of the Englishmen beeing Strangers vnto mee, I shoulde say but a trueth. Wee beganne therefore to fortifie our selues and to repaire that which was broken downe, principally toward the water side, where I caused threescore foote of trees to be planted, to repaire the Palisado with the planks which I caused to be taken of the Shippe which I had builded. Neuerthelesse notwithstanding all our diligence and trauaile, wee were neuer able fully to repaire it by reason of the stormes, which commonly did vs so great annoy, that wee could not finish our inclosure. Perceiuing my selfe in such extremitie

escape.

I tooke a muster of the men, which captaine Ribault had left me, to see if there were any that wanted weapon: I found nine or ten of them whereof not past two or thre had euer drawn sword out of a scabbard, as I thinke. Let them which haue bene bold to say, that I had men ynough left me, so that I had meanes to defend my selfe, giue eare a litle now vnto mee, and if they haue eyes in their heads, let them see what men I had. Of the nine there were foure but yong striplings, which serued Captaine Ribault and kept his dogs, the fift was a cooke: among those that were without the fort, and which were of the foresaid company of Captaine Ribault, there was a Carpenter of threescore yeres olde, one a Beere-brewer, one olde Trosse-bow maker, two Shoemakers, and foure or fife men that had their wiues, a player on the Virginals, two seruants of Monsieur du Lys, one of Monsieur de Beauhaire, one of Monsieur de la Grange, and about foure score and fife or sixe in all, counting as well Lackeys as women and chyldren. Behold the goodly troupe so sufficient to defend themselves, and so couragious as they haue esteemed them to be: and for my part I leaue it to others consideration to imagine whether Captaine Ribault woulde haue left them with me to haue borrowed my men, if they had bene such. Those that were left me of mine owne company were about sixteene or seuentene that coulde beare armes, and all of them pooze and leane: the rest were sicke and maymed in the conflict which my Lieutenant had against Vcina. This view being thus taken, wee set our watches, whereof wee made two Centinels, that the souldiers might haue one night free. Then wee bethought our selues of those which might bee most sufficient, among whome wee chose two, one of whom was named Monsieur Saint Cler, and the other Monsieur de la Vigne, to whom we deliuered candles and Lanterns to goe round about the fort to viewe the watch, because of the foule and foggie weather. I deliuered them also a sandglasse or clocke, that the Centinels might not be troubled more one then another. In the meane while I ceased not, for all the foule weather nor my sicknesse which I had, to ouersee the Corps de garde. The night betweene the nineteenth and twentieth of September La Vigne kept watch with his company, wherein he vled all endeuour, although it rayned without ceasing. When the day was therfore come, and that hee saw that it rayned still worse then it did before, hee pitied the Centinels so too moyled and wette: and thinking the Spaniards woulde not haue come in such a strange time, hee let them depart, and to say the trueth, hee went himselfe vnto his lodging. In the meane while one which had something to doe without the fort, and my trumpet which went by vnto the rampart perceived a troupe of Spaniards which came downe from a litle knappe. Where incontinently they beganne to cry alarme, and the Trumpetter also: Which alioone as euer I vnderstoode, forthwith I issued out, with my target and sword in my hand, and gatte mee into the midst of the Court, where I beganne to crie vpon my souldiers. Some of them which were of the forward fort went toward the breach, which was on the Southside, and where the munitions of the artillerie lay, where they were repulsed and slaine. By the selfe same place two ensignes entred, which immediately were planted on the wals. Two other ensignes also entred on the other side toward the West, where there was another breach: and those which were lodged in this quarter, & which shewed themselves, were likewise defeated. As I went to succour them which were defending the breach on the southwest side, I encountered by chance a great company of Spaniards, which had already repulsed our men and were now entred, which draue me backe vnto the court of the fort: being there I espied with them one called Francis Iean, which was one of the Hariners which stole away my barks, and had guided and conducted the Spaniards thither. Alioone as he sawe me, he began to say, This is the Captaine. This troupe was led by a captaine whose name, as I thinke, was Don Pedro Melendes: these made certain pushes at me with their pikes which lighted on my tarker. But perceiuing that I was not able to withstand so great a company, and that the court was already worne, and their ensignes planted on the ramparts, & that I had neuer a man about me, sauing one only whose name was Bartholomew, I entred into the yard of my lodging, into which they followed me, and had it not bene for a tent that was set vp. I had bin taken: but the Spaniards which followed me were occupied in cutting of the cordes of the tent, and in the meane while I saued my selfe by the breach which was on the West side neere vnto my Lieutenants lodging, and gace away into the woods: where I found certain of my men which were escaped, of which number there were three or foure which were sore hurt. Then spake I thus vnto them: Sirs, since it hath pleased God that this mischance is happened vnto vs, we must needs take the paines to get ouer the marshes vnto the ships which are at the mouth of the riuer. Some would needs go to a litle village which was in the woods, the rest followed me through the reedes in the water, where being able to go no farther by reason of my sicknesse which I had, I sent two of my men which were with me, which could swim well, vnto the ships, to aduertise them of that which had happened, and to send them

word to come and helpe me. They were not able that day to get vnto the ships to certifie them thereof: so I was constrained to stand in the water vnto the shoulders all that night long, with one of my men which would neuer forsake me. The next day morning, being scarcely able to draw my breath any more, I betooke me to my prayers with the souldier which was with mee, whose name was Iohn du Chemin: for I felt my selfe so feeble, that I was afraid I should die suddenly: and in truth if he had not embraced me in both his armes, and so held me vp, it had not bene possible to saue me. After we had made an ende of our prayers, I heard a voyce, which in my iudgement was one of theirs which I had sent, which were ouer against the ships and called for the ship boat, which was so in deed: and because those of the ships had vnderstanding of the taking of the fort by one called Iohn de Hais, master Carpenter, which fled vnto them in a shallop, they had set saile to run along the coast to see if they might saue any: wherein doubtlesse they did very well their endeavour. They went straight to the place where the two men were which I had sent, and which called them. As soone as they had receiued them in and vnder stood where I was, they came and found me in a pitifull case. Five or sixe of them tooke me and caried me into the shallop: for I was not able by any means to go one foot. After I was brought into the shallop some of the Mariners took their clothes from their backs to lend them me, and would haue caried me presently to their ships to giue me a little Aqua vita. Howbeit I would not goe thither, vntill I had first gone with the boat along the reeds, to seeke out the poore soules which were scattered abroad, where we gathered vp 18 or 20 of them. The last that I took in was the nephew of the Treasurer le Beau. After we were all come to the ships, I comforted them as well as I could, and sent back the boat againe with speed to see if they could find yet any more. Upon her returne, the Mariners told mee how that captaine James Ribault which was in his ship about two muskets shot distant from the fort, had parled with the Spaniards, and that Francis Iean came vnto his ship, where hee staid a long space, whereat they greatly maruelled, considering hee was the cause of this enterprise, how hee would let him escape. After I was come into the ship called the Greyhound, captaine James Ribault & captaine Valuer came to see me: and there we concluded to returne into France. Now forasmuch as I found the ship vnfurnished of Captaine, Pilot, Master, and Masters-mate, I gaue aduice to choose out one of the most able men among al the mariners, & that by their owne voices. I tooke also sixe men out of another small ship, which we had sunke because it wanted ballast and could not be saued. Thus I increased the furniture of the ship wherein I was my selfe embarked, and made one, which had bene Masters-mate in the foresaid small ship, Master of mine. And because I lacked a pilot, I prayed James Ribault that he would grant me one of the foure men that he had in his ship, which I should name vnto him, to serue me for a Pilot: he promised to giue me them, which neuertheless he did not at the instant when wee were ready to depart, notwithstanding all the speech I vsed to him, in declaring that it was for the kings seruice. I was constrained to leaue the ship behind me which I had bought of the English Captaine, because I wanted men to bring her away. For captaine James Ribault had taken away her furniture: I tooke away her ordnance onely, which was all dismounted, whereof I gaue nine pieces to James Ribault to carrie into France, the other sixe I put into my ship. The 23 of September wee set saile to returne into France, and Captaine James Ribault and I kept company all that day and the next vntill three or foure a clock in the afternoone: but because his ship was better at bowline then ours, he kept him to the wind and left vs the same day. Thus we continued our voyage, wherein we had marvellous flawses of wind. And about the eight and twentieth of October in the morning at the breake of the day we descried the Isle of Flores, one of the Açores, where immediately vpon our approaching to the land we had a mightie gust of wind which came from the North-east, which caused vs to beare against it foure dayes: after ward the wind came South and Southeast, and was alwayes variable. In all the time of our passage we had none other foode saving biscuit and water. About the tenth or eleuenth of Nouember, after we had sailed a long time, and supposing we were not farre from land, I caused my men to sound, where they found threescore and fiftene fathoms water, whereat we all reioyced, and praised God because we had sailed so prosperously. Immediately after I caused them to set saile again and so we continued our way: but forasmuch as we had borne too much toward the North-east we entred into Saint Georges chanell, a place much feared of all Sailers, and where as many ships are cast away: But it was a faire gift of God that we entred in it when the weather was cleare. We sailed all the night, supposing wee had bene shot into the narrow Sea betwene England and France, and by the next day to reach Diepe, but we were deceiued of our longing: for about two or three of the clocke after midnight as I walked vpon the hatches, I descried land round about me, whereat wee were astonished. Immediately I caused them to strike saile and sound: we found we had not vnder vs past 8 fathoms of water, whereupon

Florida.

The French
fleete cast a-
way on the
coast of Florida.

I commanded them to stay till breake of day: which being come, and seeing my Mariners told me that they knew not this land, I commanded them to approach unto it. Being neere thereunto I made them cast anchor, & sent the boat on shore to understand in what Countrey we were. Word was brought me that we were in Wales a prouince of England. I went incontinently on land, where after I had taken the appze, a sickenesse tooke mee whereof I thought I should haue dyed. In the meane while I caused the ship to be brought into the bay of a small towne called Swansey, where I found merchants of S. Malo, which lent me money, wherewith I made certaine apparel for my selfe and part of my company that was with me: and because there were no victuals in the ship, I bought two Dren, and salted them, and a tunne of Beere, which I deliuered into his hands which had charge of the ship, praying him to cary it into France, which he promised me to doe: for mine owne part I purposed with my men to passe by land, and after I had taken leaue of my Mariners, I departed from Swansey, and came that night with my company to a place called Morgan, where the Lord of the place, vnderstanding what I was, stayed me with him for the space of 6 or 7 dayes, and at my departure indoued with pitie to see me goe on foot, especially being so weake as I was, gaue me a litle Hackny. Thus I passed on my iourney first to Briftoll, & then to London, where I went to doe my duty to Monsieur de Foix, which for the present was the kings Ambassador, and holpe me with mony in my necessitie. From thence I passed to Caleis, afterward to Paris, where I was informed that the king was gone to Molins to sojourne there: incontinently, & with all the hast I could possibly make, I gate me thither with part of my company. Thus briefly you see the discourse of all that happened in New France since the time it pleased the kings Maiesty to send his subiects thither to discouer those parts. The indifferent and vnpassionate readers may easily weigh the truth of my doings, and be vpright iudges of the endeour which I there vsed. For mine owne part I wil not accuse nor excuse any: it sufficeth mee to haue followed the truth of the history, whereof many are able to beare witnesse, which were there present. I will plainly say one thing, That the long delay that Captaine *John Ribault* vsed in his embarking, and the 15. daies that he spent in rouing along the coast of Florida, before he came to our fort Caroline, were the cause of the losse that we sustained. For he discovered the coast the 14 of August, and spent the time in going from riuer to riuer, which had bene sufficient for him to haue discharged his ships in, and for me to haue embarked my selfe to returne into France. I wote well that al that he did was vpon a good intent: yet in mine opinion he should haue had more regard vnto his charge, then to the deuities of his owne braine, which sometimes hee printed in his head so deeply, that it was very hard to put them out: which also turned to his vtter vndoing: for hee was no sooner departed from vs, but a tempest tooke him, which in fine wrackt him vpon the coast, where all his shippes were cast away, and he with much adoe escaped by swimming, to fall into their hands which cruelly massacred him and all his company.

The fourth voyage of the Frenchmen into Florida, vnder the conduct of Captaine *Gourgues*, in the yeere, 1567.

Captaine *Gourgues* a Gentleman borne in the Countrey neere vnto Bourdeaux incited with a desire of reuenge, to repaire the honour of his nation, borrowed of his friends and sold part of his owne goods to set forth and furnish three ships of indifferent burthen with all things necessary, hauing in them an hundred and fiftie souldiers, and fourescore chosen Mariners vnder Captaine *Cazenoue* his lieutenant, and Francis Bourdelois Master ouer the Mariners. He set forth the 22 of August 1567. And hauing endured contrary winds and stormes for a season, at length hee arriued and went on shore in the Isle of Cuba. From thence he passed to the Cape of Saint Antony at the end of the Isle of Cuba, about two hundred leagues distant from Florida, where the captaine disclosed vnto them his intention which hitherto he had concealed from them, praying and exhorting them not to leaue him being so neere the enemy, so well furnished, and in such a cause: which they all sware vnto him, and that with such courage that they would not stay the full moone to passe the channell of Bahama, but speedily discovered Florida, where the Spanyards saluted them with two Canon shot from their fort, supposing that they had bene of their nation, and *Gourgues* saluted them againe to entertaine them in this errour, that hee might surpriue them at more aduantage, yet failing by them, & making as though he went to some other place vntill he had sailed out of sight of the place, so that about euening, hee landed 15 leagues from the fort, at the mouth of the Riuer Tacatacouru, which the Frenchmen called Seine, because they thought it to bee like Seine in France. Afterward perceiuing the shore to bee couered with Sauages with

and the Isles
of Lucayos.

The French-
mens landing
at the Riuer
Tacatacouru.

with their bowes and arrowes, (besides the signe of peace and amitie which he made them from his ships) he sent his Trumpetter, to assure them, that they were come thither for none other end but to renew the amitie and ancient league of the French with them. The Trumpetter did his message so well (by reason he had bene there before under Laudonniere) that he brought backe from king Satourioua, the greatest of all the other kings, a kisse and other meat to refresh vs, besides the offer of his friendship and amitie. Afterward they ret red danling in signe of ioy, to aduertise all the kings Satouriouaes kinsmen to repaire thither the next day to make a league of amitie with the Frenchmen. Thereupon in the meane space our generall went about to sound the chanel of the riuer to bring in his ships, and the better to traffike and deale with the Sauages, of whom the chiefe the next day in the morning presented themselves, namely the great king Satourioua, Tacatourou, Halinacanir, Athore, Harpaha, Helmacapé, Helicopilé, Molloua, and others his kinsmen and allies, with their accustomed weapons. Then sent they to increate the French general to come on shoze, which he caused his men to do with their swords and hargue bures, which he made them leaue behind them, in token of mutuall assurance, leauing his men but their swords only, after that the Sauages complaining there of had left and likewise sent away their weapons at the request of Gourgues. This done Satourioua going to meet him, caused him to sit on his right hand in a seat of wood of lenticque couered with mosse made of purpose like vnto his owne. Then two of the eldest of the company pulled vp the brambles & other weeds which were before them, and after they had made the place very cleane, they all sat round about them on the ground. Afterward Gourgues being about to speake, Satourioua preuented him, declaring at large vnto him the incredible wrongs, and continuall outrages that all the Sauages, their wiues and children had receiued of the Spanyards since their coming into the Countrey and massacring of the Frenchmen, with their continuall desire if we would assist them throughly to reuenge so shamefull a treason, as well as their owne particular griefes, for the firme good will they alwayes had borne vnto the Frenchmen. Thereupon Gourgues giuing them his faith, and making a league betweene them and him with an othe gaue them certaine presents of daggers, knives, looking glasses, hatchets, rings, belles, and such other things, besides vnto vs, but precious vnto these kings: which moreouer, seeing his great liberality, demanded eche one a shirt of him to weare onely on their festiuall dayes, and to be buried in at their death. Which things after that they had receiued, and Satourioua had giuen in recompense to Captaine Gourgues two chaines of siluer graines which hung about his necke, and eche of the kings certaine drete skimmes dyessed after their manner, they retired themselves danling and very forond, with promise to keep all things secret, and to bring vnto the sayd place good companies of their subjects all well armed to be auenged throughly on the Spanyards. In the meane space Gourgues very narrowly examined Peter de Bré bozine in Newhauen, which being but a yong stripling escaped out of the fort into the woods while the Spanyards murdered the rest of the French, & was afterward brought vp with Satourioua, which at that time belloved him on our generall, whose aduise stood him in great steade: Thereupon he sent to discouer the fort and the estate of the enemies by certaine of his men, being guided by Oloracara Satouriouaes nephew which hee had giuen him for this purpose and for assurance of Estampes a gentleman of Cominges, and others which he sent to discry the state of the enemies. Moreouer he gaue him a somme of his starke naked as all of them are, and his wife which he loued best of all the rest, of eightene yeeres olde, apparelled with the mosse of trees, which for 3 dayes space were in the ships, until our men returned from discrying the state of the enemy, and the kings had furnished their preparation at their rende-vous. Their marching being concluded, and the Sauages rende-vous being appointed them beyond the riuer Salinacani, of our men called Somme, they all dranke with great solemnitie their drinke called Cassine, made of the iuice of certaine hearbs (as they are wont to do, when they go to any place of danger,) which hath such force, that it taketh from them hunger and thirst for 24 houres, and Gourgues was faine to make as though he drank thereof for company. Afterward they lift up their handes and sware all that they would neuer forsake him. Olorocara followed him with pike in hand. Being all met at the riuer of Sarauahi, not without great trouble, by reason of the raine and places full of water which they must needs passe, which hindred their passage, they were distressed with famine finding nothing by the way to eat, their Bark of prouision being not arrived, which was to come vnto him from the ships, the ouersight and charge whereof he had left vnto Burdelois with the rest of the Mariners. Now he had learned that the Spanyards were foure hundred strong, deuided into three forts builded and flanked, and well fortified vpon the riuer of May, the great fort especially beguine by the French, and after ward repaired by them: vpon the most dangerous and principall landing place whereof, two leagues lower and neerer towarde the Riuer's mouth,

they had made two smaller Forts, which were defended, the river passing betweene them, with five score souldiers, good store of artillery and other munition, which they had in the same. From Saracary unto these small forts was two leagues space, which he found very painful, because of the bad waies and continual raines. Afterward he departed from the river Caracouru with 10, shor, to view the first fort, and to assault it the next day in the morning by the breake of day, which hee could not doe, because of the foule weather, and darknesse of the night. King Helicopile seeing him out of quiet in that he had failed of his purpose there, assured him to guide him a more easie way, though it were farther about. Insomuch as leading him through the woods, he brought him within sight of the fort, where he discerned one quarter which was but begun to bee entrenched. Thus after he had sounded the small river that falleth downe thereby, hee stayed untill ten of the clock in the morning for an ebbe water, that his men might passe over there, unto a place where he had scene a litle groue between the river & the fort (that he might not be scene to passe and set his souldiers in array) causing them to fasten their flasks to their Hozions, & to hold up their swords and kalivers in their hands, for feare least the water, which reached up to their girdles, should not wet them: where they found such abundance of great oysters, and shels which were so sharpe, that many had their legs cut with them, and many others lost their shoes. Notwithstanding alldone as they were passed over, with a French courage they prepared themselves to the assault on the Sundaye next after Easter day, in Aprill 1568. Insomuch that Gourgues to employ the ardent heat of this good affection, gaue twenty shot to his Lieutenant Cazenoue, and ten Mariners laden with pots and balles of wild fire to burne the gate: and then he assaulted the Fort on another side, after he had made a short speech unto his men of the strange treasons which the Spaniards had plaid their companions. But being discried as they came holding downe their heads within two hundred paces from the Fort, the Gunner being upon the terrace of the Fort, after he had cried, Arme, Arme, these be French men, discharged twise upon them a coluerine, wheron the Armes of France were grauen, which had bin taken from Laudonniere. But as he went about to charge it the third time, Olotocara, which had not learned to keepe his ranke, or rather moued with rage, leapt on the platforme, and thrust him through the bodie with his pike and slew him. Whereupon Gourgues aduanced forward, and after he had heard Cazenoue cry, that the Spaniards which issued out armed at the cry of the alarme, were fled, hee drew to that part, and so hemmed them in betweene him and his Lieutenant, that of threescore there escaped not a man, sauing only fiftene reserved unto the same death which they had put the French unto. The Spaniards of the other fort in the meanwhile ceased not to play with their ordinance, which much annoied the assailants: although to answer them they had by this placed and oftentimes pointed the foure pieces found in the first fort. Whereupon Gourgues being accompanied with fourescore shot went aboard the barke which met him there to good purpose to passe into the wood neere unto the Fort, out of which he supposed the Spaniards would issue to saue themselves through the benefit of the woods in the great fort, which was not past one league distant from y^e same. Afterward the Sauvages not staying for the returne of the bark, leapt al into the water holding up their bowes & arrowes in one hand, & swimming with the other, so that the Spaniards seeing both y^e Hozes couered with so great a number of men, thought to flee towards the woods: but being charged by the French, and afterward repulled by the Sauvages, toward wh^o they would haue retired, they were sooner then they would bereft of their liues. To conclude they al there ended their dayes sauing 15 of those which were reserved to be executed for the example of others. Whereupon Captaine Gourgues hauing caused al that he found in the second fort to be transported unto the first, where he ment to strengthen himselfe to take resolution against the great Fort, the state whereof hee did not vnderstand: in fine a Sergeant of a band one of the prisoners assured him that they might be there very neere 300 well furnished vnder a braue Gouvernor, which had fortified there, attending farther succours. Thus hauing obtained of him the platforme, the height, the fortification and passages vnto it, and hauing prepared eight good lathers, and raised all the Countrey against the Spaniard, that he neither might haue newes, nor succours, nor retract on any side, he determined to march forward. In the meane while the Gouverneur sent a Spaniard disguised like a Sauage to spie out the state of the French. And though he were discovered by Olotocara, yet he vfed all the cunning he could possibly to perswade them that he was one of the second fort, out of which hauing escaped, and seeing none but Sauvages on euery side, he hoped more in y^e Frenchmens then their mercy, vnto whom he came to yeild himselfe disguised like a Sauage, for feare lest if he should haue bin knowne, he should haue bin massacred by those Barbarians: but the spie being brought face to face with the sergeant of the the band, & conuicted to be one of the great fort, was reserved vntill an other time: after that he had assured Gourgues that the truth was that he had 2000 Frenchmen with him for feare

fear of whom the 200 and threescore Spaniards which remained in the great fort, were greatly astonished. Whereupon Gourgues being resolved to set upon them, while they were thus amazed, and leaving his Standard-bearer and a Captaine with fifteene shot to keepe the fort, and the entry of the River, he caused the Sauages to depart by night to lye in ambush within the woods on both sides of the river, then he departed in the Morning, leaving the Sergeant and the spy fast bound along with him, to shew him that in deede, which they had only made him understand before in paynting. As they marched Olotocara a resolute Sauage which neuer left the Captaine, said vnto him, that he had serued him faithfully, and done whatsoever hee had commaunded him, that he was assured to dye in the conflict at the great Fort, wherein neuertheless he would not faile, though it were to saue his life: but he prayed him to giue that vnto his wife, if hee escaped not, which he had meant to bestow on him, that she might bury the same with him, that thereby hee might be better welcome vnto the village of the soules or spirits departed. To whom Captaine Gourgues answered, after he had commended his faithfull valour, the loue toward his wife, and his noble care of immortall honour, that he desired rather to honour him alive then dead, and that by Gods helpe he would bring him home againe with victorie. After the discouerie of the fort, the Spaniards were no niggards of their Canon shotte, nor of two double Coluerines, which being mounted vpon a Bulwarke, commaunded all along the River, which made captaine Gourgues to get to the hill couered with wood, at the foot whereof the fort beginneth, and the Forrest of wood continueth and stretcheth forth beyond it: so that he had sufficient couerture to approach thereunto without offence. He purposed also to remaine there vntill the Morning, wherein hee was resolved to assault the Spaniards by scaling their walles on the side toward the hill, where the Trench seemed not sufficiently flanked for the defence of the courtains, and from whence part of his men might draw them that were besieged, which should shew themselves to defend the rampart while the rest were coming by. But the Gouverneur hastened his unhappy destinie, causing threescore shotte to sallie forth, which passing through the Trenches, aduanced forward to describe the number and valour of the French, whereof twentie vnder the conduct of Cazenoue, getting betweene the fort and them which now were issued forth, cut off their repassage, while Gourgues commanded the rest to charge them in the front, but not to discharge but neere at hand, and so that they might be sure to hitte them, that afterward with more ease they might cut them in pieces with their swords. So that turning their backs as soone as they were charged, and compassed in by his Lieutenant, they remayned all slaine vpon the place. Whereat the rest that were besieged were so astonished, that they knew none other meane to saue their liues, but by fleeing into the Wooddes adioynning, where neuertheless being incountred againe by the arrows of the Sauages which lay in wayte there for them (whereof one ranne through the target and body of a Spaniard, which therewithall fell downe starke dead) some were constrained to turne backe, choosing rather to dye by the hand of the French, which pursued them: assuring themselves, that none of them could finde any fauour neyther with the one nor the other Nation, whom they had alike and so out of measure cruelly intreated, sauing those which were reserved to be an example for the time to come. The fort when it was taken, was found well provided of all necessities: namely of five double Coluerines, and foure Spynions, with diuers other small pieces of all sorts, and eightene grosse cakes of gunnepowder, all sorts of weapons, which Gourgues caused with speede to be imbarked, sauing the powder and other moueables, by reason it was all consumed with fire through the negligence of a Sauage, which in seeking of his fish, set fire on a traine of powder which was made and hidde by the Spaniards, to haue sealed the French at the first assault, thus blowing vp the store house, and the other houses buylt of pine trees. The rest of the Spaniards being led away prisoners with the others, after that the General had shewed them the wrong which they had done without occasion to all the French Nation, were all hanged on the boughs of the same trees, whereon the French hung: of which number five were hanged by one Spaniard, which perceiving himselfe in the like miserable estate, confessed his fault, and the iust iudgement which God had brought vpon him. But in stead of the writing which Pedro Melendes had hanged ouer them, importing these wordes in Spanissh, I doe not this as vnto French men, but as vnto Lutherans, Gourgues caused to be imprinted with a searing iron in a table of firrewood, I doe not this as vnto Spaniards, nor as vnto Mariners, but as vnto Traitors, Robbers, and Murtherers. Afterward considering he had not men inough to keepe his forts which he had wonne, much lesse to store them, fearing also lest the Spaniard which hath Dominions neere adioynning should renew his forces, or the Sauages should preuaile against the French men, vntill his Maiestie would send thither, hee resolved to raze them. And in deede, after he had assembled, and in the ende perswaded all the Sauage kings so to doe, they

caused their subiects to runne thither with such affection, that they ouerthrew all the three Ports flatte euery with the ground in one day. This done by Gourgues, that hee might returne to his Shippes which were left in the Riuer of Seyne called Tacatacourou, fiftene leagues distant from thence, he sent Cazenoue and the artillery by water: afterward with fourescore barquebu- siers, armed with coxlets, and matches light, followed with fortie Hariners bearing pikes, by reason of the small confidence he was to haue in so many Sauages, he marched by land alwayes in battell ray, finding the wayes couered with Sauages, which came to honour him with presents and prayles, as the deliuerer of all the countreys round about adioyning. An old woman among the rest sayd vnto him, that now she cared not any more to dye, since she had seene the Frenchmen once againe in Florida, and the Spaniards chased out. Briefly being arrived, and finding his ships set in order, and euery thing ready to set sayle, hee counselled the kings to continue in the amitie and ancient league which they had made with the king of France, which would defend them against all Nations: which they all promised, shedding teares because of his departure, Olocora especially: for appealing of whom he promised them to returne within twelue Moones, (so they count the peeres) and that his king would send them an army, and store of kniues for presents, and all other things necessary. So that after he had taken his leaue of them, and assembled his men, he thanked God of all his successe since his setting forth, and prayed to him for an happy re- turne. The third of May 1568, all things were made ready, the Rendez-vous appoynted, and the Ankers weighed to set sayle so prosperously, that in seuentene dayes they ranne cleuen hundred leagues: continuing which course they arrived at Rochel the first of June, the foure and thirtieth day after their departure from the Riuer of May, hauing lost but a small Pinnesse and eight men in it, with a few gentlemen and others which were slaine in the assaulting of the Ports. After the cheere and good entertainment which he receiued of those of Rochel, hee sayled to Bordeaux to informe Monsieur Monluc of the things aboue mentioned, albeit hee was aduertised of eigh- teene Pinnesses, and a great Shippe of two hundred Tunnes full of Spaniards, which being assured of the defeat in Florida, and that he was at Rochel, came as farre as Che-de-Bois, the same day that he departed thence, and followed him as farre as Blay (but he was gotten already to Bordeaux) to make him yeeld another account of his voyage, then that, wherewith hee made many Frenchmen right glad. The Catholike king being afterward informed that Gourgues could not easily be taken, offered a great summe of money to him that could bring him his head, praying moreouer king Charles to doe iustice on him as of the authour of so bloody an act con- trary to their alliance and good league of friendship. In so much as coming to Paris to present himselfe vnto the King, to signifie vnto him the successe of his Voyage, and the meanes which hee had to subdue this whole Countrey vnto his obedience, (wherein hee offered to imploy his life, and all his goods) hee found his entertainment and answere so contrary to his expecta- tion, that in fine hee was constrained to hide himselfe a long space in the Court of Roan, about the peere 1570 And without the assistance of President Marigny, in whose house he remayned certaine dayes, and of the Receiuer of Vacqueiulx, which alwayes was his faithfull friend, hee had beene in great danger. Which grieved not a litle Dominique de Gourgues, considering the seruices which hee had done as well vnto him as to his predecessours kings of France. Hee was borne in Mount Marfan in Guyenne, and imployed for the seruice of the most Christi- an Kings in all the Armies made since these twentie five or thirtie peeres: at last he had the charge and honour of a Captaine, which in a place neere vnto Siene, with thirtie Soulopers sustayned the brunt of a part of the Spanish Armie, by which beeing taken in the assault, and hauing all his men cutte in pieces, hee was put into a Galley in token of the good warre and singular fauour which the Spaniard is wont to shewe vs. But as the Galley was going to- ward Sicillie, beeing taken by the Turkes, ledde away to Rhodes, and thence to Constanti- nople, it was shortly afterwarde recovered by Romeguas, commander ouer the Armie of Malta. By this meane returning home, hee made a Voyage on the coast of Africa, whence hee tooke his course to Bresil, and to the South Sea. At length beeing desirous to repayre the ho- nour of France, he set vpon Florida with such successe as you haue heard. So that being become by his continuall warlike actions both by Land and Sea no lesse valiant Captaine then skillfull Hariner, hee hath made himselfe feared of the Spaniard, and acceptable vnto the Queene of England for the desert of his vertues. To conclude, he dyed in the peere 1582, to the great grieve of such as knew him.

The

The relation of *Pedro Morales* a Spaniard, which *sir Francis Drake* brought from *Saint Augustines* in *Florida*, where he had remayned fixe yeeres, touching the state of those partes, taken from his mouth by Master *Richard Hakluyt* 1586.

Three score leagues by to the Northwest from *Saint Helena* are the mountaines of the golde and Chyffall Mines, named *Apalaci*.

The riuer of *Wateri* is thirtie leagues from *S. Helena* Northward, which is able to receiue any flecte of ships of great burden. Wateri a goodly riuer.

Wateri and *Caiowa* are two kings, and two riuers to the North of *Saint Helena*.

Oristou,

Ahoia,

Ahoiauc,

Isamacon,

Icosa or Dicosa

} Kings and Riuers to the South of *Saint Helena*.

The Spaniards haue killed three hundred of the subiects of *Potanou*.

The greatest number of Spaniards that haue bene in *Florida* this fixe yeeres, was three hundred, and now they were but two hundred in both the Forts.

There is a great City sitteene or twentie dayes iourney from *Saint Helena* Northwestward, which the Spaniards call *La grand Copal*, which they thinke to bee very rich and exceeding great, and haue bene within the sight of it, some of them. La grand Copal a rich citie.

They haue offered in generall to the King to take no wages at all of him, if he will giue them leaue to discouer this citie, and the rich mountaines, and the passage to a sea or mighty Lake which they heare to be within foure and twenty dayes trauel from *Saint Helena*, which is in 32. degrees of latitude: and is that riuer which the French called *Port-royal*.

He saith also that he hath seene a rich Diamond which was brought from the mountaines that lye by in the countrey Westward from *S. Helena*. These hills seeme wholly to be the mountaines of *Apalaci*, whereof the Sauages aduertised *Laudonniere*, and it may bee they are the hills of *Chauris Temoatam*, which Master *Lane* had aduertisement of.

The relation of *Nicholas Burgoignon*, aliâs *Holy*, whom *sir Francis Drake* brought from *Saint Augustine* also in *Florida*, where he had remayned fixe yeeres, in mine and Master *Heriois* hearing.

His *Nicholas Burgoignon* sayth, that betweene *S. Augustine* and *S. Helen* there is a Calique whose name is *Casicola*, which is lord of ten thousand Indians, and another calique whose name is *Dicasca*, and another called *Touppেকyn* toward the North, and a fourth named *Potanou* toward the South, and another called *Moscica* toward the South likewise. Besides these he acknowledgeth *Oristou*, *Ahoia*, *Ahoiauc*, *Isamacon*, alledged by the Spaniard.

He further affirmeth, that there is a citie Northwestward from *S. Helenes* in the mountaines, which the Spaniards call *La grand Copal*, and is very great and rich, and that in these mountaines there is great store of Chyffal, golde, and Rubies, and Diamonds: And that a Spaniard brought from thence a Diamond which was worth five thousand crownes, which *Pedro Melendes* the marques nephew to olde *Pedro Melendes* that slew *Ribault*, & is now gouernor of *Florida*, weareth. He saith also, that to make passage vnto these mountaines, it is needefull to haue store of Hatchets to giue vnto the Indians, and store of Pickaxes to breake the mountaines, which shine so bright in the day in some places, that they cannot behold them, and therefore they trauell vnto them by night. Also corlets of Cotton, which the Spaniards call *Zecopiez*, are necessary to bee had against the arrowes of the Sauages.

He sayth farther, that a Tunne of the *sassafras* of *Florida* is solde in *Spaine* for fittie ducates: and that they haue there great store of Turkie cocks, of Beanes, of Peason, and that there are great store of pearles.

The things, as he reporteth, that the *Floridians* make most account of, are red Cloth, or redde Cotton to make baudricks or gyddes: copper, and hatchets to cut withall.

The Spaniards haue all demaunded leaue at their owne costs, to discouer these mountaines, which the King denyeth, for feare lest the English or French would enter into the same action, once known.

All the Spaniards woulde passe by by the riuer of Saint Helena vnto the mountaines of golde and Chyffall.

Oren.

The Spaniards entring 50. leagues by Saint Helena, found Indians wearing golde rings at their nostrils and eares. They found also Oren, but lesse then ours.

Six leagues from Saint Helena toward the North, there is a poynt that runneth farre into the sea, which is the marke to the Seamen to finde Saint Helena and Waterin.

Waterin is a riuer fortie leagues distant Northward from Saint Helena, where any flecte of great ships may ride safely. I take this riuer to be that which we call Waren in Virginia, whither at Christmasse last 1585. the Spaniards sent a barke with fortie men to discouer where we were seated: in which barke was Nicholas Burgoignon the reporter of all these things.

The Spaniards of S. Augustine haue slaine three hundred of the subjects of Potanou. One Porassi is neighbour to Potanou. Oratina is he which the French histoyr calleth Olata Outina. Caluui is another calique which they knowe.

SVNDRY VOYAGES MADE FROM

Nueva Galicia, and Nueva Viscaia in new Spaine, to the 15. Pro-

uinces of new Mexico, and to Quivira and Cibola, all situate on the

backside of Guastecan, Florida, and Virginia, as farre as 37. degrees of Nor-

therly latitude: with a description of the riuers, lakes, cities, townes,

nations, fertile soyle, and temperate ayre in those partes; and

most certaine notice of many exceeding rich siluer-
mines, and other principall commodities.

A discourse of the famous Cosmographer *Iohn Baptista Ramusius*, concerning the three voyages of *Frier Marco de Nica*, *Francis Vasquez de Coronado*, and *Ferdinando Alorchon* next following: taken out of his third volume of Navigations and Voyages.

The right honourable Don Antonio de Mendoza being sent by Charles the Emperour to be viceroy of Mexico and Nueva Espanna, and hauing understood that Don Ferdinando Cortez had sent many ships along the coast of Nueva Espanna to discouer countries, and to find out the Isles of the Malucos, began himselfe to desire to do the like, as viceroy of Nueva Espanna; and hereupon they fell out: for Cortez said that he was general and discouerer of the South sea, and that it belonged to him to set forth those voyages. On the other side, the lord Don Antonio alledged that it belonged to him to make that discouery, as being viceroy of Nueva Espanna. So that they fell at great variance, and Cortez returned into Spaine to complaine vnto the Emperour. Don Antonio in the meane season hauing obtained knowledge of the voyage, which Andrew Dorantez (who was one of the company of Pamphilo Naruacz that escaped, as you may reade in the relation of Alvaro Nunnez, called Cabeça de Vaca) made; sent Frier Marco de Nica with a Negro of the said Dorantez to discouer that country. Which Frier Marco de Nica being returned, & hauing informed his lordship of all his discouery, he sent captain Francis Vasquez de Coronado with many Spaniards on horsebacke and Indians on foot: likewise he sent a flecte by sea, whereof Ferdinando Alorchon was captaine, as may be seene in the relations following.

An extract of a letter of captaine *Francis Vasques de Coronado*, written to a Secretary of the right noble *Don Antonio de Mendoza*, viceroy of *Nueva Espanna*. Dated in *Culiacan*, the 8. of March 1539.

He saith that Frier Marcus de Nica arrived in the Province of Topira, where he found all the Indians fled vnto the mountaines for feare of the Christians, and that for his sake they came all downe to see him, with great ioy & boldnesse. They are men of good making, and whiter then others, and their women are more beautifull then others of the neighbour. provinces. There are no great cities there, yet are the houses built of stone, and are very good, and in them they haue great store of gold, which is as it were lost, because they know not what vse to put it to. The people weare Emeralods and other precious iewels vpon their bodies: they are valiant, hauing very strong

Store of golde,
siluer, and pre-
cious stones
in Topira.

strong armour made of silver, fashioned after diuers shapes of beasts. They worship for their gods such things as they haue in their houses, as namely hearbes, and birdes, and sing songs vnto them in their language, which differeth but litle from that of Culiacan. They told the Frier that they were willing to become Christians, and the Emperors subiects, for they were without a gouernour; with condition that no man should hurt them: and that they would change their golde for such things as they wanted. Commandement was giuen, that they should bee receiued without doing them any displeasure. Neere vnto this countrey there is another Prouince heretofore discovered by our men, where the people go naked without any thing before them: they are very hardly reduced to Christianitie, and they are valiant and stout. Their houses are couered with straw. They seeke no other riches but to feede cattel. They goe at certaine seasons to their sacrifices into a valley situate in that Prouince, which is inhabited with people, esteemed by those of the countrey as saints and priests, whom they call Chichimecas, which dwell in the woods without houses: and they eat such things as they of the countrey giue them of almes. They goe naked, and are tanned in the smoke, and tye their priue member with a string vnto their knee, and the women likewise goe stark naked. They haue certain temples couered with strawe, with small round windowes full of the skulls of dead men; before their temple is a great round ditch, the brim whereof is compassed with the figure of a serpent made of gold and silver, and with another mixture of vnknown metals: and this serpent holdeth his tayle in his mouth. They of this valley from time to time cast lots, whose lucke it shal be to be sacrificed, and they make him great cheere, on whom the lotte falleth, and with great toy they crowne him with flowers vpon a bed prepared in the sayd ditch all full of flowers and sweete hearbes, on which they lay him along, and lay great stoe of dry wood on both sides of him, and set it on fire on epyther part, and so he dyeth. Where he continueth so quietly without being bound, as though hee did something, wherein he tooke great pleasure. And they say that hee is a Saint, and doe worshippe him for that peere, and sing psalmes, and hymnes vnto him, and after ward set up his head with the rest in order within those windowes. Also they sacrifice their prisoners, whom they burne in another deeper ditch, and not with the foresayde ceremonies. The Spanyardes which are in Xalisco write, that hauing good assistance, they hope that those people will become Christians. The Countrey is very good and fruitfull, and hath great stoe of good and wholesome waters.

A Letter of Francis Vazquez de Coronado, Gouvernour of Nueva Galicia, to the lord Don Antonio de Mendoza, Viceroy of Nueva Espanna.
Dated in Saint Michael of Culiacan the 8. of March, 1539.

Of the hard passage from Saint Michael of Culiacan to Topira. The description of that Prouince, and of another neere vnto the same, very rich in gold and precious stones. The number of the people which Vazquez carried with him in his journey thither; and how greatly Frier Marcus of Niza is honoured by the Indians of Petatlan.

By the helpe of God I meane to set forward from this City of S. Michael of Culiacan toward Topira the 10. of April: neither can I any sooner set forward, because the powder and match which your Lordship sendeth mee, cannot be brought thither before that time, and I thinke it be now in Compostella. Besides this, I am to passe many leagues ouer mightie high mountaines, which reach vp to the skyes, and ouer a Riuer, which at this present is so bigge and swolne, that it can in no place be waded ouer. And if I depart at the time aforesayde, they say wee may wade ouer it. They tolde mee that from hence to Topira was not aboute 50. leagues; and I haue learned since that it is aboute foure score leagues. I doe not remember that I haue written to your Lordshippe the information which I haue of Topira: and though I had written thereof vnto you, yet because that since that time I haue learned something more, I thinke it meete to signifie the same vnto your Lordship in these my letters. It may please your honour therefore to vnderstand, that they tell mee, that Topira is a very populous Prouince, lying betweene two riuers, and that there are aboute 50. inhabited townes therein. And that beyond the same there is another Countrey greater then it, the name whereof the Indians could not tell mee, wherein there is great stoe of victuals of Maiz, French peason, Art of Pepper, Melons, and Gourbs, and great stoe of Venues of the countrey. The people weare on their bodies golde, Emeralds, and other precious stones, and are serued commonly in golde and silver, wherewith they couer their houses: and the chiefe men weare great chaines of golde

Topira.

Another greater Prouince.

These may
seeme to be the
Pintados menti-
oned by Frier
Marco de Niza
in his 2. Chap.

golde well wrought, about their necks, and are apparelled with paynted garments, and haue store of wilde kine; and they say they enter not into their countrey, because themselves haue no great store of people: these Indians being many in number, and very valiant. That which here I say, I learned by two other relations of Indians dwelling neere vnto them. I meane to set forthward at the time before mentioned, and I carrie with me 150. horsemen, and twelue spare horses, and 200. footmen, crossebow-men, and gunners. I take also with mee line hogs, sheepe, and all such things as I can get for money: assure your Lordship that I meane not to returne to Mexico, vntill I be able to informe your honour more perfectly, what the state of that place is: and if I find ought that we may doe good in, I will stay there, vntill I haue aduertised your Lordship, that you may command what you will haue done: and if it fall out so vnluckily, that there be nothing of importance, I will seeke to discover 100. leagues farther, wherein (I hope in God) there will be some thing found in which your Lordship may employ all these gentlemen, and those which shall come hither hereafter. I thinke I cannot chuse but stay there: and the waters, the seasons, and disposition of the countrey, and other accidents will direct mee what is best to be done. Frier Marco de Niza entered a good way into the country, accompanied with Stephan Dorantez, the 7. of February last past: when I departed from them, I left them with about 100. Indians of Pecos, and from the time of their comming thither they greatly honoured the father, shewing him all the courtesies they could possibly. I cannot send you, nor describe vnto you his entrance among them better then I haue done in all my relations which I wrote in my letters from Compostella, and I signified vnto you all things to the full from the cite of S. Michael: and though there be but the tenth part of those things, it is a great matter. Herewithall I haue sent your Lordship a Letter, which I receiued from the said father: the Indians tell me, that all the people of the countrey doe greatly reuerence him: and I beleue he may trauel many leagues farther in that sort. He saith, that if he finde any good countrey, he will write to me thereof: I will not goe thither without informing your Lordship of my iourney. I hope in God, that by one way or other wee shall discover some good thing.

A Letter written by the most honourable Lord *Don Antonio de Mendoza*, Vice-roy of *Nueva España*, to the Emperors Maiestie.

Of certaine Noblemen which sought to discover the end of the firme land of *Nueva España* toward the North. The arriual of *Vazquez de Coronado* with Frier *Marco de S. Michael* of *Culiacan*, with commission to the Gouvernors of those partes, to pacifie the Indians, and not to make them slaves any more.

Now the ships that went last from hence (whereof Michael de Vsnago was Admiral) I wrote vnto your Maiestie, how I had sent two Franciscan Friers to discover the end of this firme land, which stretcheth to the North. And because their iourney fell out to greater purpose then was looked for, I will declare the whole matter from the beginning. It may please your Maiestie to call to mind how often I wrote vnto your Highnesse, that I desired to know the ende of this Province of *Nueva España*, because it is so great a countrey, and that we haue yet no knowledge thereof. Neither had I onely this desire; for Nunno de Guzman departed out of this city of Mexico with 400. horsemen, and 14000. Indians footmen borne in these Indias, being the best men, & the best furnished, which haue bene seene in these parts: and he did so little with them, that the most part of them were consumed in the enterprize, & could not enter nor discover any more then already was discovered. After this the said Nunno Guzman being Gouvernour of *Nueva Galicia*, sent Captaines and Horsemen forth diuers times, which sped no better then he had done. Like wise the Marques de valle Hernando Cortez sent a captaine with 2. ships to discover the coast: which 2. ships and the captaine perished. After that he sent againe 2. other ships, one of the which was diuided from her consort, and the Master and certaine mariners slue the captaine, & vsurped ouer the ship. After this they came to an Island, where the Master with certaine mariners going on land, the Indians of the country slew them, and tooke their boat: and the ship with those that were in it, returned to the coast of *Nueva Galicia*, where it ran on ground. By the men which came home in this ship, the Marques had knowledge of the countrey which they had discovered: and then, either for the discontentment which hee had with the bishop of Saint Domingo, and with the Judges of this royal audience in Mexico, or rather because of his so prosperous successe in all things here in *Nueva España*, without seeking any farther

This was the
Port of Santa
Cruz. in the
Isle of Cali-
fornia.

ther intelligence of the state of that Island, he set forward on that voyage with 3. Ships, and with certaine footemen and hozenmen, not thoroughly furnished with things necessary; which fell out so contrary to his expectation, that the most part of the people which he carryed with him, dyed of hunger. And although he had ships, and a Countrey very neere him abounding with victuals, yet could hee neuer finde meanes to conquer it, but rather it seemed, that God miraculously did hide it from him: and so he returned home without achieving ought else of moment. After this, hauing heere in my company Andrew Dorantez, which is one of those who were in the voyage of Panphilo Naruacz, I often was in hand with him, supposing that he was able to doe your Maestie great seruice, to imploy him with forty or fiftie hozen, to search out the secret of those parts: and hauing prouided all things necessary for his iourney, and spent much money in that behalfe, the matter was broken off, I wot not how, and that enterpryse was giuen ouer. Yet of the things which were prouided for that purpose, I had left mee a Negro, which returned from the forsayde voyage of Naruacz with Dorantez, and certaine slaues which I had bought, and certaine Indians which I had gathered together, who were borne in those North partes, whome I sent with Frier Marco de Niza, and his companion a Franciscan Frier, because they had bene long travelled, and exercised in those partes, and had great experience in the affaires of the Indies, and were men of good life and conscience, for whom I obtained leaue of their superiours: and so they went with Francis Vazquez de Coronado, gouernour of Nueva Galicia vnto the Citie of Saint Michael of Culiacan, which is the last Province subdued by the Spaniards towarde that quarter, being two hundred leagues distant from this Citie of Mexico. As soon as the gouernour, and the Friers were come vnto that Citie, hee sent certaine of those Indians which I had giuen him, home into their Countrey, to signifie, and declare to the people of the same, That they were to vnderstand, that your Maestie had commaunded they should not hereafter bee made slaues, and that they should not be afraid any more, but might retorne vnto their houses, and liue peaceably in them, (for before that time they had bin greatly troubled by the euil dealings which were vsed toward them) and that your Maestie would cause them to be chastened, which were the causes of their veration. With these Indians about twentie dayes after returned about 400. men; which coming before the gouernour said vnto him, that they came on the behalfe of al their Countrey-men, to tell him, that they desired to see and know those men which did them so great a pleasure as to suffer them to retorne to their houses, and to sow Maiz for their sustenance: for by the space of many yeres they were driuen to flee into the mountaines, hiding themselves like wild beasts, for feare lest they should be made slaues, and that they and all the rest of their people were ready to doe whatsoeuer should bee commaunded them. Whom the gouernour comforted with good wordes, and gaue them victuals, and stayed them with him thre or foure dayes, wherein the Friers taught them to make the signe of the Crosse; and to learne the name of our Lorde Iesus Christ, and they with great diligence sought to learne the same. After these dayes hee sent them home againe, willing them not to be afraid, but to be quiet, giuing them apparel, beades, knives, and other such like things, which I had giuen him for such purposes. The sayde Indians departed very well pleased, and said, that whensoeuer hee would send for them, they and many others would come to doe whatsoeuer he would command them. The entrance being thus prepared, Frier Marco and his companion, with the Negro and other slaues, and Indians which I had giuen him, went forward on their voyage 10. or 12. dayes after. And because I had likewise aduertisement of a certaine Province called Topira situate in the mountaines, and had appoynted the gouernour Vazquez de Coronado, that he should vse meanes to learne the state thereof; he supposing this to be a matter of great moment, determined himselfe to goe and search it, hauing agreed with the sayd Frier, that he should retorne by that part of the mountaine, to meete with him in a certaine valley called Valle de los Coracones, being 120. leagues distant from Culiacan. The gouernour travelling into this Province (as I haue written in my former letters) found great scarcity of victuals there, and the mountaines so craggy, that he could finde no way to passe forward, and was inforced to retorne home to Saint Michael: so that as well in chusing of the entrance, as in not being able to finde the way, it seemeth vnto all men, that God would shut vp the gate to all those, which by strength of humane force haue gone about to attempt this enterpryse, and hath reueiled it to a poore and bare-footed Frier. And so the Frier beganne to enter into the Land, who because he found his entrance so well prepared, was very well receiued; and because he wrote the whole successe of his voyage, according to the instruction which I had giuen him to vnder take the same, I wil not write any more at large, but send your Maestie this copy of all such things as he obserued in the same.

Hh

A relation

Valle de los Coracones mentioned by Vazquez de Coronado cap. 1.

A relation of the reuerend father Frier Marco de Niça, touching his discouery of the kingdome of *Ceuola* or *Cibola*, situate about 30. degrees of latitude, to the North of *Nueva España*.

Chap. I.

Frier Marco de Niça departeth from *Saint Michael* in the Prouince of *Culiacan*, standing in 24. degrees of Northerly latitude: and comming to the Towne of *Petalan*, receiueth many courtesies of the Indians there. Departing from thence, he had information of many Islands, and of a great countrey inhabited with ciuill people; he commeth to *Vacupa*: where during his aboad, he heard newes of *Ceuola*, and of the state of the 7. Cities, and of other prouinces, & of the rich Islands of perles, which extend northward vpon the coast.

Frier Marco de Niça of the order of S. Francis, for the execution of the instruction of the right honourable lord Don Antonio de Mendoza, Vice-roy and capitaine Generall for the Emperors Maiestie in New Spaine, departed from the towne of S. Michael in the prouince of Culiacan on Friday the 7. of March, in the yeere 1539. hauing for my companion Frier Honoratus, and carying with me Stephan a Negro, belonging to Andrew Dorantez, and certaine of those Indians which the sayde lord Vice-roy had made free, and bought for this purpose: whom Francis Vazquez de Coronado gouernour of Nueva Galicia deliuered me, and with many other Indians of Petatlan, and of the towne called Cuchillo, which is some 50. leagues from Petatlan, who came to the valley of Culiacan, shewing themselves to bee exceeding glad, because they were certified by the Indians which had bin set free, whom the said gouernour had sent befoze to aduertise them of their libertie, that none of them from thenceforth should be made slaues, and that no man should inuade them, nor vse them badly; signifying vnto them, that the Emperors Maiestie had willed and commanded that it should be so. With the foresaid company I went on my voyage vntill I came to the towne of Petatlan, finding all the way great intertainment, and prouision of victuals, with roses, flowres, and other such things, and bowlers which they made for me of chalke and boughs platted together in all places where there were no houses. In this towne of Petatlan I rested 3. dayes, because my companion Honoratus fell so sicke, that I was constrained to leaue him there behinde.

Petalan a towne.

The island of Saint Iago.

A great island, and 30. small islands, which seeme to be the new islands of California rich in pearles.

A desert foure dayes iourney.

Then, according to my said instruction, I followed my iourney as the holy Ghost did leade me, without any merit of mine, hauing in my company the said Stephan the Negro of Dorantez, and certaine of the Indians which had bin set at liberty, and many of the people of the countrey, which gaue me great intertainment and welcome in all places where I came, and made mee bowlers of trees, giuing me such victuals as they had, although they were but small: because (as they said) it had not rained there in 3. yerres, and because the Indians of this countrey sought meanes rather to hide themselves, then to sowe corne, for feare of the Chyistians of the towne of S. Michael, which were wont to make in-roads euen to that place, and to warre vpon them, and to cary them away captiues. In all this way, which may be about 25 or 30. leagues from that part of Petatlan, I saw nothing worthy the noting, saue that there came to seeke me certaine Indians from the Island, where Fernando Correz the Marques of the valley had bin, of whom I was informed, that it was an island, & not firme land, as some suppose it to be. They came to y^e firme land vpon certaine raftes of wood: and from the maine to the island is but halfe a league by sea, litle more or lesse. Like wise certaine Indians of another island greater then this came to visit me, which island is farther off, of whom I was informed that there were 30. other smal islands, which were inhabited, but had small store of victuals, sowing 2. which haue Maiz or corne of the country. These Indians had about their necks many great shels which were mother of Pearle. I shewed them pearles which I carryed with me for a shew, and they told me that there were in the Islands great store of them, and those very great: howbeit I saw none of them. I followed my voyage through a desert of 4. dayes iourney, hauing in my company both the Indians of the islands, & those of the mountaines which I had passed, and at the end of this desert I found other Indians which marvelled to see me, because they had no knowledge of any Chyistians, hauing no traffike nor conuersation with those Indians which I had passed, in regard of the great desert which was between them. These Indians intertained me exceeding courteously, & gaue me great store of victuals, & sought to touch my garments, and called me Hayota, which in their language signifieth A man come from heauen. These Indians I aduertised by my interpreter, according to my instructions, in the knowledge of our Lord God in heauen, & of the Emperors. In these countreies & in all places els by all wayes and meanes possible,

possible, I sought information where any Countreys were of more Cities and people of civillitie and understanding, then those which I had found; and I could heare no newes of any such: howbeit they tolde mee, that foure or five dayes journey within the Countrey, at the foote of the mountaines, there is a large and mightie plaine, wherein they tolde mee, that there were many great Townes, and people clad in Cotton: and when I shewed them certaine Metals which I carryed with mee, to learne what riche Metals were in the Lande, they tooke the minerall of Golde and tolde mee, that thereof were vesselles among the people of that plaine, and that they carryed certaine round Greene stones hanging at their nostrilles, and at their eares, and that they haue certaine thinne plates of that Golde, wherewith they scrape off their sweat, and that the walles of their Temples are couered therewith, and that they vse it in all their household vesselles. And because this Valley is distant from the Sea-coast, and my instruction was not to leaue the Coast, I determined to leaue the discouery thereof untill my returne; at which time I might doe it more commodiously.

This was the valley of Cuzco.

Thus I travelled three dayes journey through Townes inhabited by the sayde people, of whome I was receiued as I was of those which I had passed, and came vnto a Towne of reasonable bignesse, called Vacupa, where they shewed mee great courtesies, and gaue mee great store of good victuals, because the soyle is very fruitfull, and may bee watered. This Towne is fortie leagues distant from the Sea. And because I was so farre from the Sea, it being two dayes before Passion Sunday, I determined to stay there vntill Easter, to informe my selfe of the Ilandes, whereof I sayde before that I had information. And so I sent certaine Indians to the Sea by three severall wayes, whom I commaunded to bring mee some Indians of the Sea-coast and of some of those Ilandes, that I might receiue information of them: and I sent Stephan Dorantes the Negro another way, whom I commaunded to goe directly Northward fiftie or threescore leagues, to see if by that way hee might learne any newes of any notable thing which wee sought to discouer, and I agreed with him, that if hee found any knowledge of any peopled and riche Countrey which were of great importance, that hee should goe no further, but should returne in person, or should sende mee certaine Indians with that taken which wee were agreed vpon, to wit, that if it were but a meane thing, hee should sende mee a white Crosse of one handfull long; and if it were any great matter, one of two handfulls long; and if it were a Countrey greater and better then Nueva Espanna, hee should send mee a great crosse. So the sayde Stephan departed from mee on Passion-Sunday after dinner: and within foure dayes after the messengers of Stephan returned vnto me with a great Crosse as high as a man, and they brought me word from Stephan, that I should forthwith come away after him, for hee had found people which gaue him information of a very mightie Province, and that he had certaine Indians in his company, which had bene in the sayd Province, and that he had sent me one of the said Indians. This Indian told me, that it was thirtie dayes journey from the Towne where Stephan was, vnto the first Citie of the sayde Province, which is called Ceuola. Hee affirmed also that there are seven great Cities in this Province, all vnder one Lord, the houses whereof are made of Lime and Stone, and are very great, and the least of them with one losse aboue head, and some of two and of three losses, and the house of the Lord of the Province of foure, and that all of them toyne one vnto the other in good order, and that in the gates of the principall houses there are many Turques-stones cunningly wrought, whereof hee sayth they haue there great plentie: also that the people of this Citie goe very well apparelled: and that beyond this there are other Provinces, all which (hee sayth) are much greater then these seven cities. I gaue credite to his speech, because I found him to bee a man of good vnderstanding: but I deferred my departure to follow Stephan Dorantes, both because I thought hee would stay for mee, and also to attend the returne of my messengers which I had sent vnto the Sea, who returned vnto me vpon Easter day, bringing with them certaine inhabitants of the Sea-coast, and of two of the Ilandes. Of whom I vnderstoode, that the Ilandes aboue mentioned were scarce of victuals, as I had learned before, and that they are inhabited by people, which weare shelles of Pearles vpon their foreheads, and they say that they haue great Pearles, and much Golde. They informed mee of foure and thirtie Ilandes, lying one neere vnto another: they say that the people on the Sea-coast haue small store of victuals; as also those of the Ilandes, and that they traffique one with the other vpon raftes. This coast stretcheth Northward as is to bee seene. These Indians of the Coast brought me certaine Targets made of Cow-hydes very well dressed, which were so large, that they couered them from the head to the very foote, with a hole in the toppe of the same to looke out before: they are so strong, that a Crossebow (as I suppose) will not pierce them.

Vacupa a town 40 leagues from the Sea of California.

From Vacupa to Ceuola are 32 dayes journey.

Great pearls and much gold in the Isles of California, which are 34 in number.

He hath new information of the seuen Cities by certaine Indians called *Pintados*, and of three other kingdomes called *Marata*, *Acus*, and *Totonteac*, being Countreys very rich in Turqueses and Hides of cattel. Following his voyage through those countries, he taketh possession thereof for the Emperors Maiestie, and of the Indians is much honoured and serued with victuals.

The same day came three Indians of those which I called *Pintados*, because I saw their faces, breasts and armes painted. These dwel farther up into the countrey towards the East, and some of them border vpon the seuen cities, which sayd they came to see mee, because they had heard of me: and among other things, they gaue me information of the seuen cities, and of the other Prouinces, which the Indian that Stephan sent me had tolde mee of, almost in the very same manner that Stephan had sent mee worde; and so I sent backe the people of the sea-coast: and two Indians of the *Illandes* sayde they would goe with mee seuen or eight dayes.

So with these and with the three *Pintados* aboue mentioned, I departed from *Vacupa* vpon Easter tuesday, the same way that Stephan went, from whom I receiued new messengers with a Crosse of the bignesse of the first which he sent me: which hastened mee forward, and assured me that the land which I sought for, was the greatest and best countrey in all those partes. The sayd messengers tolde mee particularly without sayling in any one poynt, all that which the first messenger had tolde mee, and much more, and gaue mee more plaine information thereof. So I travelled that day being Easter tuesday, and two dayes more, the very same way that Stephan had gone: at the end of which 3 dayes they tolde mee, that from that place a man might trauell in thirtie dayes to the citie of *Ceuola*, which is the first of the seuen. Neither did one onely tell me thus much, but very many; who tolde me very particularly of the greatnesse of the houses, and of the fashion of them, as the first messengers had informed me. Also they told me, that besides these seuen Cities, there are 3. other kingdomes which are called *Marata*, *Acus*, and *Totonteac*. I enquired of them wherefore they travelled so farre from their houses: They said that they went for Turqueses, and Hides of kine, and other things; and that of all these there was great abundance in this Countrey. Likewise I enquired how, and by what meanes they obtained these things: They tolde me, by their seruice, and by the sweat of their browes, and that they went vnto the first citie of the Prouince which is called *Ceuola*, and that they serued them in tilling their ground, and in other businesses, and that they giue them Hydes of oxen, which they haue in those places, and turqueses for their seruice, and that the people of this city weare very fine and excellent turqueses hanging at their eares and at their nostrils. They say also, that of these turqueses they make fine workes vpon the principall gates of the houses of this citie. They tolde mee, that the apparell which the inhabitants of *Ceuola* weare, is a gowne of cotten downe to the foote, with a button at the necke, and a long string hanging downe at the same, and that the sleeves of these gownes are as broad beneath as aboue. They say, they gyrd themselves with gyrdles of turqueses, and that ouer these coates some weare good apparell, others hides of kine very well dyed, which they take to bee the best apparell of that countrey, whereof they haue there great quantitie. Likewise the women goe apparelled, and covered downe to the foote. These Indians gaue me very good intertainment, and curiously enquired the day of my departure from *Vacupa*, that at my returne they might prouide me of foode and lodging. They brought certaine sicke folkes before mee, that I might heale them, and sought to touch my apparell, and gaue mee certaine Cow-hydes so well trimmed and dyed, that by them a man might coniecture that they were wrought by ciuile people, and all of them affirmed, that they came from *Ceuola*.

Another vil-
lage.

The next day I followed my iourney, and carrying with mee the *Pintados*, I came to another Village where I was well receiued by the people of the same: who like wise sought to touch my garments, and gaue mee as particular knowledge of the Lande aforesayde, as I had receiued of those which mette mee before: and also tolde mee, that from that place certaine people were gone with Stephan Dorantez foure or fife dayes iourney. And here I found a great crosse, which Stephan had left me for a signe, that the newes of the good Countrey increased, and left worde, that with all haste they should sende mee away, and that hee would stay for mee at the ende of the first Desert that he mette with. Here I set by two Cresses, and tooke possession according to mine instruction, because that the Countrey seemed better vnto mee then that which I had passed, and that I thought it meete to make an acte of possession as farre as that place.

In

In this maner I trauailed five dayes, alwayes finding inhabited places with great hospitalitie and intertainments, and many Turqueses, and Dre-hides, and the like report concerning the countrey. Heere I vnderstood, that after two dayes iourney I should finde a desert where there is no foode; but that there were certaine gone before to build mee lodgings, and to carrie foode for mee: whereupon I hastened my way, hoping to finde Stephan at the ende thereof, because in that place hee had left worde that hee would stay for mee. Before I came to the desert, I mette with a very pleasant Towne, by reason of great store of waters conuigthed thither to water the same. Heere I mette with many people both men and women clothed in Cotton, and some couered with Dre-hydes, which generally they take for better apparell then that of cotton. All the people of this Village goe in Caconados, that is to say, with Turqueses hanging at their nostrilles and eares: which Turqueses they call Cacona. Amongst others, the Lord of this Village came vnto me, and two of his brethren very well apparellled in Cotton, who also were in Caconados, each of them hauing his collar of Turqueses about his necke: and they presented vnto mee many wilde beastes, as Conies, Quailles, Hairs, nuttes of Pine trees, and all in great abundance, and offered mee many Turqueses, and dressed Dre-hydes, and very sayze vessels to drinke in, and other things; whereof I would receiue no whit. And hauing my garment of gray cloth, which in Spaine is called garagoça, the Lord of this Village, and the other Indians touched my gowne with their handes, and tolde mee, that of such Cloth there was great store in Totontecac, and that the people of that Countrey wore the same. Whereat I laughed, and sayde that it was nothing else but such apparell of Cotton as they wore. And they replied: We would haue thee thinke that we vnderstand, that that apparell which thou wearest, and that which we weare are of diuers sortes. Vnderstand thou, that in Ceuola all the houses are full of that apparell which we weare, but in Totontecac there are certaine litle beastes, from whom they take that thing where with such apparell as thou wearest, is made. I prayed them to informe mee moze playnely of this matter. And they tolde mee that the sayde beastes were about the hignesse of the two braches of spaniels which Stephan carped with him, and they say that there is great store of that cattell in Totontecac.

A pleasant village.

Store of woollen cloth and sheepe in Totontecac.

Chap. 3.

He entred into a desert, and the Indians suffer him to want nothing necessary. Following this Voyage, he cometh into a fertile valley, and hath certaine knowledge giuen him (as he had before) of the state of Ceuola, and of Totontecac; and that the coast of the sea in 35 degrees trendeth much to the Westward: and also of the kingdomes of Marata and Acum.

The next day I entred into the Desert, and where I was to dine, I found bowers made, and victuals in abundance by a riuers side; and at night I found bowers and victuals in like sort, and after that maner I found for 4. dayes trauell: all which time the wilderness continued.

A desert of foure dayes iourney.

At the ende of these foure dayes, I entred into a valley very well inhabited with people. At the first Village there mette me many men and women with victuals, and all of them had Turqueses hanging at their nostrills and eares, and some had collars of turqueses like those which the Lord of the Village before I came to the Desert, and his two brethren wore; sauing that they ware them but single about their neckes, and these people weare them three or foure times double, and goe in good apparell, and skümes of Oren: and the women weare of the sayd Turqueses at their nostrills and eares, and very good wast-coats and other garments. Heere there was as great knowledge of Ceuola, as in Nueva Espanna of Temistitan, and in Peru of Cuzco: and they tolde vs particularly the maner of their houses, lodgings, streetes and market-places, as men that had bene oftentimes there, and as those which were furnished from thence with things necessary for the seruice of their householdes, as those also had done, which I already had passed. I tolde them it was impossible that the houses should be made in such sort as they informed mee, and they for my better vnderstanding tooke earth or ashes, and powdered water thereupon, and shewed me how they layd stones vpon it, and how the buyling grewe vp, as they continued laying stones thereon, vntill it mounted aloft. I asked them whether the men of that Countrey had wings to mount vpon those losses: whereat they laughed, and shewed mee a Ladder in as good sort as I my selfe was able to describe it. Then they tooke a Staffe and helde it ouer their heads, and said that the losses were so high one above another. Likewise heere I had information

A very populous valley.

Collars of turqueses two or three times double.

formation of the woollen cloth of Totontecac, where they say are houses like those of Ceuola, and better and more in number, and that it is a great Province, and hath no gouernour.

This graduation is mistaken by 6. or 7. degrees at the least.

Here I understood that the coast of the sea trended much toward the West: for vnto the entrance of this first desert which I passed, the coast still stretched Northward: and because the trending of the coast is a thing of great importance, I was desirous to knowe and see it: and I saw plainly, that in 35. degrees the coast stretcheth to the West, whereat I reioyced no lesse, then of the good newes within land, and so I returned backe to proceede on my iourney.

Abacus.

Through the foresayd valley I trauailed five dayes iourney, which is inhabited with goodly people, and so aboundeth with victuals, that it sufficeth to feede aboute thre thousand horsemen: it is all well watered and like a garden: the burroughs and townes are halfe and a quarter of a league long, and in all these villages, I found very ample report of Ceuola, whereof they made such particular relation vnto me, as people which goe yeerely thither to earne their liuing. Here I found a man borne in Ceuola, who told me that he came thither, hauing escaped from the gouernour or Lieutenant of the towne; for the Lord of these seuen Cities liueth and abideth in one of those townes called Ahacus, and in the rest he appoynteth lieutenants vnder him. This townesman of Ceuola is a white man of a good complexion, somewhat well in yeeres, and of farre greater capacite then the inhabitants of this valley, or then those which I had left behind me. Hee sayde that hee would goe with mee, that I might begge his pardon: and of him I learned many particulars: he tolde me that Ceuola was a great Citie, inhabited with great store of people, and hauing many Streetes and Market-places: and that in some partes of this Citie there are certaine very great houses of five stories high, wherein the chiefe of the Citie assemble themselves at certaine dayes of the yeere. He sayeth that the houses are of Lym and Stone, according as others had tolde mee before, and that the gates, and small pillars of the principall houses are of Turqueses, and all the vessels wherein they are serued, and the other ornaments of their houses were of golde: and that the other five Cities are built like vnto this, whereof some are bigger: and that Ahacus is the chiefe of them. Hee sayd that toward the Southeast there is a kingdome called Marata, and that there were woont to be many, and those great Cities, which were all built of houses of Stone, with diuers lofts; and that these haue and doe wage warre with the Lord of the seuen cities, through which warre this kingdome of Marata is for the most part wasted, although it yet continueth and mainteineth warre against the other.

Marata lieth toward the Southeast.

Totontecac lieth West.

Likewise he saith, that the kingdome called Totontecac lieth toward the West, which he saith is a very mightie Province, replenished with infinite store of people and riches: and that in the sayde Kingdome they weare woollen cloth like that which I weare, and other finer sorts of woollen cloth made of the fleeces of those beastes which they described before vnto me; and that they are a very ciuile people. Moreover hee tolde me, that there is another great Province and kingdome called Acus; for there is Acus, and Ahacus with an aspiration, which is the principall of the seuen cities: and Acus without an aspiration is a kingdome and Province of it selfe. He tolde me also, that the apparel which they weare in Ceuola is after the same maner as they before had certified me, and that all the inhabitants of the Citie lie vpon beddes rayled a good height from the ground, with quiltes and canopies ouer them, which couer the sayde Bedes: and hee tolde mee that he would goe with me to Ceuola and farther also, if I would take him with me. The like relation was giuen vnto me in this towne by many others; but not so particularly. I travelled thre dayes iourney through this valley: the inhabitants whereof made mee exceeding great cheere and intertainment. In this valley I saw aboute a thousand Ore-hides most excellently trimmed and dresed. And here also I saw farre greater store of Turqueses and chaines made thereof, then in all places which I had passed; and they say, that all cometh from the city of Ceuola, whereof they haue great knowledge, as also of the kingdome of Marata, and of the kingdomes of Acus and Totontecac.

Chap. 4.

Of a very great beast with one horne vpon his fore-head; and of the courtesies which the Indians shewed Frier *Marcus* of *Niça*, in his Voyage. Also how cruelly *Stephan Dorantes* and his companions were vied vpon their arriuall at *Ceuola*, by the Lorde thereof.

A mightie beast with one horne.

Here they shewed me an hide halfe as bigge againe as the hide of a great ore, and tolde me that it was the skin of a beast which had but one horne vpon his forehead, & that this horne bended toward

toward his breast, and that out of the same goeth a point right forward, wherein he hath so great strength, that it will breake any thing how strong so euer it be, if he runne against it, and that there are great store of these beasts in that Countrey. The colour of the hide is of the colour of a great Goat-skin, and the haire is a finger thicke. Here I had messengers from Seephan which brought me word, that by this time he was come to the farthest part of the desert, and that he was very ioyfull, because the farther he went, the more perfect knowledge he had of the greatnesse of the countrey, and sent me word, that since his departure from me, hee neuer had found the Indians in any place; for euen vnto that very place he had found al in such maner as they had informed him, & hoped that he should find the like at his arriual in the valley which he was going vnto, as he had found in the villages before passed. I set by crosses, and bled those acts and ceremonies, which were to be done according to my instructions. The inhabitants requested me to stay here three or foure daies, because that from this place there were foure dayes iourney vnto the desert, and from the first entrance into the same desert vnto the citie of Ceuola are 15 great dayes iourney more; also that they would prouide victuals for me and other necessaries for that voyage. Likewise they told me, that with Seephan the Negro were gone about 300 men to beare him company, and to carry victuals after him, and that in like sort many of them would go with me to serue me, because they hoped to returne home rich. I thanked them, and willed them to set things in order with speede, and so I rested there three dayes, wherein I alwayes informed my selfe of Ceuola, and of as many other things as I could learne, and called many Indians vnto mee, and examined them severally, and all of them agreed in one tale, and told me of the great multitude of people, and of the order of the streetes, of the greatnesse of the houses, and of the strength of the gates, agreeing altogether with that which the rest before had told me. After three dayes many assembled themselves to go with me, 30 of the principal of whom I tooke, being very well apparelled, and with chaines of turqueses, which some of them were five or six times double, and other people to carry things necessary for them and me, and so set forward on my voyage.

Thus I entered into the second desert on the 9 of May, and travelled the first day by a very broad and beaten way, & we came to dinner vnto a water, where the Indians had made prouision for me; and at night we came to another water, where I found a house which they had fully made by for me, and another house stood made where Stephan lodged when he passed that way, and many old cottages and many signes of fire which the people had made that travelled to Ceuola by this way. In this sort I travelled 12 dayes iourney being alway well prouided of victuals, of wild beasts,

fifteene daies iourney from the end of the desert to Ceuola of Ciuala.

The second desert entered the 9. of May.

Twelve dayes iourney.

Here met vs an Indian the sonne of one of the chiefe men that accompanied mee, which had gone before with Stephan, who came in a great fright, hauing his face and body all couered with sweat, and shewing exceeding sadnesse in his countenance; and he told mee that a dayes iourney before Stephan came to Ceuola he sent his great Pace made of a gourd by his messengers, as he was alwayes wont to send them before him, that hee might knowe in what sort hee came vnto them, which gourd had a string of belles vpon it, and two feathers one white and another red, in token that he demanded safe conduct, and that he came peaceably. And when they came to Ceuola before the Magistrate, which the Lord of the citie had placed there for his Lieutenant, they deliuered him the sayde great gourd, who tooke the same in his hands, and after he had spied the belles, in a great rage and fury hee cast it to the ground, and willed the messengers to get them packing with speed, for he knew well ynough what people they were, and that they should will them in no case to enter into the citie, for if they did hee would put them all to death. The messengers returned and tolde Stephan how things had passed, who answered them, that it made no great matter, and would needes proceed on his voyage till he came to the citie of Ceuola: where he found men that would not let him enter into the towne, but shut him into a great house which stood without the citie, and straightway tooke all things from him which hee caried to truck and barter with them, and certaine turqueses, and other things which he had receiued of the Indians by the way, and they kept him there all that night without giuing him meate or drinke, and the next day in the morning this Indian was a chiefe, and went out of the house to drinke at a riuer that was nere at hand, and within a litle while after he saw Stephan running away, and the people followed him, and slew certaine of the Indians which went in his company. And when this Indian saw these things, he hid himselfe on the banks of the riuer, and after ward crossed the high way of the desert. The Indians that went with me hearing these newes began incontinently to lament, and I thought these heauie and bad newes would cost mee my life, neither did I feare so much the losse of mine owne life, as that I should not be able to returne to giue information of

the

the greatnesse of that Countrey, where our Lord God might be glorified: and streight way I cut the cords of my budgets which I carried with me full of merchandise for traffique, which I would not doe till then, nor giue any thing to any man, and began to diuide all that I carried with mee among the principall men, willing them not to be afraid, but to goe forward with me, and so they did. And going on our way, within a dayes iourney of Ceuola wee met two other Indians of those which went with Stephan, which were bloody and wounded in many places: and alsoone as they came to vs, they which were with mee began to make great lamentation. These wounded Indians I asked for Stephan, and they agreeing in all poynts with the first Indian sayd, that after they had put him into the foresayd great house without giuing him meat or drinke all that day and all that night, they tooke from Stephan all the things which hee carried with him. The next day when the Sunne was a lance high, Stephan went out of the house, and some of the chiefe men with him, and suddenly came store of people from the citie, whom alsoone as hee sawe he began to run away and we likewise, and forthwith they shot at vs and wounded vs, and certaine dead men fell vpon vs, and so we lay till night and durst not stirre, and we heard great rumours in the citie, and saw many men and women keeping watch and ward vpon the walles thereof, and after this we could not see Stephan any moze, and wee thinke they haue shot him to death, as they haue done all the rest which went with him, so that none are escaped but we onely.

Chap. 5.

The situation and greatnesse of the Citie of *Ceuola*, and how frier *Marcus* tooke possession thereof and of other prouinces, calling the same *The new kingdome of S. Francis*, and how after his departure from thence being preserued by God in so dangerous a voyage, he arriued at *Compostella* in *Nuena Galicia*.

HAuing considered the former report of the Indians, and the euill meanes which I had to propose my voyage as I desired, I thought it not good wilfully to looke my life as Stephan did; and so I told them, that God would punish those of Ceuola, and that the Viceroy when he should vnderstand what had happened, would send many Christians to chastise them: but they would not beleue me, for they sayde that no man was able to withstand the power of Ceuola. And herewithall I left them, and went aside two or three stones cast, and when I returned I found an Indian of mine which I had brought from Mexico called *Marcus*, who wept and sayde vnto me: Father, these men haue consulted to kill vs, for they say, that through your and Stephans meanes their fathers are slaine, and that neither man nor woman of them shall remaine vnslain. Then againe I deuised among them certaine other things which I had, to appeale them, whereupon they were somewhat pacified, albeit they still shewed great griefe for the people which were slaine. I requested some of them to goe to Ceuola, to see if any other Indian were escaped, with intent that they might learne some newes of Stephan; which I could not obtaine at their handes. When I saw this, I sayd vnto them, that I purposed to see the citie of Ceuola, whatsoeuer came of it. They sayde that none of them would goe with me. At the last when they sawe mee resolute, two of the chiefe of them sayde they would goe with me; with whome and with mine Indians and interpreters I followed my way, till I came within sight of Ceuola, which is situate on a plaine at the foote of a round hill, and maketh the w to bee a faire citie, and is better seated then any that I haue seene in these partes. The houses are builded in order, according as the Indians told me, all made of stone with diuers stozies, and flatte roofes, as farre as I could discerne from a mountaine, whither I ascended to viewe the citie. The people are somewhat white, they weare apparell, and lie in beds, their weapons are bowes, they haue Emralds and other iewels, although they esteeme none so much as turqueses, wherewith they adorne the walles of the porches of their houses, and their apparell and vessels, and they vse them in stead of money through all the Countrey. Their apparell is of cotton and of ore hives, and this is their most commendable and honourable apparell. They vse vessels of gold and siluer, for they haue no other mettall, whereof there is greater vse and moze abundance then in Peru, and they buy the same for turqueses in the prouince of the Pintados, where there are sayd to be mines of great abundance. Of other kingdomes I could not obtaine so particular instruction. Diuers times I was tempted to goe thither, because I knewe I could but hazard my life, and that I had offered vnto God the first day that I began my iourney: in the ende I began to bee afraid, considering in what danger I should put my selfe, and that if I should dye, the knowledge of this Countrey should be lost, which in my iudgement is the greatest and the best that hitherto hath bene discovered: and when I tolde the chiefe men, what a goodly citie Ceuola seemed vnto mee, they answered

Most rich
mines of gold
and siluer in
the prouince of
the Pintados,

answered me that it was the least of the seven cities, and that Totontecac is the greatest and best of them all, because it hath so many houses and people, that there is no ende of them. Having seene the disposition and situation of the place, I thought good to name that Countrey El Nuevo reyno de san Francisco: in which place I made a great heape of stones by the helpe of the Indians, and on the topp thereof I set up a small slender crosse because I wanted meanes to make a greater, and sayd that I set up that crosse and heape in the name of the most honourable Lord Don Antonio de Mendoza Viceroy and Captaine generall of Nueva Espanna, for the Emperour our Lord, in token of possession, according to mine instruction. Which possession I sayd that I tooke in that place of all the seven cities, & of the kingdomes of Totontecac, of Acus, and of Maraca. Thus I returned with much more feare then victuals, and went untill I found the people which I had left behind mee, with all the speede that I could make, whome I overtooke in two dayes traueill, and went in their company till I had passed the desert, where I was not made so much of as before: for both men and women made great lamentation for the people which were slaine at Ceuola, and with feare I hastened from the people of this valley, and trauelled tenne leagues the first day, and so I went daily eight or ten leagues, without staying untill I had passed the second desert. And though I were in feare, yet I determined to go to the great plaine, where of I said before, that I had information, being situate at the foote of the mountaines, and in that place I vnderstoode, that this plaine is inhabited for many dayes iourney toward the East, but I durst not enter into it, considering, that if hereafter wee shoulde inhabite this other Countrey of the seven cities, and the kingdomes before mentioned, that then I might better discover the same, without putting my selfe in hazard, and leaue it for this time, that I might giue relation of the things which I had now seene. At the entrance of this plaine I sawe but seven Townes onely of a reasonable bignesse, which were a farre off in a lowe valley being very greene and a most fruitfull soyle, out of which ranne many Riueres. I was informed that there was much golde in this valley, and that the inhabitants worke it into vessels and chinne plates, wherewith they strike and cake off their sweat, and that they are people that will not suffer those of the other side of the plaine to traffique with them, and they could not tell me the cause thereof. Here I set up two crosses, and tooke possession of the plaine and valley in like sort and order, as I did at other places before mentioned. And from thence I returned on my voyage with as much haste as I coulde make, untill I came to the citie of Saint Michael in the prouince of Culiacan, thinking there to haue found Francis Vazquez de Coronado gouernour of Nueva Galicia, and finding him not there, I proceeded on my iourney till I came to the Citie of Compostella, where I found him. I write not here many other particularities, because they are impertinent to this matter: I only report that which I haue seene, and which was told me concerning the Countreys through which I trauelled, and of those which I had information of.

Totontecac the greatest and most populous prouince.

He returned.

A desert.

A valley.

A second desert.

Compostella in 21. degrees of latitude.

The relation of Francis Vazquez de Coronado, Captaine generall of the people which were sent in the name of the Emperours maiestie to the Countrey of Cibola newly discovered, which he sent to Don Antonio de Mendoza Viceroy of Mexico, of such things as happened in his voyage from the 22. of Aprill in the yeere 1540. which departed from Culiacan forward, and of such things as hee found in the Countrey which he passed.

Chap. 1.

Francis Vazquez departeth with his armie from Culiacan, and after diuers troubles in his voyage, arriueeth at the valley of the people called Los Caracones, which he findeth barren of Maiz: for obtaining whereof hee sendeth to the valley called The valley of the Lord: he is informed of the greatnesse of the valley of the people called Caracones, and of the nature of those people, and of certaine Islands lying along that coast.

On the 22. of the moneth of Aprill last past I departed from the prouince of Culiacan with part of the army, and in such order as I mentioned unto your Lordship, and according to the successe I assured my selfe, by all likelihood that I shall not bring all mine armie together in this enterpryse: because the troubles haue bene so great and the want of victuals, that I thinke all this yeere wil not be sufficient to performe this enterpryse, & if it should bee performed in so short a time, it would be to the great losse of our people. For as I wrote unto your Lordship, I was foure score

This was but
200. leagues
from Mexico.

score dayes in traauiling to Culiacan, in all which time I and those Gentlemen my companions which were horsemen, carried on our backs and on our horses, a little victuall, so that from hence- forward wee carried none other needefull apparrell with vs, that was aboue a pound weight: and all this notwithstanding, and though wee put our selues to such a small proportion of victuals which wee carried, for all the order that possibly wee could take, wee were driuen to our shifts. And no maruayle, because the way is rough and long: and with the carriage of our Warque- bules downe the mountaines and hilles, and in the passage of Riuers, the greater part of our tozue was spoyled. And because I send your Lordship our voyage drawn in a Mappe, I will speake no more thereof in this my letter.

Fr. Marcus
of Niza.

Thirtie leagues before wee arrived at the place which the father prouinciall tolde vs so well of in his relation, I sent Melchior Diaz before with fiftene horses, giuing him order to make but one dayes iourney of two, because hee might examine all things, against mine arrival: who traualled foure dayes iourney through exceeding rough Mountaines where hee found neither victuals, nor people, nor information of any things, sauing that hee found two or three poore little villages, containing 20. or 30. cottages a piece, and by the inhabitants thereof hee vnderstood that from thence forward there were nothing but exceeding rough mountaines which ran very farre, betterly disinhabited and voyd of people. And because it was labour lost, I would not write vnto your Lordship thereof.

It grieved the whole company, that a thing so highly commended, and whereof the father had made so great bragges, should be found so contrary, and it made them suspect that all the rest would fall out in like sort. Which when I perceiued I sought to encourage them the best I coulde, telling them that your Lordshippe alwayes was of opinion, that this voyage was a thing cast away, and that wee should fixe our cogitation vpon those seven Cities, and other prouinces, whereof wee had knowledge: that there should bee the ende of our enterprize: and with this resolution and purpose wee all marched cheerefully through a very badde way which was not passable but one by one, or else wee must force out with Pioners the path which wee founde, wherewith the Souldiours were not a little offended, finding all that the frier had sayde to bee quite contrary: for among other things which the father sayde and affirmed, this was one, that the way was plaine and good, and that there was but one small hill of halfe a league in length. And yet in trueth there are mountaines which although the way were well mended could not bee passed without great danger of breaking the horses neckes: and the way was such, that of the cattell which your Lordship sent vs for the prouision of our armie wee lost a great part in the voy- age through the roughnesse of the rockes. The lambes and sheepe lost their hoofes in the way: and of those which I brought from Culiacan, I left the greater part at the Riuer of Lachimi, because they could not keepe company with vs, and because they might come softly after vs, foure men on horsebacke remained with them which are notwe come vnto vs, and haue brought vs not past foure and twentie lambes, and foure sheepe, for all the rest were dead with traauiling through that rough passage, although they traualled but two leagues a day, and rested themselues e- uery day.

The riuer of
Lachimi.

The valley of
the people cal-
led Caracones.

Valle del Sennor.

At length I arrived at the valley of the people called Caracones, the 26. day of the mo- neth of May: and from Culiacan vntill I came thither, I could not helpe my selfe, saue onely with a great quantitie of bread of Maiz: for seeing the Maiz in the fieldes were not yet ripe, I was constrained to leaue them all behind me. In this valley of the Caracones wee found more store of people then in any other part of the Countrey which wee had passed, and great store of til- lage. But I vnderstood that there was store thereof in another valley called The Lords valley, which I woulde not disturbe with force, but sent thither Melchior Diaz with wares of exchange to procure some, and to giue the sayde Maiz to the Indians our friends which wee brought with vs, and to some others that had lost their cattell in the way, and were not able to carry their victuals so farre which they brought from Culiacan. It pleased God that wee gate some small quantitie of Maiz with this traffique, whereby certaine Indians were releiued and some Spanyards.

The halley de
los Caracones
distant five
dayes iourney
from the Wes-
terne sea.

And by that time that wee were come to this valley of the Caracones, some tenne or twelue of our horses were dead through wearinesse: for being overcharged with great burdens, and hauing but little meate, they could not endure the traualle. Likewise some of our Negros and some of our Indians dyed here; which was no small want vnto vs for the performace of our enterprize. They tolde me that this valley of the Coracones is five dayes iourney from the Western Sea. I sent for the Indians of the Sea coast to vnderstand their estate, and while I stayed for them the horses rested: and I stayed there foure dayes, in which space the Indians of the

the Sea coast came vnto mee: which told mee, that two dayes sayling from their coast of the Sea, there were leuen or eight Islands right ouer against them, well inhabited with people, but badly furnished with victuals, and were a rude people: And they told mee, that they had seene a Shippe passe by not farre from the shore; which I wote not what to thinke whether it were one of those that went to discouer the Countrey, or else a Ship of the Portugals.

Seven or eight
Isles, which
are the Isles
of California.
A ship seene on
the sea coast.

Chap. 2.

They come to Chichilticale: after they had rested themselves two dayes there, they enter into a Countrey very barren of victuals, and hard to trauaile for thirtie leagues, beyond which they found a Countrey very pleasant, and a riuer called *Rio del Lino*, they fight with the Indians being assailed by them, and with victorie vanquishing their citie, they relieved themselves of their pinching hunger.

I Departed from the Caracones, and alwayes kept by the Sea coast as neere as I could iudge, and in very deed I still found my selfe the farther off: in such sort that when I arriued at Chichilticale I found my selfe tenne dayes iourney from the Sea: and the father prouinciall sayd that it was onely but five leagues distance, and that hee had seene the same. Wee all conceiued great griefe and were not a little confounded, when we saw that wee found euery thing contrary to the information which he had giuen your Lordship.

Chichilticale ten
dayes iourney
from the sea.

The Indians of Chichilticale say, that if at any time they goe to the Sea for fish, and other things that they carry, they goe trauersing, and are tenne dayes iourney in going thither. And I am of opinion that the information which the Indians giue me should be true. The sea returneth toward the West right ouer against the Coracones the space of tenne or twelue leagues. Where I found that your Lordships ships were seene, which went to discouer the haue of Chichilticale, which father Marcus of Nica sayd to bee in five and thirtie degrees. God knoweth what griefe of mind I haue sustained: because I am in doubt that some mishappe is fallen vnto them: and if they follow the coast, as they sayde they would, as long as their victuals last which they carry with them, whereof I left them store in Culiacan, and if they be not fallen into some misfortune, I hope well in God that by this they haue made some good discouerie, and that in this respect their long staying out may be pardoned.

This Chichilti-
cale is indeed
but in 23. deg.

I rested my selfe two dayes in Chichilticale, and to haue done well I should haue stayed longer, in respect that here wee found our horses so tyred: but because wee wanted victuals, wee had no leasure to rest any longer: I entred the confines of the desert Countrey on Saint Johns eue, and to refresh our former trauailes, the first dayes we founde no grasse, but worse way of mountaines and badde passages, then wee had passed already: and the horses being tired, were greatly molested therewith: so that in this last desert wee lost more horses then wee had lost before: and some of my Indians which were our friends dyed, and one Spanyard whose name was Spinosa; and two Negroes, which dyed with eating certaine herbes for lacke of victuals. From this place I sent before mee one dayes iourney the master of the fildie Don Garcia Lopez de Cardenas with fiftene horses to discouer the Countrey, and prepare our way: wherein hee did like himselfe, and according to the confidence which your Lordship reposed in him. And well I wote he sayled not to do his part: for as I haue enformed your Lordship, it is most wicked way, at least thirtie leagues and more, because they are inaccessible mountaines.

The 23. of
Iune.

Don Garcia Lo-
pez de Cardenas

But after wee had passed these thirtie leagues, wee found fresh riuers, and grasse like that of Castile, and specially of that sort which we call Scaramoio, many Nutte trees and Mulberie trees, but the Nutte trees differ from those of Spayne in the leafe: and there was flaxe, but chiefly neere the bankes of a certayne riuer which therefore wee called *El Rio del Lino*, that is to say, the riuer of Flaxe: wee found no Indians at all for a dayes trauaile, but afterward foure Indians came out vnto vs in peaceable maner, saying that they were sent euen to that desert place to signifie vnto vs that wee were welcome, and that the next day all the people would come out to meete vs on the way with victuals: and the master of the fildie gaue them a crosse, willing them to signifie to those of their citie that they should not feare, and they should rather let the people stay in their houses, because I came onely in the name of his maiestie to defend and ayd them.

A godly and
fruitfull coun-
treyp found.

Rio del Lino.

And this done, Fernando Aluarado returned to aduertise mee, that certaine Indians were come vnto them in peaceable maner, and that two of them stayed for my coming with the master of the fildie. Whereupon I went vnto them and gaue them beades and certaine short clockes, willing

willig them to returne vnto their citie, and bid them to stay quiet in their houses, and feare no-
thing. And this done I sent the master of the field to search whether there were any bad passage
which the Indians might keepe against vs, and that hee should take and defend it vntill the next
day that I should come thither. So hee went, and found in the way a very bad passage, where
wee might haue sustayned very great harme: wherefore there hee seated himselfe with his
company that were with him: and that very night the Indians came to take that passage to
defend it, and finding it taken, they assaulted our men there, and as they tell mee, they assaulted
them like valiant men; although in the ende they retired and fledde away; for the master of the
fielde was watchfull, and was in order with his company: the Indians in token of retreat soun-
ded on a certaine small trumpet, and did no hurt among the Spaniards. The very same night
the master of the fielde certified mee hereof. Whereupon the next day in the best order that I
could I departed in so great want of victuall, that I thought that if wee should stay one day
longer without foode, wee should all perishe for hunger, especially the Indians, for among vs all
we had not two bushels of cozne: wherefore it behoued mee to picke forward without delay.
The Indians here and there made fires, and were answered againe afarre off as orderly as
wee for our liues could haue done, to giue their fellows vnderstanding, how wee marched and
where we arrived.

As soone as I came within sight of this citie of Granada, I sent Don Garcias Lopez Campe-
master, frier Daniel, and frier Luys, and Fernando Vermizzo somewhat before with certaine
horsesmen to seeke the Indians and to aduertise them that our coming was not to hurt them,
but to defend them in the name of the Emperour our Lord, according as his maiestie had giuen
vs in charge: which message was deliuered to the inhabitants of that countrey by an interpreter.
But they like arrogant people made small account thereof; because we seemed very few in their
eyes, and that they might destroy vs without any difficultie: and they strooke frier Luys with an
arrow on the gone, which by the grace of God did him no harme.

In the meane space I arrived with all the rest of the horsesmen, and footemen, and found in the
fieldest a great sort of the Indians which beganne to shoote at vs with their arrowes: and be-
cause I would obey your will and the commaund of the Marques, I would not let my people
charge them, forbidding my company, which intreated mee that they might set vpon them, in any
wise to prouoke them, saying that that which the enemies did was nothing, and that it was not
meete to set vpon so few people. On the other side the Indians perceiuing that wee stirred
not, tooke great stomacke and courage vnto them: insomuch that they came hard to our horses
heelles to shoote at vs with their arrowes. Whereupon seeing that it was now tinte to stay no
longer, and that the friers also were of the same opinion, I set vpon them without any danger:
for suddenly they fled part to the citie which was neere and well fortified, and other into the field,
which way they could shift: and some of the Indians were slaine, and more had bene if I would
haue suffered them to haue bene pursued.

But considering that hereof wee might reape but small profite, because the Indians that
were without, were fewe, and those which were retired into the citie, with them which stayed
within at the first were many, where the victuals were whereof wee had so great neede, I as-
sembled my people, and deuised them as I thought best to assault the citie, and I compassed
it about: and because the famine which wee sustained suffered no delay, my selfe with certaine
of these gentlemen and souldiers put our selues on foote, and commaunded that the crosse-
bowes and harquebushers should giue the assault, and should beate the enemies from the
walles, that they might not hurt vs, and I assaulted the walles on one side, where they tolde me
there was a scaling ladder set vp, and that there was one gate: but the crossebowmen sudden-
ly brake the strings of their bowes, and the harquebushers did nothing at all: for they came thi-
ther so weake and feeble, that scarcely they could stand on their feete: and by this meanes the
people that were aloft on the wals to defend the towne were no way hindered from doing vs all
the mischief they could: so that twice they strooke mee to the ground with infinite number of
great stones, which they cast downe; and if I had not bene defended with an excellent good
headpiece which I wore, I thinke it had gone hardly with mee: neuerthelesse my companie
tooke mee by with two small wounds in the face, and an arrowe sticking in my foote, and many
blowes with stones on my armes and legges, and thus I went out of the battell very weake.
I thinke that if Don Garcias Lopez de Cardenas the second time that they strooke mee to
the ground had not succoured mee with striding ouer mee like a good knight, I had bene in
farre greater danger then I was. But it pleased God that the Indians yielded themselues
vnto vs, and that this citie was taken: and such store of Maiz was found therein, as our
necessitie

necessitie required. The Master of the felds, and Don Pedro de Touar, and Fernando de Alu-
rado, and Paul de Melgosa Captaines of the footemen escaped with certaine knocks with stones :
though none of them were wounded with arrowes, yet Agoniez Quarez was wounded in one
arme with the shot of an arrowe, and one Torres a townesman of Panuco was shot into the face
with another, and two footemen more had two small woundes with arrowes. And because my
armour was gilded and glittering, they all layd load on mee, and therefore I was more wounded
then the rest, not that I did more then they, or put my selfe forwarder then the rest, for all these
Gentlemen and souldiers carried themselves as manfully as was looked for at their hands. I am
nowe well recouered I thanke God, although somewhat bruised with stones. Likewise in the
skirmish which wee had in the feldes, two or three other souldiers were hurt, and three horses
slaine, one of Don Lopez, the other of Viliega and the third of Don Alonso Manrique, and seuen
or eight other horses were wounded; but both the men and horses are whole and sound.

Chap. 3.

Of the situation and state of the seuen cities called the Kingdome of Cibola, and of the
customes and qualities of those people, and of the beasts which are found there.

I remaineth now to certifie your Honour of the seuen cities, and of the kingdomes and prouin-
ces whereof the Father prouinciall made report vnto your Lordship. And to bee brieue, I can
assure your honour, he sayd the trueness in nothing that he reported, but all was quite contrary, sa-
uing onely the names of the cities, and great houses of stone: for although they bee not wrought
with Turqueses, nor with lyme, nor bricke, yet are they very excellent good houses of three or
four or five loftes high, wherein are good lodgings and faire chambers with ladders in stead of
staires, and certaine cellers vnder the ground very good and paved, which are made for winter,
they are in maner like stooues: and the ladders which they haue for their houses are all in a ma-
ner moouable and portable, which are taken away and set downe when they please, and they
are made of two pieces of wood with their steppes, as ours be. The seuen cities are seuen small
townes, all made with these kinde of houses that I speake of: and they stand all within foure
leagues together, and they are all called the kingdome of Cibola, and euery one of them haue
their particular name: and none of them is called Cibola, but altogether they are called Cibola.
And this towne which I call a citie, I haue named Granada, as well because it is somewhat like
vnto it, as also in remembrance of your lordship. In this towne where I nowe remaine, there
may bee some two hundred houses, all compassed with walles, and I thinke that with the rest of
the houses which are not so walled, they may be together five hundred. There is another towne
neere this, which is one of the seuen, & it is somewhat bigger then this, and another of the same big-
nesse that this is of, and the other foure are somewhat lesse: and I send them all painted vnto your
lordship with the voyage. And the parchment wherem the picture is, was found here with other
parchments. The people of this towne seeme vnto me of a reasonable stature, and wittie, yet
they seeme not to bee such as they should bee, of that iudgement and wit to builde these houses in
such sort as they are. For the most part they goe all naked, except their priue partes which are
couered: and they haue painted mantles like those which I send vnto your lordship. They haue
no cotton wooll growing, because the countrey is colde, yet they weare mantles thereof as
your honour may see by the shewe thereof: and true it is that there was found in their houses
certaine yarne made of cotton wooll. They weare their haire on their heads like those of Mexi-
co, and they are well nurtured and condicioned: And they haue Turqueses I thinke good quan-
tities, which with the rest of the goods which they had, except their corne, they had conueyed away
before I came thither: for I found no women there, nor no youth vnder fifteene yeeres olde, nor
no olde folkes aboue sixtie, sauing two or three olde folkes, who stayed behinde to gouerne all the
rest of the youth and men of warre. There were found in a certaine paper two poynts of Em-
eralds, and certaine small stones broken which are in colour somewhat like Granates very bad,
and other stones of Christall, which I gaue one of my seruants to lay vp to send them to your
lordship, and hee hath lost them as hee telleth me. Wee found heere Guinie cockes, but fewe.
The Indians tell mee in all these seuen cities, that they eate them not, but that they keepe them
onely for their feathers. I beleue them not, for they are excellent good, and greater then those
of Mexico. The season which is in this countrey, and the temperature of the ayre is like that of
Mexico: for sometime it is hotte, and sometime it raineth: but hitherto I neuer sawe it raine,
but once there fell a little showe with winde, as they are wont to fall in Spaine.

ted very curi-
ously.

The snow and cold are wont to be great, for so say the inhabitants of the Countrey: and it is very likely so to bee, both in respect of the maner of the Countrey, and by the fashion of their houses, and their furtres and other things which this people haue to defend them from colde. There is no kind of fruit nor trees of fruite. The Countrey is all plaine, and is on no side mountainous: albeit there are some hillie and bad passages. There are small store of fowles: the cause whereof is the colde, and because the mountaines are not neere. Here is no great store of wood, because they haue wood for their fuell sufficient foure leagues off from a wood of small Cedars. There is most excellent grasse within a quarter of a league hence, for our hoxles as well to feede them in pasture, as to mowe and make hay, whereof wee stood in great neede, because our hoxles came hither so weake and feeble. The victuals which the people of this countrey haue, is Maiz, whereof they they haue great store, and also small white Pease: and Aenison, which by all likelyhood they feede vpon, (though they say no) for wee found many skinnies of Deere, of Hares, and Conies. They eate the best cakes that euer I sawe, and every body generally eateth of them. They haue the finest order and way to grinde that wee euer sawe in any place. And one Indian woman of this countrey will grinde as much as foure women of Mexico. They haue most excellent salte in kernell, which they fetch from a certaine lake a dayes iourney from hence. They haue no knowledge among them of the North Sea, nor of the Westerne Sea, neither can I tell your lordship to which wee bee neerest: But in reason they should seeme to bee neerest to the Westerne Sea: and at the least I thinke I am an hundred and fiftie leagues from thence: and the Northerne Sea should bee much further off. Your lordship may see howe broad the land is here. Here are many sorts of beastes, as Beares, Tigers, Lions, Worke spicks, and certaine Sheep as bigge as an hoxle, with very great hornes and little taitles, I haue seene their hornes so bigge, that it is a wonder to behold their greatnesse. Here are also wilde goates whose heads likewise I haue seene, and the pawes of Beares, and the skins of wilde Bores. There is game of Deere, Dunces, and very great Staggess: and all men are of opinion that there are some bigger then that beast which your lordship bestowed vpon me, which once belonged to Iohn Melaz. They trauele eight dayes iourney vnto certaine plaines lying toward the North Sea. In this countrey there are certaine skinnies well dresed, and they dresse them and paint them where they kill their Deen, for so they say themselves.

Chap. 4.

Of the state and qualities of the kingdomes of *Totontec*, *Marata*, and *Acus*, quite contrary to the relation of Frier *Marcus*. The conference which they haue with the Indians of the citie of *Granada* which they had taken, which had fiftie yeres past foreseene the comming of the Christians into their countrey. The relation which they haue of other seuen cities, whereof *Tucano* is the principall, and how he sent to discouer them. A present of diuers things had in these countreys sent vnto the Viceroy *Mendoza* by *Vasques de Coronado*.

Totontec
is an hotte
lake.
Tadouac seem-
eth because it
is a lake, and
endeth in ac to
haue some affi-
nitie herewith.
Other townes
neere a riuer.

The kingdome of *Totontec* so much extolled by the Father prouinciall, which sayde that there were such wonderfull things there, and such great matters, and that they made cloth there, the Indians say is an hotte lake, about which are five or sixe houses; and that there were certaine other, but that they are ruinated by warre. The kingdome of *Marata* is not to be found, neither haue the Indians any knowledge thereof. The kingdome of *Acus* is one onely small citie, where they gather cotton which is called *Acucu*. And I say that this is a towne. For *Acus* with an aspiration nor without, is no word of the countrey. And because I gesse that they would deriue *Acucu* of *Acus*, I say that it is this towne whereinto the kingdom of *Acus* is conuerted. Beyond this towne they say there are other small townes which are neere to a riuer which I haue seene and haue had report of by the relation of the Indians. I would to God I had better newes to write vnto your lordship: neuerthelesse I must say the truth: And as I wrote to your lordship from *Culiacan*, I am nowe to aduertise your honour as wel of the good as of the bad. Yet this I would haue you bee assured, that if all the riches and the treasures of the world were here, I could haue done no more in the seruice of his Maiestie and of your lordshippe, then I haue done in comming hither whither you haue sent mee, my selfe and my companions carrying our victuals vpon our shoulders and vpon our hoxles three hundred leagues; and many dayes going on foote traualling ouer hilles and rough mountaines, with other troubles which I cease to mention, neither purpose I to depart vnto the death, if it please his Maiestie and your lordship that it shall be so.

Ther

Three dayes after this citie was taken, certaine Indians of these people came to offer mee peace, and brought mee certaine Turqueses and badde mandes, and I receiued them in his Ma-
iesties name with all the good speaches that I could deuise, certifying them of the purpose of my
comming into this countrey, which is in the name of his Maiestie, and by the commandement of
your Lordship, that they and all the rest of the people of this prouince should become Christians,
and should knowe the true God for their Lord, and receiue his Maiestie for their King, and earth-
ly Soueraigne: And herewithall they returned to their houses, and suddenly the next day they
set in order all their goods and substance, their women and children, and fled to the hills, leauing
their towne as it were abandoned, wherein remained very fewe of them. When I sawe this,
within eight or tenne dayes after being recovered of my woundes, I went to the citie, which I
sayde to bee greater then this where I am, and found there some fewe of them, to whom I sayde
that they should not bee afraid, and that they should call their gouernour vnto mee: howbeit, for-
asmuch as I can learne or gather, none of them hath any gouernour: for I sawe not there any
chiefe house, whereby any preeminence of one ouer another might bee gathered. After this an
olde man came, which sayd that hee was their lord, with a piece of a mantle made of many pieces,
with whom I reasoned that small while that hee stayed with mee, and hee sayd that within three
dayes after, hee and the rest of the chiefe of that towne would come and visite mee, and giue or-
der what course should bee taken with them. Which they did: for they brought mee certaine
mantles and some Turqueses. I aduised them to come downe from their holdes, and to returne
with their wiues and children to their houses, and to become Christians, and that they would ac-
knowledge the Emperours maiestie for their King and lord. And euen to this present they
keepe in those strong holdes their women and children, and all the goods which they haue. I
commanded them that they should paint mee out a cloth of all the beastes which they knowe in
their countrey: And such badde painters as they are, forthwith they painted mee two clothes,
one of their beastes, another of their birdes and fishes. They say that they will bring their chil-
dren, that our religious men may instruct them, and that they desire to knowe our lawe: And
they assure vs, that about fiftie yeeres past it was prophesied among them, that a certaine people
like vs should come, and from that part that wee came from, and that they should subdue all that
countrey.

That which these Indians worship as farre as hitherto wee can learne, is the water: for they
say it causeth their corne to growe, and maintaineth their life; and that they know none other rea-
son, but that their ancessors did so. I haue sought by all meanes possible to learne of the inhabi-
tants of these towne, whether they haue any knowledge of other people, countreys and cities:
And they tell mee of seuen cities which are farre distant from this place, which are like vnto
these, though they haue not houses like vnto these, but they are of earth, and small: and that a-
mong them much cotton is gathered. The chiefe of these towne whereof they haue knowledge,
they say is called Tucano: and they gaue mee no perfect knowledge of the rest. And I thinke
they doe not tell me the truth, imagining that of necessitie I must speedily depart from them, and
returne home. But herein they shall soone finde themselves deceived. I sent Don Pedro de To-
uar with his companie of footemen and with certaine other horsemen to see this towne: And I
would not haue dispatched this packet vnto your lordship, vntill I had knowen what this towne
was, if I had thought that within twelue or fiftene dayes I might haue had newes from him:
for hee will stay in this journey thirtie dayes at least. And hauing examined that the knowledge
hereof is of small importance, and that the colde and the waters approach: I thought it my duety
to doe according as your lordship gaue mee charge in your instructions, which is, that immediat-
ly vpon mine arrivall here, I should signifie so much vnto your lordship, and so I doe, sending
withall the bare relation of that which I haue seene. I haue determined to send round about the
countrey from hence to haue knowledge of all things, and rather to suffer all extremitie, then to
leane this enterpryse to serue his maiestie, if I may find any thing wherein I may performe it, and
not to omit any diligence therein, vntill your lordship send mee order what I shall doe. Wee haue
great want of pasture: and your lordship also shall vnderstand, that among all those which are here,
there is not one pound of raiins, nor suger, nor oyle, nor any wine, saue only one pinte which is sa-
ued to say Masse: for all is spent & spilt by the way. Now your lordship may prouide vs what you
thinke needefull. And if your honour meane to send vs cattell, your lordship must vnderstand that
they will bee a sommer in coming vnto vs: for they will not be able to come vnto vs any sooner.
I would haue sent your lordshippe with this dispatch many mullets of things which are in this
countrey: but the way is so long and rough, that it is hard for me to doe so: neuerthelesse I send
you twelue small mantles, such as the people of the countrey are wont to weare, and a certaine

Garment also, which seemeth unto me to bee well made: I kept the same, because it seemed to mee to bee excellent well wrought, because I beleue that no man euer sawe any needle worke in these Indies, except it were since the Spaniards inhabited the same. I send your Lordshippe also two clothes painted with the beasts of this countrey, although as I haue sayde, the picture bee very rudely done, because the painter spent but one day in drawing of the same. I haue seene other pictures on the walles of the houses of this citie with faire better proportion, and better made, I send your honour one Ore-hide, certaine Turqueses, and two earrerings of the same, and sifterne combes of the Indians, and certain tablets set with these Turqueses, and two small baskets made of wicker, whereof the Indians haue great store. I send your lordshippe also two rolles which the women in these parts are woont to weare on their heads when they fetch water from their welles, as wee vse to doe in Spaine. And one of these Indian women with one of these rolles on her head, will carie a pitcher of water without touching the same with her hande vpon a lather. I send you also a muster of the weapons wherewith these people are woont to fight, a buckler, a mace, a bowe, and certaine arrowes, among which are two with points of bones, the like whereof, as these conquerours say, haue neuer bene seene. I can say nothing vnto your lordshippe touching the apparell of their women. For the Indians keepe them so carefully from vs, that hitherto I haue not seene any of them, sauing onely two olde women, and these had two long robes doونه to the foote open before, and girded to them, and they are buttoned with certaine cordons of cotton. I requested the Indians to giue me one of these robes, which they ware, to send your honour the same, seeing they would not shewe mee their women. And they brought mee two mantles which are these, which I send you as it were painted: they haue two pendants like the women of Spaine, which hang somewhat ouer their shoulders. The death of the Negro is most certaine: for here are many of the things found which hee carried with him: And the Indians tell me that they killed him here, because the Indians of Chichilcalle tolde them that hee was a wicked vil- laine, and not like vnto the Christians: because the Christians kill no women: and hee killed wo- men; and also he touched their women, which the Indians loue more then themselves; therefore they determined to kill him: But they did it not after such sort as was reported, for they killed none of the rest of those that came with him: neither shewe they the young lad which was with him of the prouince of Petatlan, but they tooke him and kept him in safe custodie vntill now. And when I sought to haue him, they excused themselves two or three dayes to giue him mee, telling mee that hee was dead, and sometimes that the Indians of Acucu had carried him away. But in conclusion, when I tolde them that I should bee very angry if they did not giue him mee, they gaue him vnto me. Hee is an interpreter, for though hee cannot well speake their language, yet hee understandeth the same very well. In this place there is found some quantitie of golde and silver, which those which are skillfull in minerall matters esteeme to be very good. To this houre I could neuer learne of these people from whence they haue it: And I see they refuse to tell mee the truth in all things, imagining, as I haue sayde, that in short time I would depart hence, but I hope in God they shall no longer excuse themselves. I beseech your lordship to certifie his Maiestie of the successe of this voyage. For seeing wee haue no more then that which is afore- sayd, and vntill such time as it please God that wee finde that which wee desire, I meane not to write my selfe. Our Lorde God keepe and preferue your Excellencie.

From the prouince of Cibola, and from this citie of Granada the third of August 1540.
Francis Vasques de Coronado kisseth the hands of your Excellencie.

The rest of this voyage to *Acuco*, *Tiguex*, *Cicnic*, and *Quinira*, and vnto the West-erne Ocean, is thus written in the generall historie of the West Indies by *Francis Lopez de Gomara*, Chap. 214.

Acuco.
The Westerne
sea discovered.
Tiguex.
Axa and Qui-
uira.

Because they would not returne to Mexico without doing something, nor with empty hands, they agreed to passe further into the countrey, which was tolde them to bee better and better. So they came to *Acuco*, a towne vpon an exceeding strong hill. And from thence *Don Garcias Lopez de Cardenas* with his companie of horsemen went vnto the Sea: and *Francis Vasques* went to *Tiguex*, which standeth on the banke of a great riuer. There they had newes of *Axa* and *Quinira*. There they sayde was a King whose name was *Tacirax*, with a long beard, hoie headed, and rich, which was girded with a *Bzacamart*, which prayed vpon a payre of beades, which worshipped a Crosse of golde, and the image of a woman, the Queene of heauen. This newes did greatly reioyce and cheere vpon the armie: although some thought it to bee false, and the report of the Friers. They determined to goe thither, with intention to winter in so rich a coun-
tre

they as that was reported to bee. One night the Indians ranne away, and in the morning they found thirtie horses dead, which put the armie in feare. In their iourney they burnt a certaine towne: And in another towne which they assauled, they killed certaine Spaniards, and wounded sicke horses, and the inhabitants dyed into their towne Francis de Quando wounded in dead, to ease and sacrifice him as they thought, or peradventure to see more perfectly, what manner of men the Spaniards were: for there was not found there any signe of sacrificing men. Our people layde siege vnto the towne, but could not take it in more then five and forty dayes space. The townesmen that were besieged, dranke kinde in stead of water: and seeing themselves forlorne they made a fire, wherein they cast their mandes, feathers, Turqueses and precious things, that those strangers might not enioy them. They issued out in a squadron with their women and children in the midst, to make way by force, and to saue themselves, but few escaped the edge of our swordes and the horses, and a certaine river which was neere the towne. Seven Spaniards were slaine in this conflict, and fourescore were wounded, and many horses: whereby a man may see of what force resolution is in necessitie. Many Indians returned to the towne with the women and children, and defended themselves, vntill our men set fire on the towne. In this countrey there are melons, and white and redde cotton, whereof they make faire large mantels, then in other parts of the Indies. From Tiguex they went in foure dayes iourney to Cieuc, which is a small towne, and foure leagues from thence they met with a new kind of ore en wild and fierce, whereof the first day they killed fourescore, which sufficed the armie with flesh. From Cieuc they went to Quiuia, which after their accompt, is almost three hundred leagues distant, through mighty plaines, and sandie heathes so smooth, and wearisome, and bare of wood, that they made heapes of ore-dung for want of stones and trees, that they might not lose themselves at their returne: for thre horses were lost on that plaine, and one Spaniard, which went from his companie on hunting. All that way & plaines are as full of crooked backed open, as the mountaine Serena in Spaine is of sheepe: but there is no people but such as keepe those cattell. They were a great succout for the hunger and want of bread which our people stood in. One day it rayned in that plaine a great shoure of haile, as bigge as Oranges, which caused many feares, weakenesse, and bowes. At length they came to Quiuia and found Taracax, whome they fought, an hoarie headed man, naked, and with a iewell of copper hanging at his necke, which was all his riches. The Spaniards seeing the false report of so famous riches, returned to Tiguex, without seeing either crosse or shewe of Christianitie: and from thence to Mexico. In the ende of March of the yeere 1542. Francis Vasquez fell from his horse in Tiguex, and with the fall fell out of his wits, and became madde. Which some tooke to bee for griefe, and others thought it to be but counterfeited: for they were much offended with him, because hee peopled not the countrey.

to towne burnt.
Another towne assailed.

Spaniards.
Turqueses.
Feathers.
Precious things.

Melons.
Cotton.
Large mantels.
Cieuc foure dayes iourney from Tiguex.
Quiuia.
Heapes of ore dung made for markes to know the way

The Spaniards returned to Tiguex, and so to Mexico 1542.
The Spaniards would haue inhabited the countrey.

Ships scut on the sea coast of Quiuia, which were 30. dayes in sailing thither.

Andrew de Campo translated from Quiuia to Panuco.

The cause why the Spaniards peopled not in Cibola.

Quiuia is in forty degrees: it is a temperate countrey, and hath very good waters, and much grasse, plumes, mulberries, nuts, melons and grapes, which ripen very well. There is no cotton: and they apparell themselves with ore-hides and deeres skinnies. They sawe shippes on the sea coast, which bare Alcatrazes or Pellicanes of golde and silver in their prowes, and were laden with marchandises, and they thought them to bee of Cathaya, and China, because they shewed out men by signes that they had sayled thirtie dayes.

Frier Iohn de Padilla stayed behinde in Tiguex, with another of his companions called Frier Francis, and returned to Quiuia, with some dozen Indians of Mechuacan, and with Andrew de Campo a Portugall, the gardiner of Francis de Solis: Hee tooke with him horses and mules with provision. Hee tooke sheepe and hennes of Castile, and ornaments to say Masse withall. The people of Quiuia slew the Friers, and the Portugall escaped with certaine Indians of Mechuacan. Who albeit at that time he escaped death, yet could hee not free himselfe out of captivity: for by and by after they caught him againe. But ten moneths after he was taken captiue, hee fled away with a couple of dogs. As hee traualled, hee blessed the people with a crosse, wherunto they offered much, and wheresoeuer hee came, they gaue him almes, lodging, and foode. He came to the countrey of the Chichimechas, and arriued at Panuco. When he came to Mexico, hee wate his haire very long, and his beard tyed vp in a lace, and reported strange things of the lands, riuers and mountaines that he had passed.

It grieved Don Antonio de Mendoza very much that the army returned home: for hee had spent aboue threescore thousand pesos of golde in the enterprise, and ought a great part thereof still. Many sought to haue dwelt there; but Francis Vasquez de Coronado, which was rich, and lately married to a faire wife, would not consent, saying, that they could not maintaine nor defend themselves

themselves in so poore a countrey, and so farre from succour. They traualled aboue nine hundred leagues in this countrey.

The foresayd Francis Lopez de Gomara in his generall historie of the West Indies, Chap. 215. writeth in maner following of certaine great and strange beasts neuer scene nor heard of in our knowen world of Asia, Europe, and Africa: which somewhat resembling our oxen, hauing high bunches on their backs like those on the backs of Camels, are therefore called by him *Vacas corcobadas*, that is to say, Crooke-backed oxen, being very deformed & terrible in shewe, and fierce by nature: which notwithstanding for soode, apparell, and other necessarie vses, are most seruiceable and beneficiall to the inhabitants of those countreys. He reporteth also in the same chapter of certaine strange sheepe as bigge as horses, and of dogs which vse to carie burchens of 50. pound weight pound weight vpon their backs.

These are
much like the
people that
Captain Fro-
bisher brought
into England
from Meta
incognita.

The descripti-
on of the open
of Quivira.

Sheepe as
big as horses.

spightful dogs
carrying 50.
pound weight.

ALl the way betweene Cicuic and Quivira is a most plaine soyle, without trees and stones, and hath but fewe and small towines. The men clothe and shooe themselves with lether; and the women which are esteemed for their long lockes, couer their heads and secrets with the same. They haue no bread of any kinde of graine, as they say: which I account a very great matter. Their chiefest soode is flesh, and that oftentimes they eate rawe, either of custome or for lacke of wood. They eate the fatte as they take it out of the Dre, and drinke the blood hotte, and die not therewithall, though the ancient writers say that it killeth, as Empedocles and others affirmed, they drinke it also colde dissolved in water. They seech not the flesh for lacke of pots, but roast it, or to say more properly, warme it at a fire of Dre-dung: when they eate, they chaw their meate but little, and rauens much, and holding the flesh with their teeth, they cut it with razors of stone, which seemeth to be great bestialitie: but such is their manner of liuing and fashion. They goe together in companies, and mooue from one place to another, as the wilde Poores of Barbarie called Alarbes doe, following the seasons and the pasture after their Dre.

These Dre are of the bignesse and colour of our Bulles, but their hornes are not so great. They haue a great bunch vpon their fore shoulders, and more haire on their fore part then on their hinder part: and it is like wooll. They haue as it were an horse mane vpon their backe bone, and much haire and very long from the knees downeward. They haue great tufts of haire hanging downe their foreheads, and it seemeth that they haue beards, because of the great store of haire hanging downe at their chins and throates. The males haue very long taites, and a great knobbe or flocke at the end: so that in some respect they resemble the Lion, and in some other the Camell. They push with their hornes, they runne, they ouertake and kill an horse when they are in their rage and anger. Finally, it is a foule and fierce beast of countenance and forme of bodie. The horses flodde from them, either because of their deformed shape, or else because they had neuer scene them. Their masters haue no other riches nor substance: of them they eat, they drinke, they apparel, they shooe themselves: and of their hides they make many things, as houses, shoes, apparell and ropes: of their bones they make bodkins: of their sinewes and haire, theyeed: of their hornes, matwes, and bladders, vessels: of their dung, fire: and of their calues-skimes, budgets, wherein they drawe and keepe water. To bee short, they make so many things of them as they haue neede of, or as many as suffice them in the vse of this life.

There are also in this countrey other beastes as big as horses, which because they haue hornes and fine wool, they cal them sheepe, and they say that every horne of theirs weigheth is fiftie pound weight.

There are also great dogs which will fight with a bull, and will carrie fiftie pound weight in sacks when they goe on hunting, or when they remoue from place to place with their flocks and herds.

de ESPEJO en el anno de ochenta y tres: el qual con

sus companneros descubrieron vna tierra en que hallaron quinze

Prouincias todas llenas de pueblos, y de casas de quatro y cinco al-

tos, a quien pusieron por nombre El nuevo Mexico, por

parecerse en muchas cosas al viejo. Esta à la parte

del Norte, y se cree que por ella, y por po-

blado, se puede venir hasta llegar a

la tierra que llaman del Labrador.

Del Nuevo Mexico, y de su descubrimiento, y lo que del se sabe.

A dixe en el titulo del libro, que el anno de mil y quinientos y ochenta y tres, se auian descubierta quinze Prouincias, a quien los inuentores llamaron El nuevo Mexico en la tierra firme de Nueva Espanna, y prometi de dar noticia del descubrimiento, como lo hare con la mayor breuedad que sea possible, porque si uiera de poner diffusamente todo lo que vieron y supieron, fuera menester hazer dello nueva historia.

Nuevo Mexico.

La substancia dello es, que el anno de mil y quinientos y ochenta y vno, teniendo noticia vn Religioso de la Orden de sant Francisco, que se llamaua fray Augustin Ruyz, que moraua en el valle de sant Bartholome, por relation de ciertos Indios Conchos que se comunicauan con otros sus conuezininos llamados Passaguates: que hazia la parte del Norte (caminando siempre por tierra) auia ciertas poblaciones grandes, y nunca sabidas de nuestros Espannoles, ni descubiertas, con zelo de caridad, y de saluacion de las almas, pidio licencia al Conde de Corunna Virey de la dicha Nueva Espanna, y a sus mayores, para yr a ellas, a procurar aprender su lengua, y sabida, bautizarlos, y predicarles el santo Euangelio. Alcançada la licencia de los sobredichos, tomando otros dos companneros de su mesma Orden, se partio con ocho soldados, que de voluntad le quisieron acompañar, a poner en execucion su Christiano y zeloso intento. Los quales a pocos dias de camino toparon con vna Prouincia, que se llamaua de los Tiguas, distante de las minas de sancta Barbola (de donde començaron la jornada) dozientas y cinquenta leguas hazia el Norte, en la qual por cierta ocasion los naturales le mataron al dicho padre vno de sus dos companneros. El qual, los soldados que yuancó el, viendo, y sintiendo el lucesso, y temiendo que del se podria seguir otro mayor danno, acordaron de común consentimiento de boluerse a las minas de donde auian salido, con consideracion de que la gente que yua era muy poca para resistir a los successos que se podian offerer en tanta distancia de la viuienda de los Espannoles, y tan lexos del necessario socorro. Los dos Religiosos que hauian quedado, no solo no vinieron en su parecer, mas antes viendo la ocasion para poner en execucion su buen desseo, y tanta mies madura para la mesa de Dios, viendo que no podian persuadir a los soldados a passar adelante en el descubrimiento, se quedaron ellos en la dicha Prouincia con tres muchachos Indios, y vn mestizo, que auian lleuado consigo, pareciendoles que aunque quedassen solos, estauan alli seguros, por la affabilidad y amor con que los naturales della los tratauan. Llegados los ocho soldados adonde desseaui, embiaron luego la nueva al dicho Virey dello sucedido a la ciudad de Mexico, que dista de las dichas minas de santa Barbora ciento y sesenta leguas. Sintieron mucho los religiosos de sant Francisco la quedada de sus hermanos: y timiendo no los matassen viendo los solos, començaron a mouer los animos de algunos soldados, para que en compannia de otro Religioso de la mesma Orden llamado fray Bernardino Beltran, tornassen a la dicha Prouincia, a sacar de peligro a los dichos dos Religiosos, y proseguir con la empresa començada.

Augustin Ruyz

Tiguas.

Fray Bernardino Beltran.

En esta sazón estaua en las dichas minas por cierta ocasion vn vezino de la ciudad de Mexico, llamado Antonio de Espejo, hombre rico, y de mucho animo y industria, y zeloso del seruicio de la maiestad del Rey Don Philippe nuestro senor, natural de Cordoua. El qual como entendiesse el desseo de los dichos religiosos, y la importancia del negocio, se ofrecio a la jornada, y a gastar en ella parte de su hacienda, y a riesgar su vida, siendo le para ello concedida licencia de alguna persona que representasse a su maiestad, la qual procurandola los dichos religiosos, le fue dada por el Capitan Iuá de Onqueros Alcalde mayor por su magestad en los pueblos que llaman las quatro Cienegas, que son en la gouernacion de la Nueva

Antonio de Espejo morio en la Havana 1589.

Nueva Bizcaya.

Vizcaya,

Vizcaya, setenta leguas de las dichas minas de Santa Barbara, assi para que el pudiesse yr, como para que iuntasse la gente y soldados que pudiesse, para que le acompañassien, y ayudasen a conseguir su Christiano intento.

El dicho Antonio de Espejo tomo el negocio con tantas veras, que en muy pocos dias juntò los soldados y bastimentos necesarios para hazer la jornada, gastando en ello buena parte de su hazienda: y partio con todos ellos del valle de Sant Bartholome a los diez de Noviembre de mil y quinientos y ochenta y dos, lleuando para lo que se ofreciesse ciento y quince cauallos, y mulas, y muchas armas, municiones, y bastimentos, y alguna gente de seruicio.

Endereço su camino hacia el Norte, y a dos jornadas topo mucha cantidad de Indios de los que llaman Conchos en Rancherías o poblaciones de calas pagicas. Los quales como lo supiesse, y tuuiesse dello relacion muy de atras, los salieron a recebir con muestras de alegria. La comida destos, y de los de la Prouincia, que es grande, es de carne de conejos, liebres, y venados que maran, y lo ay todo en grandissima cantidad. Tienen mucho maiz, que es el trigo de las Indias, calabacas, y melones, y en abundancia: y ay muchos rios que crían mucha cantidad de pescado muy bueno, y de diuersas suertes: andan casi todos desnudos, y las armas que vsan son arco y flecha, y viuen debaxo de gouerno, y señorio de Caciques, como los Mexicanos, y no les hallaron Idolos, ni pudieron entender que adorassen a nadie, por lo qual facilmente consintieron en que les pusiesse los Christianos cruces, y quedaron muy contentos con ellas, despues de auer sido informados de los nuestros de la significacion dellas, que se hizo por interpretes que lleuauan, por cuyo medio supieron de otras poblaciones, para adonde los dichos Conchos los guiaron, acompañandolos mas de veinte y quatro leguas, que todas estauan pobladas de gente de su nacion, y los salian a recebir de paz, por auiso que embiauan los Caciques de vnos pueblos a otros.

Passaguates
Indios.

Muchas minas
de plata.
Tobosos Indios.

Andadas las veinte y quatro leguas dichas, toparon otra nacion de Indios, llamados Passaguates, los quales viuia al modo que los ya dichos Conchos sus conuezinis, y hizieron con ellos lo proprio, guiandolos adelante otras quatro jornadas, con los auisos de los Caciques, de la manera ya dicha: hallaron los nuestros en este camino muchas minas de plata, al parecer de los que lo entendian, de mucho, y muy rico metal. Vna jornada destas toparon otra nacion, llamada los Tobosos, los quales en viendo el rastro de los nuestros, se huyeron a las sierras, dexando sus casas y pueblos desiertos. Supose despues que algunos annos antes auian acudido por alli ciertos soldados que yuan en busca de minas, y auian lleuado cautiuos a ciertos naturales, lo qual tenia temerosos y abispados a los demas. El Capitan dio orden como los fuesse a llamar, assegurandolos de que no les seria hecho ningun mal, y dióse tan buena manna que hizo venir a muchos, a quien regalò, y dio dones, acariciandolos, y declarandoles por el interprete, que no yuan a hazer mal a nadie, con lo qual se boluieron todos a fosegar, y consintieron les pusiesse Cruces, y declarassen el mysterio dellas, mostrando recebir dello gran contentamiento, en cuya demostracion los fueron acompañando, como lo auian hecho sus vezinos, hasta que los metieron en tierra poblada de otra nacion diferente, que distauan de la suya cosa de doze leguas: vsan arco, y flecha, y andan desnudos.

Prosiguese del descubrimiento del Nuevo Mexico.

Iumanos Indios.

Rio del Norte.

Buena sal.

A nacion hasta donde los dicho Tobosos los guiaron se llamaua Iumanos, a quien por otro nombre llaman los Espannoles Patarabueyes: tienen vna Prouincia grande, y de muchos pueblos con mucha gente, y las casas eran con açoreas, y de calicanto, y los pueblos traçados por buen orden: tienen todos los hombres y mugeres los rostros rayados, y los brazos, y piernas: es gente corpulenta, y de mas policia, que los que hasta alli auian visto, y tenian muchos mantenimientos, y mucha caça de pie y de buelo, y gran cantidad de pescado, a causa de tener grandes rios que vienen de hazia el Norte, y alguno tan grande como Guadalquivir, el qual entra en la propia mar del Norte. Tiene muchas lagunas de agua salada que se quaja cierto tiempo del anno, y se haze muy buena sal. Es gente bellicosa, y mostraronlo luego, porque la primera noche que los nuestros asentaron real, les flecharon, y mataron cinco cauallos, hiriendo muy mal otros tantos, y no dexaran ninguno a vida, sino por las guardas que los defendieron. Hecho este mal recado, despoblaron el lugar, y se subieron a vna sierra que estaua cerca, adonde fue luego por la manana el Capitan con otros cinco soldados bien armados con vn interprete llamado Pedro, Indio de su misma nacion, y con buenas razones los quieto y dexo de paz, haziendolos baxar a su pueblo y casas, y persuadiendolos a que diessen auiso a sus vezinos de

de que no eran hombres: que hazian mal a nadie, ni les yuan a tomar sus haciendas: que lo alcanço facilmente con su prudencia, y con darles a los Caciques algunas sartas de quantas de vidrio que lleuaua para este effeto, y sombreros, y otras ninnerias: con este, y con el buen tratamiento que les hazian, se fueron muchos dellos en compannia de los nuestros algunos dias, caminando siempre por la ribera del rio grande arriba dicho, por toda la qual hauia muchos pueblos de Indios desta nacion, que duraron por espacio de doze jornadas, en todas las quales auisados los vnos Caciques de los otros salian a recebir a los nuestros sin arcs, ni flechas, y les trayan muchos mantenimientos, y otros regalos y dadiuas, en especial cueros y camuças muy bien adereçados, y que no les excedian en esto las de Flandes. Es gente toda vestida, y hallaron que tenian alguna lumbré de nuestra sancta Fee, porque fennalauan a Dios mirando al cielo, y le llaman en su lengua Apalito, y le conocen por fennor, de cuya larga mano, y misericordia confiesan auer recibido la vida, y el ser natural, y los bienes temporales. Venian muchos dellos, y las mugeres y ninños, a que el Religioso, que diximos que yua con el dicho Capitan y soldados, los santiguasse, y echasse la benedicion: el qual como les preguntasse de quien auian entendido aquel conocimiento de Dios que tenian: respondieron, que de tres Christianos, y vn negro, que auian passado por alli, y detenido se algunos dias en su tierra, que segun las fennas que dieron, eran Aluar Nunnes Cabeça de Vaca, y Dorantes, y Castillo Maldonado, y vn negro, que todos ellos auian escapado de la armada con que entro Panfilo de Narbaez en la Florida, y despues de auer sido muchos dias esclauos, vinieron a dar a estos pueblos, haziendo Dios por medio dellos muchos milagros, y sanando con el tocamento solo de sus manos muchos enfermos, por lo qual dexaron gran nombre en toda aquella tierra. Toda esta Prouincia quedo de paz, y muy fofsegada, en cuya demonstracion fueron acompannando y firiendo a los nuestros algunos dias por la orilla del rio que diximos arriba.

Rio grande.

12 jornadas.

Apalito.

Otra Prouincia.

A pocos dias toparon con vna gran poblacion de Indios, adonde los salieron a recebir por nueua que tuuieron de sus vezinos, y les sacaron muchas cosas muy curiosas de pluma de diferentes colores, y muchas mantas de algodón barretadas de azul y blanco, como las que traen de la China, para rescatarlas, y trocarlas por otras cosas. Yuan todos, assi hombres como mugeres, y ninños vestidos de camuças muy buenas y bien adobadas, y nunca pudieron los nuestros entender que nacion era por falta de interprete que entendiesse su lengua, aunque por fennas trataban con ellos, a los quales como les mostrassen algunas piedras de metal rico, y les preguntassen si hauia de aquello en su tierra: Respondierón por las mismas fennas que cinco dias de camino de alli hazia el Poniente, auia de aquello en muy gran cantidad, y que ellos los guiaran para alla, y se lo mostrarian, como lo cumplieron despues, acompannandolos por espacio de veynte y dos leguas, todas pobladas de gente de su mesma nacion: a quien inmediatamente se seguia por el mismo rio arriba otra de mucha mas gente que la de la passada, de quien fueron bien recibidos, y regalados con muchos presentes, especialmente de pescado que hauia infinito, a causa de vnas lagunas grandes que cerca de alli hauia, que lo crian en la abundancia dicha. Estuuieron entre estos tres dias, en los quales de dia, y de noche les hizieron muchos bayles a su modo, con particular signification de alegria: no se supo como se llamaua esta nacion por falta de interprete, aunque entendieron que se extendia mucho, y que era muy grande. Entre estos hallaron vn Indio Concho de nacion, que les dixo, y fennalo, que quinze jornadas de alli hazia el Poniente hauia vna laguna muy ancha, y cerca della muy grandes pueblos, y casas de tres y quatro altos, y la gente bien vestida, y la tierra de muchos bastimentos, el qual se offrecio de llevarlos alla, y holgaran los nuestros dello, y solo lo dexaron de poner en effecto, por profeguir el intento con que auian comenzado la jornada, que era yr al Norte a dar socorro a los Religiosos arriba dichos.

Metal rico.

Otra prouincia.
Lagunas grandes.

Laguna muy ancha.

Muchos Metales ricos.

En esta Prouincia lo que particularmente notaron fue, que hauia muy buen temple, y muy ricas tierras, y mucha caça de pie y buelo, y muchos metales ricos, y otras cosas particulares, y de prouecho.

Desta Prouincia fueron siguiendo su derrota por espacio de quinze dias, sin topar en todos ellos ninguna gente por entre grâdes pinales de pinnas y pinnonnes, como los de Castilla: al cabo de los quales auiedo caminado a su parecer ochenta leguas, toparon vna pequenna Rancheria, o pueblo de poca gente, y en sus casas, que eran pobres, y de paja, gran cantidad de cueros de venados tan bien adereçados como los de Flandes, y mucha sal blanca, y muy buena. Hizieronles muy buen hospedaje dos dias que alli estuuieron, despues de los quales los acompannaron como doze leguas a vnas poblaciones grandes, caminando siempre por el rio del Norte ya dicho, hasta llegar a la tierra que llaman el Nucuo Mexico.

Sal blanca.
Rio Turbiolo del Norte.
Nucuo Mexico.

Estaua

Estaua toda la ribera del dicho rio llena de grandissimas alamedas de alamos blancos, y en partes tomauan quatro leguas de ancho, y ansi mesmo de muchos nogales, y parrales como los de Castilla. Auiendo caminado dos dias por estas alamedas, y noguales, topó diez pueblos que estauā assentados en la ribera del dicho rio por ambas partes, sin otros que se mostrauan mas desuiados, en los quales les parecio auia mucha gente, y la que ellos vieron passauan en numero de diez mil animas. En esta Prouincia los regaló mucho có recibimientos, y con llevarlos a sus pueblos, donde les dauan mucha comida, y gallinas de la tierra, y otras cosas, y todo con gran voluntad. Aquí hallaron casas de quatro altos, y bien edificadas, y con galanos aposentos, y en las mas dellas auia estufas para tiempo de inuierno. Andauan vestidos de algodón, y de cuero de venado, y el traje, assi de los hombres, como de las mugeres, es al modo del de los Indios del reyno de Mexico: y lo que les causó más estraneza, fue ver que todos ellos, y ellas andauan calzados con çapatos y botas de buen cuero con suelas de vaca, cosa que hasta allí nunca la auian visto. Las mugeres trayan el cabello muy peynado, y compuesto, y sin cosa sobre la cabeça. En todos estos pueblos auia Caciques que los gouernauan como entre los Indios Mexicanos, con Alguaziles para executar sus mandamientos, los quales van por el pueblo, diziendo à voces la voluntad de los Caciques, y que la pongan por obra. En esta Prouincia hallaron los nuestros muchos Idolos que adorauan, y en especial que tenian en cada casa vn templo para el Demonio, donde le lleuauan de ordinario de comer, y otra cosa, que de la manera que entre los Christianos tenemos en los caminos cruces; assi tienen ellos vnas como capillas altas, donde dizē, descansan, y se recrea el Demonio, quando va de vn pueblo a otro: las quales estan muy adornadas y pintadas. En todas las sementeras, o labranças, que las tienen muy grandes, tienen a vn lado dellas vn portal con quatro pilares, donde comen los trabajadores, y passan la fiesta, porque es la gente muy dada ala labor, y estan de ordinario en ella: es tierra de muchos montes y pinales. Las armas que vsan son arcos muy fuertes, y flechas con las puntas de pedernal con que passan vna cota, y macanas, que son vnos palos de media vara de largo, y llanos todos de pedernales agudos, que bastan a partir por medio vn hombre, y ansi mesmo vnas como adargas de cuero de vaca crudo.

Prosiguese del Nuevo Mexico, y de las cosas que en el se vieron.

Despues de auer estado en esta Prouincia quatro dias, y a poca distancia toparon con otra, que se llamaua la Prouincia de los Tiguas, en la qual auia diez y seys pueblos: en el vno de los quales, llamado por nombre Poala, hallaron que auian muerto los indios a los dichos dos padres fray Francisco Lopez, y fray Augustin, a quien yuan a buscar, y juntamente a tres muchachos, y vn mestizo. Quando los deste pueblo, y sus conuezinios vieron a los nuestros, remordiendoles la propria consciencia, y temiendose que yuan a castigarlos, y tomar vengança de las muertes de los dichos padres, no los osaron esperar, antes dexando sus casas desiertas se subieron a las sierras mas cercanas, de donde nunca los pudieron hazer baxar, aunque lo procuraron con alagos y mannas. Hallaron en los pueblos y casas muchos mantenimientos, y gran infinidad de gallinas de la tierra, y muchas fuertes de metales, y algunos que parecian muy buenos. No se pudo entender claramente que tanta gente fuesse la desta Prouincia, por causa de auerse (como ya dixē) subido a la sierra.

Auiendo hallado muertos a los que buscauan, entraron en consulta sobre si se boluerian a la Nueva Vizcaya, de donde hauian salido, o passarian adelante: en lo qual vuo diuersos pareceres: pero como allí entendiesse, que a la parte de Oriente de aquella Prouincia, y muy distante de allí hauian grandes pueblos y ricos, hallandose allí tan cerca, acordo el dicho Capitan Antonio de Espejo de consentimiento del Religioso ya dicho, llamado fray Bernardino Beltran, y de la mayor parte de sus soldados, y companneros, de proseguir con el descubrimiento hasta ver en que paraua, para poder dar dello noticia cierta y clara a su Magestad, como testigos de vista: y assi conformes determinaron que quedandose allí el Real, fuesse el Capitan con dos companneros en demanda de su desseo, que lo pusieron por obra. Y a dos dias de camino toparon con vna Prouincia donde vieron onze pueblos, y en ellos mucha gente, que a su parecer passaua en numero de quarenta mil animas: era tierra muy fértil y bastecida, cuyos confines estan inmediatamente juntos con las tierras de Cibola, donde ay muchas vacas, de cuyos cueros se visten, y de algodón: siguiendo en la manera del gouerno el orden que guarden sus conuezinios: ay sennales de muchas minas ricas, y assi hallauan metales dellas en algunas casas de los Indios, los quales tienen, y adoran Idolos: recibieronlos de paz, y dieron les de comer. Visto esto, y la disposición

posicion de la tierra, se boluieron al real de donde auian salido, a dar noticia a sus companneros de todo lo sobredicho.

Llegados al Real (como esta dicho) tuuieron noticia de otra Prouincia, llamada los Quires, Quires. que estaua el rio del Norte arriba seys leguas de distancia, y como se partiessen para alla, y llegassen vna legua della, les salieron a recebir de paz mucha cantidad de Indios, y a rogar que se fuesen con ellos a sus pueblos, que como lo hiziesen, fueron muy bien recebidos y regalados. Vieron solamente cinco pueblos en esta Prouincia, en los quales auia muy gran cantidad de gente, y la que ellos vieron passaua de quinze mil animas, y adoran Idolos como sus vezinos. Hallaron en vno destos pueblos vna Vrraca en vna jaula, como se vfa en Castilla, y tirasoles, como los que se traen de la China, pintados en ellos el sol y la luna, y muchas estrellas. Donde como tomassen la altura, se hallaron en treynta y siete grados y medio debaxo del Norte.

Salieron desta Prouincia, y caminando por el proprio rumbo, y a catorze leguas, hallaron otra Prouincia, llamada los Cunames, donde vieron otros cinco pueblos, y el principal dellos, y mas grande se llamaua Cia, Cunames Indios, Cia. que era tan grande que tenia ocho plaças, cuyas casas eran encaladas, y pintadas de colores, y mejores que las que hauian visto en las Prouincias atras: parecieron que la gente que vieron passauan de veynte mil animas: hizieron presente a los nuestros de muchas mantas curiosas, y de cosas de comer muy bien guisadas, y juzgaron ser la gente mas curiosa, y de mayor policia, de quantas hasta alli hauian visto, y de mejor gouerno: mostraronles ricos metales, Ricos metales. y vnas sierras alli cerca de donde los sacauan. Aqui tuuieron noticia de otra Prouincia, que staua hazia el Nordueste, que se determinaron de yr a ella.

Como viuessen andado como seys leguas, toparon con la dicha Prouincia, que se llamaua de los Amejes, en la qual hauia siete pueblos muy grandes, y en ellos a su entender mas de Amejes. treynta mil animas. Vno destos siete pueblos dixerón era muy grande y hermoso, que le dexaron de yr a ver, assi por estar detras de vna sierra, como por temor de algun ruyn successo, si a caso se diuidian los vnos de los otros. Es gente al modo de la Prouincia su vezina, y tan abastada como ella, y de tan buen gouerno.

A quinze leguas desta Prouincia, caminando siempre hazia el Poniente, hallaron vn pueblo grande llamado Acoma, 15 Leguas, Acoma. era de mas de seys mil animas, y estaua assétado sobre vno penna alta que tenia mas de cinquenta estados en alto, no teniendo otra entrada sino por vna escalera que estaua hecha en la propria penna, cosa que admiro mucho a los nuestros: toda el agua que en el pueblo auia era de cisternas.

Vinieron los principales de paz a ver a los Espannoles, y traxeron les muchas mantas, y camuças muy bien adereçadas, y gran cantidad de bastimentos. Tienen sus sembrados dos leguas de alli, y sacan el agua para regarlos de vn rio pequenno que esta cerca, en cuya ribera Metales vieron muy grandes rosales como los de aca de Castilla. Ay muchas sierras con fennales de metales, aunque no subieron a verlo, por ser los Indios dellas muchos, y muy bellicosos. Estuuiéron los nuestros en este lugar tres dias, en vno de los quales los naturales les hizieron vn bayle muy solenne, saliendo a el con galanos vestidos, y con juegos muy ingeniosos, con que holgaron en se estremo.

Veynte y quatro leguas de aqui, hazia el Poniente, dieron con vna Prouincia, que se nom- 24 leguas. bra en lengua de los naturales Zuny, y la llaman los Espannoles Cibola, Zuny o Cibola, ay en ella grã cantidad de Indios, en la qual estuuó Francisco Vazquez Coronado, y dexo muchas Cruzes puestas, y otras fennales de Christianidad que siempre se estauan en pie. Hallaron assi mesmo tres Indios Christianos que se auian quedado de aquella jornada, cuyos nombres eran Andres de Cuyoacan, Gaspar de Mexico, y Antonio de Guadalajara, los quales tenian casi olvidada su mesma lengua, y sabian muy bien la de los naturales, aunque a pocas bueltas que les hablaron se entendieron facilmente. De quien supieron que sesenta jornadas de alli auia vna laguna, o lago 60 Jornadas, Lago muy grande mucho oro. muy grande, en cuyas riberas estauan muchos pueblos grandes y buenos, y que los naturales tenian mucho oro, de lo qual era indicion el traer todos braceletes y orejeras dello: y que como el sobredicho Francisco Vazquez Coronado tuuiesse noticia muy cierta dello, hauia salido desta Prouincia de Cibola para yr alla, y auiendo andado doze jornadas le salto el agua, y se determino de boluer, como lo hizo, con determinacion de tornar otra vez mas de proposito a ello, que despues no lo puso en execuciõ, porque la muerte le atajo los passos y pensamientos.

Prosigue del Nuevo Mexico.

A La nueua de la riqueza dicha, quiso acudir el dicho Capitan Antonio de Espejo, y aunque eran de su parecer algunos de sus companneros, la mayor parte, y el Religioso fue de

Nueva Víscaia.

metales.Rio grandísimo.
Mar del Norte.Zuni,
o Cibola.

de contrario : diziendo, era ya tiempo de boluerse à la nueua Víscaia de donde hauian salido, a dar cuenta de lo que auian visto: que lo pusieron por obra dentro de pocos dias la mayor parte, dexando al Capitan con nueue companneros que le quisieron seguir : el qual, despues de hauerse certificado muy por entero de la riqueza arriba dicha, y de mucha abundancia de metales que en ello auia muy buenos, salio con los dichos sus companneros desta prouincia, y caminando hazia el proprio Poniente, despues de hauer andado veinte y ocho leguas, hallaron otra muy grande, en la qual les parecio hauia mas de cinquenta mil animas, cuyos moradores como supiesen su llegada, les embiaron vn recado, diziendo, que si no querian que los matassen, no se acercassen mas a sus pueblos : a lo qual respondió el dicho Capitan, que ellos no les yuan a hazer mal, como lo verian, y que assi les rogauan no se pusiesen en llevar adelante su intento, dando al mensajero algunas cosas de las que lleuaua : el qual supo tan bien abonar a los nuestros, y allanar los pechos alborotados de los Indios, que les dieron lugar de voluntad para que entrassen, que lo hizieron con ciento y cinquenta Indios amigos de la prouincia de *Cibola* ya dicha, y los tres Indios Mexicanos, de quien queda hecha mencion. Vna legua antes que llegassen al primer pueblo, les salieron a recibir mas de dos mil Indios cargados de bastimentos, a quien el dicho Capitan dio algunas cosas de poco precio, que a ellos les parecio ser de mucho, y las estimaron mas que si fueran de oro. Llegando mas cerca del pueblo, que se llamaua Zaguato, salio a recibirlos gran muchedumbre de Indios, y entre ellos los Caciques, haziendo tanta demostracion de plazer y regozijo, que echauan mucha harina de maiz por el suelo, para que la pisassen los cauallos : con esta fiesta entraron en el, y fueron muy bien hospedados, y regalados, que se lo pago en parte el Capitan, con dar a todos los mas principales sombreros, y quantas de vidrio, y otras muchas cosas que lleuaua para semejantes ofrecimientos.

Despacharon luego los dichos Caciques recados a todos los de aquella Prouincia, dandoles noticia de la venida de los huéspedes, y de como eran hombres muy corteses, y no les hazian mal : lo qual fue bastante para hazer los venir a todos cargados de presentes para los nuestros, y de que los importunassen, fuesen con ellos a holgar a sus pueblos, que lo hizieron, aunque siempre con recado de lo que podia succeder. Por lo qual el dicho Capitan vso de vna cautela, y fue dezir a los Caciques, que por quanto los cauallos eran muy brauos, y les auian dicho que los querian matar, seria necessario hazer vn fuerte de calicanto donde meter los para euitar el danno que querian hazer en los Indios. Creyeronlo los Caciques tan de veras que dentro de pocas horas juntaron tanta gente que hizieron el dicho fuerte que los nuestros querian con vna presteza increyble. Demas desto, diziendo el Capitan que se queria yr, le traxeron vn presente de 40. mil mantas de algodón pintadas y blancas, y mucha cantidad de pannos de manos con borlas en las puntas, y otras muchas cosas, y entre ellas metales ricos, y que mostrauan tener mucha plata. Hallaron entre estos Indios muy gran noticia de la laguna grande arriba dicha, y conformaron con los otros en lo tocante a las riquezas, y mucha abundancia de oro.

Fiado el Capitan desta gente, y de sus buenos animos, acordo a cabo de algunos dias de dexar alli cinco de sus companneros con los demas Indios amigos, para que se boluiesen a la prouincia de *Zuni* con el bagaje, y de yrse el con los quatro que quedauan a la ligera en descubrimiento de cierta noticia que tenia de vnas minas muy ricas. Lo qual puesto por obra se partio con las guias que lleuaua, y como vuisse caminado hazia el proprio Poniente quarenta y cinco leguas, topo con las dichas minas, y sacó con sus proprias manos riquísimos metales, y de mucha plata: y las minas, que eran de vna veta muy ancha, estauan en vna sierra adonde se podia subir con facilidad, a causa de hauer para ello camino abierto. Cerca delas auia algunos pueblos de Indios serranos que les hizieron amistad, y los salieron a recibir con Cruces en las cabeças, y otras fennales de paz. Aqui cerca toparon dos rios razonables, a cuyas orillas hauia muchas parras de vuas muy buenas, y grandes noguerales, y mucho lino como lo de Castilla, y dixeron por fennas que detras de aquellas sierras estaua vno que tenia mas de ocho leguas de ancho, pero no se pudo entender que tan cerca, aunque hizieron demonstracion que corria hazia la mar del Norte, y que en las riberas del de vna y otra banda ay muchos pueblos tan grandes, que en su comparacion aquellos en que estaua eran barrios.

Despues de hauer tomado toda esta relación, se partio el dicho Capitan para la Prouincia de *Zuni*, adonde hauia mandado yr a los dichos companneros : y como llegasse a ella con salud, haviendo ydo por muy buen camino, halló con ella a sus cinco companneros, y al dicho padre Fray Bernardino con los soldados que se auian determinado de boluer, como ya diximos, que aun no se auian partido, por ciertas ocasiones : a los quales los naturales hauian hecho muy

muy buen tratamiento, y dádoles todo lo necesario muy complidamente, haziendo despues lo mesmo con el capitan, y los que con el venian, a quien salieron a recebir con demonstracion de alegria, y dieron muchos bastimentos para la jornada que hauian de hazer, rogandoles que boluissen con breuedad, y traxessen muchos Castillas (que assi llaman a los Espannolles) y que a todos les darian de comer. Por lo qual para poderlo hazer con comodidad auian sembrado aquel anno mas trigo y semillas, que en todos los passados.

En este tiempo se retificaron en su primera determinacion el dicho religioso, y los soldados arriba dichos, y acordaron de boluerse a la prouincia de donde auian salido con el designio que queda dicho, a quien se junto Gregorio Hernandez que auia sido Alferes en la jornada: los quales partidos, quedando el Capitan con solos ocho soldados, se resoluo de seguir lo comenzado y correr por el Rio del Norte arriba, que lo puso por obra. Y hauiendo caminado como sesenta leguas hazia la prouincia de los Quires ya dicha, doze leguas de alli hazia la parte del Oriente, hallaron vna prouincia que se llamaua los Hubates, donde los Indios los recibieron de paz, y les dieron muchos mantenimientos, y noticia de que cerca de alli hauia vnas minas muy ricas, que las hallaron, y sacaron dellas metales reluzientes y buenos, con los quales se boluieron al pueblo de donde auian salido. Luzgaron esta prouincia por de hasta veynte y cinco mil animas, todos muy bien vestidos de mantas de algodón pintadas, y camuças muy bien adereçadas. Tienen muchos montes de pinales y cedros, y las casas de los pueblos son de quatro y cinco altos. Aqui tuuieron noticia de otra prouincia que estaua vna jornada de alli, que se llamaua de los Tamos, en que hauia mas de quarenta mil animas, donde como llegassen no les quisieron dar de comer los moradores della, ni admitirlos en sus pueblos: por lo qual, y por el peligro en que estauan, y estar algunos soldados enfermos, y ser tan pocos (como hauemos dicho) se determinaron de yrse saliendo para tierra de Christianos, y lo pusieron en execucion a principio de Julio del anno de ochenta y tres, siendo guiados por vn Indio que se fue con ellos, y los lleuo por camino diferente del que a la venida hauian traydo, por vn rio abaxo, a quien llamaron de las vacas, por auer gran muchedumbre dellas en toda su ribera, por donde caminaron ciento y veynte leguas, topando las ordinariamente: de aqui salieron al rio de los Conchos por donde auian entrado, y del al Valle de Sant Bertholome de donde auian salido para dar principio al descubrimiento: y ya quando llegaron, hallaron que el dicho fray Bernardino Beltran, y sus companneros auian llegado a saluamento al dicho pueblo muchos dias hauiá, y que de alli se auian ydo a la villa de Guadiana. Hizo en este pueblo el dicho Capitan Antonio de Espejo informacion muy cierta de todo lo arriba dicho, la qual embio luego al Conde de Corunna Virey de aquel Reyno, y el a su Magestad, y a los señores, de su Real Consejo de las Indias, para que ordenassen lo que fuesen seruidos, que lo han ya hecho con mucho cuydado. Nuestro Sennor se sirua de ayudar este negocio, de modo que tantas

El libro de la historia de la Nueva España.

The first voyage made by Frier Augustin Ruiz to the prouince de los Tiguan.

A briefe relation of two notable voyages, the first made by frier

Augustin Ruiz a Franciscan, in the yeere 1581: the second by *Antonio de Espejo* in the yere 1583: who together with his company discouered a land wherein they found fiftene prouinces all full of townes, conteining houses of foure and fve stories high, which they named *New Mexico*; for that in many respects it resembleth the prouince of *Olde Mexico*. This land is situate to the North of *Nueva España*, and stretcheth from 24 to 34 degrees and better: by the which & by other inhabited lands it is thought that men may trauell euen to *Terra de Labrador*. Taken out of the history of *China* written by Frier *Iuan Gonzalez de Mendoza*, and printed in *Madrid* 1586.

Have now declared in the title of this present discourse, that in the yeere 1583 there were discouered fiftene prouinces, which the discouerers called *New Mexico*, situate on the firme land of *Nueva España*, and I promised to giue notice of the sayd discouery, which I will do with as much breuity as is possible: for if I should record at large all particulars which they saw and came to the knowledge of, it would require a full history. The substance thereof is as followeth.

In the yere of our Lord 1581 a certaine Franciscan frier called *Augustin Ruiz* which dwelt in the valley of *S. Bartholomew*, being informed by the report of certaine Indians called *Conchos*,

Kk

which

The chiefe of these 8 souldiers was Francisco Sanchez Xamuzcado which made a map of these prouinces, which being intercepted is come to our hands.

The prouince de los Tiguar distant 250 leagues southward from the mines of Santa Barbara.

The mines of Santa Barbara 160 leagues distant from Mexico.

The second voyage.

Las quatro Cieneegas in the prouince of Nueva Biscaya 70 leagues fro the mines of Santa Barbara.

Antonio de Espejo his first going forth fro the valley of S. Bartholomew the tenth of Nouember 1582.

Indians called Conchos.

Many rivers.

which had dealings and conuersation with other of their neighbours called Passaguates; that toward the North, travelling alwayes by land, there were certaine great townes not hitherto known nor discovered by our Spaniards: moued with a zeale of charity, and a desire to saue soules, craued licence of the Conde of Coruina as the Viceroy of Nueva Espanna, and of his superiours, to go to the sayd townes, and to endeavour to learne their language, and hauing learned the same, to baptize them, and to preach the holy Gospel vnto them. After he had obtained licence of the parties aforesayd, taking with him other two companions of his owne order, and eight souldiers, who of their owne good will offered to beare him company, he departed to put in execution his Christian and zealous intent. Who after certaine dayes trauell came vnto a countrey called The prouince de los Tiguar distant from the mines of Santa Barbara, from whence they began their iourney, 250 leagues towards the North: in which prouince the inhabitants, vpon a certaine occasion, slew one of the sayd friers two companions. The souldiers that went with him seeing this mishap, and perceiuing the successe, and likewise fearing, that thereof might happen some greater danger, determined with a common consent to return vnto the mines from whence they departed: considering that their company was too small to resist the dangers that might happen, being so farre distant from the dwellings of the Spaniards, and from all necessary succour. But the two friers which remained aliuie did not onely refuse their determination, but rather seeing fit occasion to put their good desire in execution, and so great a harvest ripe for the Lords table, because they could not persuaade the souldiers to proceed any further in that discovery, remained behinde in the sayd prouince with thre Indian boyes, and one Mexico whom they had carried with them; thinking that although they remained alone, yet should they be there in securitie, by reason of the great affability and loue which the people of that place shewed vnto them.

The eight souldiers being returned to their wished home, immediately sent newes of all that had passed to the Viceroy vnto the city of Mexico, which is distant from the sayd mines of Santa Barbara 160 leagues.

The friers of Saint Francis were very much agrieved at the staying of their brethren behinde in the countrey, and fearing least the Sauages would kill them seeing them left alone, they began to moue the minds of certaine souldiers to make another voyage to the sayd prouince in the company of another frier of the foresayd Order called Frier Bernardin Beltran, to deliuer the aforesayd two religious men out of danger, and to prosecute their former enterprize.
